"The meetings of the conference have been characterized by Soviet dictation. The unhappy subservience of the Danubian peo-

---

[1] From a speech by Mr. Cannon, the U.S. Ambassador to Yugoslavia in Belgrade on Aug. 18, 1948, rejecting a Soviet-dictated treaty designed to restrict navigation on the Danube.

ples was never more clearly manifest than at this conference. The statements and voting of the representatives of the Danubian States reflected their lack of freedom of choice on matters of vital concern to their peoples."

During the same speech, Ambassador Cannon accurately predicted the fate of the formerly free Danube in these words:

"The actions of the Soviet delegation have made evident the determination of the Soviet Union to perpetuate its economic and political enslavement of the Danubian peoples. Its refusal to accept provisions assuring genuine freedom of commerce and nondiscrimination shows that it intends to maintain vested interests which it has established for its own benefit through extortion from governments imposed by force against the will of the peoples of its satellites."

The lesson then is clear. If the U.S.S.R. ever gains full control of an international sea, we can expect a repetition of the Danube story. With this admonitory experience in mind we should consider the significance of Soviet military and political actions relating to the Baltic, the Black Sea, and the Sea of Japan.

SOVIET TACTICS TO ACHIEVE NAVAL DOMINANCE

Russian Communist moves to achieve control of all three seas have ranged from direct military operations to subtle, almost concealed, diplomatic maneuvers. Underscoring the role of force in achieving domination of these seas are the Soviet attacks on U.S. planes, as well as those of other nations, made outside of territorial waters and in clear violation of international law. At the other end of the spectrum of Soviet instrumentalities are diplomatic chicanery and propaganda. Communist expressions such as "sea of peace" and Soviet-sponsored measures to extend territorial waters are best explained by a Kremlin drive to control three traditionally international water highways.

THE BALTIC

In the Baltic, the Soviet Navy has developed a strong fleet with supporting shore-based air. These naval forces operate from numerous excellent bases along the north, east, and south coasts from Finland to Germany. Many of these bases are sufficiently ice-free to be easily negotiable with the aid of icebreakers even under the severest conditions.

Most significantly, Russia shares naval power in the Baltic only with Sweden, whose navy, although vigorous and progressive, is not large. Germany's defeat in World War II created an inviting opening for the Soviets. And, as has become evident, the Communists are quick to fill a power vacuum, be it on land or sea.

The Soviets give no indication of being satisfied with their vastly improved military position in the Baltic. They continue to employ their international political machine to increase their relative strength by attempting to weaken their neighbors. In doing this, Moscow has shown its versatility and flexibility by skillfully alternating between the economic carrot of trade agreements and the propaganda stick of atomic threats. The Soviets have also made strident calls for "peace zones," on Communist terms, of course.

In 1957, the Soviet Foreign Office issued notes to Denmark and Norway, bluntly stating that they were inviting certain destruction if they accepted U.S. missiles on their soil. Free Germany received the same treatment with the addition of promises and threats regarding eventual reunification.

Parallel with the threatening notes, the Communists conducted a propaganda campaign aimed at pacifists and wishful thinkers. This campaign opened in December 1957, when the Polish Foreign Minister, Rapacki, called for a nuclear-free zone in central Europe. His plan, if carried out, would seriously weaken NATO and leave the Baltic open to Soviet exploitation.

Khrushchev has personally taken part in this propaganda campaign. Speaking in Riga, Latvia, on June 11, 1959, he proposed that Scandinavia and the Baltic be made a "zone free of atomic and rocket weapons." Incidentally, this offer to turn the Baltic into a Communist "sea of peace" followed soon after the concluding of a 2-year Danish-Soviet trade protocol.

Nine days after the Riga speech, on 20 July 1959, Khrushchev attempted to disquiet his neighbors by cancelling proposed visits to the Scandinavian countries. Because there exists in Scandinavia what Moscow terms an "anti-Soviet attitude," it is clear that the series of cynical and transparent actions by the U.S.S.R. has been correctly evaluated by the astute northern Europeans. These people have had long experience with the Russian Bear.

Russia may consider, however, that its programs have not failed completely, because our Scandinavian NATO allies have avoided the difficult questions which would be posed if atomic deterrents were located in their countries. In so doing they fail to achieve the maximum defense which their NATO membership could accord them. Thus the countries which are the northern bastion of NATO are resisting Soviet pressures, but the Baltic area remains in jeopardy since defenses there are weaker than they should be.

THE BLACK SEA AND THE EASTERN MEDITERRANEAN

The Black Sea, like the Baltic, occupies a position high on the Soviet list of military and political objectives. In comparing events relating to the Black Sea since World War II with those relating to the Baltic, one notices many striking parallels, along with a few interested differences.

A large naval construction program in the Black Sea has made Soviet Russia virtually the single naval power in this area. Having acquired Rumania and Bulgaria as satellites, the U.S.S.R. is in complete control of the western, northern, and eastern shores of the Black Sea. It is perhaps in a more dominant position here than in the Baltic.

Another similarity is that the entrance to the Black Sea is controlled by a NATO ally. Just as Denmark is astride the Öresund and the Belts, so is Turkey in direct control of the Bosporus and the Dardanelles. In the case of the Baltic, Denmark gains support from the strategic location of Free Germany and Norway; while to the south, Greece occupies a key position in relation to the Black Sea approaches and can support its NATO ally, Turkey.

Because Turkey and Greece are necessary for full control of the Black Sea they have been in the front lines of the cold war since it began. In fact, the quarrel between Russian communism and the free world was brought out into the open as a result of Soviet moves against the Turkish Straits. And cold war battlelines were drawn as a result of Soviet bloc support of the Greek guerrillas.

The pattern of Soviet diplomacy and propaganda on Black Sea matters has a familiar look when compared with that relating to the Baltic. Here again is the mixture of threatening notes and offers of "zones of peace." In fact, the timing of the Soviet notes and speeches leads to the conclusion that for the Russians, the Baltic and Black Seas are part of a single question.

There is one important difference among the many similarities. The U.S.S.R. views the Black Sea and the straits as an integral part of its drive into the eastern Mediterranean and the Middle East—a drive it has begun even before it has gained complete control of the Black Sea. To the Soviets, control of the Black Sea is the first step for achieving what appears to be their long-term goal of spreading into the Middle East. For this reason, the Soviets in June of 1959 included Italy, the Balkans, and the Adriatic in their proposal for a "peninsula of peace."

There is no reason to believe that Soviet Russia would be content if it achieved its goal of turning the Black Sea into a satellite lake. The recurring crises in the Middle East, the sale of submarines to Egypt, and the basing of submarines in Albania, all lead to the conclusion that the eastern Mediterranean would become the next body of water closed to all but "friendly" shipping and men-of-war.

The United States and its allies have stood firm in this area. Had we not done so, the Soviet Navy would now have bases on the straits and in Greece, and the U.S. Navy would never again have visited Turkish Black Sea ports or, for that matter, have operated in the eastern Mediterranean.

THE SEA OF JAPAN

It may seem like a radical change to leave the Baltic and Black Seas to discuss the Sea of Japan. From the Soviet point of view, however, no readjustment in thinking is necessary; all three seas are part of one objective. The Soviet aim of forming satellite seas is global. While the Soviets were scheming late in the last war to form satellite states and satellite seas in Europe, they were also taking measures to do the same thing in the Far East.

As a result of the Yalta agreements, the U.S.S.R. was off to a running start in the Far East at the end of World War II. In August of 1945, in accordance with those agreements, it occupied southern Sakhalin and the Kuriles. Thus the Sea of Okhotsk was largely closed off from the outside world. The U.S.S.R. was much more concerned, however, about the Sea of Japan.

Welcoming the postwar instabilities and military voids, the U.S.S.R. proceeded to develop its naval and other forces in the area at an accelerated pace. By 1950, it felt ready to have one of its puppets seize South Korea and thus gain control of the Sea of Japan. It was stopped, principally by American determination, from acquiring this neighboring sea and using it as a sure means for subjugating Japan, the principal industrial nation in Asia. With Japan as a satellite, the rest of Asia would have been unable to resist further Communist encroachments.

The global nature of Soviet naval policy is well illustrated by the Soviet-provoked incidents relating to the Sea of Japan. In this area, too, the Soviets have attacked American planes over international waters. Moreover, they have resorted to crude diplomatic intimidation of Japan, just as they have with our naval allies in Europe. For example, on May 15, 1958, the Soviet Union bluntly asked the Japanese Government if the United States were basing nuclear weapons in Japan. It was undoubtedly more than coincidence that the U.S.S.R. launched Sputnik III on this same date.

Such Soviet tactics may seem barbarous and clumsy to the civilized world of the second half of the 20th century. On the other hand, to the pragmatic leaders of Communist Russia, such measures may seem a good way to give reality to the name of the principal Soviet city on the Sea of Japan. In the Russian language "Vladivostok" means "ruler of the East." If we want more tangible evidence of Soviet intent, we can reflect on the Soviet statement of July 1957 that the vast bay leading to Vladivostok is closed.

TERRITORIAL WATERS AND SATELLITE SEAS

So far we have examined specific Soviet measures designed to restrict free world action in each of the three seas earmarked by the Communists for satellite status. Con-

currently with these actions, the Soviet Union has been conducting a cold war campaign which endangers all three seas and is therefore worthy of special attention. This campaign, which is both blatant and subtle, aims to increase the breadth of territorial waters from the traditional 3 miles to 12 miles. If the persistent Soviet efforts in this direction were ever successful, the world's naval and shipping powers would lose some of their advantage in relation to land powers. The American striking fleets could be placed under a legal ban by neutrals and others against operating in strategically important areas. If this ever happens, the Baltic, the Black Sea, and the Sea of Japan will all be a step closer to Danube status.

SOVIET NAVAL STRATEGY AND THE DRIVE FOR CLOSED SEAS

For the Soviet Navy, the neighboring seas are a constant frustration. For one thing, Western naval power has kept the Soviet fleet from spreading the Russian version of Marxism. To date, communism, an unnatural method of ordering man's life, has taken hold only in the presence of Sino-Soviet military force. This force is now being checked by a worldwide coalition of maritime powers, a coalition occasioned by Soviet aggression, centered around the United States, and based upon utilization of the worlds' oceans.

These facts take on great significance for the Soviet Navy, since the most tempting areas for Communist military expansion are related to bodies of water on which the free world maritime coalition can dispose overwhelming power. The Baltic Sea would be more vital to the Soviets for a westward military thrust than would the north European plain. The Black Sea and the eastern Mediterranean would have to be secure before the Russians could lunge into the Middle East. Japan is militarily secure behind its moat, particularly with the power of the 7th Fleet in the immediate background. Thus when Khrushchev speaks of the limited utility of cruisers, he is reflecting the frustrations of the Soviet Navy. It is true that Khrushchev's cruisers will be good for little more than diplomatic visits and salutes so long as the West maintains strong and balanced naval strength. If we lower our guard, however, the Soviet cruisers will be useful in spreading Russian communism.

Particularly troublesome to Soviet naval thinkers is the thin belt of land satellites in Europe insecurely anchored in the Baltic in the north and the Black Sea in the south. Since the satellites may be defined as a militarily occupied group of states lying between two international seas, they are in contact with the outside world through the ocean highways. As a result, they are certain to remain dissatisfied. Perhaps Soviet naval strategists sometimes reflect wryly on the words of a czar who laid the foundations of the modern Russian Navy. Peter the Great, when he founded St. Petersburg (Leningrad) in 1703 called it "a window into Europe." As long as the oppressed peoples of East Central Europe can gaze out the windows of free seas, they will have hope. The Soviet Navy has the task of closing those windows.

The bordering seas and their defenses are purely naval problems for the Soviet Union, since the Soviet Navy has a number of tasks which would normally fall to the army or another service in most countries. The long coasts of the Soviet Union are defended by naval coast artillery, naval infantry, and a naval air arm, in addition to naval forces afloat. These forces are large. In fact, in terms of manpower, the Soviets have the world's largest navy. Despite this large and growing naval strength, Soviet Navy planners know they are responsible for inadequately defended borders. The lessons of World War II have not been lost on these realistic men who fully appreciate that Western military power can be brought to bear in overwhelming force wherever there are oceans. They also appreciate the flexibility of naval power which can support a guerrilla force, a police action, or conventional land and air operations of whatever size.

Soviet naval strategy, then, is directed against the Western maritime coalition centered around the United States and its Navy. It also seeks control of the strategic straits and narrows leading into the neighboring seas. If the Soviet Navy could plant coast artillery, naval infantry, and units of the naval air arm in the vicinity of the Danish, Turkish, and Korean Straits, it would no longer have to defend the long coastlines of the Baltic, Black Sea, and Sea of Japan. With the resources thus freed, the Russian fleet could make a great impact in new areas, particularly on the high seas.

THE TASKS OF FREE WORLD NAVAL POWER AND DIPLOMACY

The principal free world naval undertaking in the three threatened seas should be to redress the military imbalance resulting from World War II. The defeat of Germany and Japan means that counterforces to Soviet expansion in the Baltic and the Sea of Japan have been greatly weakened. Soviet Russia is also relatively stronger in the Black Sea than before the war. To stabilize these areas, the Western World must give political and naval support to the free powers fronting these seas. Such support should include aid, training, and frequent naval visits.

Just as important, the free world should never surrender any of its inherent sea power advantages through ignorance or lack of interest. For example, we must be on guard when Soviet diplomacy, in an attempt to restrict freedom of the seas, speaks piously of the rights of riparian states. Such an approach in doubly specious for the Soviets. Since they militarily dominate many of the bordering states, they speak only for themselves. Any sea is of interest to the entire international community, especially maritime countries.

We enjoy a seapower advantage in these three international seas because of Western naval strength and because free world allies control the critical narrows in each case. We must never lose this advantage to Soviet bluffing. To do so would be to sacrifice our ability to project our national power to the shores of potential aggressors. It would also be a necessary step toward opening the great oceans as attack roads leading to the shores and cities of the United States.

The Late Honorable Edward J. Hart

SPEECH
OF
HON. WILLIAM T. CAHILL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. CAHILL. Mr. Speaker, I rise to join in tribute to the Honorable E. J. Hart, former Representative of the 14th Congressional District of the State of New Jersey.

I knew Mr. Hart as one of New Jersey's outstanding lawyers and most honored public servants. As a young lawyer, practicing in the southern end of the State, I came to know and respect Mr. Hart for his outstanding ability as an orator.

He was, during his service in Washington, one of the best known of all our representatives. His death is not only a great personal loss to his family but to all citizens of the State of New Jersey.

I express to his family my sincere sympathy and condolence.

A Layman Looks at the Survey of Dentistry

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks, I include an address entitled "A Layman Looks at the Survey of Dentistry." This address was delivered by me at the 38th annual session of the American Association of Dental Schools, Boston, Mass., on March 27, 1961:

A LAYMAN LOOKS AT THE SURVEY OF DENTISTRY

(By Hon. JOHN E. FOGARTY, of Rhode Island)

H. G. Wells once declared that "human history becomes more and more a race between education and catastrophe." After reading the summary report issued by the Commission on the Survey of Dentistry, any thoughtful citizen will be made aware of how appropriately that statement may be applied to the future of dental health in this country. For one recurring theme in the commission's summary is the crucial importance of education to the solution of the most serious problems now confronting members of the dental profession and the public they serve.

The commission stresses again and again the extent to which sound solutions depend ultimately upon the Nation's ability to educate and to be educated, upon our knowing more and applying what we know with greater force and effectiveness. This is the theme in the discussions of manpower planning, research expansion, better utilization of available preventive measures, specialized care for the aged, and the many other topics covered in their broad-based report.

If the problems detailed by the commission had been totally unexpected, or if the burden of solving them had to be borne by any single group, we might well ask ourselves whether we have the time or the strength or the resources to assure a future of good dental health for the citizens of this country.

Fortunately, the task can be shared by many groups. Though the dental profession has both the right and the responsibility of leadership, the public, individually and through the medium of Government, also has its duty to support you in finding solutions and in making them work.

The problems demanding attention are not totally new. All of us here today have long known that a critical need exists for more dentists and for the schools in which to train them, for better utilization of auxiliary personnel, for intensified research, and for more effective health programs. Corrective action in all of these areas has been urged repeatedly by professional groups like the American Association of Dental Schools and the American Dental Association, by Government agencies like the Public Health Service, by interested laymen and Members of Congress like myself, and, most recently by the new President of the United States in his health message.

It does not detract from the importance of the commission's report to suggest that its

greatest value stems not so much from the newness of its basic findings as from the objectivity, candor, and practicality of its analyses and recommendations for action. What the commision has given us is a fresher viewpoint, a broader perspective. To consider our own problems from another's vantage point is always helpful, for often we need to be reassured that deep concern and long familiarity with the issues at hand have not blinded us to obvious solutions. Otherwise, there is always a danger of responses becoming automatic rather than thoughtful. A commission like this one, representing a variety of interests, is not likely to fall victim to such occupational hazards as dedicated nearsightedness or overactive reflexes. And since, despite the diversity of their professional backgrounds, the members have been able to reach what Dr. Adams, in his foreword, describes as a firm agreement on what needs to be done, the authority and importance of their report is even further enhanced.

I therefore find it of great significance that the commission's estimates of the seriousness of the dental manpower shortage not only substantiate what dental organizations and Government agencies have said before, but indicate that the shortage may be even greater than anticipated. In the first place, these new estimates remove any basis for denying, as some people have, that there is any manpower problem to overcome. In the second place, they assure those of us who have been deeply concerned about inadequate dentist ratios that we were right to be concerned, and that the steps we have already taken to offset them, have been well taken. We at least have gained a short headstart in the race against time.

If American dentists had not scored impressive gains in their own efficiency, if they had not begun to employ auxiliary personnel more extensively and with greater effectiveness, the manpower shortage would already be felt by the public, and critically felt. Increased efficiency, therefore, has momentarily cushioned us against the impact of shortage. But what of the future? The margin for improved efficiency is narrowing. There is a limit to the load the individual practitioner can bear. These are facts which cannot be ignored, for neither the times we live in nor the standards we live by are fixed and static.

The commission points out that currently only some 40 percent of the public are receiving anything approaching adequate dental care. This is neither as good as the country needs nor the best it can expect. In the 20th century, the entire conception of health and the health services has been changing. We look upon adequate health protection not as the special privilege of a fortunate few but as the right of all.

This modern viewpoint is reflected in the commission's concern about the Nation's manpower needs. Commission members see the future of dentistry as one of great growth and complexity, of increasing prestige and authority, and, by the same token, of greater responsibility. They see this responsibility as one which cannot be met by relying solely upon the achievement of higher technical proficiency in clinical procedures. The commission would have us realize that this Nation not only needs more schools and more dentists, it needs better schools and better dentists. We can be glad that a start has been made in this direction.

The comprehensive health program which President Kennedy has outlined in his recent message to the Congress includes specific recommendations for substantial Federal aid to education, and there are many congressional proposals which would make Federal funds available for the building of more schools and the training of more dentists. I myself have again introduced legislation providing wide-ranging support for dental and medical education. I have proposed that the Congress appropriate $100 million for the construction of new schools and $50 million for the expansion and modernization of existing schools. Passage of this bill will make it possible to produce the larger numbers of dentists so urgently needed.

I have proposed, in addition, two other measures which will not only bring us closer to the goal of more adequate supply but will also help us attain the higher standards of dental education which the commission envisions. The first of these is a scholarship bill which will permit you to fill the additional school spaces which will be created, and to fill them with applicants of greater intellectual stature. The second measure will provide operating grants to schools. Although this measure, too, includes an incentive for expanding enrollments, its real purpose is to provide schools with the funds needed to improve the quality of their instruction.

The commission has a great deal to say about the method and content of undergraduate dental training, and some of it is critical of things as they exist. I will not attempt to judge the worth of all the recommendations in the report. But many of the comments the commission makes are as applicable to other branches of education as they are to dentistry, and in this regard, I found in them a vigorous and stimulating challenge to habitual patterns of thought.

For I suggest to you that we in this country must become more constructively critical of our traditional approaches to education. We should ask some questions. Why do we teach what we teach? What is it we are educating for? And wherever we find that we are doing things just because they have always been done, we might ask whether we are educating for the 20th and 21st centuries or merely perpetuating the methods inherited from the 19th. Education, after all, is not a monument to the past; it is the architecture of the future.

If I read the report aright, the commission believes that in current dental education there is perhaps too much emphasis upon restorative dentistry, too little upon preventive. The commission assumes, and I certainly agree, that the dentist's responsibility extends far beyond the providing of treatment to the patient who knocks on his door and demands it. If this were all we expected from our dentists, restorative dentistry might be all they needed to know. But the dental profession also has a responsibility for seeing that the receipt of care more accurately reflects the actual need for it. Treating the patient who knocks on the door is only one in a progression of important activities in which the profession participates. Ideally, the first step in that progression is the development of methods for the prevention of disease itself. Therefore, if dentistry is indeed educating for the future, it should obviously be educating for research.

As the commission observes, "Of all avenues leading toward the prevention of dental disease, the one offering the most hope is research. One investigator, if he should discover a means of preventing or reducing periodontal disease, might do more for oral health than several thousand practitioners of restorative dentistry." Yet the commission finds little reason for satisfaction with the current status of dental research, although it acknowledges the substantial progress which has been made in recent years.

The Federal Government has played, and undoubtedly will continue to play, a major role in conducting and sponsoring dental research programs. I have always been deeply interested in this field, and I look upon the growth of the National Institute of Dental Research—incidentally, NIDR will soon move into its new building—and of its grants program in support of extramural activity as being among the notable contributions the Government has made to the advancement of health standards. I am glad to have had a part in making them possible. Yet I agree with the commission that while the Federal Government should increase its support of research, and I think it will, the Government cannot carry the burden alone. Financial support from other sources must be forthcoming.

There is, as you know, a codicil to the commission's recommendations for increased financial aid: the increase should be commensurate with the increase in available research personnel. Since, as the commission points out, the best source of researchers is the undergraduate student body, the availability of personnel depends to a very great extent upon the dental educator. Yet today, teachers do not have time to pursue research projects; students are given neither the scientific depth, nor the curriculum time, nor the intellectual stimulus to interest them in the field. The commission sees the result as a shortage so acute that "the recruitment for dental research is even more important than the recruitment for dental practice," and it urges the integration of research with teaching at the undergraduate level as a logical first step toward overcoming the shortage.

That stronger and better designed undergraduate programs will in time do much to strengthen the whole intricate structure of dental research in this country strikes me as a sound and practical observation. I therefore suggest that proposals which advocate Federal or private financial aid for talented undergraduate dental students who are interested in research and teaching careers deserve serious consideration from us all. At the same time, ways must be found to increase the scope and intensity and effectiveness of activity at the more advanced levels of dental research.

For the general public, these extended programs of research will have greatest meaning when preventive discoveries are given practical application in day-to-day life. And in view of the seriousness of the overall dental health problem, the Nation's failure to utilize fully the preventive techniques already at its disposal is nothing short of tragic.

Every leading health organization in the country, among them the American Dental Association, the American Medical Association, and the American Association of Dental Schools, has endorsed fluoridation. The Commission on the Survey of Dentistry therefore speaks for informed opinion when it states it is "totally unimpressed by the arguments advanced, usually by health and other faddists, that fluoridation is dangerous, immoral, unconstitutional, and unscriptural." Yet today, more than 10 years after the introduction of a simple procedure for the controlled fluoridation of public water supplies, something less than a fourth of the American people have access to the benefits that method provides. The public denies itself those benefits, and now the fluoridation of water supplies is not even pacing population growth. Evidently, the health and other faddists have lately been more successful in presenting their case to the public than the profluoridationists, though the latter have scientific fact on their side. Perhaps the difference is in the intensity of effort.

Let me quote some other statements from the Commission's report and, I warn you, quote them out of sequence:

"Although 37 percent—of some 750 dentists participating in an opinion survey—take part in fluoridation campaigns in their communities, only about 2 percent have been active as individuals in initiating these campaigns.

"Wide scale educational efforts must be undertaken to acquaint the American people with the importance of dental health and with means of attaining it.

"Education, in the dental health sense, has many facets ranging from campaigns on behalf of public health measures to hygiene instruction in primary school."

And, finally, there is the recommendation of the commission that "all public agencies, with the assistance of voluntary associations and professional societies, make greater efforts to promote water fluoridation and community topical fluoride programs."

As the commission recognizes, the possibility of making greater efforts will depend to a large degree upon the possibility of securing substantial grants for expansion of the State and local dental health programs needed to win widespread public support for fluoridation and other preventive measures. But important as they are, grants are not a substitute for incisive and coordinated action. They serve only as the foundation upon which better programs can be built.

I remarked earlier that the commission continually stresses how much depends upon our ability to educate and be educated, and upon our ability to use what we know with greater force. The fluoridation issue is a case in point. If they are to strengthen and intensify activities in support of fluoridation, public health agencies at the National, State, and local level must make sure that they employ their special resources and knowledge and practical experience to the very fullest extent. And their efforts, in turn, must be reinforced by the professional knowledge and prestige and influence of the private practitioner, working individually in his community and through his dental society. This kind of cooperation should produce an educational force persuasive and authoritative enough to offset the statements, however dramatic, of the small but vocal opposition.

Valuable though preventive measures like fluoridation are, I am sure the commission is right when it states that the achievement of dental health solely through the prevention of disease is far in the future, a fact which throws into relief the importance of what the commission calls "prevention of progression through treatment." And since people differ both in their ability to pay for care and even in their physical ability to seek it, the receipt of treatment cannot be left to chance. The commission makes a series of recommendations for reducing distance between dentist and patient which impress me as both imaginative and workable.

One of these, the incremental care program for school-age children, seems to me to be of particular value and importance. Beginning the first year with 6-year-olds and adding a new crop of them each year, the program would eventually cover all children through high school, and do so at a minimum of cost, for the care would begin in most cases before serious treatment problems have had a chance to develop. Since cost to the family would be based on the ability to pay, every child, regardless of financial status, would have a chance for a lifetime of good dental health. And that, eventually, should mean an impressive reduction in the accumulation of the Nation's unmet treatment needs. Therefore, though a program of this scope would undoubtedly require Federal and State aid in the form both of financial support and of participation by official health agencies, it would also represent a national asset.

Another group whose special needs for treatment deserve more thoughtful attention is the chronically ill and aged. The Public Health Service, for a number of years, has been conducting a series of studies designed to measure existing needs among these disadvantaged people. In cooperation with State and local dental societies and health departments, the Service has been experimenting also in the development of techniques and in the training of personnel to adapt traditional types of treatment to the special needs of people who are too infirm to visit the dentist in his office.

Some idea of the extent of the problem of caring for the homebound and institutionalized came out of a study recently completed in Kansas City. Four thousand nursing home patients, with an average age of 75, were examined; 88 percent were in need of care. If this measure of need holds true for all the population aged 75, then there are today some 4 million older people who require a service they are not likely to get unless a concerted effort is made to provide it. In less than 20 years, the figure will be 8 million. If we are to meet the special dental care needs of our growing population of older people, undergraduate training in dental geriatrics may well be a necessary addition to the modern dental school curriculum.

In efforts to narrow the gap between need and receipt of services, the greatest attention is perhaps being centered currently on the growth of various types of group prepaid dental care plans. Such plans may eventually have as great an impact upon dental care as hospital and medical coverages have had upon medical care. The recommendations of the Commission that the dental profession cooperate with industry, labor, and Government in experimentation with various approaches to group programs are therefore eminently sensible. Their suggestion that dental societies form service corporations to facilitate the development of group programs bears out the opinion of public health officers that this particular approach offers dentistry the best opportunity of assuring orderly growth and quality of care within the framework of group plans.

Even though many people disapprove in principle of group dental programs, cooperation in their design is still advisable. At least you must be prepared to face the changes they entail and to deal with them constructively. For it is much better to control circumstances than to be controlled by them.

Controlling circumstances becomes increasingly difficult as society becomes more complex. It requires infinitely more knowledge and patience. Today the members of all professions find themselves involved in activities which a few years ago did not even exist. And as activities increase, so do the demands upon professional skills and qualities of leadership.

Because this is true, laymen and professional men must meet together to discuss problems of mutual concern. And it becomes all the more necessary for us to accept the fact that we cannot limit our vision to the merely convenient or tailor the future by a pattern fitted only to the past. That is why it is so essential to realize that we must train more professional people, and that we must train them better. Perhaps we must even train a new breed of men—men of broader vision and greater scientific deapth than we have ever before known. Certainly in a field as essential as dentistry, we must, at the very least forgo the luxury of a narrow vocationalism in our educational processes.

To do what must be done will require the best that is in all of us—the willingness to try and the courage to fail. For much of what we must learn and teach can only be discovered by trial and error. If that is a painful process, it is also our greatest hope. As the great Oxford teacher E. R. Dodds once put it, "If the truth is beyond our grasp, the errors of tomorrow are still to be preferred to the errors of yesterday; for error in the sciences is only another name for the progressive approximation to truth."

Hoffa Leads Union in Fight To Amend Rule of Ratemaking

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. KEARNS. Mr. Speaker, on April 13, 1961, I called the attention of my colleagues in the Congress to a national drive against the railroads which James R. Hoffa is mounting.

The following article from the April 17, 1961, issue of Transport Topics, the national newspapers of the motor-freight carriers tells how Mr. Hoffa intends to carry out his program:

HOFFA LEADS UNION IN FIGHT TO AMEND RULE OF RATEMAKING

Teamster President James R. Hoffa last week touched off a massive campaign to urge Congress to enact S. 1197, a measure introduced by Senator ROBERT BARTLETT, of Alaska, to amend the Interstate Commerce Act.

The Bartlett bill is cosponsored by Senators A. S. MIKE MONRONEY, Oklahoma; NORRIS COTTON, of New Hampshire; VANCE HARTKE, of Indiana, and RALPH YARBOROUGH, of Texas. It would amend controversial section 15a (3) of the Interstate Commerce Act, which the trucking charges was an invitation to destructive rate-cutting now practiced by the railroads.

In a telephone network, Mr. Hoffa addressed 212 locals in 170 cities on the subject, urging the membership to write letters of protest to Congress. At the same time Senator MONRONEY appeared in a filmed interview, which was shown at all of the meetings.

The Teamster leader accused the Commission of misinterpreting "intentionally or otherwise" a law designed to make competition between trucks and the rails more realistic.

PROVISION CAUSING TROUBLE

The section of law, passed by Congress in 1958, which is causing all the legislative fireworks, says: "Rate of a carrier shall not be held up to a particular level to protect the traffic of any other mode of transportation."

The most severe effects of the 1958 law have been felt by the trucking industry in hauling new automobiles from assembly plants to distributors and dealers and by other specialized carriers.

Trucks formerly hauled more than 90 percent of such freight. This year, Ford Motor Co. alone expects to transport about a third of its new cars by railroad.

This substantial shift in auto hauling resulted from rates established by the railroads and approved by the ICC which were as much as 50 percent lower than motor carriers were charging.

"This misrepresentation," Mr. Hoffa charged, "will destroy the auto hauling companies, and the jobs of over 15,000 Teamster members unless the railroads and the ICC are stopped."

All five of the cosponsoring Senators of S. 1197 are members of the Senate Interstate and Foreign Commerce Committee, which has jurisdiction over the ICC. A companion bill has been introduced in the House (H.R. 5937) by Representative MORGAN MOULDER, of Missouri.

WIVES ASKED TO HELP

The second stage of the nationwide campaign will be establishing women's auxiliaries among the Teamster wives. A brochure explaining how to establish an auxiliary, and

how it can function in the campaign will be distributed.

Simultaneous with establishment of the auxiliaries, a series of congressional breakfasts will be held in Washington. Teamster members will come to the Capitol, and invite their Congressmen and Senators to breakfasts sponsored by the international union. At the breakfasts the congressional delegations will hear the Teamster members' case for the Bartlett bill.

Also part of the second stage, a massive letter-writing campaign has been undertaken by the entire 1.7 million Teamster members, urging support of the Bartlett bill. It is estimated that over 75,000 letters have been written to Congress and the ICC since January.

Senator Keating Delivers Important Address on Governmental Reform

EXTENSION OF REMARKS
OF
HON. CHARLES E. GOODELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. GOODELL. Mr. Speaker, the junior Senator from New York, Mr. KEATING, recently delivered an interesting speech on the need for certain governmental reforms before the annual banquet of the Olean Chamber of Commerce. He outlined a concrete program for increasing congressional efficiency in the appropriation process and generally urged fresh initiatives to gear our Government to modern problems.

In view of his long crusade for efficiency in Government and his deep study of this field, Senator KEATING's remarks deserve wide circulation and study. I therefore ask unanimous consent that the text of his address before the Olean Chamber of Commerce be printed at this point in the RECORD.

REMARKS OF SENATOR KENNETH B. KEATING, OF NEW YORK, BEFORE ANNUAL BANQUET OF OLEAN CHAMBER OF COMMERCE, OLEAN, N.Y., APRIL 22, 1961

Mr. Chairman, members of the chamber of commerce, honored guests, it is a pleasure to be with you here tonight. I must say that during the recent basketball season I saw the Olean dateline quite often in the newspapers. It would appear that Tom Stith and his teammates were of great help to the chamber of commerce in putting Olean in the Nation's eye, and I'd like to state that as a western New Yorker, I was proud of the fine national record established by the St. Bonaventure team.

You are here today as citizens interested in government. There is nothing so valuable to a free society as people such as yourselves. A free government is people. When it ceases to be that—when it becomes bureaucrats and legislators, experts, and researchers operating in a self-made empire, then, it is in trouble.

As a Member of the Congress, I have always taken a deep interest in good government. Good government is not automatic. It requires constant vigilance.

It is founded on the greatness of the past and at the same time is willing to accept the dynamic challenges of the future. Good government, therefore, by definition, is both past and future. Let me elaborate for a moment on this point. As for the past, all of us recognize that the greatness of our Nation today depends very largely upon the preservation of individual initiative and incentives, which are so much a part of our free, competitive enterprise system.

While seeking to govern effectively, we recognize that the concentration of too many activities and of too much power in Washington—or anywhere else—tends to drain so huge a lump of every man's income away in taxes that his energies and initiative are depleted and eventually diminished altogether. We must remember that the coin of Government has two sides—spending and taxing.

But Government cannot be static and inflexible. We must be willing to expand the role of Government in those specific fields in which it is found to be necessary. We must strengthen existing Government programs where there is a clear need to do so.

This is the framework which I try to keep in mind. The Nation as a whole must make the great decisions as to what the Nation should do—what should be the size and scope of the activities of our Federal, State, and local Governments—how authority and responsibility should be related and equated.

To make these decisions, the public must be informed and articulate. There is much yet to be done in bringing the Government closer to the people. In this day and age of mass media, and the urban sprawl, we must renew and reinvigorate our efforts to make Government more understandable so that all Americans can appraise its actions and develop opinions on the major questions of our day.

The chamber of commerce is one of the organizations which is doing an important job in this field.

In this connection, let me touch upon a few questions that illustrate the point I have in mind. In doing so, I want to outline a program to gear our Government to 20th century problems and to promote efficiency in its operation.

First, there is the matter of the item veto. For many years, I have sponsored legislation to permit the President of the United States to veto items in appropriation bills without having to veto the entire bill.

In a nutshell, if we would provide the President with the power to veto items in an appropriation bill, that is the most effective single step we could take to eliminate waste and pork barreling and enable the Government of the United States to operate more economically and efficiently.

Many States have successfully provided their chief executives with this needed and constructive power of the purse. It is clear from their experience that the Federal Government and the taxpayers of America would benefit materially from the institution of the item veto.

This is a matter that should not be the exclusive concern of legislators.

It affects all of us—and every American should think of the item veto not as a vague phrase but as a step towards the better kind of government he wants. And if he has convictions, he shouldn't jingle them in his pocket, but put them on the line. So the next time you write a letter to a Congressman, may I suggest that instead of talking in negative generalities about wasteful spending in Government, you urge him affirmatively to support this constructive reform.

Secondly, there is the proposal, now in the form of a bill, of which I am a cosponsor, whereby a Joint Committee on the Budget would be established.

This committee would examine the budget as a whole, and not piecemeal. It would handle this important fiscal responsibility in an efficient, modern way, not with the horse-and-buggy methods of the past. This bill has wide support. It deserves the backing of responsible, savings-minded, efficiency-minded citizens.

In this same vital fiscal area, there is an urgent need for a broad and searching consideration of tax reforms. Here, too, is a problem that is the business of all Americans, not just the lawmakers.

One suggestion worthy of study in this field is the establishment of a Hoover-type commission to examine analytically the entire tax structure, and submit recommendations for changes geared to the times and designed to eliminate inequities. It is all right for people to have a passion for antiques—but our tax laws shouldn't be early American.

* * * * *

Many businessmen, like yourselves, will say that taxes are a bloodletting where a transfusion is needed. To pursue this subject a bit, as you are aware, more interest is being focused on taxation today than since—well, let me say, since the Boston Tea Party.

Recommendations run the gamut from sanity to extremism. Some groups are now calling for tax reforms that would abolish income tax completely, and return all Government business-type operations to the States.

Now, I agree with the school of thought that favors revision and modernization of our tax policies. I also recognize that there are certain Federal functions that can and should be turned over to local governments. But it is neither realistic nor practical to suggest the abolition of the Federal income tax.

Just as one example, how could we possibly achieve a posture of national defense and security in a world where power is not only the first requisite of safety but the indispensable requisite of survival? The argument for the fragmentation of national power—power based on Federal taxes—falls apart when we contemplate the alternative—a defense system geared to the days of the bow and arrow, not to the age of the hydrogen bomb.

Now, my third point is that we must cease to venerate the status quo. When we build automobiles we don't go on the principle that no improvements are possible on last year's model.

In Government, too often the ways of the past have been sanctified and perpetuated. Not only is last year's model still good, but even the last century's model in some cases. My own feeling is that we must constantly keep the door of our mind open to new concepts, new approaches, new directives. Not because change in itself is desirable, but because changes for the better are desirable—changes that will give us more efficiency-per-dollar, more achievement-per-effort.

I should like to cite an example. The suggestion has been advanced that a special session of the Congress be authorized for the sole purpose of studies, hearings and legislative action in the vital field of appropriations.

Such a session might take place in November and December of each year, prior, that is, to the opening of the regular session. Now such a proposal deserves serious consideration.

The business of appropriating sums in excess of $80 billion requires time, study, consultation, and deep reflection. At present this whole operation is done on a piecemeal basis, subject to the interruptions, the distractions, the emergencies that go hand in hand with a regular session of the Congress.

It is my conviction that more effective, more businesslike, and, not the least important, more money-saving general appropriations legislation would result from this special session proposal I have briefly outlined to you.

There is a fourth and final point I should like to make in this program of modernizing and vitalizing the operation of our Government. This point is embodied in another bill which I am sponsoring in the Senate. This measure is based on the premise that the more people know about the way Government operates, the better a Government operation we will have.

It calls for the establishment of a "know your Government" service whose sole function will be to break down the wall of secrecy that lies between the people and their Government. The idea is to make Government the living thing it ought to be, not the big anonymous, incomprehensible force that directs our lives from a central control system.

Too many of our citizens know only what they're obliged to do for the Government. They don't know that the Government is a two-way, not a one-way street—that it was created to serve the people, not to be their master. My contention is that we must do on the national scale what is so well done on the local scale—in cities like your own.

Your active, informed, alert citizenry is the greatest human resource that Olean possesses. You have a history here of thinking for yourselves, acting by yourselves—and economic adversity hasn't made you sit down and wait, but stand up and fight. For Washington is not the ultimate solution to every problem. It may assist, it may cooperate, but the prime mover must be the drive, the energy, the spirit of citizens like your own who don't just stare at difficulties but roll up their sleeves and go out and work to overcome those difficulties.

I want to make it clear that the four-point program I have discussed with you today is not just a matter of good housekeeping in government. It is, above all, a matter of strengthening the muscles of democracy—of better preparing us to withstand the tremendous challenge that free societies like our own are facing throughout the world today as communism mounts its silent and deadly offensive.

Too many Americans think that a fight doesn't begin until the bell rings—until a shot is fired—until the sirens go off.

The cold, hard fact is that a fight is going on right now—across the world, a struggle that we're in whether we like it or not—a titanic struggle that is not conventional war, where there is no blood, no thunder, but where our freedom can be put to death as surely as a bullet can kill or a bomb can destroy. That is why we Americans can no longer afford the luxury of apathy. That is why the way America is run is the personal business of all Americans, not the prerogative of an official few.

We face a foe that has a single purpose, the destruction of all freedom.

Against that diabolical resolve we must throw the full strength of our energies, the full dedication of our spirit. And in this connection, let me leave one final thought with you—a thought every one of us should burn into his heart and mind. History has recorded for us the many ways in which human freedom has died—gloriously, cravenly, forlornly, but the saddest, most ignominious death of all is when freedom dies in its sleep.

Bracero Program Defended

EXTENSION OF REMARKS

OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1961

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks, I call the attention of my colleagues in the Congress to an article by Richard Strout, staff correspondent of the Christian Science Monitor, which appeared in the April 21, 1961, edition of that newspaper:

BRACERO PROGRAM DEFENDED

(By Richard Strout)

WASHINGTON.—There are fewer so-called wetbacks along the Mexican border of the United States today than there used to be. Many feel it is due to the bracero program.

The colorful wetbacks were the illicit immigrants from Mexico who came across the Rio Grande to work on U.S. farms.

Some controversy surrounds the program whose extension is being debated now in a House subcommittee on agriculture where Representative CHARLES M. TEAGUE, Republican, of California, is ranking Republican.

The bracero program, Mr. TEAGUE argues, has helped reduce wetbacks from around 1 million each year to about 30,000.

The braceros, Mr. TEAGUE, are properly transported, house, fed, and insured. Mexican and United States Government officials travel, throughout the areas of our country using braceros, to make certain the treaty provisions are followed to the letter. When they return to Mexico, in most cases at least, they are emissaries of goodwill for the United States."

"Why should we bring in workers from Mexico when we have 4 or 5 million unemployed persons in this country?" Mr. TEAGUE says the answer is that "not enough domestic Americans workers are willing to do hard farm labor."

In a statement he continues: "Several persons, with headquarters here in Washington, appeared before our subcommittee and stated that the bracero program should be abandoned. All of these people were well intentioned, and some of them were clergymen. They did demonstrate, however, an abysmal ignorance of the real situation.

"It is sometimes stated that the bracero program works only for the benefit of the large farmers. This simply is not true. There are two good reasons why it is not:

"1. Large farmers can afford to mechanize, and most small operators cannot.

"2. If our total domestic farm labor supply were not supplemented by the braceros, a shortage of available workers would surely develop.

Then, the large farmers could outbid the small ones for the labor, because the former could afford to take a financial loss for a year or two. On the other hand, the small operators would go bankrupt and would be forced out of business entirely. The larger farmers would be in a position to gamble that the subsequent drop in production would tend to force up farm prices (and consequently food prices) so that they could again make a living."

Where Has "Faith" in Our Foreign Giveaway Program Brought Us in the World?

SPEECH

OF

HON. EARL WILSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill H.R. 6518 making appropriations for the inter-American social and economic cooperation program and the Chilean reconstruction and rehabilitation program for the fiscal year ending June 30, 1961, and for other purposes.

Mr. WILSON of Indiana. Mr. Chairman, we have passed in this Congress a bill that practically hands a half billion dollars to the State Department in the form of a blank check. We have told the State Department, in effect, "Here is a blank check. Spend it as you see fit."

Now, a half billion dollars may not mean much to some of the gentlemen in this assembly. It certainly does mean much to the taxpayers of this Nation, and especially to the taxpayers in my home State of Indiana.

We on the Appropriations Committee have tried diligently to learn of a definite program that exists for spending this money. We have sought to learn where about $106 million of soft money in the bill is going to be spent. We have tried to learn this to no avail.

We have been told by the State Department that we must back the bill "on faith." Time and again we have been told we "must have faith" that everything will come out all right and that the money will be spent wisely and properly.

I ask you, what kind of justification is that? It is about as sensible as giving $2 billion to the Corps of Engineers "on faith," hoping they will carry out the right flood control projects.

These mystery funds have been neither explained nor justified, yet we are asked to tell our constituents to "grin and bear it"—to "have faith."

What has faith gained us in the past? We have poured billions and billions of dollars down this foreign aid hole and what have we gained by it? Prestige? Friendship? Reciprocated faith in what the United States is trying to do? I think you will agree that the end result of all this aid has been enmity by those getting it, an ever-decreasing circle of friends and allies and a mounting national debt for ourselves.

I, for one, am against voting for these pigs in pokes. When we spend money from now on, I want to know where it is going, why it is being sent and what it is going to do when it gets there.

Our past experience at trying to win friends through dollars has been sad, indeed. I think we should stop playing the rich uncle, embark on a positive campaign of pro-Americanism and display to the world the image of a nation that believes in itself. We should display our intention to continue that direction regardless of minor setbacks. It is time we worried about American strength and prestige first and allow other countries a free and clear choice as to whether they want to join us or not.

Mr. Chairman, the gentleman from Virginia [Mr. GARY], indicated in debate on this bill that the 87th Congress was committed by the 86th Congress to this program. I should like to point out that the gentleman is incorrect. Every Member of the 87th Congress was elected in 1960. The commitments of the 86th Congress in no way bind the 87th Congress and the gentleman from Virginia knows it.

Similarly, each individual Member of this august body was sent here because his constituents hold him in high es-

teem. They expect him to seek answers, to probe for information and to get the facts on everything pertinent to the Nation's business.

If we are now individually and collectively to abdicate this position of responsibility, if we are to proceed on a hazy policy of "faith" in an unknown program, then we have violated our trust. Every one of us should resign and go back home and run for office again. It would be interesting to see how successful those of us who run on a platform of blind faith might be.

Memory of Molly Secure in Hearts of Peorians

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. MICHEL. Mr. Speaker, I wish to insert the following article from the April 23, 1961, issue of the Peoria Journal-Star. I am sure that the memory of Molly of radio's "Fibber McGee and Molly" will not only remain in the hearts and minds of Peorians, but with millions of their fans throughout the Nation:

Death has split the Peoria couple who became radio's king and queen, but Fibber McGee and Molly will live forever in the entertainment world's hall of fame.

For nearly 20 years Jim and Marian (Driscoll) Jordan enjoyed the heights of radio popularity, meantime amassing a fortune, with good clean comedy their only secret of success.

Show business and the millions of persons who were fans of Fibber and Molly mourned the passing April 7, in California, of Marian Jordan—born on Peoria's south side April 15, 1898—and extended sympathy to her husband, born November 16, 1896 in a farmhouse off Farmington Road.

Jim, the son of a farmer, and Marian, daughter of a coal miner, had been married 42 years. They met as teenagers while singing in the choir of St. John's Church, and have often said it was "love at first sight." They were married here August 31, 1918.

Even as youngsters Jim and Marian had their hearts set on show business as a career, and never lost sight of that goal. However, it was a long, hard struggle—frequently beset with seemingly insurmountable obstacles—before they reached it.

Marian was the youngest member of a family of nine boys and four girls born to Daniel and Anna (Carroll) Driscoll; Jim was one of a family of five boys and three girls born to James W. and Mary (Tighe) Jordan. Marian is survived by two brothers and a sister, living here. Jim has two brothers and two sisters living, but no close relatives here anymore.

Until they went into virtual retirement a few years ago, Jim and Marian had attracted weekly radio audiences up to the 40-million mark with their "Fibber McGee and Molly" show—a series that started in April of 1935. The comedy show had a distinctly American smalltown tang and was one the whole family could, and did, enjoy.

The local background on Jim and Marian, coming largely from her two brothers and her sister—Daniel Driscoll of 2818 W. Hayes Street, Carroll P. Driscoll, of 2923 West Augustana Avenue, and Mrs. Ellen Lord, 1024 North Flora Avenue—shows the close ties Fibber and Molly had with Peoria.

Jim attended St. Mark's grade school and Spalding Institute. In his spare time he studied voice. This study continued 4 years, during which time he was engaged in various jobs including that of wholesale drug clerk, mail carrier, washing machine salesman, and insurance agent. All the time he was going with Marian.

During these early years Jim sang in a local quartet and teamed up frequently with Marian as a harmony duo.

In September 1917 Jim decided to strike out and try to make the big time, going to Chicago and getting a job as tenor in vaudeville in an act known as "A Night With the Poets."

Marian, who had studied at the parochial schools and the Academy of Our Lady, appeared in many amateur theatricals and concerts. She had studied voice, violin, and piano, and later taught piano.

After a comparatively short time in Chicago Jim got lonesome for Marian and returned to Peoria. Five days after they were married, Jim, who had been turned down when he tried to enlist, was called by the Army. After training at a Georgia camp he was sent overseas to serve with the 122d Engineers.

Although he became seriously ill at St. Nazaire, Jordan refused to leave France and turned his entertaining talents to the morale division of the oversea army. He organized a troupe and toured the frontlines.

Once back in Peoria he got a job in a machine shop, but the lure of the entertainment world was too great for either Jim or Marian and they embarked on a vaudeville tour. A bit later they organized a concert tour, being part of an entertainment troupe. These tours lasted 4 years and took the Peoria couple to hundreds of tank towns, opera houses, and churches throughout the Middle West. They got tired of all this, called it quits.

The real break for Jim and Marian, although they didn't realize it at the time, came when they made a visit to Byron, one of Jim's brothers at Rogers Park in Chicago, and someone turned on the radio.

Jim listened, then said: "Marian and I can do better than that." It was when his brother jokingly bet him $10 that he couldn't that Jim accepted the challenge that started them on their way to fame and fortune.

In 1925 they had a satisfactory audition over WIBO, Chicago, and were hired for a song program. After the initial performance they were engaged for one of the first sponsored radio programs in the Middle West—receiving $10 a week as "The O'Henry Twins" sponsored by a candy bar firm.

It was their meeting with Don Quinn, erstwhile cartoonist and gag specialist, that led them up the golden path of radio. He recognized their talents and their potentiality as an outstanding team and continued as their writer all through the years that followed.

His first sketch for them, "Smack Out," concerned a folksy grocery store proprietor who was always smack out of everything except tall tales. This developed into a popular series and the Jordans appeared in this and in other sketches over NBC, as well as on children's programs.

Well on their way, the Jordans reached the top with the creation of Fibber McGee and Molly—which was given its original network airing 26 years ago this month. The series continued from that time until around 5 years ago, except during part of 1938 and 1939 when Marian's health caused its interruption for two seasons.

The show was a moderate success as a daytime feature, but when changed to one of the choicest night spots on the air—9:30 p.m. Tuesdays—it's popularity soared. The Jordans' fortunes rose and they built a home in Chicago—a far cry from one in which they had lived here in the 900 block First Avenue when they were first married.

When Marian became ill in 1938 the Jordans moved to California. There, they continued the show and also made three motion pictures over the next several years. After the Jordans went into semi-retirement, making only infrequent appearances on the marathon radio show, Monitor, a TV version of their Fibber McGee and Molly show with another cast proved a flop.

Costarring with Jim and Marian on their radio show over the years weer such favorites as Hal Peary, "Gildersleeve"; Cliff Arquette as "The Old Timer"; Bill Thompson as "Wallace Wimple"; Gale Gordon as "Mayor Latrivia," and Arthur Q. Bryan as "Doc Gamble."

Fibber, of course, was always the braggadocio, loving guy who told the gargantuan whoppers and cracked the corny jokes that evoked Molly's "'Taint funny McGee." And Molly did Grandma, the dolorous Mrs. Wearybottom, the exasperating Teeny, a neighbor's child, and other characters.

The locale of the show was the mythical 79 Wistful Vista, where a bong-bong of the door chimes would announce the arrival of the various personalities on the show. Fibber's junk-laden closet was the cause of much mirth as all its contents would be heard to spill on the floor whenever he yanked open the door.

Johnson's Wax sponsored the show, which paid the Jordans around $6,000 a week. They made considerably more in the years when they appeared in movies.

Her brother, Carroll, who with Mrs. Driscoll returned a few days ago from California where they attended Marian's funeral, said Jim wants to do some traveling and then wants to go back to work. He didn't say, however, just what he has in mind. He and Marian resided in an estate at Encino. He still owns property in Peoria.

Carroll tells some interesting things about Fibber and Molly, including the fact that "Fred Nitney," about whom Jim often quipped in the radio show, was a real person. Jim told Carroll that Nitney was an entertainer in the troupe he toured with many years ago.

At the end of that tour, Carroll revealed, Jim and Marian—unhappy at the prospect of returning to Peoria and probably losing all opportunity to break into the bigtime—even considered going to China.

Jordan had a sister and brother-in-law who were theatrical impressarios in that country and they wrote urging Jim and Marian to revive their concert company and bring it over.

The Jordans were just on the verge of taking this advice when they got a second letter telling them not to bring "the kids; you'll be traveling in a land where it will be difficult to secure fresh milk." The Jordans looked at their two then youngsters, Jim, Jr., and Kathryn (now Mrs. Victor Newcomer), and the Chinese tour was off.

Carroll revealed, also, that at one time his brother had visions of becoming a "Swiss bellringer." He said, incidentally, he and his wife still have Marian's violin in their home and probably would send it to Jim at some later date.

Danny, the other brother of Marian, likes to remember doing the Irish jig with her when we were kids, and Mrs. Lord also has many fond memories of her sister.

The Jordans visited Peoria several times, the last time 5 years ago.

One of their best friends in their younger days here was Paul Mehlenbeck, 62, of 220 North Western Avenue. He and Jordan were members of the old quartet which appeared at numerous functions in the pre-World War I days.

"Jim was our tenor, and a darned good one," Mehlenbeck recalls. Mehlenbeck, him-

self, gained a widespread reputation throughout the Midwest after the quartet broke up as the leader of his own orchestra for 19 years.

Mehlenbeck said his family and the Jordan family were very close and "I would class Jim and Marian as my very best friends; they were the kind of people one would certainly be proud to call his friends." The Mehlenbecks visited Jim and Marian at their beautiful Encino home a couple of years ago. Mehlenbeck said:

"Jim and Marian showed us a wonderful time and we were thrilled to see their estate. But they never changed; they were the same down-to-earth people that they were back in Peoria before they gained fame and fortune."

Customhouse 22 Miles From Harbor Is A Waste of Money

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. HOSMER. Mr. Speaker, construction of a customs headquaters for the twin ports of Los Angeles and Long Beach in the Los Angeles Civic Center 22 miles away is an unnecessary waste of taxpayers' money. The GSA proposes to construct the custom house as part of a new 8-story Federal office building costing in excess of $30 million. Two floors, or approximately 150,000 square feet are to be devoted to customs facilities. Customs' cost of the new building has been estimated variously by Federal sources as from $4 million to $6 million. More than 100,000 square feet of this customs space are to be devoted to appraiser's store. The appraiser's store is essentially warehousing where merchandise samples are brought, examined and stored until they are picked by the importer.

This customs appraiser's warehousing in a multistory civic center building will thus cost the Federal Government more than $30 a square foot to construct.

By contrast, good private warehousing, including air-conditioned offices can be and has been built in the harbor area for as little as $5 a square foot. Location of the custom house in the harbor would save the taxpayer construction costs of at least $2 million. This is not the only price the Government pays for its 22-mile bottleneck.

Examiners packages have to be transported from the piers to the appraiser's store in central Los Angeles. This cartage costs the Government between $40,000 and $50,000 a year. Each day, eight appraisers are sent out from Los Angeles to inspect merchandise too delicate or too bulky to truck to the appraiser's store for examination. Travel time, as stated by former Acting Collector of Customs D. B. Strubinger, is 1 hour each way. Thus the eight appraisers, just in traveling to and from the harbor, lose a total of 16 hours, or 2 man-days each day.

Every transportation delay or problem that costs the Government money in attempting to administer customs at the harbor from a headquarters 22 miles inland, also costs the man in the importing or exporting business money. Importers complain that customs clearances that are a matter of hours in other ports frequently become a matter of days in Los Angeles and Long Beach harbors. Shipments frequently cannot be forwarded until the examiner's packages are returned from the appraiser's store. Similarly, if a cargo is taken off a ship after the appraiser's truck has made its visit to that pier, the merchandise must sit on the pier until the truck comes again the next day. Importers complain that damage to merchandise seems to occur most frequently to those packages which are transported to Los Angeles for examination. They do not blame this on the customs, but on 22-mile transportation and repackaging problems. Sometimes, customs forms—called entries—get misplaced by the messenger who once a day shuttles papers back and forth between Los Angeles and the port. That results in extra delay until the mistake is corrected and the messenger makes his next run.

The Influence of Communism on Government Policy

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. HIESTAND. Mr. Speaker, here is the last in a series of articles by Robert B. Dresser concerning communism.

It appeared in Economic Council Paper, volume XVI, No. 4, April 1, 1961:

COMMUNISM AND THE HOUSE UN-AMERICAN ACTIVITIES COMMITTEE—THE INFLUENCE OF COMMUNISM ON GOVERNMENT POLICY

(By Robert B. Dresser)

Numerous investigations of communism and subversive activities have been made by committees of Congress and of the individual States during the past 40 or more years. A summary index of these investigations during the period from 1918 to 1956 has been printed by order of the U.S. Senate, dated July 23, 1956. The large number of such investigations is shown by the fact that the summary index contains 339 pages.

SPEECH OF CONGRESSMAN DIES, MARCH 1948

In March 1948 Congressman Martin Dies, Democrat, of Texas, a courageous and much respected Member of Congress, made a most startling and revealing speech before the Southern Gas Association, at Galveston, Tex., on Communist activities in the United States. Congressman Dies was the first chairman of the House Committee on Un-American Activities, originally known as the "Dies committee."

I quote from his speech as follows:

"Democracy and Christian civilization are more gravely menaced throughout the world today than ever before in history. At long last, many of our people realize that fact. Unfortunately, however, they realize it imperfectly and incompletely, and there are still millions of people in the United States who have no conception of the methods, tactics, and purposes of communism. All of us, however, must have some understanding of what has happened in the world about us.

* * * * *

"Only a few years ago, Russia was looked upon as a third-rate power. Today, all of us must concede that Russia is the most powerful country on earth. Now, how did that happen? I propose to answer that question.

* * * * *

"It all began in 1938. I was a member of the Immigration Committee and also a member of the Committee on Rules of the House of Representatives. I became intensely interested in Communist infiltration of labor unions, and in Government service. I decided the time was appropriate to investigate and expose Communists' activities in the United States. So I introduced a resolution and the Committee on Rules approved it and the House of Representatives, on May 26, 1938, established the committee.

"Immediately after the committee was established, I encountered strenuous opposition. When I went to the Committee on Accounts to secure an appropriation to finance the work of the committee, I found that the Democratic members were hostile to every suggestion that I made. They finally, upon instructions from the White House, reduced the requested budget from $100,000 to $25,000. I began the work with the paltry sum of $25,000.

"I telephoned the Attorney General of the United States and said, 'Mr. Attorney General, I want to secure the services of some competent and reliable investigators to assist me in this work.' He sent me two men. I received a telephone call, however, an anonymous call shortly before their arrival, telling me both men were members of the Communist Party. I never knew who gave me that valuable information, but I acted upon it.

"When they arrived, I began to question them. I put them through the third degree, in the presence of the entire committee, and finally they broke down and admitted that they were members of the Communist Party who worked for the Department of Justice.

* * * * *

"I announced through the press that I intended next morning to open hearings and give the American people the truth.

"I received a telephone call from President Roosevelt who asked me to come to the White House at 10 o'clock the next morning. I went to the White House. Senator Sheppard was there. Evidently the President thought Senator Sheppard might influence me. The President said to me, 'You know, Martin, I have been watching you for a long time. You have a promising future. You are an able speaker and a young man and I want vigorous, able, young men in the New Deal, and you can go a long way working with me.' He continued, 'You have got to be loyal to me. I can't work with men that I can't depend upon. You can't go through with this investigation.' And I said, 'Why can't I go through with it, Mr. President?' Of course, I was somewhat weakened, to tell the truth. It sounded awfully good to me, what he was telling me, and being human, I am not going to represent myself as any hero because I wasn't. I was just plain scared.

* * * * *

"Well, one thing led to another, and finally the President became somewhat impatient and angry with me, and he turned to Senator Sheppard and said, 'Senator, what are we going to do with Martin?' Senator Sheppard was a very genial, pleasant man and a good friend of mine. He said, 'I don't know. I knew his dad, and when one of these Dies makes up his mind to do something, he usually does it. I am afraid you are going to have trouble in persuading him not to do it.'

"Well, the interview lasted about 45 or 50 minutes, and finally, I looked at the watch and said, 'Mr. President, I have to go because the committee meets and I have to be there to open.'

* * * * *

"I recall for instance, that a man by the name of General Sevinsky, a very able young man who had served with Stalin for a long time, and had become disgusted with the brutality of the Communist practice and had fled to the United States. I discovered his whereabouts and went to see him. He told me an amazing story of what Stalin had told him a long time ago, about the plan to infiltrate the Balkan States, to build secret armies in every country, to spend millions of dollars for propaganda purposes. He told me the ultimate goal of Stalin was the conquest of Europe and then the conquest of the Americas.

"I said to him, 'Why don't you come to Washington and testify? The American people ought to have that information.' He said, 'Mr. Congressman, if I were to come to Washington and testify and if they discovered my identity, the OGPU which is now the NKVD, the secret army of the Politico Bureau, would assassinate me in 2 days.'

"I said, 'Surely they are not that powerful in the United States.' I was very skeptical about it. He said, 'Mr. Congressman, I was chief of the western division of the Soviet intelligence and I know that there isn't a country, there isn't an industry, there isn't a town of industrial importance that members of the OGPU are not there listening, getting and using information and transmitting it to the Soviet Union. They have their agents in the Embassies—even the Ambassadors do not know the members of the OGPU.'

"At any rate, I talked to him at some length and finally, upon the promise that I would protect him and conceal his identity, he agreed to testify.

"I called up the Secret Service and I said, 'I am undertaking a rather perilous thing. This man is fearful of his life.' I undertook to get a commitment from the Government that they would help me protect him, but the Government didn't want him to testify. He did testify. His name was not given then to the press. Within 2 weeks after his startling revelations, which predicted almost 100 percent accurately the progress the Kremlin has made within the last 2 years, within 2 weeks after his testimony, he was found shot in his hotel room in Washington, D.C., and not one arm was raised by the Federal Government to discover and apprehend the man or men responsible for his death.

"Another former agent of the Soviet Union, in New York, was persuaded to testify. Shortly after his testimony, he was found dead. They said it was a heart attack. I demanded another examination and discovered that he had been shot with a fine steel bullet through the eye which had entered his brain and brought about his death.

"Still another man who testified before our committee in Chicago was mysteriously run down by a hit-and-run driver.

"I say these things because my purpose is to show you upon this occasion what happened in the United States and which resulted in the sacrifice of the fruits of victory won by our boys on the battlefields. I am at a loss to understand why men in public affairs are not now clamoring for publication of the secret agreements made with Joseph Stalin by our Government. I have been amazed that people have received with such indifference and unconcern the startling revelation that all of the men who fought and died, died in vain because they were betrayed. And I shall show you here and now how they were betrayed.

* * * * *

"Yes, we continued, continued giving the American people the truth. Finally, we discovered that some 2,500 Communists, agents and stooges and servants and minions of a foreign dictator, were on the Government payroll, occupying in many instances key positions in the State Department, in the Justice Department, and in the Interior Department. So, I wrote to President Roosevelt and told him I wanted to see him about it, and he said, 'All right.'

"I went down to the White House. I said, 'Mr. President, we have got to do something about this. Here is a list of these people. We have raided the organization and we have their membership records. There can't be any doubt about it. If you understand the Communists as I understand them, you will know they are in the Government for one purpose and one purpose alone, and that is to steal the important Government secrets to transmit them to Moscow.'

"The President was furious. I was amazed at his anger. He said to me—he got to calling me Mr. Congressman—he had called me Martin before—he said, 'Mr. Congressman, you must see a bugaboo under every bed.' I said, 'No, I never look under the bed, Mr. President.' 'Well,' he said, 'I have never seen a man that had such ideas about this thing. There is nothing wrong with the Communists, some of the best friends I have got are Communists.' Mind you, that is a truthful account. He made that statement.

"I made that statement before the House soon after President Roosevelt made it and he did not deny it. Everything I tell you, I told to the Congress, and no one to this day has ever denied any statement I ever made.

* * * * *

"Well, the President refused to discharge the Communists and finally I went before the House and induced Congress to withhold appropriations to pay their salaries. The executive department then defied Congress and refused still to fire them. They were kept on the Government pay. Yes, they were on the Government payroll when we were working on the secret of the atomic bomb. And still there are people in America so dumb as to believe Stalin doesn't have the secret of the atomic bomb. How could he have kept from getting it with men in every department of the Government, influential men who wouldn't hesitate a moment to give that information to Stalin. They got it in Canada, didn't they, and Canada wasn't one-twentieth as well organized by Communists as the United States. We were taken in, lock, stock, and barrel, by Communist propaganda.

* * * * *

"I had a member of the Secret Service who worked in the White House give me reports every week on what happened in the White House. I knew that leading Communist agents had access to the White House, were going there and were using their influence to affect our domestic and foreign policy. Now, I know this is difficult for you to believe, but every bit of it is the truth. I am telling you these incidents so that you may have some faint idea of how thoroughly Stalin was able to dupe the United States of America.

* * * * *

"So, my fellow citizens, here was Moscow in full swing in the United States. They were influencing our domestic policy by preaching public ownership. They formed innumerable organizations which were lobbying actively in Washington for this purpose. Of course, they didn't say this was communism. They didn't say these organizations were controlled by Communists. These organizations were making inroads on the economic system of America, acquiring land, acquiring business, narrowing the field of competition, building up the monopoly of public power, which is as dangerous as monopoly in business, if not more dangerous. And Stalin was working on the foreign policy."

REPORT OF JENNER COMMITTEE, JULY 30, 1953

Probably the most comprehensive of the congressional investigations was one undertaken by the Internal Security Subcommittee of the Judiciary Committee of the U.S. Senate. The report of this committee was dated July 30, 1953. It is a most important and revealing document. The committee was composed of eight Senators—five Republicans and three Democrats—and the chairman was Senator William E. Jenner, Republican, of Indiana. The report was unanimous.

The conclusions of the Committee were stated in the report as follows:

"1. The Soviet international organization has carried on a successful and important penetration of the U.S. Government and this penetration has not been fully exposed.

"2. This penetration has extended from the lower ranks to top-level policy and operating positions in our Government.

"3. The agents of this penetration have operated in accordance with a distinct design fashioned by their Soviet superiors.

"4. Members of this conspiracy helped to get each other into Government, helped each other to rise in Government and protected each other from exposure.

"5. The general pattern of this penetration was first into agencies concerned with economic recovery, then to warmaking agencies, then to agencies concerned with foreign policy and postwar planning, but always moving to the focal point of national concern.

"6. In general, the Communists who infiltrated our Government worked behind the scenes—guiding research and preparing memorandums on which basic American policies were set, writing speeches for Cabinet officers, influencing congressional investigations, drafting laws, manipulating administrative reorganizations—always serving the interest of their Soviet superiors.

"7. Thousands of diplomatic, political, military, scientific, and economic secrets of the United States have been stolen by Soviet agents in our Government and other persons closely connected with the Communists.

"8. Despite the fact that the Federal Bureau of Investigation and other security agencies had reported extensive information about this Communist penetration, little was done by the executive branch to interrupt the Soviet operatives in their ascent in Government until congressional committees brought forth to public light the facts of the conspiracy.

"9. Powerful groups and individuals within the executive branch were at work obstructing and weakening the effort to eliminate Soviet agents from positions in Government.

"10. Members of this conspiracy repeatedly swore to oaths denying Communist Party membership when seeking appointments, transfers, and promotions: and these falsifications have, in virtually every case, gone unpunished.

"11. The control that the American Communications Association, a Communist directed union, maintains over communication lines vital to the national defense poses a threat to the security of this country.

"12. Policies and programs laid down by members of the Soviet conspiracy are still in effect within our Government and constitute a continuing hazard to our national security."

Other investigations by congressional committees have resulted in similar conclusions.

STATEMENT OF J. EDGAR HOOVER, MARCH 26, 1947

In further support of the House Committee on Un-American Activities, let me quote

from a statement by J. Edgar Hoover, Director of the FBI, before that committee on March 26, 1947:

"The aims and responsibilities of the House Committee on Un-American Activities and the Federal Bureau of Investigation are the same—the protection of the internal security of this Nation. The methods whereby this goal may be accomplished differ, however.

"I have always felt that the greatest contribution this committee could make is the public disclosure of the forces that menace America—Communist and Fascist. That is why the venom of the American Communist and the now defunct German-American Bund has been directed at this committee as it has also been directed at the Federal Bureau of Investigation. This committee renders a distinct service when it publicly reveals the diabolic machinations of sinister figures engaged in un-American activities."

CONCLUSION

1. Does it appear strange to anyone—

(a) That onr Government should permit an organized enemy to plot our destruction in our very midst?

(b) That we should continue to recognize the Government of the country that is directing such action?

(c) That we should continue our membership in an organization, the United Nations, which admits Russia and her satellite nations to membership, thereby providing a most effective means of infiltrating our country with agents engaged in spying and subversive activities?

There was a period from 1917 to 1933 when we refused to recognize the Russian Government. In November 1933, President Franklin D. Roosevelt, acting alone, without any supporting action on the part of Congress or the Senate, entered into an executive agreement with Maxim M. Litvinov, representing Russia, whereby American recognition was extended to Russia, thereby enabling Russia to bring into this country thousands of agents for the purposes of undermining our Government and our system of society.

2. Can there be any doubt about the importance of discovering and exposing to public view the scoundrels who are plotting our destruction?

3. If so, why in heaven's name does anyone wish to abolish the most effective agency we have for this purpose?

The Tangled Web

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. ALGER. Mr. Speaker, the Ways and Means Committee will soon deliberate over the changes in our tax law recommended in the President's tax message. We all know the tax burden is heavy and should be tightened; yet we continue to increase it, already this year by fuel, highway users', and social security tax increases.

Now come these new recommendations which seem only to scramble further an already complicated tax hierarchy of law. This study by the Wall Street Journal is a stimulating one in this connection from which we may all benefit.

THE TANGLED WEB

Ever since the publican appeared on the doorstep to exact the things that were Caesar's, we suppose men have attacked the prevailing tax system as inequitable.

President Kennedy is no exception. His long-range goal, he told Congress the other day, is a more equitable tax structure and a simpler tax law. That is surely a desirable destination, but it's hard to see how the first steps he now proposes lead there.

Take the urgent question of depreciation allowances on plant and machinery. Liberal depreciation gives foreigners a growing edge over American firms which must operate outmoded machinery because of outmoded depreciation rules. But instead of an across-the-board modernization of depreciation, Mr. Kennedy favors a selective and complicated formula that would affect industry most unequally.

Or consider the proposed remedies for tax inequities in the field of foreign investment. Within 2 years, oversea tax havens are to be wiped out. American firms operating foreign subsidiaries are to be stripped of tax deferral privileges and so compelled to repatriate profits that would otherwise be reinvested abroad.

But "tax havens" aren't bad everywhere, in the Kennedy view. In order to enhance the relative attraction of investment. Mr. Kennedy proposes continued tax deferral for firms operating in the developing economies—that is, the backward countries.

Is this a step toward tax equity? To penalize investment in Europe and reward it in India? In any case, is it realistic? Regardless of the special tax favor, capital isn't likely to rush into lands which offer little real incentive to foreign investment or which are openly hostile to it. And the whole approach of punishing private foreign investment is a dubious solution to the imbalance of U.S. international payments. Foreign investment, after all, is a means of oversea income to this country.

Tax reform of this sort deals with effects and leaves causes unconsidered. Capital seeking oversea havens and investment opportunity is, to a great extent, capital driven from these shores by domestic tax inequities and obstacles to profitable enterprise.

To be sure, the President is concerned with domestic tax inequity—as he sees it. In his opinion, the $50 tax credit on dividend income and the 4-percent credit above that sum are wholly inequitable. Because such credits are highly favorable to taxpayers in the upper income (above $10,000) group, he urges their elimination and imposition of a 20-percent withholding tax on all income from interest and dividends.

Dismissed in this soak-the-rich reasoning is the inequity of taxing dividends both as corporate and personal income. Cooperatives, ironically enough, are to have their income taxable either to themselves or to their patrons—not both.

Finally, the President's zeal for tax equity moves him to moral indignation over "expense account living." It is a matter of national concern, he declares, "affecting not only our public revenues, our sense of fairness, and our respect for the tax system, but our moral and business practices as well." Granted. Expense accounts are sometimes flagrantly abused. Having condemned and deplored, however, one should ask the pertinent question: Why?

Here again, misuse of expense accounts is an effect and not a cause. It is an attempt to thwart the arbitrary restrictions and oppressive levies of the Government. The fundamental immorality of the steeply progressive tax rates is reflected in the immoral means by which men try to evade them. And so long as men do not respect the tax "system," so long will they try to beat it.

Contradictory and inconsistent, confused and arbitrary, the tax laws are an open invitation to man's ingenuity. And nowhere is this made more plain than in the new inequities Mr. Kennedy would create in the name of stamping out inequity.

Perhaps the tax laws must be a tangled web of deception and inequity when called upon to yield upwards of some $80 billion in Federal revenue annually. The enormity of the Federal outlay is the clue to urgently needed reform. Only when extravagant Federal spending is sharply reduced will it be possible to reduce rates, and so achieve "a more equitable tax structure and a simpler tax law."

Aid to Latin America

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared on Sunday, April 23, 1961, in the Kansas City Kansan—one of the major metropolitan newspapers in midcontinent America—commenting upon the inter-American appropriation bill, 1961, which this House passed yesterday by an overwhelming margin. Included in the editorial is comment by President Deane W. Malott, of Cornell University, a Kansan and a personal friend of mine. The editorial and the comment speak for themselves, and as my vote yesterday indicates, I am in agreement. The article follows:

AID TO LATIN AMERICA

Although coldly received by Congress, the half-billion-dollar aid to Latin America bill was approved by the House Appropriations Committee. The Cuban situation no doubt has whipped up support for the big money bill, as proposed by President Kennedy. Cuba is not included; will get no money from this source. An additional $100 million is recommended for the aid of Chile, which was seriously hurt by earthquakes last year.

The appropriations probably will be made available speedily so that the United States will not be accused of faltering. Our commitments being what they are, there appears to be no course less than granting funds to our neighbors to the south, hopeful that our ministrations aren't too late.

A former Kansan, Deane W. Malott, now president of Cornell University, in an address in California more than a month ago made a strong plea for immediate aid, notwithstanding the great diversity of the 21 countries involved. Nowhere are our problems greater, our stakes so huge, he says.

"In this vast area that is patently within our zone of influence, that is allied with us in every physical way, we have frittered away a grand alliance and, with it, a glittering opportunity. It would have been tragic enough to have thrown this into the discard by intent; worse still, we have come close to letting it go by neglect, simply because we never understood Latin Americans nor they us. This has been an active force at work against us."

Continuing, Dr. Malott declares:

"This problem of militant communism already entrenched in the Western Hemis-

phere, probing, luring, vindictive and insidious, is more serious for the destiny of the United States than any other problem now before us. Unless America takes steps, and costly steps, through the expenditure of many a million of American dollars to improve the social, political and economic health and to help to correct the economic imbalance between the Northern and Southern Hemispheres, you can mark my words, all hope of economic and political solidarity will be gone forever and the Monroe Doctrine and all it has stood for for 150 years will be nothing but the dreams of a past history and a lost opportunity.

"Every knowledgeable person in the realm of Latin American affairs agrees that the only way to stave off the insidious infiltration of Communism is to help improve the all-around standards of these countries, and to help at once. This will be costly; it may be in part wasteful. To many of us further Federal expenditures are most unpalatable, but alternatives do not exist."

The United States-Soviet Space Race

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD an editorial from the magazine Business Week, issue of April 22, 1961, entitled "Can We Match the Soviets in Space?" The editorial takes a realistic look at the recent Soviet achievement in putting a man in space and concludes, very logically, that we are in a space race and that as a nation which in the past has thrived on competition we should take up the challenge.

The editorial is as follows:

CAN WE MATCH THE SOVIETS IN SPACE?

No one can accuse Washington of reacting hysterically to last week's news that Russia had put a man in space and returned him safely to earth. It took Moscow's historic announcement in stride—almost as if it considered defeat inevitable in our efforts to match the Russians in space spectaculars.

In a sense, this is no more than a realistic appraisal of the facts. For all the soundness of our space exploration program, there is little chance of outpacing the Russians for at least the next 3 to 4 years.

The reasons we are behind the Russians are clear enough. We started our space program later. And we still don't have rocket boosters sufficiently powerful to lob heavy payloads into outer space.

How we got into this situation is a matter of history dating back to decisions made shortly after World War II. At that time, we developed small, lightweight nuclear warheads that could be delivered on target by less powerful rockets. Russia followed a different course, largely out of expediency. Lagging in nuclear developments, it set out to design powerful rockets to launch missiles equipped with heavy, fairly crude warheads.

When Russia embarked on a space program, it took its military missiles off the shelf and used them to boost heavy satellites and man-in-space capsules into outer space. We entered the competition belatedly—after the jolt of sputnik. And when we did push forward with a space program in 1958, under the civilian-controlled National Aeronautics and Space Administration, we had to draw on our inventory of less powerful missiles.

Even so, we have scored significantly in space achievements. We can boast a clear lead over the Russians in gathering scientific data from communications, weather, and other types of satellites.

But we can't stage the impressive, prestige-building feats as the Russian can. And these have enormous impact on the minds of all people.

It's high time that this country took another look at its space program to see just where and how it can be speeded up. Big, new outlays of money won't make up for the original delays in starting and formulating our space program. But—in the opinion of some Government officials—small increases in the funds assigned to development of immensely powerful rockets and solid (as opposed to liquid) fuels would go a long way.

Beyond that, the administration should give the space program a sense of top-priority urgency rather than repeat, like a tired phonograph record, that our program is sound. While this country recognizes the scientific and commercial gains to be made in space, it grasps the psychological and political gains only after a sputnik or man-in-space success—and then soon forgets.

We are, like it or not, in competition with the Russians. Other peoples around the world see it that way. It is surely short-sighted for a country that has thrived in an atmosphere of competition to pretend that the space race does not exist.

"A" for Accomplishment

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. CHAMBERLAIN. Mr. Speaker, one of the brighter accomplishments that we as a nation have had in our relations with the rest of the world, and one unfortunately whose merit and value is usually relegated to the back pages of our newspapers because it does not represent hot news, has been the educational exchange programs developed under the Fulbright and Smith-Mundt Acts.

Although the precise impact of these programs is difficult to gage in terms of better understanding, we can be sure that we as a nation will reap the fruits of this broad educational experience for years to come. Under leave to extend my remarks, I wish to place in the RECORD an editorial, "'A' for Accomplishment," which appeared in the April 10 issue of the State Journal, Lansing, Mich., a newspaper which, in serving a community that includes one of the country's major universities, clearly understands and appreciates the purpose and importance of such programs.

The editorial follows:

"A" FOR ACCOMPLISHMENT

Back in the late 1940's the original Fulbright education exchange program was widely hailed as a promising step in improving international understanding.

Later this program was bound into the broader Smith-Mundt Act aimed at strengthening international cooperative relations. In this framework, this country's educational exchange has gone forward for more than a dozen years.

Now the original author, J. WILLIAM FULBRIGHT, chairman of the Senate Foreign Relations Committee, proposes to expand these activities and draw them together with other, scattered exchange programs in the cultural field. He also wants to wipe out certain legal irritants that now and then have tended to hamper the effort.

Despite handicaps, educational exchange, backbone of the program, seems to have produced solid results.

Altogether, under the Smith-Mundt and Fulbright Acts, some 60,000 U.S. and foreign students, teachers, professors, specialists, and leaders (such as foreign parliamentarians) have benefited from studies and research here and abroad.

Those who have thought of the program as almost exclusively a student affair may be surprised to learn that grants have gone to 10,700 foreign leaders and specialists, while 1,700 U.S. specialists have gone abroad. Benefits also have been extended to nearly 5,000 foreign teachers and educators, and some 3,000 U.S. teachers.

Overall, two foreigners come here for study for every one American who goes abroad.

The Fulbright part of the program (excluding leaders and specialists) has been substantially financed through use of foreign currency accruing to us from sales of surplus war property and farm products.

Dollar amounts involved have steadily mounted, however, and the annual appropriation by Congress today is in the range of $25 million.

Senator FULBRIGHT puts no new price tag on his plan to unify and enlarge the whole exchange effort. He stresses an intent to make the programs work more effectively, attract higher caliber students and others, and thus add vitally needed enrichment to the cultural and educational life of both this Nation and its foreign friends.

Few Americans are likely to question these purposes or doubt the clear evidence of accomplishment up to now.

Expansion of Our Nation's System of Community Junior Colleges Is Essential in Our Educational Framework

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. ULLMAN. Mr. Speaker, as one vitally concerned with the expansion of our Nation's system of community junior colleges and as the sponsor of H.R. 16 to provide Federal assistance to the States in carrying out such a program, I was very pleased to read the following letter to the editor by a student at such an institution. It appeared in a recent issue of the East Oregonian, edited by my friend, J. W. Forrester, Jr., of Pendleton, Oreg., and it sets forth clearly some of the reasons for regarding community colleges as an aspect of our educational framework which deserves special encouragement and assistance:

DEAR SIR: At the present time I am attending Columbia Basin Junior College at Pasco, Wash. This, of course, does not qualify me as an expert on the subject of community colleges, but I believe it does give

me a basis on which to make a few comments concerning your editorial of March 31 dealing with the need for such institutions in Oregon.

First I would like to say I agree with your views 100 percent. Community colleges should be encouraged, and they very definitely can fill a unique and necessary place in education beyond the high school level.

Community colleges generally serve a threefold purpose: they provide lower division, college courses, courses for occupational competence, and general education for individual improvement.

As you have pointed out these institutions can do something for those students who do not want to attend 4-year colleges, and also for students who need to get their feet wet before deciding to continue on a 4-year curriculum. In addition to helping the individual this also provides a service to the 4-year institutions. As you know at several such institutions, in this State, upper classmen are required to live off campus due to the great influx of freshmen, and in addition must often limit acceptance of applications. The community college would alleviate this situation by providing facilities for freshman and sophomore work. An example is the State of Washington where there are approximately 10,000 students enrolled in community colleges. In California one such college has an enrollment of 40,000.

It is commendable that some school districts in this State are operating vocational-tech schools. The results of such education are vital to our economy. As we know some persons are not interested, for various reasons, in 4 years of adavnced academic study, but because of neglect due to lack of foresight we have failed to develop the vocational ability of these people.

The above has been concerned mainly with the young people of the State, but let's not forget that through community colleges opportunities for individual improvement and cultural development are provided to the general public. This in itself brings a deeper awareness of the world we live in.

I am sure that in the future community colleges will become not just important, but essential. If Oregon does not begin now it may find itself in the position where it must deny to many the opportunities for advanced training.

I graduated from Umatilla High School in 1958 and am a resident of Oregon.

Sincerely,

JAMES D. MCMILLIN,
ASB President, Columbia Basin College.
College.

Communism: Menace to Freedom

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a forthright statement by J. Edgar Hoover, Director of the Federal Bureau of Investigation, on a subject matter in which every American should be vitally interested. This special feature appeared in Our Sunday Visitor, the National Catholic Action Weekly, published on April 30, 1961, at Huntington, Ind.:

COMMUNISM: MENACE TO FREEDOM

Seldom does a day pass in our generation when news media are able to report current events which do not relate the web of deceit and terror spun by Communist oppression somewhere in the world. It is a known fact that the ultimate goal of communism is domination of the world. The blight of communism has already engulfed one-fourth of the land surface of the world, and one-third of the peoples of the earth presently live under its yoke of slavery. Members of the Communist conspiracy are relentlessly seeking to undermine the governments of those countries which yet remain free.

In order properly to combat communism, we must know what it is. It is a materialistic concept of thought and action which demands the total subjugation of every individual to the will of the state. It is an atheistic theory of government fostering the ultimate abolition of religion.

The code of communism embodies an "end justifies the means" explanation to all actions—there is no consideration given to the ethical conduct or moral values as we know them. And finally, it demands the complete domination of the world, openly advocating, if necessary, the overthrow of non-Communist nations through the use of force and violence.

Tragically, many Americans do not realize the seriousness of the Communist menace. The immediate threat within the boundaries of our Nation is the Communist Party, U.S.A., an integral part of the international Communist conspiracy. Its members are schooled in the use of the weapons of deceit and duplicity to enable them to fully exploit any situation which might arise. Anything which promotes communism and weakens its opponents is moral under the Communist code. There is no limitation.

We are all aware of the Communist influence exerted in the May 1960 riots in San Francisco, Calif., when a group of ideological innocents—most of them students—became the weapons used by an arm of the brutal Communist dictatorship in an action designed to disrupt the activities of a congressional committee. This was only one example of how a few Communist agitators, using mob psychology, were able to turn peaceful demonstrations into an ugly instrument furthering their cause. Their success in this one instance should be a clear warning to the citizens of our Nation that their paramount goal is the subversion of democracy.

To control such tactics, we must fully understand the true nature of the conspiracy and possess the ability to separate truth from propaganda. Exposure of the tactics of communisnm is a major weapon in destroying its ideological appeal. We must remember that the Communist Party line will coincide again and again with the view of many non-Communists on many specific issues. We must be eternally wary, therefore, not to place an indiscriminate label of "Communist" on those innocent individuals whose opinions on a particular question may parallel the announced official Communist position. This is one of their prime tactics since the creation of disunity arms them with a dangerous weapon.

Our answer to the problem confronting us is not limited simply to enlightening ourselves to the true nature and tactics of communism. We can actively participate in the fight by other means as well. Initially, we must know our Nation—its history, traditions, and heritage. The early settlers surmounted unbelievable odds in carving out this great American Republic which we know today. Much can be learned from the story of their raw courage and determination.

Thereafter, we should keep abreast of the events occurring throughout the world. Nothing is more discouraging to the subversive element than an enlightened citizen who actively participates in his government. Exercise your right to vote by electing representatives of integrity, and actively participate in civic programs promoting social improvement in your community.

Undoubtedly the most inspiring sight to the serpent of subversion is the dark cloud of public apathy which has engulfed so many of our citizens. Through indifference, they are unable to tell right from wrong and, what is worse, their lethargy weakens the moral armor which is so essential in repelling the false truths of communism. It is our responsibility to combat this disease wherever we see it. Indifference can be fatal when the survival of our Nation is at stake.

Lastly, we must attack bigotry and prejudice wherever they appear. We cannot allow them to exist since justice for all is the bulwark of freedom. Our cherished beliefs in the dignity and freedom of man are beacons of hope to the oppressed throughout the world. Let us rise to the challenge and protect our heritage of freedom.

General Electric

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. MULTER. Mr. Speaker, the following article is the second in a series by Mr. T. K. Quinn. The first appeared in the RECORD on March 23. Because I feel that Mr. Quinn's articles are important in understanding the recent affair that resulted in the conviction of some of our top business people on price-fixing charges I commend to the attention of our colleagues Mr. Quinn's discussion, which appeared in the March 20 issue of the New Republic:

GENERAL ELECTRIC

(By T. K. Quinn)

(A former General Electric vice president who resigned "because of just such practices as those disclosed in the Philadelphia price collusion case" describes who runs the company.)

There is to be an election to determine whether the present chief officials of the General Electric Co. are to keep their jobs, despite the judgment in the Philadelphia price collusion case. Theoretically, the stockholders will make the decision. Will they, in fact? Not at all. It just doesn't work out that way. Stock ownership in General Electric, as in other giant corporations, is fragmentized and widely scattered. Most of the stockholders, in number, may not vote at all. The big blocks of General Electric stock that always make the annual meetings appear so farcical are held in huge private, insurance or pension trust funds, and to a lesser extent, in mutual funds. Who will vote this deciding stock interest on judgment day? Why, the trustees of these funds, of course. Who are they? Well, about 10 New York banks are the trustees for about three-fourths of it. They will make the decision.

If you want a diagramatic sketch of just how the machinery will work, here is a probable one: Mr. Sidney Weinberg, who sponsored Mr. R. J. Cordiner for his official position with General Electric, must first make up his mind on the relative chances. Sidney won't be too deeply concerned over the ethical questions involved. He's a smart, personally likeable, go-getting, dollar-directed, little man. President of the Wall Street banking firm of Goldman Sachs, he is also a director of General Electric, General

Foods Corp., Continental Can Co., Cluett Peabody & Co., General Cigar Co., B. F. Goodrich Co., Ford Motor Co., McKesson & Robbins, Inc., National Dairy Products Co., etc.

Mr. Weinberg will probably go to work on his banking friends in an effort to convince them that Mr. Cordiner was right when he said, "Nobody has been damaged," just before he announced elaborate plans to prevent future abuses, in a way that implied he knew nothing of the crimes for which several GE executives were jailed and fined. Some of the more responsible and public-spirited banking trustees will protest that the moral standing of the whole business community, and therefore the country, is at stake. They will agree with Judge Ganey that "General Electric and the others made a mockery of our free enterprise protestations," and provided opponents with another argument for more governmental controls and public representation in these quasi-public institutions.

The answer will be halfhearted, "Yes, but Chairman Cordiner discharged a number of the convicted GE executives, and he's trying, belatedly, to straighten things out." Chairman Cordiner did discharge several who were not close to him, and he accepted under fire, the resignation of the president, a Cordiner protege. But Vice President Edward Ginn was not dismissed. He was the big man in the affair, at $125,000 a year, who was in line for the presidency and close to Cordiner. After his jail sentence Mr. Ginn will resume his old position. He's too close to the throne to be cast off. Only the designation of a new chief officer in place of Cordiner would wipe the slate clean and eliminate Mr. Ginn, unless he will accept a payoff, which isn't likely. These things will not escape intelligent people, and General Electric will continue under its present cloud.

At this point the discussion will go to another level. Mr. Weinberg will probably say, "We're all in this together and must hang together or we'll hang separately"—an argument that often wins. He may not fail to remind the bankers of other confidential deals. There is always strong pressure to sit tight.

On the one side it will be contended that the dismissal of Mr. Cordiner would be an admission of guilt, which although believed by Judge Ganey to be true, and supported by the long record of General Electric antitrust violations through the years, was not technically proved in Philadelphia. On the other side, the argument will be advanced that people see through technicalities, that public opinion has been aroused and there is too much at stake to try to defend Cordiner. And what of the example which has been set and its effect on the hundreds of thousands of young men who aspire to be business executives?

In the end the deciding issue is not likely to be responsibility or morality. It will, in all probability, be decided like the collusive prices—a judgment based upon what the traffic will bear. Just how much will public opinion accept? A handful of trustees who altogether own less than 1 percent of the outstanding General Electric stock will decide. They are the ones who are really on trial.

Peace Corps—What It Takes

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 12, 1961

Mr. REUSS. Mr. Speaker, James M. Johnston, religious editor of the Milwaukee Sentinel, has a very perceptive article on the Peace Corps in his recent regular column, "Chapter and Verse." In the thought that Members may wish to send this splendid article to young people who write concerning the Peace Corps, I include it herewith:

PEACE CORPS—WHAT IT TAKES

Their imaginations stirred by the prospect of oversea travel and working in some distant spot on the globe, church youths of high school age are showing avid interest in the Peace Corps, which hopes to begin recruiting among the 1961 college graduating classes, though Congress hasn't yet provided the funds.

One Milwaukeean exceptionally well advised about the corps is Robert Tehan Jr., home secretary to Representative REUSS, who is one of the authors of the plan. Tehan enlightened some youths and their elders this week in a U.N. seminar at Wesley Methodist Church.

For one thing, he made clear that service in the corps is for men and women, not boys and girls. Sure, they must be young (though 30 isn't too old) but they must be mature, as well.

Added Tehan:

"They must be thoroughly American and stand for all that American stands for. Imagine how terrible it would be to send a segregationist to Africa." From what Tehan said, however, it would seem the Peace Corpsmen would be expected to show their Americanism by actions, in helpful, friendly instruction, rather than by their words.

Teaching will be their primary responsibility. They will teach literacy, agriculture, health, sanitation, etc., for those seem to be the areas of greatest demand.

THEY'RE WILLING TO LEARN

Incidentally, missionaries report most inhabitants of these so called backward areas show a surprising mental capacity. Most are curious and willing to learn, and even the most illiterate tribesmen, missionaries say, can't be tripped up in arithmetic. They may be victims of a cultural lag, but certainly not stupidity.

Tehan said the cream of embryo doctors, medical technicians and teachers in the 1961 college classes will be screened for the first projects, which will consist of literacy and public health. Large scale engineering projects like dams, roads and powerplants will necessarily come later.

The first candidates will receive cram courses in the language, customs, economics and geography of the areas in which they'll serve, probably something like the training given young missionaries.

YOU CAN BE FIRED

Suppose the screening fails to show gaps of immaturity in the corpsman's character. Suppose he turns out to be a tippler, emotionally unstable, incorrigible, or unfit in other ways. Out he'll go, before he damages the entire project, his coworkers and the name of the United States. For that reason, the corpsmen will not be tied to a long contract.

"It's best if the corpsman is single," said Tehan. "The Government does not intend to provide transportation for a spouse, unless he or she, too, is a corpsman."

What about pay? That will be based not upon what the corpsman with his college degrees is worth, but on a minimum decent standard of living. Because he must be a helpful teacher and friend to the people he is serving, the United States cannot afford to let an economic gulf stand between teacher and pupil. Upon separation from the service, however, the corpsman will receive an allowance.

No Peace Corps will be sent to any country that doesn't want it. That may be difficult to determine, for the Government can frankly expect many an anti-American campaign against a project if it seems effective and steals thunder from the Communist promises. That, said Tehan, is a risk that we must take.

The early stages of the Peace Corps will be financed by mutual security funds, inasmuch as it hasn't yet passed Congress. Senators and Representatives are likely to take a long, long look at the program before they stamp their approval.

It would seem from this talk that much of the success of the corps depends upon the quality of its first class that goes out. The service is doomed unless it gets the best among young men and women. Somehow the interviewers must measure maturity, the "emotional quotient" along with the intelligence quotient.

So, son, if you're looking at the Peace Corps to satisfy your desire for travel and adventure, you'd be happier in other fields. The corps will require more than imagination and a flair for excitement.

But if you're really grown up, if your goal is service rather than adventure, if you can learn to like and help people of a vastly different background from your own, and get more of a thrill out of their progress than your own bank account or comfort—then, perhaps, the Peace Corps is for you.

A Test of Steadiness

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very thoughtful article and one that is worthy of the serious thinking of the Members of Congress. The article appeared in the Christian Science Monitor, issue of April 25, 1961:

A TEST OF STEADINESS

We are confident that even a few days' time will place last week's Cuban events in better focus. President Kennedy has outlined a firm but steady course and we trust his unusual consultations with three top Republicans have confirmed him in it. For many excited and baffled people are talking of desperate measures.

The American people have had a triple shock. They were disappointed by the failure of the Cuban exile landings. But they were even more jolted by reports that their own Government, through the Central Intelligence Agency, was involved in a miserably managed fiasco. They also are dismayed to find some of their friends unable to distinguish between this operation and aggression.

Even in this mood we do not believe they will listen to urgent voices saying, "Since we have the penalty, why not take the prize? Since we are blamed for aggression, why not send in the marines?"

As the dust from the Las Villas beaches and hysterical headlines settles, answers to these questions will appear. The President has rightly reminded Americans that the use of their Armed Forces in an attack on Cuba would violate both their traditions and their treaty commitments.

Ever since Japan invaded Manchuria in 1931 a good part of world opinion has been trying to define and combat aggression. In the United Nations and elsewhere the nearest approach to agreement holds that invasion or attack by the armed forces of one nation against another is aggression. This was the

basis of the U.N. and the U.S. position on Korea, Hungary, and Suez. It has helped marshal moral sanctions against naked force.

For the United States to abandon this position now would be a disservice to itself and to the cause of peace.

In the U.N. debate it became clear that many people do recognize a difference between aggression and aid given to rebel exiles—regrettable as that may appear even to many Americans. In Latin America there is—despite outcries about intervention—an awareness that the marines have not landed.

If they had, the picture would be very different. Probably Senor Castro could not long withstand the full power of the United States—provided it was ruthlessly used. But at what cost? America would be remembered as the invader, not the nation which gave Cuba its independence. And the whole of Latin America would be embittered—ripe for a whole flock of Soviet-supported Castros. And what could the United States answer in the U.N.—except to try to dodge as the Soviet still does over Hungary?

The struggle in Cuba has only begun. Senor Castro is already following the Batista course, using terror and oppression which will turn the people against him. The exiles will at least infiltrate and sabotage. Economic problems harass his regime. Should he attempt to use force against the United States or any other nations, then greater force can be used against him.

Mr. Kennedy has indicated force could be a last resort. It is true that Communist infiltration and controls blur the usual tests of aggression. But there are better answers than American aggression. If Washington hopes to deal with communism anywhere by ideological and economic rather than military means, it should be able to do so in its own neighborhood.

Actually the main concern should be with Latin America. If the United States helps to promote the reforms which will forestall Castroism there, the dictator in Cuba should wither on the vine.

The Effects of Imports on the U.S. Economy With Special Reference to the 23d Congressional District of Illinois

SPEECH

OF

HON. GEORGE E. SHIPLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. SHIPLEY. Mr. Speaker, perhaps more than ever before, grave concern is being expressed throughout the land over the serious impact of imports on many American industries. In the decade from 1950 to 1960 merchandise imports have increased by more than 65 percent. While this increase during the decade has not been as large as the increase in exports or in gross national product, it has to a considerable extent been concentrated among certain products, with serious consequences to producers of the same or similar products here at home. I should like to refer specifically to four industries that are of particular importance to the people in my congressional district and that have been seriously affected by imports from abroad: leather footwear, petroleum, shirts, and machinery. I should like to deal with each of them in turn.

LEATHER FOOTWEAR

More than 2,500 people in my district are employed directly in the manufacture of leather footwear. This is an industry which has felt the full brunt of import competition. Imports of leather footwear increased from 22,278,000 pair a year in 1959 to 26,990,000 pair in 1960, an increase of 20 percent in a single year. The imports of nonrubber footwear have grown from slightly more than 1 percent of domestic porduction in 1954 to about 4.4 percent in 1960. The number of pairs of women's, misses', children's, and infants' leather shoes imported in 1959 was over 12 times as large as in 1954 and about 2½ times as large as in 1957, while for men's and boys' shoes the comparable figures were 8 times and 2 times. Detailed statistics for 1960 are not yet available in the Library of Congress. It should be noted however that U.S. production of shoes declined by 5.5 percent from 1959 to 1960, and that our exports dropped by 9 percent during the same period.

In December 1959 the Department of Commerce reported that it saw no indication of any halt in the increase of shoe imports; in fact, it stated:

> There is good reason to believe that shoe imports during 1960 will be 10 percent higher than in 1959.

About double this increase actually occurred. Standards and Poors Industry Surveys estimates that imports could reach 37 million pairs in 1961.

PETROLEUM

Petroleum imports, too, have made serious inroads on our local oil industry. My district has a good share of Illinois' 92 establishments engaged in the processing of petroleum and coal products.

Today the United States has an excess producing capacity of 3 million barrels daily, equal to about 40 percent of actual production. On the other hand, imports of petroleum and petroleum products increased from $829 million in 1954 to a peak of $1,636 million in 1958; in 1959 they totaled $1,529 million. In the years 1954–58 domestic production of crude petroleum rose only 4 percent.

Our oil industry has been in poor economic health since 1957. Between 1946 and 1957 demand increased by about 5 percent per year; in 1958 there was no increase. Since that time demand has risen about 3 percent per annum. Over the next decade demand will probably rise by only about 3 to 3½ percent per year, which means adjustment to a slower increase by our oil industry and an oversupply—with consequent lowered prices—until this adjustment is completed. It is estimated that oil demand during 1961 will increase only from 2 to 2.5 percent. Surpluses have also resulted from extensive drilling programs, from attempting to achieve self-sufficiency because of unsettled world conditions and because refiners tend to produce more oil than is necessary in order that they might reduce unit costs of production.

How can an industry which is operating below capacity but still with surplus production compete with a flood of imports? Naturally costs of production are higher when excess capacity is unused. Large surpluses abroad indicate that excessive imports might cause a break in U.S. crude oil prices. Estimates for 1961 production show little alleviation for this situation. It is true that the Government has an oil import control program, but there have been several increases in the quotas since they were set. On March 10, 1961, oil import quotas were increased to 461,427 barrels a day for the year beginning April 1, an increase of about 10 percent over the then current rate.

In my opinion, Alvin C. Hope, president of the Independent Petroleum Association, best pictured the situation when he pointed out that the price of crude oil had dropped to near the 1953 level while the price of finished steel has gone up to 37 percent since 1953; wages have increased 30 percent; oil field machinery has risen 26 percent and oil well casings costs have jumped 41 percent. Small wonder that oil finding activity has shown a marked decline.

Naturally this affects Illinois' oil industry. Our petroleum and coal products industry employs 16,625 persons. While it is true that we export petroleum products, fuels, lubricating oils, and so forth, we must import crude oils for the production of our exports. Our residual fuel oil must compete with that "dumped" on the America market at low prices. So long as high taxes, high wages and high costs of materials exist, our domestic industry is faced with an almost insuperable problem in competing with imports much of which are virtually dumped in our markets. Ever since the Suez crisis there has been a glut of crude oil which has naturally been accompanied with rapidly increasing supplies of residual fuel oil which has resulted in low prices and has not only affected our domestic oil industry unfavorably but has also had an injurious effect on our domestic coal industry.

SHIRT MANUFACTURES

Approximately 5,775 persons in Illinois apparel and related products industry worked for firms engaged in the manufacture of men's and boys' furnishings in 1956. Imports into the United States of men's and boys' shirts and nightwear totaled $6.9 million in 1956. In 1960 imports of men's and boys' shirts totaled $14.4 million. In 1959 the executive board of the Amalgamated Clothing Workers of America reported that imports of shirts had increased eightfold since 1954 most of the increase coming from the Far East. They continued to increase in 1960, although the rate of increase declined. This may sound like a small amount, but from March to September 1959 imports of cotton shirts from Hong Kong alone increased sixfold. With Japan we have set a quota on imports of cotton shirts at a level above 1 million dozen a year. The segment of Hong Kong producers agreeable to a quota have demanded a figure higher than that of Japan. Present estimates indicate that the ratio of imports from Japan and Hong Kong equals 12 percent of U.S. production. Fears have been expressed that Japanese and Hong

Kong quotas will be ineffective because other low-cost areas such as Formosa, Portugal, and Spain will immediately increase their exports to us. In 1958, 1.5 million dozen shirts were imported; the total for 1959 jumped to 2.41 million dozen.

Apparently we need a worldwide quota or some equalization of cost legislation to permit our shirt producers to compete with these low-cost foreign producers. The Clothing Workers' report I have cited above warned that many thousands of jobs in the textile industry are in jeopardy and I believe it.

MACHINERY

Traditionally, the United States is a heavy exporter of machinery. However, in recent years imports have been growing. In the single year between 1958 and 1959 they rose from $472 million to $656 million or by 39 percent. In the same period exports remained almost stable. One source has estimated that 35 to 40 percent of U.S. machine tool purchases come from abroad. Much of the increase is the result of more modern, lower cost foreign industries rebuilt since World War II, many of them with the financial and technical aid of the United States. One source estimates the cost of foreign machine tools at about 60 percent of American-made tools. Not only do their products come in as imports and compete with domestic industries but they also compete with our exporters in foreign markets. Temporarily, in 1960, our export business increased substantially because we were able to make much quicker delivery than our competitors. Small wonder, because we have been operating at only 60 percent of capacity with a small backlog of orders.

According to a study by the Department of Commerce, Illinois' share of U.S. exports of nonelectrical machinery is one-seventh of the national total. About 11 percent of the Nation's electrical machinery output is located in Illinois. Her machinery industry thus is affected by increased imports, such as 1959 witnessed in industrial, office and printing machinery and in electrical apparatus imports. Furthermore, our machinery industry is experiencing more and more difficulty in competing in world markets.

One pertinent example is the recent award of a contract to Mitsubishi Shoji Kaisha, Ltd., of Japan for a number of towing locomotives to be used in the Panama Canal Zone. It is true that the Japanese bid was well under the lowest American bid, that of the Plymouth, Ohio, Locomotive Works. Perhaps this is good business, but I quarrel with the idea that the Japanese were awarded the contract through fair and free competition. Our laws impose burdensome production costs upon business which, together with our high wages, makes the term "free and fair competition" a mockery.

Dun's Review has recently completed a survey of the effects of imports on our economy. Both the members of their president's panel—representing 175 of the Nation's leading companies—and a random selection of 300 small manufacturers expect more serious competition from foreign imports in the next 5 years.

Most of the panel members and the smaller companies polled believe that lower labor costs, less overhead, foreign government export subsidies, and low ocean freight rates account for the difference in costs. Many trace it primarily to lower wage costs although there is diversity of opinion here. I am sorry to say that close to 40 percent of the presidents of large corporations on the panel reported that they plan to launch more foreign operations: licensing arrangements, new plants and expanded facilities abroad, joint operations with oversea manufacturers, and purchase of foreign concerns. I do not know how many of these are located in Illinois nor how many—if any—are in my district, but I do know that this means the export of jobs from our borders and import competition. The smaller businesses must rely on increased efficiency, new products, automation, and greater production. The increase in imports of finished manufactures, which in 1950 constituted about 18 percent of total consumption imports, accounted for about 34 percent of import transactions in 1959. Together with semimanufactures they accounted for over half of U.S. imports by value. This is a grave portent for my congressional district and for the State of Illinois.

For all these reasons, I feel that concrete action should be taken immediately to alleviate the conditions in the boot and shoe industry, petroleum industry, the shirt industry, and the machinery industry.

Mass Transit Is the Lifeline of Business

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 30, 1961

Mr. TOLL. Mr. Speaker, the subject of mass transportation is of vital concern to our large cities and growing communities. A most interesting discussion of this problem is contained in an article written by E. H. Wolson, a consultant to management in mass passenger transportation and head of Brown Survey Corp., of Philadelphia, which has rendered service to mass passenger carriers, I am informed, for more than 70 years. The author's article, which is entitled "Mass Transit Is the Lifeline of Business," will be worthwhile reading, I believe, for all Members of Congress.

MASS TRANSIT IS THE LIFELINE OF BUSINESS

(By E. H. Wolson)

Recent developments in Congress resulting from hearings on Senator WILLIAMS of New Jersey's urban transportation bill bring into national focus the need of long range projected planning for help for all public passenger carriers. In most areas of local commuter service there have been many evidences that private money to modernize and expand any system is unavailable. American business has been built on the basis of private enterprise, operated with reasonable return to those making the capital investment. Investors in transportation companies' stocks, in too many instances, have received little or no dividends. With this record before the public, it is generally almost impossible to secure private capital except at very high interest rates. Taking into consideration the high subsidies for railroads and other forms of transportation for a relatively few passengers the local privately owned carriers are being more than short changed with the very limited tax relief, granted in some areas but not as a national pattern.

Transit is a service available to all the public. The general public is not fully aware of the importance of transit, taking for granted that it is an expected service, the lack of which is brought sharply into focus by a sudden work stoppage or a public announcement by management of the abandonment of service. Yet the same consideration that is given to utilities such as the gas, electric, and telephone companies, with standby charges for services whether used or not, has never been available to transit. Since none of these forms of revenue have been provided for even though the services rendered contribute greatly to land development, increased income and tax values, certainly special consideration should be given and is more than merited. There is a reluctance by passenger carriers to file for increased fare rates because the public instinctively militantly opposes the granting of these increased rates. In order to supply the expanded service that is constantly being demanded, a service charge for the industry would eliminate many of these problems and sources of public opposition and disapproval.

Mass transit is the business lifeline carrying the bulk of the employed population to their places of occupation, schoolchildren to their schools, and the shopper to the shopping center. The living pattern in the last decade has changed drastically with shorter working hours. TV, with its impact, has changed the evening hours travel pattern. The offpeak and weekend transit use has dropped sharply. Local transit and commuter lines are burdened with heavy peak-hour loads and uneconomical operation of off-peak-hour runs. Most transit companies have peak-to-base ratios of from 3:1 to 5:1. This required heavy costs for equipment for peak use of 2 to 3 hours on working days. To create a more even traffic flow that would utilize equipment and manpower more equitably it would seem that the travel pattern can be changed further with the cooperation and interest of industry and civic governing bodies. One suggestion would be to change the opening hour of business offices to provide for spreading the peak hours of travel, such as having opening hours of business offices at 9:45 a.m. with a proportionate earlier closing, schools to open at 9:30 a.m., and retail establishments to open at 10 a.m. This would create a more even transit flow pattern contributing much needed relief in spreading heavy peaks to an even loading flow. Similar changes in closing hours should also be considered. As with many proposed changes, there will be areas of complaint. The pilot experiment in the intensely concentrated insurance area in New York City on early office opening now in operation is reported to be a satisfactory experience, with employees welcoming the earlier closing hour. In the well remembered gas shortage era during World War II, staggered working hours were proven workable and practical in industry and retail establishments. Schools can be brought into this program. Mercantile establishments would, without a doubt, welcome the change giving them the opportunity to open and close later to accommodate office workers

who would then be free to shop before the stores close.

The Williams bill has many recommendations for financing transit's rehabilitation and growth. This is an urgent program that should be implemented without long delays. Numerous engineering studies, made in every area of the country, are available. These are based on sound engineering plans that could be the basis for making funds available to operators at low interest rates.

The building of highways and freeways are important parts of the national program but can never serve alone the hearts of the metropolitan area by bringing in more cars to add to the center city traffic flow strangulation. Reserve lanes for mass transportation, with planned parking lots would also help give the service flexibility by making it more attractive. The speed of movement of the public carrier in reserved lanes would attract riders and will eliminate the need of much of the private vehicle flow into the center.

Every type of conveyance: Private automobile, bus, high speed transit and commuter railroad has its place in its sphere in the movement of people. The mass carrier has lost most of its appeal because of the lack of speed and in many instances the use of old equipment. The actual back bone of the public transportation system is the service that is rendered by the local carriers, whether operating under private ownership or an authority, that serve the centers of population.

Local carriers have been saddled with the ills of the past, namely: carrying students at highly reduced rates during peak hours with no subsidy from school boards to compensate for the differential in fares. School transportation is a sorely needed public service that cannot be denied, but the cost should be included in the overall school tax from which the carrier should be compensated for the service.

Transit management, in all its phases, have blueprinted modern plans for the expansion of lines and speed of service, realizing fully that they are public utilities. None of these plans can be successfully executed without public aid. This does not mean conversion to public ownership. On the whole private operation, as such, compared to public operation has proven to be more efficient and dollar conscious utilizing its equipment and manpower to the highest potential.

Transit aid is vital in every area. It is important that the operators, whether public or private, tell their story fully through the press and every other public medium, with particular emphasis on simplification of the message so that it can be clearly understood by the public and lawmaking bodies. There is no time like the present to again make mass passenger transit the lifeline of business.

Columbus Couldn't Get a Visa

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. LINDSAY. Mr. Speaker, under unanimous consent, I include in the RECORD an article written by Senator WARREN G. MAGNUSON, of Washington, which appeared in the New York Times magazine on April 16. Senator MAGNUSON'S article, entitled "Columbus Couldn't Get a Visa," is an incisive and perceptive analysis of the problems encountered by foreign visitors to the United States and of the need for legislative remedy.

Senator MAGNUSON has made a major contribution toward the encouragement of a greatly increased flow of foreign visitors to the United States by piloting legislation for the establishment of a National Travel Service both last year and this year. No one can speak with greater authority on the question of foreign tourist travel to the United States than the Senator from Washington:

COLUMBUS COULDN'T GET A VISA—AND THEREIN LIES ONE OF THE CHIEF OBSTACLES TO MAKING THE UNITED STATES A WORLD TOURIST CENTER

(By Senator WARREN G. MAGNUSON, of Washington, chairman of the Interstate and Foreign Commerce Committee)

Because he was a recent indigent, insane (by contemporary standards) and born in Italy—a country whose immigration quota is heavily oversubscribed—Christopher Columbus could never have qualified for a U.S. tourist visa. Nevertheless, he was the first foreign visitor to these shores.

Since then, foreign visitors have made a remarkably profound contribution to our national advancement. Many of them have become effective ambassadors for us in their lands. Today, with tourist travel becoming an evermore potent economic force, the flow of tourists to this country has taken on new significance. Yet, with a thousand and one reasons for promoting the United States as a host nation, our Government has, until recently, displayed a towering indifference to its guests. Unlike almost every other country, we do nothing to atract the international traveler. There has been little or no official leadership in improving the quality, and minimizing the cost, of tourist facilities here. Our visa laws have had the effect of actually discouraging travel to this country. As a result, most of our foreign visitors today are, in reality, simply border-crosses, from Canada and Mexico.

Hundreds of thousands of newly prosperous Europeans, as well as our many South American and trans-Pacific friends, have yet to discover America as an attractive and rewarding vacation land. It is a sobernig truth that far more Europeans visit the Soviet Union every year than visit the United States. Of more immediate consequence is the fact that for every visitor from overseas (not counting those from Canada and Mexico), there are three or four American tourists who vacation abroad.

The current movement for a national tourist promotion program actually began when we in Congress awoke to the economic implications of this last statistic. Eighteen months ago the Committee on Interstate and Foreign Commerce undertook a special study of America's declining position in international trade and its effect upon our continuing balance of payments deficits. Realizing that the strength of our export trade is the foundation upon which this country's economic leadership in the free world must be based, our committee concentrated its study on discovering where our sales abroad had faltered and why.

We proceeded down the list, commodity by commodity, and found part of the reason for our payments deficit in 1959 was the fact that the United States was buying more iron and steel, more passenger cars, more textile products from abroad than it sold abroad. Yet our net loss of dollars through the exchange of such products turned out to account for only a small fraction of the dramatically adverse tilt in the payments scale. Then we made the discovery that the greatest single imbalance arose not from an exchange of goods but from an exchange of people.

One needn't be an expert in international trade to know that a dollar spent for the purchase of foreign goods and services represents, in terms of outflow of currency, an import, whether it is spent in the United States or elsewhere. By the same token, an export occurs whenever and wherever a foreigner purchases American goods and services.

In 1960, Americans spent approximately $2.2 billion on travel abroad (not including payments to American carriers), making foreign tourism by far our largest single import. In contrast to this, the combined expenditures of foreigners who visited the United States—including residents of Canada and Mexico—were only one-half as much, placing tourism well down on the list of American exports.

As a result, the current imbalance between our tourist expenditures and tourist receipts is over $1.1 billion—nearly one-third of the entire balance of payments deficit.

Economic self-interest demands positive measures to help close this "travel gap." A prudent sense of international public relations dictates that this should be accomplished by increasing the number of foreigners who visit here—not, obviously, by abridging or inhibiting our own citizens' right to journey abroad.

Contrary to the situation which existed only a few years ago, rising prosperity in many foreign countries has put money in the pockets of would-be travelers, particularly in Western Europe. Travel restrictions imposed on them by their governments have been lifted or greatly relaxed. The potential market for travel to this country, therefore, is growing daily.

It was with such thoughts in mind that several of my Senate colleagues joined with me last year in offering legislation to rescue the foreign visitor from official oblivion by initiating this country's first real travel promotion and facilitation program. Adopted unanimously by the Senate, the bill was not acted upon by the House. A similar measure, Senate bill 610, was again enacted by the upper Chamber in February. At present, it is being considered by the House Committee on Interstate and Foreign Commerce.

In his recent message to the Congress on the problem of the outflow of gold, President Kennedy called for immediate steps to plan a program based upon the major provisions of this proposed legislation. The President has also written to me personally in support of the measure which, he agrees, "will open up a long-neglected channel for improving international understanding, as well as help our payments problem."

I am now hopeful that our long endeavors to bring this program into being will soon begin to bear fruit. We must not assume, however, that the job of attracting and accommodating a greater number of foreign visitors can be done overnight, merely by the passage of this needed legislation. Whether the United States becomes an international tourist center depends squarely upon the continuing efforts and awareness of the American Government, the American travel industry, and the American people.

Why do we lag so far behind other nations in the field of foreign travel and what obstacles must be overcome? Contrary to a great deal of supposedly expert, and usually conflicting, opinion, I am convinced that there is no single answer to this question. In my judgment there are at least three major problem areas where positive action is required. It is these three areas toward which we have directed the pending legislation.

First is our total lack of promotional activity abroad. The United States is probably the only organized society on the face of the globe which does not purposefully advertise and promote its scenic, cultural, and recrea-

tional attractions. From Swaziland to Switzerland to Sweden, governments have long considered the attraction of outside visitors an important and legitimate function.

If the governments themselves did not so consider it, it was only because they could rely on a chamber of commerce which did. One need only stroll down Fifth Avenue, Piccadilly or the Via Veneto and observe the colorful and inviting window fronts of tourist bureaus representing countries in every corner of the world. In some capitals a nation's national travel office is often a bigger operation than the same country's local Embassy.

If a U.S. travel office is conspicuous by its absence in London, Rome, or Paris, the loss extends far beyond a question of prestige. Among other activities, these bureaus serve as points of distribution for local travel agents of pamphlets, guidebooks, and other promotional materials published by private and public tourist organizations in the home country.

Walk into any European travel agency and you will in all probability be able to find out the fee on the ski tow at Kitzbuehel, the price of a meal in some obscure Czechoslovak village, and everything you need to know for a trip to Uzbekistan. But chances are that the man behind the counter will not be able to tell you the train fare from New York to Chicago and has probably never even heard of Colorado Springs.

But this is only part of the promotional void.

A few pages away from the one you are now reading you will probably find at least one attractive advertisement beckoning you to some foreign land, inserted by the government-supported tourist office of that country. Nearly $10 million worth of such advertising is placed in American newspapers and magazines every year. Needless to say, the foreign press has yet to see its first U.S.-sponsored full-color spread portraying the gaiety of Mardi Gras in New Orleans, the excitement of an Iowa county fair, or the majestic beauty of Mount Rainier.

If there is any doubt travel advertising and related promotional activities produce results, all we need do is to look again at our own international travel statistics. Since 1953, the volume of foreign travel by own own citizens has exactly doubled. Our population has certainly not doubled in that period; our economy has not grown by anywhere near 100 percent, nor have the levels of disposable personal income. An increase of this order is obviously not the result of any lowering in travel costs.

There is, in short, very little that could explain such a phenomenal burgeoning of American travel abroad except the skillful and vigorous efforts of foreign governments and various international carriers, many of which are owned by these governments.

Aside from stimulating a broader long-term flow of visitors to this country, the program of oversea offices and paid advertising called for in Senate bill 610 would be invaluable in publicizing our two upcoming World's Fairs. The Federal Government has devoted many millions of dollars toward making the New York fair and Seattle's "Century 21" exposition truly international showcases. A failure to back up this investment with suitable promotion abroad would be short-sighted, to say the very least.

The second major factor inhibiting an inflow of tourists to the United States boils down to a question of geography—the thousands of miles that separate us from our principal markets for new tourists, plus the fact that the United States is itself a mighty big country. New jet aircraft have fortunately overcome these disadvantages so far as travel time is concerned. But the problem of travel costs remains as big a hurdle as ever.

If we are ever to coax our foreign friends into seeing San Francisco as well as the east coast, or to lure them to Yelowstone Park as well as to Miami Beach, something will have to be done to keep transportation fares, both to and within the United States, as low as possible.

One suggestion has been made which deserves particularly careful study: the adoption of a flat-rate, limited-period pass by domestic carriers for exclusive use by bona fide foreign tourists. Travel-conscious European nations have long offered this money-saving convenience to American guests in the form of the famous "Eurail pass."

So far as international fares are concerned, significant reductions are bound to come as the volume of two-way traffic increases. Developing a larger flow of foreign visitors will thus serve to benefit the pocketbooks of American travelers as well.

Finally, we come to the much-discussed problem of our visa requirements, the third principal stumbling block in the way of launching a realistic travel program and the best example of why I have called the foreign visitor today's "forgotten man." As a matter of fact, the law presumes he does not even exist.

Section 214(b) of the Immigration and Nationality Act states that "Every alien shall be presumed to be an immigrant unless he establishes * * * that he is entitled to nonimmigrant status * * *." If the potential visitor happens to be young and single, or from a country whose U.S. immigration quota is oversubscribed, the task of convincing our officials that he (or she) is a bona fide nonimmigrant may be anything but easy. But even if he succeeds, he must then go on to pass all of the tests of admissibility—legal requirements which were designed with the immigrant, not the visitor, in mind.

How does this work out in practice?

If a Danish citizen, for example, wants to visit his brother in Minnesota, he must first travel to our embassy in Copenhagen, present his passport, submit photographs, show evidence of his visitor status, fill in the necessary forms and then proceed to satisfy our consul that he is not feebleminded, a drug addict, a polygamist, a criminal, a leper, a professional beggar, or a person liable to become a public charge or who has any immoral purpose in coming to the United States.

There are 31 separate categories of excludable aliens and the whole procedure may take anywhere from a day to a month.

Finally, with visa in hand, our Danish friend catches his plane, feeling like a Brooklyn schoolboy who has just wangled a ticket to the world series—until he arrives in New York. Then he discovers that this hard-won piece of paper is nothing more than a permit to apply for entry into the United States.

He must now take on a completely new branch of our bureaucracy, the Immigration and Nationalization Service, and satisfy them, too, of his honesty, morality, and financial resources. If he is lucky, the inspector stamps his passport "Admitted" and the ordeal is over.

But suppose insead that the brother in Minnesota decides on a trip to Denmark. The contrast is almost unbelievable. Never once does he see the inside of an embassy or consulate. The first Danish official he encounters is at the airport in Copenhagen, a pleasant fellow who stamps his passport "Welcome to Denmark" (in English, mind you), hands him an envelope wtih a souvenir medallion and a letter of greeting, and sends him on his way.

It is a demonstrable fact that the average Dane, Swiss, Bolivian, or Thai today finds it much easier to enter Communist Russia than to get within sight of the Statue of Liberty. For all our talk about the Iron Curtain, the unpleasant truth is that when it comes to international pleasure travel our own curtain of red tape can be far harder to penetrate than the Iron.

The Department of State is to be commended for its recent abolition of the so-called "long form" for visitors, thus clearing away some of this red tape. But that is only one step in the right direction. Further administrative improvements to expedite visa issuance can profitably be made, including fuller staffing of our consulates abroad.

It is probably also time to take a long new look at the law itself. I am constantly struck by the brevity of our statute on passport eligibility for Americans, which is only a few lines long, compared with the page after page of legal provisions applicable to friendly tourists. Surely it is just as damaging to the national interest (if not more so) to have American indigents, prostitutes, and so forth, displaying our flag abroad as it is to allow such persons into this country temporarily from abroad.

Yet we have never felt the necessity for placing endless restrictions on American tourists, and rightly so. Why, then, should our foreign visitors present such a different problem? Legislation looking toward a simplification of the law respecting foreign visitors has recently been introduced by two of my colleagues, Senator JACOB JAVITS and Representative JOHN LINDSAY, both of New York. These measures deserve our careful consideration.

Sensible administration of revised visa laws, plus reasonably lower transport costs, plus an adequate program of travel promotion abroad should result in a significantly increased stream of foreign visitors. But will we be prepared to receive them? More important than any other aspect of our national travel program is the care and attention we give to this question.

Unless we can gear our own tourist industry—an industry which in a way includes almost all of us—to an accommodation of the special requirements of new foreign guests, it might be better not to extend the invitation.

This means more and better packaged tours, solicitation and accommodation of specialized groups of travelers, an end to the notorious rudeness of baggage handlers and other service personnel at ports of entry, sight-seeing trips built around the needs and interests of foreign guests, civic and private hospitality clubs to meet and socialize with oversea travelers, more language proficiency on the part of sight-seeing, hotel and other key industry employees, and many, many other things. Above all, it means a general recognition of the importance of assuring that each traveler from abroad returns to his home with a higher opinion of America, her ideals, her institutions and her people.

The less than $5 million travel program which the President and we in the Senate have recommended may never completely close the travel gap. But it still adds up to a mighty inexpensive welcome mat for a Nation which prides itself on being a good neighbor.

A CIA Briefing by the New York Times

EXTENSION OF REMARKS
OF
HON. WILLIAM FITTS RYAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. RYAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of April 22, 1961, by the highly respected Latin American correspondent for the Times, Mr. Tad Szulc,

writing from Miami. It would seem that the only way Members of this body can get information on the activities of the virtually autonomous Central Intelligence Agency is from the press. Mr. Szulc has done a fine job with his informal and unclassified briefing on the Cuban situation, but it is hardly a substitute for regular reports to the Congress on the activities of the CIA. I only hope, Mr. Speaker, that recent events in Cuba will accelerate action on the proposals to require the intelligence agencies of the Government to report directly to authorized committees or a joint committee of the Congress.

The article follows:

CIA Is Accused by Bitter Rebels—Cubans Assert U.S. Agency Failed To Coordinate Drive and Ignored Warnings

(By Tad Szulc)

Miami, April 21.—Bitter Cuban rebels here were analyzing today the causes of the failure of their attack this week on the regime of Premier Fidel Castro.

With their political leadership battered and divided, and with the underground organizations in Cuba badly mauled, deep resentment is mounting against the United States, and especially the Central Intelligence Agency, over what is widely regarded here as monumental mismanagement.

As has been an open secret in Florida and Central America for months, the Central Intelligence Agency planned, coordinated and directed the operations that ended in the defeat on a beachhead in southern Cuba Wednesday.

Among the immediate questions arising here is what is to be done with more than 4,000 men of the rebel army who were not committed in the first attack and are now scattered about the Caribbean area. They were described as demoralized and disoriented.

Meanwhile, the recruiting centers have closed in Miami and officers and men, proclaiming their bitterness, are beginning to trickle back from the camps. There was a danger simply evaporate.

Cuban sentiment here is that it is up to the United States to handle the situation in Cuba directly.

A second question is whether and how the underground organizations can be rebuilt in the face of mass arrests all over Cuba and of the break in communications between them and the rebel centers in Florida.

From reports and opinions gathered among Cubans involved in this week's events, and from information available beforehand but kept confidential, the picture that emerges is one of military, political, intelligence and security failures.

The principal charge leveled at the Central Intelligence Agency by Cubans from numerous groups is that it precipitated the attack without adequate coordination with the underground and despite urgent warnings in recent weeks against such an attempt.

EXCLUSION IS CHARGED

The agency is also blamed for excluding from the operations several rebel groups—which include a number of experienced guerrilla officers—because of alleged favoritism for other factions for political reasons.

With such a lark of coordination, many rebels claim, the Central Intelligence Agency could not have expected to see the fulfillment of its intelligence estimates that a major internal uprising would follow the first landing. The entire operation was based on the assumption of a popular explosion against Premier Castro as soon as the landing materialized.

But, the rebels charge, the proper climate for such an uprising was not allowed to be established because of the Central Intelligence Agency's haste to produce the attack, using groups it particularly favored. These groups were components of the Democratic Revolutionary Front which belongs to the Cuban Revolutionary Council, the top rebel command, and the principal among them was the Movement of Revolutionary Recovery led by Capt. Manuel Artime, a 29-year-old officer.

According to almost unanimous reports, Captain Artime was the favorite of the Central Intelligence Agency and of the agent directing the field operation.

POLITICAL ISSUE BLAMED

According to these sources, Captain Artime and his group received most of the military equipment and financial assistance, including funds for the families of men in military camps.

The Peoples Revolutionary Movement, an organization that is directed by Manuel Ray, Dr. Castro's one-time Minister of Public Works, and that operated the most effective underground network in Cuba, is reported to have received no financial support and almost no equipment.

The Central Intelligence Agency, it was reported, began to deliver sabotage materiel to the Ray movement only in the last few weeks, when it joined with the Democratic Front to form the Revolutionary Council.

The alleged reason for the disapproval of the movement was its belief that Senor Ray's and his associates' political ideas were too radical.

The Central Intelligence Agency, it was reported, believed the Artime movement to be more conservative.

SPLINTER GROUPS FORMED

For personal and political reasons, a series of splinter groups developed within the movement led by Captain Artime. Late last year, he was beaten up in a Miami street by a group of his former associates.

Numerous officers, including several cofounders of the Movement of Revolutionary Recovery who has been Premier Castro's guerrilla captains in Sierre Maestra, split away. They attempted to form "free-lance" guerrilla organizations, hoping for U.S. aid in transporting them back to Cuba and equipping them with weapons and sabotage materiel.

What follows is a summary of the history of the Cuban rebel operation from the beginning of training in Guatemala, as described by qualified sources:

The rebel troops began to be trained in Guatemala under Central Intelligence Agency supervision about last May. The ranks of the revolutionary army swelled as the months went by, reaching strength in recent weeks as a mobilization order was issued by the Revolutionary Council.

The training took place in seven camps in the vicinity of the Pacific coast of Guatemala. The camps were at La Suiza, Helvetia, Trax, Champerico, Retalhuleau, San José Buenavisea, and Sayaxche.

A shrimp factory was established at Champerico to serve as a cover. Most of the other camps were made to look like ranches.

AIR BASE ESTABLISHED

An air base with a 4,500-foot landing strip was established at Retalbuleu, and the rebel air force was equipped with C–54 and C–46 transports, B–26 bombers and P–51 fighters, the latter obsolescent types.

The Cuban pilots were trained by at least seven U.S. pilots belonging to a F–104 jet fighter group.

When a group of foreign newsmen went to Retalbuleu in January to see for themselves that reports of a Cuban military buildup there were untrue, the pilots were ordered to hide in a shack.

The aircraft were used late last year and early this year to drop supplies for the anti-Castro guerrillas in the Escambray Mountains.

To facilitate operations, Cuban airmen painted Guatemalan and Cuban Air Force insignia on their planes or left them unmarked, depending on the missions.

When two B–26 bombers attacked air bases in Cuba last Saturday and one of the pilots who landed in Miami described himself as a defector from the Cuban Air Force, his picture, published in local newspapers, was promptly identified here as that of a Lieutenant Zuniga, a flyer from the Guatemalan camp. He has vanished.

The account given by qualified sources continued:

The bulk of the troops were trained for a conventional army, using tanks, mortars and bazookas. A U.S. Army colonel commanded the training.

Special guerrilla forces were trained at one or two of the camps, and some of the Cuban officers were sent to the U.S. Army's Jungle Warfare School in Panama.

A Filipino guerrilla specialist was in charge of some of the training. He was assisted by five or six instructors who are believed to be Slavs, perhaps Ukrainians, and who were assisted by interpreters.

However, Cuban officers complained that they were not receiving proper instruction and that the rocky terrain of western Guatemala taught no useful lessons for guerrilla action in the forest-covered mountains of Cuba.

In time, political problems and friction began to develop in the camps. Captain Artime was the center of many of the arguments as nervousness rose.

When the revolutionary council ordered a purge of men who were once supporters of the former dictator, Fulgencio Batista, Central Intelligence Agency agents were reported to be reluctant to give up trained personnel to satisfy political requirements.

Charges were constantly heard in Miami that Batista supporters held high positions in the camps. Ten days before the landings a gun battle was reported to have occurred in one of them.

CASTRO AGENTS INFORMED

That a landing was imminent this month was known to almost all Cubans in this area. This included at least 100 known Castro intelligence agents. Although local law enforcement agencies even had their photographs, Federal authorities made no visible effort to remove them.

As troops from Guatemala and from smaller camps in Louisiana and Florida began to get moved to jumpoff points in the Caribbean in the first week in April, the rebel leaders sounded urgent warnings against an invasion attempt.

They argued forcefully with Central Intelligence Agency agents and other U.S. authorities that any substantial landing should be preceded by a softening-up campaign of sabotage.

They also were insistent that a strategy of small multiple landings be used instead of a single thrust.

Early last week, however, the preparations for a landing went into high gear just as a major sabotage campaign began in Cuba. These last-minutes preparations were kept a secret from the underground organizations not favored by the Central Intelligence Agency.

AGENT HANDLED START

A top underground leader who went to New York last week for conferences with the Revolutionary Council was not informed of the plans. As he prepared to return to Cuba with a load of special explosives for the stepped-up sabotage campaign, a friend telephoned him that an invasion had begun.

In New York, the members of the Revolutionary Council, meeting at the Hotel Lexington, were spirited out through the backdoor by 10 Central Intelligence Agency agents Sunday afternoon and taken to secret spots to await the moment to land on the beachhead.

This report appears to contradict allegations made later that the landing Monday was merely intended as a supply operation.

There are reasons to believe that several of the council's members were not aware at that moment of what precisely was about to occur. Senor Ray was reported to be among those kept in the dark.

The invading force was reported to have jumped off, among other points, from the islands of Great Corn and Little Corn, off the coast of Nicaragua.

The islands belong to Nicaragua, but they have been 99-year leased to the United States since 1916.

As the rebels sailed toward the beachhead, several hundred trained anti-Castro fighters were being held back in Miami for no apparent reason.

They included about 150 men of the People's Revolutionary Movement, and about 400 men of another group.

For reasons that were not made clear, perhaps as many as 100 officers and men from the Guatemalan camps, including airmen, were brought to Miami several weeks ago and told to remain with friends, or at motels, each receiving $50 weekly.

One of the important criticisms of the landing operation was that it was not accompanied by broadcasts into Cuba urging the people to rise, and informing them who was leading the attack. This, it was stressed, left Cubans in a state of uncertainty and confusion, compounded by broadcasts by Radio Swan, a Central Intelligence Agency-operated propaganda station on Swan Island, claiming victories and uprisings that were not actually happening.

"People could not take chances on exposing themselves not knowing what was happening," a rebel leader here said.

Peace Corps

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 12, 1961

Mr. REUSS. Mr. Speaker, I wish to include in the RECORD a sermon on the Peace Corps which the Reverend Ensworth Reisner preached in the First Methodist Church of Milwaukee. His thesis is that the 10th chapter of Matthew might well be a statement of the basic principles to guide the establishment of the Peace Corps:

PEACE CORPS

("If the house be worthy let your peace come upon it."—Matthew 10: 13.)

Behold a strange and wonderful thing has come about. A nation is about to send forth disciples who shall have power against unclean spirits, and to heal sickness, and to eliminate all manner of disease. These shall go forth and say to all the world, "The Kingdom of peace is at hand." These disciples have freely received the benefits of a great nation. They are to freely give. They are to have no salary, yet each will receive his meat for his work. Where there is worthiness and need in a house their peace is to rest upon it. And where there is no need, they are to depart. They are to be sent forth as sheep in the midst of wolves and must be wise as serpents yet harmless as doves. They should beware of men for they will receive much opposition. But they should not be anxious as to how they should respond or speak, for the responsibility is not theirs, it is the Spirit of God which speaks through them. Behold a nation is preparing to send forth disciples. And it is being called the Peace Corps.

The idea of the Peace Corps is rooted in a great American tradition which considers Americans to be "citizens of the world." This phrase was pronounced by such persons as Thomas Paine and John Paul Jones, the great naval hero of the Revolutionary War. Following the War of Independence, Jones extended his efforts to many other nations, including Russia, because he felt that freedom, independence and peace as pronounced in the American Declaration of Independence should be the heritage of people everywhere. As the mid-19th century approached, the burgeoning vitality of America again sent forth disciples thru many missionary societies and charged them with the responsibility of casting out unclean spirits and of healing the disease of peoples from the Hawaiian Islands to China, the Middle East, and Africa. These missionaries not only carried with them the religious sentiments of their particular churches but even more, preached and taught the Gospel of equal opportunity, of freedom, and of man's concern for man.

At the turn of the 20th century this same spirit of discipleship sent forth men and women not only as representatives of churches, but as disciples of the gospel of peace to proclaim the kingdom of good will among men. There were a thousand forms starting with the student volunteer movement under John R. Mott at the turn of the century, to world neighbors which sought to bring agricultural and village industry activities to depressed peoples. This wave of world conquest for peace and righteousness translated itself into the 14 points of Woodrow Wilson, the Charter of the United Nations, foreign aid, and the efforts of hundreds of private foundations. And now the Peace Corps.

The cynic can look at all these ventures and point to their failures, the sometimes attendant hypocrisy, the waste and presumptuousness of many efforts. But history will testify to the eventual effectiveness of these myriad approaches to discipleship.

Typical of these movements emanating from America are the origins of the Peace Corps idea. The seeds of the Peace Corps were planted by Christian pacifists who in the twenties and thirties contended that the only way to stop the waging of war was to wage peace. I attended a meeting of the Friends Service Committee, that group of Quakers and similarly minded persons, who planned work camps where young people would give their time living on a subsistence level to meet the needs of depressed peoples, especially in the slums of American cities. One of the first successful ventures in work camps was held in Dearborn, Mich., as the result of the efforts of the Reverend Mr. Owen Geer, a soldier in World War I who dedicated his life to pacifism in rejection of the failure of war to bring peace and democracy. Work camps developed all over America and extended to foreign shores. Dedicated young people donated everything from months to years in these projects.

Then came World War II. At the outset the pacifists devoted themselves to those wounded by war. They volunteered to enter war torn areas to care for the victims of evil. Their heroic efforts and sacrifice were so significant that the military authorities were afraid to permit this kind of work to become an alternative to military service. So their efforts were sharply curtailed during most of the war. However, the civilian public service camps and projects could not be completely throttled. These groups became human guinea pigs, worked in mental hospitals until the whole care for mental disease was transformed in America. One of the effects was a profound influence upon the thinking of General Hershey, who was and has remained the head of the Selective Service. General Hershey has been one of the main advocates of the Peace Corps.

Another root of this idea came as the result of the beginning of the World Neighbors organization when Mr. Con Dale, of Waukesha, and I prepared a thorough study which was presented to the International Administrations office in Washington, in which we proposed that the Government finance Peace Corps activity under the direction of voluntary services organizations; such as, World Neighbors and others. Some years ago I discussed this matter with Jim Hagerty, President Eisenhower's press secretary, and it received very favorable response from the President. However, neither World Neighbors nor other voluntary organizations were in a position to give the kind of direction which was needed.

At a meeting of the Milwaukee County Council of Churches Committee on International Relations at Plymouth Congregational Church, I proposed the idea to Congressman HENRY REUSS, who is a fraternity brother and longtime friend. Again I reiterated the idea one day when visiting him in Washington. Apparently the force of the suggestion was revivified in his mind while visiting some of our oversea establishments, and he tells in an article in the Christian Science Monitor of this latter incident. Senator HUMPHREY, through his activity in the old Epworth League of the Methodist Church, which has fostered some workcamps and had advocated young people working for peace in such projects, was also greatly influenced by these ideas. I called upon him in Washington some years ago with the suggestion of a Peace Corps. Undoubtedly there have been many others furthering this idea. Henry Hitt Crane of Detroit sent a letter to the President suggesting such activity to be conducted by our military personnel in oversea bases. Some of the military people have already endeavored, on an individual basis and even a regimental basis, to conduct projects in such places as Korea and elsewhere. Responding to these thoughts, part of the great American tradition, HENRY REUSS proposed a study bill in Congress. President Kennedy took it up in his campaign. And now there has been a response such as rarely before received.

There are two reasons for this response. First, it is part of the great American tradition, and second, it is in partial fulfillment of the directions of Jesus given to His disciples at the outset of His ministry. What Jesus taught was the fulfillment of the deepest instincts of human nature.

With the paraphrasing of a few words, the 10th chapter of Matthew might well be a statement of the basic principles to guide the establishment of the Peace Corps. Matthew first states the principles of His ministry in the Sermon on the Mount. None of these principles advocated the establishment of a church or other ecclesiastical organization. They were the universal statement of basic truths in man's relationship to man which would result in peace and good will among men. They applied to everyone, regardless of his religion, his race or his color. Then Jesus proceeded to demonstrate to His disciples the way in which He would put into effect this program of peace and good will among men. "Jesus went about all the cities and villages teaching in their synagogues and preaching the Gospel of the Kingdom and healing every sickness and every disease among the people."

But one man couldn't do it all, so He called His intimate group of 12 disciples and "gave them power against unclean spirits to cast them out and to heal all manner of sickness and all manner of disease." If this isn't the primary function of any Peace Corps, I don't know what is. Unclean spirits obviously include all those things which are against the social betterment of any people. All manner of sickness certainly would include sanitation, public health, as well as private concern for the physical disabilities arising from malnutrition, bacilli, and virii. Disease could certainly include all those condtions immediately affecting the freedom and well-being of human individuals. To attack these things is to attack some of the underlying causes of economic and social disease which creates bitterness and antagonism and leads to war.

Jesus directed the disciples to go to the lost sheep of the House of Israel first and carry out a program of education about the possibilities of peace and good will—or in the words of the Bible, "Preach the Kingdom of Heaven, saying it is at hand." Obviously the Peace Corps cannot eliminate all sickness, social and economic conditions, but they can give the people who are most susceptible, hope that such conditions of peace and good will are at hand. More than anything else the lost sheep of the earth need to have a realistic hope that peace and prosperity and opportunity are at hand, and this preaching or educational program can best be accomplished by the Peace Corps, by working for the betterment of the sick, the outcast, and those possessed of deplorable conditions.

Next Jesus gave the disciples the basic attitude they should assume. They were not to approach it from a "better than thou" point of view. They were rather paying off a debt they owed. "Freely ye have received, freely give." This is the reason why they were to receive no salary—neither the disciples nor the Peace Corpsmen. Neither silver nor gold nor brass will be provided for the purses. However, they will obtain subsistence commensurate with that received by other workmen. As Jesus stated it, "The workman is worthy of his meat"—but you're not to receive any profits. You've already received the profit by the many things that you have received. Americans who go into the Peace Corps have received their education, their training, their advantages in a prosperous and free Nation. They certainly dare not enter the Peace Corps for the sake of exploitation or profit.

The next thing Jesus made clear was that the disciples were to go where there was responsiveness and real need. "Wherever you go," He said, "Inquire who is worthy and abide there if the house be worthy let your peace come upon it, but if it be not worthy let your peace return to you and shake off the dust off your feet." It should be the policy of the Peace Corps to go to those people who are receptive and who are in need, who will receive education, assistance and sanitation, agriculture, household industries, and other self-help projects. There must be a conscious need upon the part of those who are to be assisted, for to force help upon an individual is to destroy the effectiveness of that help, just as it is to give help to those who don't really need it. Those who reject the gestures of good will and peace should be left alone—"shake off the dust of your feet," for if they persist in their refusal as Jesus said, "it shall be more tolerable for the land of Sodom and Gomorrah in that day of judgment than for that city."

Next Jesus advised His disciples, "I send you forth as sheep in the midst of wolves. Be yet therefore wise as serpents and harmless as doves." There is no question but what the Peace Corps will be subjected to all manner of difficulties. It will have no authority except what it can win for itself. The Marines cannot stand back of it, and those who feed upon poverty, disease, will be bitter in their efforts to discredit those who are in the Peace Corps. Among some of the depressed people moneylenders get up to as high as 50 and 75 percent interest on short-term loans, and it may be to the benefit of exploited people to learn the advantages of a credit union.

Such will cause all kinds of scheming on the part of moneylenders. Sanitation projects may interfere with factories that pollute streams. And those who work for peace and good will among men have to expect a snake in the grass and fight him with harmless shrewdness, wise as a serpent but harmless as the dove. It may even mean that those who work for the Peace Corps will have trumped up charges leveled against them. They may be brought before governors and kings and accused of all sorts of things because they are Americans. But they should not be anxious if they follow the Spirit of God in their helpfulness and good will. For their testimony for the peace of the world is not merely their own responsibility but that of God who works through them. As Jesus stated it, "It is not ye that speak but the Spirit of your Father which speaketh in you."

I have no illusions about the Peace Corps alone bringing in the Kingdom of God any more than has the missionary movement brought heaven on earth. And certainly the Peace Corps has already been subjected to disillusioning doubts cast for political purposes. We can expect the Communists to try to invade it and discredit it. Perhaps more dangerous is the possibility that some of its leaders may try to substitute educational qualifications for the Spirit of God in the training program. It may hagridden with bureaucracy as is the tendency in all Government agencies. It should be expected that some Peace Corpsmen may prove traitors, but then one of the disciples of Jesus was a traitor, also.

These failures, these criticisms, these nibblings of the mice of cynicism are not too important. What is important is that we as a people and as individuals under God fulfill our heritage and carry on the great mission of the Kingdom of God. If we do this in our generation we will hand on the torch of peace and good will among men under the Spirit of God as a heritage for all the world.

Polio Vaccines

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1961

Mr. CONTE. Mr. Speaker, with the approach of the polio season, it is of special interest to all Americans that this once deadly disease is almost conquered. Emphasis is now being placed on a variety of vaccines to do the job with greater ease and convenience. Progress in a field such as this is often of necessity slow to insure maximum safety. The following article, I feel, gives excellent expression and clarification to the progress in the battle against polio.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, "What's Delaying the New Polio Vaccine?" from the April 1961 issue of Redbook magazine:

WHAT'S DELAYING THE NEW POLIO VACCINE?
(By Ruth and Edward Brecher)

In Cincinnati last spring 180,000 children swallowed a few drops apiece of the new Sabin "oral" polio vaccine. Throughout the rest of the year only one case of paralytic polio was reported in the city. That one case occurred in an unvaccinated man who had recently returned to Cincinnati from New York City and was probably infected before his return. In Hungary too, according to Dr. Albert S. Sabin, of the University of Cincinnati College of Medicine, who developed the Sabin vaccine, not a single case of paralytic polio was reported throughout that country during the July-August-September 1960 polio season following a nationwide oral-vaccine campaign.

Similar dramatic results have been reported with two other new oral polio vaccines—one developed by Dr. Hilary Koprowski, of the Wistar Institute in Philadelphia, and the other by Dr. Herald Cox, of Lederle Laboratories. Yet none of these vaccines is available now for general use in the United States—nor will they be available in time to prevent paralysis during the coming polio season. Why the delay? Equally important, what should young adults do right now, while waiting for an oral vaccine, to protect themselves and their children from paralytic polio this year? When Redbook sent us to find out we encountered several ugly accusations. The Russian newspaper Izvestia, for example, alleges that American vaccine manufacturers are delaying the new oral vaccines because they are making so much money on the Salk polio vaccine. Dr. Koprowski charges that his vaccine is being discriminated against. Dr. Sabin insists that polio could have been wiped out in the United States altogether this year if the U.S. Government, the National Foundation (March of Dimes) and vaccine manufacturers had pushed ahead at top speed with his vaccine last winter. In contrast to such accusations, here are the blunt facts as we have rounded them up from both official and well-informed unofficial sources. Here too is a sober, scientific evaluation of how the new oral polio vaccines are likely to affect you and your family. The familiar Salk vaccine is composed of polio viruses which have been killed by formaldehyde. It is one of the safest and most effective vaccines ever produced against any disease. It erects a barrier of antibodies in your bloodstream so that even though polio viruses subsequently enter your intestinal tract and multiply there, they cannot get past the antibody barrier to reach your nervous system and cause paralysis.

The new oral vaccines contain living viruses which have been weakened or tamed. These tamed viruses infect your intestinal tract after you swallow them and multiply there, creating an immunity not only to paralytic polio but also to further intestinal infections caused by polio viruses. If enough people achieve this intestinal type of immunity, it is expected, polio viruses will no longer be passed back and forth from person to person within a vaccinated community. The disease may thus be eradicated altogether.

Who is responsible for holding back the new live vaccines?

First, strike off the National Foundation from the list of suspected culprits. It has been continuously supporting Dr. Sabin's oral vaccine research since 1953 with more than $1 million in March of Dimes grants; and it has been financing research on the Sabin vaccine in other laboratories as well. This support is continuing.

Next, don't blame the vaccine manufacturers. At least four companies are planning to manufacture the Sabin vaccine, and because of the competitive advantage of being first on the market, all of them have an

incentive to move quickly. Two of the four are currently manufacturing the Salk vaccine, and may therefore have some slight incentive to go slow. But the other two companies have no Salk vaccine to sell. The company likely to be first with the Sabin vaccine (Lederle Laboratories) reports that it has already spent $11 million on oral vaccine research and an additional $2 million for a new oral vaccine plant and equipment. Since this investment will not begin to pay off until the Sabin vaccine is actually marketed, Lederle obviously will lose rather than profit by delay.

This leaves the U.S. Government at the head of the suspect list.

The Government agency responsible for deciding whether or not to license any new vaccine is the Division of Biologics Standards (DBS) of the National Institutes of Health, a unit of the U.S. Public Health Service. If a vaccine proves unsafe after licensing, the DBS gets the blame—and rightly so. It is your sentinel, posted by law to safeguard you and your children from unsafe vaccines and from overinflated vaccine claims.

The DBS has learned the hard way how important it is to be extra cautious. Back in 1955 it licensed the Salk vaccine in a hurry, at the urging of the National Foundation and others; polio was then on the rampage and no other preventive was available. The results were in general excellent, with many thousands of men, women and children saved from crippling or death. But a price was paid for haste; several bad batches of vaccine managed to slip thruogh an unnoticed loophole in the DBS regulations governing safety. As a result, 61 children who received vaccine from those batches came down with paralytic polio; others caught polio from them; several died.

The DBS regulations were immediately tightened up, and the Salk vaccine has been completely safe ever since. But DBS officials resolved to avoid a similar situation with oral polio vaccine if it was humanly possible.

Live-virus vaccines by their very nature require special safety precautions. If the Salk killed-virus vaccine were to be accidentally contaminated by some other viruses during manufacture, the formaldehyde which kills the tough polio viruses would no doubt kill the other viruses as well. A live-virus vaccine has no such built-in safeguard. Contaminating viruses may travel with the tame polio viruses into your body and produce disease. Such an incident actually occurred during World War II; serum hepatitis viruses got into a yellow fever vaccine and thousands of cases of serious, sometimes fatal, hepatitis followed among American soldiers and others all over the world.

Against this background of possible hazards, and knowing that an effective polio vaccine (the Salk vaccine) was already available throughout the United States, DBS officials and scientific advisers decided to proceed with what Dr. Roderick Murray, head of DBS, describes as "all deliberate speed." This policy turned out to be warranted. During field trials of the Cox and Sabin oral polio vaccines in 1960, something happened which emphasized again the need for caution—and which, in fact, resulted in putting the Cox vaccine out of the running.

In Dade County (Miami), Fla., 412,000 men, women, and children swallowed the Cox oral vaccine last spring. The vaccine proved effective, on the whole, but three young men a young woman, and a 2-year-old child came down with paralytic polio within 9 to 14 days after swallowing it; this is the length of time it takes polio viruses to produce illness. In West Berlin also a number of cases of paralysis were reported among 300,000 residents who took the Cox vaccine.

There is no proof that these cases were caused by the Cox vaccine. Some of them—or conceivably all of them—may have been due to polio viruses already present. But enough doubt was raised to eliminate the Cox vaccine as a candidate for immediate licensing.

No such doubts have been raised about the Sabin vaccine. Large-scale field trials have now been run in Cincinnati, Ohio, and Rochester, N.Y., and smaller trials in New York City, New Haven, Cleveland, Nashville, Houston, and New Orleans. The results have been excellent. The Polio Surveillance Unit of the U.S. Public Health Service reports not a single case of paralytic polio traceable to the vaccine. In other countries too the Sabin vaccine has been used on a large scale with success; Dr. Sabin estimates that by the end of 1960, 77 million people had taken his vaccine in the U.S.S.R. and an additional 23 million elsewhere.

Convinced by this vast and rapidly accumulating body of evidence, the DBS has now announced regulations under which companies planning to manufacture the Sabin vaccine will be licensed. These licensing requirements are very strict. Each batch of vaccine, for example, must be tested separately in living rabbits, guinea pigs, adult mice, baby mice, and human kidney cells grown in test tubes. Samples of each batch must also be injected directly into the muscles, spinal cords, and brains of a number of monkeys. No manufacturer will be permitted to sell his first batch until he has proved by tests on five successive batches that he is able to turn out a safe vaccine consistently.

Since meeting all these requirements will take time, the Sabin vaccine probably will not become available for general use until late 1961 or early 1962. As a result, we can be confident that when the first oral vaccine is finally licensed, it will be as safe as scientific precautions can possibly make it.

Dr. Sabin is not happy with the time schedule. He believes that the safety of his vaccine was proved more than a year ago and that it should have been licensed for general use last winter.

Dr. Koprowski is not happy either. He believes that his vaccine is as safe and effective as Dr. Sabin's and should be eligible for licensing along with it. He challenges the evidence which caused the DBS to conclude that the Sabin vaccine is safer than his.

Perhaps the DBS did err in one or both of these respects. If so, it erred in the direction of greater safety for the millions of people who will take the new vaccine.

How much good will the Sabin vaccine accomplish for you and your family when it does become available? Here are the answers given Redbook by public health officials who have no personal stake in either the Salk or the oral vaccines:

CERTAINTY OF PROTECTION

When Dr. Salk manufactured his own vaccine in his own laboratory, it successfully immunized an overwhelming majority of the people who received it. Later, when placed in large-scale commercial production, it was somewhat less effective. Dr. Sabin's vaccine is at present almost 100 percent effective in his own hands, and the experience to date suggests that it will prove to be highly effective protection when it is being commercially produced and distributed.

DURABILITY OF PROTECTION

A few years ago, widespread publicity claims were made that an oral vaccine would provide lifelong protection without a booster, instead of the merely temporary protection which the Salk vaccine was supposed to provide. As a matter of fact, the protection provided by the Salk vaccine—to the surprise of almost everybody except Dr. Jonas Salk himself—is providing remarkably durable. Children vaccinated during the 1954 National Foundation field trials, for example, still show a very low polio rate after 6 years. But no one can foretell whether this protection will continue through the years or will begin to taper off. Nor is there any way of telling now for how many years the Sabin vaccine's protection will last.

SPREAD OF PROTECTION

It used to be claimed that the "tamed" viruses in the oral vaccines would spread rapidly from vaccinated individuals to others. Thus by vaccinating part of a community you might immunize the rest willy-nilly. This claim has proved to be exaggerated. The tamed viruses often spread from a child to his brothers and sisters; they may even spread to his parents, friends, and neighbors. But you can't rely on this spread, and there is no practical way of knowing whether or not one child or adult has "caught" immunity from another. Even limited spread, however, is a point in favor of the Sabin vaccine.

ONE-DOSE PROTECTION

It used to be said that you would be able to swallow just one dose of an oral vaccine and forget all about polio forever. This claim is still occasionally made. But the Sabin vaccine is generally given in three separate doses spaced 4 to 6 weeks apart, and a fourth dose may prove advisable. One-dose protection is a possibility but not yet a reality.

Will an oral vaccine replace the Salk vaccine, or merely take its place as an alternative polio preventive? It is too early to tell. Some experts point out that the Salk vaccine can be combined with diptheria, tetanus and whooping cough vaccines in a single series of shots; when this is done, recent research indicates, both the Salk vaccine and the diptheria vaccine produce a higher level of immunity than either does when given alone. It is quite possible, accordingly, that many physicians will continue to use the polio-diptheria-tetanus-whooping cough combination shots for infants and young children even after the Sabin vaccine is on the market.

Despite the availability and high effectiveness of Salk vaccine, millions of people have failed to get their shots—because of the discomfort or the bother or simply because they do not fully appreciate the importance of protecting themselves and their children. For this reason severe polio epidemics continue to occur among the unvaccinated, as they did during 1960 in Providence, in Baltimore and in perhaps a dozen other American communities.

Public health officials hope that even before the Sabin oral vaccine is available, many of the unvaccinated will respond to the antipolio campaign and get their Salk injections. But because oral vaccine is so painless to take and easy to administer to large groups of people, they expect it to reach many millions who have not had their Salk shots. The Sabin vaccine provides protection more promptly than the Salk vaccine—fast enough so that it can be given to an entire community whenever one case occurs. By preventing intestinal polio infections, it will slow the spread of the polio virus from person to person and may thus stamp out polio altogether—as smallpox has been stamped out—within a reasonable period of time.

Meanwhile, polio will be with us again this summer and fall. The best way for you and your family to get protection this year is by completing your series of four Salk shots now.

What about next year? The two vaccines are completely compatible. After completing your Salk shots this year you can take the Sabin vaccine by mouth next year. The Salk shots will protect you from paralytic polio; the Sabin oral vaccine may raise the level of that protection and will, in addition, prevent you from being a polio "carrier" capable of infecting others.

The Youthful President Kennedy and the Youthfulness of the Biblical Joseph

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mrs. KELLY. Mr. Speaker, Rabbi Israel H. Leventhal, who is the spiritual leader of the Brooklyn Jewish Center, one of the largest and most outstanding congregations in the United States, recently delivered a sermon which I now have the honor of inserting in the CONGRESSIONAL RECORD. The observations which Rabbi Leventhal makes concerning President Kennedy are most astute. I take great pride in the fact that the rabbi and many of the members of the congregation of the Brooklyn Jewish Center reside in the 10th Congressional District of New York which I have the honor to represent.

The sermon follows:

THE YOUTHFUL PRESIDENT KENNEDY AND THE YOUTHFULNESS OF THE BIBLICAL JOSEPH

(Excerpt of sermon preached by Rabbi Israel H. Levinthal on Sabbath Beshalach, January 28, 1961, on the occasion of the 60th anniversary of the Bar Mitzvah of the Rabbi)

It is now long after the presidential election, and most of us saw on the television or read about the impressive inauguration of our new President. Whether we are Republicans or Democrats, all of us, in the true American spirit, accept the verdict of the electorate and join in the fervent prayer that Heaven's blessing may accompany President Kennedy in all his paths of duty, and that he may succeed in strengthening the role of genuine democracy in our land and in bringing the world nearer to the goals of universal peace and human brotherhood.

It is the accepted rule for clergymen not to take an active part in political campaigns unless a great moral issue is at stake. Throughout my ministry I have adhered to this rule. Now, however, that the election is over, it is not out of place for a clergyman to comment on certain phases of the election campaign. In fact, immediately after the election, political commentators and editors, representing both parties, tried to analyze the election results and to offer reasons for the victory of the one candidate for and the defeat of the other. It is in this spirit that I permit myself to offer my comments on the subject in this Sabbath's sermon.

One of the things that struck me as strange in the recent campaign was the emphasis which the Republican leaders had placed upon Senator Kennedy's youth. I recall reading in the press that at the first meeting of the Republican Strategy Committee, immediately after the presidential nominations, it was unanimously decided to issue a directive to all Republican speakers that they should never refer to the Democratic nominee as Senator Kennedy but always as the young or youthful Senator Kennedy—implying of course that being young meant immaturity, inexperience, naivete.

That a man of 43 should be regarded as a youth was something that I could not comprehend. In our Jewish tradition, a lad of 13 is regarded as already mature for the performance of our religious duties. At 18, according to the rabbis, he is ready to marry and to assume the responsibilities of family life. At 30, a man is deemed to reach the height of physical vigor; and at 40, to attain the full strength of mind and understanding. In fact, in an interesting passage in our ancient rabbinic literature, there is a discussion on this very theme: Unto what age can a man be called a naar (a youth)? Rabbi Akiba said: Up to the age of 30; Rabbi Meir said: Up to 25; and Rabbi Samuel said: They are both wrong, only up to 20 years of age. To the Jewish mind it would be absolutely incomprehensible to speak of a man of 43 as young or as a youth.

Now what is wrong or bad in being young? It seems to me, as one who has already reached the age of the hoary head, that youth is one of man's greatest blessings and that youth offers a man great, creative opportunities. Lord Beaconsfield, from the richness of his experience, cried out: "We must be young to do great things." And William Hazlitt, the celebrated British critic, gave as his judgment that "Almost everything great has been achieved by youth." Allowing for exaggeration in these statements, we certainly cannot agree that being young is synonymous with immaturity, or that in itself, it makes one unfit for leadership. Furthermore, there is a difference of only 3 or 4 years between the ages of Kennedy and Nixon; and if at 43 one is young, and at 46 or 47 one is fully grown, the question arises: What year is the dividing line when one passes from youth to ripened age?

It is interesting to note that in this Sabbath's Scriptural reading there is a reference to the great Biblical character, Joseph. Four weeks ago we concluded the story of his dramatic life. We have been reading since then the story of the bondage of the Israelites in Egypt, and today the reading deals with the account of the exodus from Egypt and the passing of the Israelites through the Red Sea. But in the midst of today's portion we are again reminded of Joseph: "And Moses took the bones of Joseph with him."

Let us turn for a moment to the early phase of Joseph's life. You recall the story: how he was imprisoned in Egypt, how—while a prisoner—he interpreted correctly the dreams of Pharaoh's butler and baker. And now Pharaoh dreams a dream which no one can interpret for him. The butler reminds himself of his own dream while imprisoned and how Joseph's interpretation was fulfilled. He forgot the promise that he had made to Joseph that he would remember him and speak well of him to the Egyptian authorities; but now the opportunity was his to serve his master and to win his favor. And so he approaches Pharaoh and tells him of his own experience: "And there was with us naar ivri—a Hebrew youth who interpreted for us our dreams."

The rabbis were surprised that the butler referred to Joseph as a naar—a youth. The Bible itself tells us that he was 30 years old when he stook before Pharaoh—and how can one speak of a man of 30 as a naar? But the rabbis have a ready answer: the butler referred to him in a derogatory sense—K'shoteh—a foolish, immature, inexperienced lad—v'en raui ligdulah, unfit for position of greatness or leadership.

Pharaoh, however, at the first meeting with Joseph, immediately recognized his greatness, and appointed him to the high position of vice ruler of the realm. And the masses of Egypt also recognized his qualities of leadership, and they called him avrech—a strange word, which the rabbis translated as av b'chochmah v'rach b'shanim—"patriarch in wisdom and youthful in years." It was this combination which Joseph possessed—maturity in wisdom and youthfulness—not so much in years, but as one commentator notes, B'tiveo, and his nature, in spirit—that captivated the minds of the ruler and the masses of Egypt.

I have the feeling that what helped President Kennedy more than anything else was that millions of our citizens recognized in him this remarkable combination of av b'chochmah—rich maturity in wisdom and rach b'shanim, a youthfulness in his very nature and spirit. One may be old in years and yet be blessed with such youthfulness in spirit. Moses, the Bible tells us, was 80 years old when he undertook the difficult task of delivering his people from their Egyptian bondage. In our own day, we see Ben Gurion, at 74, yet blessed with the spirit of youth in directing the affairs of state in Israel.

As a matter of fact, the Bible often uses the term "naar" not in the sense of youth but in that of youthfulness, and thus refers to a number of the ancient heroes as naar, though they were advanced in years. "And Joshua, his servant, naar"—and the rabbis tell us that he was then 42 years of age. David speaks of "my son Solomon naar"—and again the rabbis tell us he was 43 years old. Speaking of the spies whom Joshua sent to investigate the city of Jericho, the rabbis tell us that they were Caleb and Pinchas, and that Caleb was then 78 years old. Yet the Bible speaks of them as naarim—youths, and the rabbis continue in their comment: "The Bible calls them youths, shehayu zerizim k'naarim, because they were as energetic, as enthusiastic, as zealous as young men." The Prophet Hosea, speaking of God's love for Israel, tells us: "ki naar Yisrael, v'ohavehu," usually translated, "When Israel was a youth, I loved him." I think the meaning of the verse is: "Because Israel is youthful, I loved him."

Though Israel is among the oldest of the world's peoples, it is today again revealing its spirit of youthfulness—its power of creativity in every field of human endeavor.

And this is what America, as well as the world at large, needs and craves for: the spirit which youth typifies—vigor, enthusiasm, adventure, and daring to translate into action the ripe wisdom and experience which a leader may possess. Such is the quality of leadership which the American people have recognized in President Kennedy, and which has won their hearts.

* * * * *

And now we can better understand the deeper meaning of our text in this Sabbath's scriptural lesson: "And Moses took the bones of Joseph with him." The rabbis were puzzled by this verse: mai immo, they ask, "Why did Moses have to carry the bones of Joseph with him?" Could he not have assigned other Jews to perform that task? Many are the interpretations which the sages offer. I think the answer is simple. Moses was quite old at the time—past 80 years of age. But he held on to the body of Joseph as a constant inspiration and challenge that he had to endeavor to retain the spirit of youthfulness which Joseph had typified. For he realized that once that spirit of youthfulness departed from him his power of leadership would also depart.

* * * * *

If I may be permitted, I should like to add a personal word. This Sabbath has a special significance for me: it is my Bar Mitzvah Sabbath. Many years have passed since that eventful day in my life—60 to be exact. I realize that I have long passed the stage of naar, of a youth. I have already passed the stages of ziknah and sevah—by which the rabbis designate one's 60th and 70th years. But, like Moses, I, too, symbolically speaking, want to cling to the bones of Joseph and to retain his spirit of naarut—of youthfulness—and to be zariz k'naar—to retain the zeal, the vigor, the enthusiasm of youth, so that for years to come you may be able to say: ki naar yisrael—for Israel is still young in spirit—and therefore I may continue to have your regard and your esteem.

* * * * *

And thus we offer a fervent prayer this Sabbath to our Heavenly Father, first, in

behalf of our new President—that he may ever be blessed with the gifts of av b'chochmah—maturity in wisdom—and of rach b'shanim—the spirit of youthfulness in years. And for myself and for all the older men and women in our congregation, I pray that we may be enabled to be zerazim k'naarim—active, vigorous, energetic like the young, so that we may continue to serve better our faith, our people, our beloved America, and all mankind.

The Touchdown Club of Washington, D.C., and the Olympics for the Deaf

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1961

Mr. ANFUSO. Mr. Speaker, recently I was privileged to attend a luncheon at the Statler Hotel sponsored by the Touchdown Club of Washington and I was extremely pleased to learn of its efforts and its interest in supporting various worthy causes and local charitable institutions. What started out some years ago as a luncheon group interested primarily in sports—hence, the origin of its name "Touchdown" as a symbol of football—has emerged into a large and respectable organization of many business and professional people who still retain a deep interest in sports.

Vice President LYNDON B. JOHNSON was the main speaker at the luncheon and, as usual, delivered an excellent address. John R. O'Brien, vice president of Hoffman Electronics Corp., was the general chairman at the luncheon, which was in the nature of a welcome to the new Washington Senators baseball team. Many Members of Congress plus a substantial number of the Touchdown Club's membership were present to greet the baseball team and to extend best wishes for a most successful season.

The president of the club is Andrew Davis, himself a well-known football player in his college days. Other officers of the club are George Neumann, vice president, and V. T. Curtis, secretary. The club's board of governors consists of the following: Clifford Battles, A. J. Bergman, E. R. Carr, James Castiglia, Walter Conway, John Cooney, Hugh Flynn, Thomas Hurney, James Johnson, Henry Krause, Al Lujack, Scott Morris, John R. O'Brien, Otis Printz, John Stapelton, and Charles Wilson.

In talking with some of its leaders, I was pleasantly surprised to learn of the Touchdown Club's activities in promoting sports in the interests of good will and cooperation. One club official, General Manager Al Fiorentino, told me: "The heart of our club lies in helping youngsters find themselves in team sports, which demand so much loyalty and so much sacrifice for a common goal." With a purpose of this kind, we can truly say that it is "a club with a heart."

Perhaps one of the most laudable endeavors undertaken by the Touchdown Club is its effort to help raise the necessary funds to send a group of athletes from Gallaudet College in Washington to compete in the 9th International Games for the Deaf—known as the Olympics for the Deaf—which are scheduled to be held this summer at Helsinki, Finland. These games are held every 4 years, the last time being in 1957 in Milan, Italy, where the United States was represented by 40 deaf athletes who scored 182 points in track and field, swimming, and tennis, and won the world championship in basketball.

At this year's Olympic Games for the Deaf at Helsinki, August 6 to 10, some 1,000 deaf athletes from 34 countries are expected to compete in track and field events, basketball, swimming, tennis, wrestling, gymnastics, soccer, cycling, and others. Women will participate in track and field, swimming, tennis, and other sports. The President of Finland will officially open the Games at the Olympic Stadium in Helsinki, which seats 80,000 people.

A substantial number of the athletes on the U.S. team will be made up of students from Gallaudet College in Washington, which is the only college in the world for the deaf. It is a private liberal arts college, established in 1864 by act of Congress. In order to cover the expenses of the Gallaudet squad at the Helsinki games, a sum of $50,000 is needed.

The Touchdown Club of Washington has undertaken the task of sponsoring agency in the effort to raise these funds. Judging by its record of achievement of the past in supporting worthy causes, there is no doubt in my mind that its effort will again prove successful. I want to take this opportunity of paying a well-deserved tribute to the officers and members of the Touchdown Club for assuming this responsibility. It is a noble deed which should be widely recognized.

Mr. Speaker, under leave to extend my remarks, I want to insert into the RECORD two brief articles from a pamphlet of the American Athletic Association of the Deaf in which are described the forthcoming games for the deaf at Helsinki and the results of the 1957 games at Milan.

The two articles read as follows:

NINTH WORLD GAMES FOR DEAF, HELSINKI, FINLAND, AUGUST 6 TO 10, 1961

The selection of Helsinki, Finland, as the scene for the 1961 International Games for the Deaf is both symbolic and unique. It is symbolic because it exemplifies the growth of the International Games for the Deaf as an all-encompassing international movement. It must be called unique since the "Deaf Olympic" games will take place in the White City of the North for the first time in the history of the games.

The Finns were to have been host to the sixth international games for the deaf at Helsinki in 1949. Unfortunately Russian planes blotted out all of the splendid Finnish physical setup, such as a stadium, arenas, etc., which had been built and readied for the 1942 Olympiad. Furthermore, the tedious process of restoring Finnish economy to its prewar level made it impossible for that country to sponsor such a gathering. Recognizing Finland's inability to play host, the CISS awarded the honor to the Danish clubs of the deaf, and they acted as host to the sixth international games for the deaf at Copenhagen in 1949.

Now Finland is ready and is inviting all the deaf in the world to the Ninth World Games for the Deaf, August 6 to 10, 1961.

The President of Finland will open the Ninth World Games for the Deaf on August 6 at the Olympic Stadium which will be the scene of all track and field events for both men and women plus the soccer finals. This stadium seating 80,000 was the scene of the memorable 15th Olympiad for the hearing in 1952.

Just a few hundred yards away is Olympic Park where both spectators and participants, seated in three sports arenas and the ultramodern swimming stadium, will watch the soccer preliminaries, swimming, water polo, tennis, and basketball events. The other events such as highway cycling, 25 kilometer marathon race, and shooting will be held in the environments of Helsinki and necessary conveyance will carry both spectators and participants to the sites of these events.

For the housing of some 1,000 deaf athletes, Olympic Village, located in Otaniemi and about nine kilometers west of Helsinki includes nine buildings, which during winter are inhabited by technical students. Athletes from each country will have an opportunity to mix freely with others, but each nation will have its own section of houses. Fine training and practice facilities are closely available for most of the games events, so there's no reason—except for amusement and sightseeing—for any athlete to leave home. And there is a good restaurant in the village, where 500 persons can have their meals at the same time. A Finnish sauna on the nearby seashore will undoubtedly prove an experience. It is interesting to note that this village housed the participants of the 1952 Olympic Games.

Tackling the tremendous task of staging the Ninth International Games for the Deaf is a national undertaking. The Finnish Government is contributing the cost of financing the games. The organizing committee, composed of several deaf leaders of Finland and hearing sports leaders, is directing the planning and preparation for the 1961 World Games for the Deaf.

Events for the Helsinki meet are track and field, swimming, basketball, wrestling, soccer, tennis, cycling, shooting, gymnastics, and ping pong.

RESULTS OF 1957 CISS GAMES AT MILAN, ITALY—U.S. ATHLETES WIN FIRST PLACE IN MEN'S TRACK AND FIELD MEET

(Yanks dazzle world cagers to grab international title; Americans receive 17 gold medals, 9 silver and 11 bronze awards; Germans top greatest games ever as records tumble.)

The 1957 Milan games already deserve on one count a special niche in International Games for the Deaf history.

The largest U.S. team ever to participate played a dominant role in making it history to be remembered.

And Russians participated in this meet for the first time since the first International Games for the Deaf were held in Paris in 1924.

As in the hearing Olympics, the CISS does not recognize the point system of all sports which decides one nation victor over another. Individual, rather than team performance, they hold, should be paramount. Consequently team standings quoted here are unofficial.

Twenty-five nations competed in the games, with a total of 635 athletes, while 11 other countries sent delegates as observers.

Everything was performed according to the hearing Olympics. There was a parade of nations in full dress and John Smith of Idaho, double winner of the 1953 games at Brussels, led the U.S. contingent by carrying the American colors.

The men's track and field meet developed into a dual meet between the United States and Russia. The United States took five firsts against seven for Russia, but we took first place with 147 points. Russia was runner-up with 121 points. The United States took five seconds and eight thirds, while Russia collected three seconds and three thirds.

This was for the male contestants only. With the women the Russians amassed 115 points, Germany secured 66 and Poland 42. All the United States got was one point from its sole feminine competitor. In this country the women (deaf women at least) do not go in for such sports.

Of 13 world's records and 3 games marks set by male performers during 6 days of fierce competition—sometimes under adverse conditions—Americans broke 3 global marks and tied one standard for this international classic. The Russians rewrote four world's records and shattered one games mark.

It was not surprising that the United States won the basketball championship for that is a favorite American sport. Playing outdoors and on a marble court, a new experience for them, the boys from Little Rock, 1957's AAAD champions and American standard-bearers, defeated Finland, 57-30, France, 51-12, Italy, 89-39, and Belgium, the 1953 champ, in the finals, 81-25.

Participating in only 4 sports, the United States did well with only 40 athletes. They won first place in men's track and field, first place in basketball, fifth place in swimming, and third place in mixed doubles tennis. In all, they won 17 gold medals, 9 silver and 11 bronze awards. Twenty-six of the 40 athletes got medals, and 31 scored points for Uncle Sam.

In the overall picture, taking into account all sports such as the rifle shooting, soccer, gymnastics, ping pong, cycling, etc., Germany led in the number of medals won, 24 gold, 9 silver and 16 bronze, a total of 49. Host Italy was next as it garnered a total of 38—5 gold, 14 silver and 19 bronze. The United States was third with 37 medals, while Russia was fourth with 31—13 gold, 11 silver and 7 bronze.

Airlines' "Overbooking"

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. MULTER. Mr. Speaker, on January 3, 1961, I introduced a bill, H.R. 1208, to amend the Civil Aeronautics Act of 1938.

The bill is designed to eliminate the practice of overbooking of passenger space reservations. I first introduced this measure in the 85th Congress.

Unfortunately the situation has not changed. This highly questionable practice is still going on. Since the airlines will not stop it themselves there must be remedial legislation.

The bill would provide protection for passengers by permitting them to bring a court action against the airline if they present themselves to board a plane for which they have confirmed reservations and the space is not available. Damages collectible would be an amount to cover actual losses, plus twice the amount of the fare paid or $100, whichever is greater, plus a reasonable attorney's fee and court costs.

If the passenger does not bring suit within 2 years the United States could bring the action against the airlines.

Those airlines which allow such shoddy practices have made this legislation necessary. As for the others they will probably benefit from it by an increase in business as a result of this additional guarantee to the passenger.

It is my hope that the Congress will act favorably on this measure in the near future.

Crisis in the Hospitals

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include an article written by Selig Greenberg in the April 1961 issue of the Progressive entitled "Crisis in the Hospitals":

CRISIS IN THE HOSPITALS

(By Selig Greenberg)

(This is the first of two articles on hospital costs by Selig Greenberg, writer on medical problems for the Providence, R.I., Journal and Evening Bulletin. Mr. Greenberg has twice been honored by the Lasker Foundation for his distinguished writing on medicine. He won the Associated Press Managing Editors Association Award for his series of articles on the problems of the aged.—THE EDITORS.)

The Nation's hospitals—the outposts of our phenomenal medical progress—are now confronted with a profound crisis, at the very time they are advancing toward ever greater miracles of healing and lifesaving. Soaring hospital costs and hospitalization insurance rates have brought a rising tide of public concern, expressed in demands for greater efficiency in hospital operation, and for reforms in the prevailing patterns of health insurance. Across the country labor unions, business firms, citizens' groups, and public officials are calling for controls on skyrocketing costs, curbs on services which are either wholly unnecessary or could be furnished less expensively, and a more rational and coherent system that will get the most out of the medical care dollar. Increasingly, warnings are heard from responsible sources that the squeeze of spiraling costs may price voluntary insurance out of the market and force full Government control of our whole complex of health services.

There is probably no more explosive issue in the entire controversial field of medical economics than that of hospital costs. For it is here, more than in any other area of medical care, that the problems of the technological revolution in medicine are rapidly coming to a head.

Hospital services now not only account for the largest single portion of the Nation's health care bill, but they are at the heart of our system of medical practice. As medicine grows more intricate and its tools more elaborate, the trend inevitably is toward increasing concentration of medical services within the hospital. And it is the very triumphs of medicine which are catapulting costs. Nowhere is this more evident than in the hospitals, which have become a large-scale and complex business requiring the coordination of a great array of professional skills and huge capital investment in expensive facilities and equipment.

Basically, the crisis of hospital function and financing stems from the fact that we are both the beneficiaries and the victims of the remarkable progress of medicine which has brought us better health and longer life but also has enormously complicated the rendering of medical services and raised their costs. The revolution in medicine is far from over, and hospitals have yet to fulfill their growing potential. Further scientific advances will unavoidably mean still costlier diagnostic and treatment procedures, more elaborate and expensive equipment, and an even greater need for technical personnel. A continued rise in hospital costs thus appears inescapable. So it is all the more vital to eliminate the waste, duplication, and lack of integrated planning now common in the hospital field. If there are ways of operating hospitals more efficiently and economically—as many authorities believe there are—the public certainly has the right to insist on getting full value at the lowest possible price consistent with high quality.

Good hospital care clearly cannot be produced cheaply. But if costs are to be kept within acceptable bounds and quality improved, we will need a much higher degree of self-discipline by the medical profession and a far greater readiness on the part of hospitals to yield some of the privileges of their cherished autonomy than have so far been evident. It is no exaggeration to say that the future of the organization of medical care and practice in the United States depends on the extent to which the doctors and the hospitals can be prevailed upon to recognize that their business is the public's business.

The statistics of rising hospital costs and utilization are instructive and sobering.

For a number of years, hospital room charges have been advancing at a much faster rate than any other item in the U.S. Department of Labor's Consumer Price Index. The overall index, which is pegged at 100 for the 1947–49 period, had risen to 124.6 by the end of 1959. At that time the index for all medical care services put together stood at 150.8. But for hospital room rates it was 208.9.

In 1946, the average cost per patient day in voluntary hospitals was $9.39. By 1959, it had jumped to $30.19, an increase of more than 220 percent. Nor is the end of the spiral anywhere in sight. Experts are generally agreed that hospital costs will continue to rise at the rate of 5 to 10 percent a year. A spokesman for the American Hospital Association has predicted that the average cost per patient day may reach $50 by 1968.

Of equal importance in contributing to the steady climb of the Nation's hospital bill is the striking increase in the rate of hospitalization. Thirty years ago, 37 out of every 1,000 Americans were admitted to general hospitals in the course of a year. Since then the ratio of hospital admissions has zoomed to 124. A variety of factors has figured in this upward trend. For one thing, hospitals can do much more for the sick than they could 2 or 3 decades ago. Widespread insurance coverage has removed much of the economic deterrent to hospital care for those in the middle and low-income groups. In the Nation's population there has been a steady increase in the numbers and in the proportion of older people, who have a higher incidence of chronic diseases requiring more frequent hospitalization. Many conditions of modern city living make for significantly higher hospital use than in rural areas. The large proportion of working wives means that often there is no one at home to take care of a sick husband or child. The high price of household or nurs-

ing help to care for the sick at home and the limited size of city apartments also force up the hospitalization rate.

The net effect of higher costs of hospital care and its much greater frequency has been a tripling of expenditures for hospital services in the United States in the past 15 years. Out of a total private medical care outlay of $18.3 billion in 1959, payments to hospitals were $5.5 billion, the biggest single share, and $500 million more than the amount paid to physicians. The latest available breakdown shows that 30 cents out of every medical care dollar now goes to hospitals, 27 cents to doctors, 26 cents for drugs and appliances, 11 cents to dentists, and the remaining 6 cents for other professional services.

There are many sound reasons for the continued rise in hospital operating costs. A U.S. Public Heatlh Service official has summed them up with the cogent observation that "when we talk about the cost of medical care today as compared to the past, we're talking about the price of an electric washer-dryer compared to a washtub."

There is no ready solution for the costliness of new and more effective medical procedures, more elaborate surgery, and more potent drugs. Such dramatic advances as open-heart surgery, artificial kidneys, heart pacemaker units, cobalt radiation treatment, and radioisotopes to pinpoint internal abnormalities are restoring patients to health sooner and more completely, and, frequently, are saving lives which otherwise would be lost. But some of these miraculous procedures are enormously expensive, requiring dozens of physicians and technicians for a single patient.

As productivity has gone up, industry has been able to shorten its workweek. But hospitals cannot shorten their week. They must remain open 168 hours a week, 52 weeks a year. To keep pace with the standard 40-hour week in the community, hospitals have been forced to hire many new employees to fill each around-the-clock job. They also have been obliged to bring their lagging wage scales closer to those of private industry. While raising its wage level, industry has often managed to cut its labor costs through automation. But hospitals cannot substitute machines for people. On the contrary, as available lifesaving services proliferate and newly developed equipment is constantly added, more rather than fewer people are required to operate them. In 1946 voluntary hospitals in the United States had, on the average, 156 employees for every 100 patients. By now the ratio of employees for each 100 patients has risen to 225. Whereas in the automobile industry wages currently account for only about one-third of production costs, payroll expenditures have shot up to 70 percent of hospital budgets.

New medical sophistication has made hospital care an accepted component of the average American's standard of living. The public learns quickly these days of new medical discoveries through the press, radio, and television. The more people learn about medical progress, the more they are likely to go to the hospital, where the latest advances can be most effectively applied. The rising standard of living also has brought a demand for more attractive hospital facilities. Hospitals are expected to match the comforts of motels by way of air conditioning, piped-in radio, perhaps television, and certainly window draperies. The new standards also call for a telephone at the bedside and some choice of menu. While the effect of these niceties on the patient's recovery is debatable, their effect on the hospital's unit costs is obvious.

Another element in the picture has been the sharp increase in new hospital construction throughout the country. This expansion has been, in general, a laudable development. Antiquated buildings have in many places been replaced, and additional bed space has been provided to keep pace with the forward march of medical science. But we have lagged in developing more economical facilities such as hospital outpatient clinics and adequate nursing and convalescent homes for chronic patients. Concentration upon the expansion of costly hospital bed capacity designed primarily for the acutely ill is wasteful. Competent opinion is that the more hospital beds are available, the greater is the tendency toward admissions for relatively trivial ailments and for longer-than-necessary stays, particularly when such abuse is encouraged by the benefit structure of hospitalization insurance.

The fact that patients now go home much sooner than they used to—the average length of hospital stay has been cut in the past 30 years from 15.3 to 7.8 days—is in itself far from an unmixed blessing.

The shorter stay means that more intensive treatment is concentrated within a shorter period of time, so that daily costs are higher. An additional cost factor in more rapid patient turnover is that chances are greater there will be vacant beds which have to be staffed but produce no income. One of the paradoxes of the hospital cost problem is that it is the result of both overuse and insufficient use of facilities. On the one hand, hospital beds are sometimes used needlessly for patients who could just as well be taken care of elsewhere at much lower cost. On the other hand, hospital facilities are not utilized as efficiently as they should be, with the result that about one bed out of four is usually empty, and in some institutions the average occupancy rate is even lower. Low occupancy means a correspondingly heavier proportion of overhead in daily per patient costs.

Much wider use of hospital services and their greater costliness have been reflected, inevitably, in steadily climbing hospitalization insurance rates. As Blue Cross and other plans throughout the country have repeatedly been forced to seek premium hikes, growing attention has been focused on the urgent need for eliminating hospital inefficiencies and needless use of expensive facilities. An important point to bear in mind is that hospital costs are no longer solely the concern of patients and their families. With the phenomenal spread of health insurance, which now covers more than two out of every three Americans, the hospital bill is being underwritten by the healthy as well as the sick. This means that the public is more and more looking upon hospital costs not only in terms of charges for services rendered but also in terms of the monthly cost of insurance.

Rate hearings before State insurance commissioners have increasingly provided a platform for the critics of hospital efficiency and of the effect which the present health insurance system has upon it.

Such hearings in New York, Pennsylvania, and a number of other States have produced charges that the prevailing insurance approach lays too much emphasis on hospitalization, ignoring possibilities for more economical treatment of many conditions in the doctor's office or in outpatient clinics; that Blue Cross—and Blue Shield, its companion surgical-medical insurance program—have built-in incentives for getting between hospital sheets merely to take advantage of insurance benefits; that hospitals could do considerably more than they have been doing to keep down their operating costs; that because of the general lack of overall community planning and integration in the hospital field there is duplication and overlapping of personnel, equipment, and services; that much of the present organization of hospital services, revolving around the doctor as a private entrepreneur, has become inefficient in the context of the growing complexity of medicine and must be drastically revamped to take advantage of opportunities for greater productivity and lower costs; and that the public is not adequately represented in the management of the voluntary hospitals and the insurance plans.

The adverse effect of health insurance, which now provides the greatest share of hospital income, in relaxing many of the pressure for economy in hospital operations is emphasized in the report of the Commission on Financing of Hospital Care. The commission, sponsored by the American Hospital Association and made up of a distinguished group of authorities, concluded after a lengthy study that the emergence of insurance as a major factor in medical economics has "to some degree reduced, if not removed, incentives that would otherwise operate to encourage maintenance of hospital operating costs at the lowest level practicable."

The commission's report points out that prior to the extensive use of insurance, when people were required to pay the full bill directly to the hospital, there were "natural economic restraints" on costs, and lower-cost institutions providing services of equally good quality enjoyed a competitive advantage in attracting more patients. But with the introduction through insurance of "a new element in the relationship between cost and use of services," the report says, Blue Cross, as "the intermediary between the purchaser of hospital care and the hospital, must inevitably assume some functions previously the direct responsibility of patient or hospital."

One of those holding that "genuine economies can be made by hospitals without lessening quality of service," and that Blue Cross should insist on such economies instead of merely acting as a collection agency for the hospitals, is Francis R. Smith, Pennsylvania's dynamic State insurance commissioner.

Smith, who feels that his authority to pass on Blue Cross premium rates goes much further than the checking of actuarial tables, and extends to the things which pyramid costs, has for several years been preaching the doctrine that neither the hospitals nor Blue Cross have done all they can and should to control such abuses as unnecessary admissions and excessively protracted stays, and to put into effect other efficiency measures. And the commissioner has used his legal powers to enforce his views. In a series of trail-blazing decisions, he has ordered Blue Cross, and the hospitals in Philadelphia, and other cities, to adopt certain economy measures before any further insurance rate boosts would be granted. Among the economy possibilities, he has advocated are wider use of opportunities for outpatient diagnosis and treatment, tighter controls on the scheduling of admissions and discharges, and on length of stay, better scheduling of medical procedures to avoid needless delays, more effective use of technicians and nurses, sharing of specialized equipment among hospitals, and greater standardization of supplies along with joint purchasing.

Considerable progress has been achieved in Philadelphia, Pittsburgh, and other Pennsylvania communities under Smith's prodding during the past 2 years. Blue Cross plans have developed medical review teams to ferret out abuse of insurance contracts. They have expanded their coverage of diagnostic services and home nursing visits, in order to cut down hospitalization. Hospitals have organized medical utilization committees to check on needless admissions and excessive stays. They also are moving to achieve greater management efficiencies and to coordinate expansion through joint planning.

While hospitals are a big enterprise, but not a business in the ordinary sense of that term, Smith said in a recent speech, "This does not mean that hospitals cannot be businesslike. More needs to be done in applying commonsense business practices and methods to hospitals—wherever they will apply."

Appendix

Statement of Senator Clifford P. Case, of New Jersey, on the 26th Annual Convention of the Catholic War Veterans of the United States of America

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, April 27, 1961

Mr. CASE of New Jersey. Mr. President, I am delighted to report that the Catholic War Veterans of the United States of America, one of our Nation's outstanding veterans' organizations, will be holding its national convention this year in Atlantic City, N.J. I can assure each of its members who are planning to attend a warm and sincere welcome from our Garden State.

In this connection, I ask unanimous consent that there be printed in the Appendix of the RECORD a statement outlining the plans for this, their 26th annual convention at Atlantic City, N.J. Various sessions of the convention have been marked to be held in various parts of the city, culminating Saturday evening in a gala convention banquet and ball at the Ambassador Hotel, Atlantic City, N.J.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR CLIFFORD P. CASE OF NEW JERSEY, ON THE 26TH ANNUAL CONVENTION OF THE CATHOLIC WAR VETERANS OF THE UNITED STATES OF AMERICA

The 26th annual convention of the Catholic War Veterans of the United States of America will have many serious aspects, varied and interesting recreational events have been arranged for the members of the organization, their wives and families. On Tuesday preceding the convention there will be a visit to the Atlantic City races with a fashion show for the auxiliary members and friends. On Tuesday evening there will be a Catholic War Veterans night at the Atlantic City Steel Pier. On the evening of the following day there will be an informal social night which will be held at the Ambassador Hotel, Atlantic City, N.J., for all Catholic War Veteran members and families.

Throughout the week there will be other interesting activities and ceremonies including a Catholic War Veterans night at Convention Hall, Atlantic City, N.J., at the 22d showing of the Ice Capades on Thursday evening. On Saturday morning a parade will take place on the boardwalk from the convention headquarters to the convention hall where a Pontifical High Mass will be celebrated by His Excellency Celestine J. Damiano, Archbishop of Camden, N.J. The closing event of the weeklong gathering will be the convention ball and banquet on Saturday evening with special Catholic War Veterans candelight ceremonies and rituals.

The convention will see reports of progress made by this national veterans' group in the fields of Americanism, Catholic action, leadership, membership, veterans' affairs, and youth welfare.

At various times throughout the convention, prominent Americans are scheduled to address joint sessions of the Catholic War Veterans and its auxiliaries. These men, all outstanding in their particular field, will bring to the Catholic War Veterans and through them to all veterans and Americans messages on "National Security," "Veterans' Affairs," "International Relations," and other vital subjects.

The Catholic War Veterans of the United States came into existence in the year 1935 when it was founded by a former Army chaplain, the Right Reverend Monsignor Edward J. Higgins, LL. D., of Astoria, Long Island, N.Y. Recognizing a need for a militant veterans organization composed of Catholic men and women who served their country in time of war, Monsignor Higgins founded an organization that has grown throughout the years and now has posts in more than 40 States and in the words of its own constitution:

"To promote zeal and devotion for God, for country, and for home:

"(a) For God: to promote through aggressive organized Catholic action a greater love, honor, and service to God; an understanding and application of the teachings of Christ in our everyday life; recognizing the wisdom of the church in all matters of faith and morals.

"(b) For country: through a more vivid understanding of the Constitution of the United States of America and tarough active participation in the promotion of its ideals of life, liberty, and the pursuit of happiness, develop a more zealous citizenship; to encourage morality in government, labor, management, economic, social, fraternal, and all other phases of American life; to combat aggressively the forces which tend to impair the efficiency and permanency of our free institutions.

"(c) For home: To promote the realization that the family is the basic unit of society; to aid in the development of an enlightened patriotic American youth; to assist all veterans and widows and dependents of deceased veterans.

"(d) These objectives are encouraged without regard to race, creed, or color."

Throughout its existence the Catholic War Veterans has been part of the fierce war of ideologies seeking to capture the minds of men. This organization has spotted and fought totalitarian and brutalitarian philosophies of both the right and left, and stood firm on the solid stand of freedom of the individual and personal independence of its citizens, under the law.

The Catholic War Veterans creed from the now-famous speech, "Catholicism and Americanism," of the late Archbishop John Ireland, of St. Paul, Minn., states:

"My religious faith is that of the Catholic Church—catholicism, integral and unalloyed—catholicism, unswerving and soul-swaying, the catholicism taught by the supreme chieftain of the Catholic Church, the Pope, the Bishop of Rome.

"My civil and political faith is that of the Republic of the United States of America—Americanism, purest and brightest, yielding in strength and loyalty to the Americanism of none other American, surpassed in spirit of obedience and sacrafice by that of none other citizens, none other soldier, sworn to uphold in peace and in war America's Star-Spangled Banner."

The Catholic War Veterans of the United States of America have received many commendations from agencies in Government, in business, in welfare and hospital work, in rehabilitation, in child guidance, in patriotic, fraternal, veteran, and religious spheres. It has the approbation of the present Pope, John XXIII, and all Popes from the date of the founding of the organization. It is recognized by the Veterans' Administration in the handling of cases before it.

It has been commended by every U.S. President in office since its inception and received accolades of a great many American statesmen.

Programs have included summer camps for youngsters, informative material exposing fascism, nazism, and the cancerous core of Communist propaganda, broadcasts and information bulletins on veteran benefits, support of youth groups, establishment of scholarships, fight for veterans' rights, and the spiritual comfort of our comrades, proper burial for veterans and care for their widows and dependents, exposure of intolerance, bigotry, and disloyalty, promotion of activities which tend to strengthen the moral fiber of the Nation and its people, and build a "greater spirit of faith and patriotism."

The current program of the Catholic War Veterans of the United States of America is strictly positive. The Catholic War Veterans of the United States of America are not anti-anything; they are protagonists of right, truth, and justice. Their whole philosophy is based on the recognition of man's dignity and rendering "to God the things that are God's." They insist on the recognition of the moral basis, underlying all political, economic, and social themes.

Their emphasis lies in action. "It is better to light one candle than to curse the darkness." They feel that no program, no matter how magnificent, can be effective unless it is acted upon.

The less than three decades of Catholic War Veterans' existence have proved fruitful for our freedom. And the future of America is safe, when public-spirited, patriotic citizens who have fought for their Nation in war, continue to serve in peace.

The Catholic War Veterans is organized to serve the individual and the Nation. Size is not the measure of its service, its reputation, its loyalty, its faith or its spirit of fellowship.

As they celebrate that 26th anniversary milestone of their history, Catholic War Veterans take pride in their past—are confident of their future.

Watchdog of the Great Lakes

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. FORD. Mr. Speaker, under leave to extend my remarks, I include an edi-

torial from the Grand Rapids (Mich.) Press for April 25 entitled "Watchdog of the Great Lakes." This editorial points up the significance of H.R. 6626 introduced by Representative ROBERT GRIFFIN, of Michigan. I sincerely hope that this House shares with all of us from Michigan a deep concern for preserving the purity of the waters of the Great Lakes which serve in so many ways millions of people in the bordering States.

The editorial follows:

WATCHDOG OF THE GREAT LAKES

Representative ROBERT P. GRIFFIN, of Traverse City, appears to be making a name for himself in Congress as "Watchdog of the Great Lakes." He is now pushing a measure to bring these waters under the Oil Pollution Act of 1924 to prevent the dumping of oil wastes. This act now applies only to tidewaters.

This action follows his earlier interest in enforcement of regulations against refuse dumping by Great Lakes ships. The U.S. Public Health Service is warning all ship captains entering the St. Lawrence Seaway concerning these rules.

In these activities Representative GRIFFIN is seeking to control pollution of the lakes as much as possible to safeguard sources of drinking water, beaches and the waterway itself. In this he should have the support of all Great Lakes States, particularly his own, since Michigan has the longest shoreline of any of the States except Alaska and it is surrounded on three sides by these waters.

Pollution was a problem long before the seaway was opened. Now it is a greater problem than ever and in future years, as shipping gains with every season, it will be a vital matter to maintain the purity of the lakes as far as possible to preserve both recreational and economic advantages.

In earlier generations there was a tendency to consider Michigan's forests as inexhaustible. This complacency later led to a rude awakening. The same attitude concerning the preservation of Great Lakes waters could bring a similar reaction—too late.

Representing the heart of this great region, Representative GRIFFIN is admirably suited to be its conservation champion. He already has proven his determination to carry through—as in his labor reform battle of a year ago.

Investigation of Communist Activities

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, April 27, 1961

Mr. DODD. Mr. President, a recent editorial from the Pilot, the archdiocesan newspaper in Boston, ably discusses the need for balance in the investigation of Communist activities.

The editorial points to the proper role of anti-Communist activity and comments upon the damage done to the cause of anticommunism by the excesses of zealots and amateurs in the field.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE UNBALANCED VIEW

The longer one lives the more it becomes plain that balance is the rarest and perhaps the most precious of the intellectual virtues. It is what our fathers used to call wisdom, the ability to see the whole picture, the comprehensive view. Just as a little learning is a dangerous thing, so also a high enthusiasm can upset the balance of the total reality and the end product is excess.

Our reflections on this subject are prompted by the rash of publicity which has been flooding the press and news media generally on Mr. Robert Welch and his Birch clubs. In a world as complex as ours, simplification can be a vice and sincerity is no excuse for exaggeration. Nothing discredits a good cause quicker than supporting it by misrepresentation. When we feed the cause of genuine anticommunism with overstatement, we err just as badly as those who nourish communism itself by understatement. The evidence available seems to indicate quite plainly that this movement, with all kinds of good intentions allowed, is unbalanced, excited, and definitely out of focus.

The lessons which can be profitably drawn from such an endeavor—a good thing gone wrong—are many and should not be lost on thoughtful observers. In protecting ourselves against communism, we should be careful that we do not fall into evils almost as bad. It is possible to escape the dogs only to perish in the swamp. Moreover we must remember that we cannot rewrite history; it is fatuous to speak of returning to the simplicity of earlier times or to suggest carrying out the responsibilities of present day government with the machinery of the 18th century. We live in a real world with real problems which we must meet realistically; there is no place for hysteria, exaggeration, accusation, or misrepresentation in an authentic anti-Communist effort.

Unfortunately, people of good will and even prestige who wish to give their support to a genuine anti-Communist movement in the United States have very little to turn to, and it is not to be wondered at if some of them are caught up by the promises of organizations like the Birch clubs. Clearly, we need a highly estimable group of American intellectuals who could be relied upon to speak and act with a balanced view on communism and at the same time supply materials for study groups of adults and young people on this subject. Such an effort could intelligently channel the human resources of our country in the kind of anticommunism which is most effective. It would expose Communist patterns of operation and educate in Communist techniques, but at the same time, and most important of all, it would seek to remove those social ills on which communism thrives.

The excesses of Mr. Welch will have served us well, even if obliquely, if they remind us of our responsibilities in combating communism intelligently and by the use of those means which do not betray the very principles we have set out to defend. Anticommunism should not be discredited by the misplaced enthusiasm of certain anti-Communists; it should be reformed into that institutional expression which embodies our own ideals and demonstrates their clear superiority over the claims of totalitarianism. Until we have done this, and it is not easy to do, we will continue to be exposed to the efforts of amateurs whose good intentions cannot redeem their repeated errors.

Miss Ellen Titus Is the Winner of the Schenectady Area Spelling Bee, Conducted by the Schenectady Union Star, and Comes to Washington Next Month for the National Spelling Bee

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. STRATTON. Mr. Speaker, I have always been very much interested in spelling contests, not only because I remember taking part in them as a boy, but also because of the importance these days of spelling in providing a solid foundation for an effective education. On top of that, as all of us in this House are well aware, it is especially wonderful to win any contest that carries with it a trip to Washington.

For all these reasons I was most pleased the other day to learn of the success of one of my constituents, 13-year-old Ellen Titus, a student at Van Antwerp School in the town of Niskayuna in Schenectady County, in winning the Schenectady area spelling bee last week, conducted by one of the great family newspapers in my home city, the Schenectady Union Star. As a result of her victory, capped by spelling successfully the word "rescissible," Miss Titus comes to Washington next month to compete in the national spelling bee. I look forward to greeting her here and I wish her the very best of luck in this important championship contest.

Under leave to extend my remarks I include an article from the Schenectady Union Star of April 24, describing in detail the exciting sequence of Miss Titus' victory:

"RESCISSIBLE" IS THE WORD THAT WON FOR ELLEN TITUS

(By Ann S. Hamlen)

"Rescissible" is an uncommon word and an uncommonly tricky one to spell. Because she tackled it successfully, 13-year-old Ellen Titus, of Van Antwerp Junior High School, won the area championship in the 1961 Union-Star-sponsored Schenectady area spelling bee Saturday.

Her winning word means "capable of being rescinded."

Close to 900 spectators watched and applauded the 37 young experts who competed as finalists in a public spelldown at Union College Memorial Chapel. In addition to families, friends, classmates and teachers, the big, airy hall was well filled with persons who had no connection with the bee except a lively interest in an impressive display of skills and sportsmanship.

"INTERESTED OBSERVER"

One of the first to arrive, more than an hour early, was a man who said he was "just an interested observer."

Ellen, the daughter of Mr. and Mrs. Albert C. Titus, 2060 Grand Boulevard, won her laurels at the end of a 3-hour contest which was climaxed by a tense 45-minute duel with Patricia Reynolds of Draper Junior High School, 14-year-old daughter of Mr. and Mrs. Donald Reynolds, 791 Curry Road, Rotterdam. Both girls are eighth graders.

Both also are superior spellers. For minute after dramatic minute they fielded such challenges as "meningitis" (spelled correctly by Patricia) and "interlocutor" (mastered by Ellen). When the tournament ended, thunderous applause greeted winner and runner-up alike for a truly spectacular demonstration of achievement.

Steve Fitz of WSNY was announcer-pronouncer for the bee, which was broadcast as it took place over WSNY. Judges were Dr. William M. Murphy, Union College English professor, chairman; Miss Margaret Walsh, head of the Mont Pleasant High School English department; Miss Marguerite Bostwick, Mohonasen High School English department head; and Joseph Porter, English teacher at Schalmont High School.

Words for the spelldown were taken from "Words of the Champions" booklets distributed by the Union-Star to participating schools for study purposes, and from Webster's Unabridged Dictionary, second edition.

THIRTY-SEVEN FINALISTS

Each of the 37 finalists appearing on the chapel stage Saturday was a school champion speller. They were chosen from among approximately 6,200 seventh and eighth grade pupils in nearly 270 classes. Eight boys and twenty-nine girls made it to the finals.

Winning through to the 11th of 12 rounds was 13-year-old Anna Hood, a seventh grader at Duanesburg Central School, who placed third. Judith Smith, a 13-year-old eighth grader at Fort Plain Central School, placed fourth, and 12-year-old Gail Shaffer, a Gilboa-Conesville Central School seventh grader, earned fifth place.

Paper Mate inscribed two-tone pens were presented each school champion at the close of Saturday's bee. As runner-up, Patricia also earned a $25 U.S. saving bond, while to Ellen went a complete, current set of the Encyclopedia Britannica, the Britannica's World Language Dictionary, a Zenith all-transistor portable radio, and her choice of a Paper Mate inscribed Mark IV pen or desk set.

Ellen now will represent Schenectady and its neighboring communities as a finalist in the 34th Annual National Spelling Bee, sponsored by Scripps-Howard newspapers. She will leave Schenectady May 31 to join 72 youthful spelling champions for several days of a specially planned program that will include sightseeing and other events, in addition to the national bee finals.

Roy Swanigan, West Virginia Legislator, Overcomes Handicap To Enjoy Fruitful Life—Operates U.S. Senate Subway Car

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 27, 1961

Mr. RANDOLPH. Mr. President, with the President's Committee on Employment of the Physically Handicapped meeting today and tomorrow in Washington, D.C., it is an appropriate occasion to call attention to one of the Senate subway car operators who has overcome a handicap and is taking an active part in public affairs.

I refer to Roy Swanigan of Fayetteville, W. Va., who is a member of the house of delegates of the West Virginia Legislature.

Today's editions of the Washington Evening Star contains an interesting column by George Kennedy, who writes as "The Rambler," and depicts the story of Mr. Swanigan in a most stimulating manner.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, the newspaper column to which I have made reference.

There being no objection, the newspaper column was ordered to be printed in the RECORD, as follows:

[From the Evening Star, Apr. 27, 1961]

THE RAMBLER IS TAKEN FOR A RIDE

(By George Kennedy)

Roy Swanigan, a young-looking man with brown hair, good complexion and a soft voice—not of the Deep South but with the slightly higher note of the hill country—operates one of the cars on the new subway to the New Senate Office Building.

He is a member of the West Virginia Legislature.

"We had a 60-day meeting in January and February," he said yesterday. "We went all out. We increased taxes and expenditures by about $30 million. West Virgina must advance. We also ratified the amendment giving the citizens of the District the vote."

He began work on March 30 after the biennial session. There will be a short session, 30 days, in January 1962. He has already arranged to attend it on annual leave.

He has not yet decided whether he will stand again in the 1962 primary election.

He is from Fayetteville, southeast of Charleston the capital of the State. Fayetteville is near the New River which flows into the Kanawha. The capital is in the valley of the Kanawha which flows into the Ohio. Fayette County is Democratic. The four Democrats leading the primary are sure to be elected to the legislature.

He was one of the 18 candidates in last year's primary—the same one which was so decisive in the selection of the Democratic candidate for President. He was first among the 18. It was his initiation in politics.

He had applied for this job 2 years ago—before he ran for the State legislature. But there was no place for him then.

Senators JENNINGS RANDOLPH and ROBERT BYRD were very helpful and especially Representative CLEVELAND BAILEY, of Clarksburg.

Mr. Swanigan is very well qualified for the job. For years he was an electrician for the New River Coal Co. He operated a motor in the mines pulling a string of cars loaded with coal blasted from the face. Like all jobs in the mine, an electrician is a member of the United Mine Workers.

There was an accident in 1955. Roy Swanigan fell below the cars and his legs were mangled just below the knees.

He did not lose consciousness and he was able to give himself some first aid by improvising tourniquets.

Four months later he was back on the job with artificial legs.

When asked about it yesterday, he jumped out of the car and walked briskly up and down the platform.

He said, "The physical rehabilitation people say I'm one of the best walkers in their experience.

"I don't know about that but I do know this. I am the only double amputee in the United States who is a licensed airplane pilot."

He produced a card to prove it. That wasn't necessary. Something about Roy Swanigan is insistent that anything he says is so.

"I've been with the New River Coal Co. for about 20 years. They are pulling in their operations. As an electrician I had charge of the motors and the powerplant in one part of the mine.

"They told me my job would be over April 1 of this year. An electrician with seniority would be able to take care of the operation."

Roy Swanigan, who is 41, now lives in Falls Church at 1438 Patrick Henry Drive with his wife and two children, an 18-year-old son and a 15-year-old daughter.

This conversation was gleaned going back and forth between the Capitol and the New Senate Office Building.

At the latter end, a distinguished-looking, gray-haired man boarded.

"Hello, Senator," said Roy Swanigan.

The Senator cordially acknowledged the greeting. When he alighted at the Capitol end, Roy Swanigan got out a little book of pictures of the Senators.

"That's CARROLL of Colorado," he said. "I know about 55 of them now. I've only been here 6 weeks. I will know them all pretty soon."

Americans Very Concerned

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. BONNER. Mr. Speaker, under leave to extend my remarks I enclose an editorial from the Washington Daily News, Washington, N.C., which I think is most timely. I want to take this opportunity to congratulate the editor of this paper, Ashley Futtrell, for the clear and understandable manner in which he has pointed out the situation in Cuba and the obligation the Congress and the Government of the United States owe the people in an effort to prohibit the establishment of a communistic government on our eastern coast:

AMERICANS VERY CONCERNED

Americans in all walks of life have become vitally concerned with what is taking place in Cuba. This is not a sudden concern, but it has been one which has grown upon the people.

When Fidel Castro first came to power, Americans generally were content to sit back and pay scant attention to what was taking place at our back door step. Bit by bit, as Castro turned his island into a communistic fort, concern of rank and file Americans seemed to grow.

This concern has grown until today we wonder if the Kennedy administration is not somewhat behind the general feeling in the United States as to definite steps.

Ask the man on the street what he thinks we should do about Cuba, and he will express disgust and disdain at the situation. He will say immediately that we have put up long enough with Castro's actions, and that the time is past due for more concerted American action. President Kennedy minced no words last Thursday when he spoke before the editors of America. He told Russia America would tolerate no interference, and that for security reasons we could not allow Cuba to be a Communist satellite. That sounds most reasonable and Americans generally will stand behind the President in this crucial hour.

Americans do not want war. Somehow the feeling has existed for a long time that "we hope Castro will be overthrown by his own people." But how long must we keep hoping while Castro builds an ever stronger military camp there? With the help of

Russia, he can equip, train, and maintain quite a sizable force. And in all probability he is working toward that end right now—day and night.

For Russia to accuse America of fomenting the recent small invasion is to be expected. Russia says nothing about what she has given Cuba in the way of arms, guns, planes, tanks, and technical assistance. But she points the ugly finger at us and tells us "you are to blame," while at the same time trying to scare us off from any other help. We do not know how much help America has given to the Invasion. But it stands to reason that we have not given very much. After all any private in the U.S. Army knows full well that one division of American marines or soldiers, well trained, well equipped and with proper air support, could go into Cuba today and defeat Castro's army. And it could be accomplished quickly.

If we are in the business of offering wholesale help, then why has such a quick invasion failed? Surely it would not have failed if America had taken even a small part in the planning and execution of the invasion.

Within a matter of hours, America could take over Cuba now if she wished to do so. When charges are made, and when the defeat of the invading army is made to sound like an American defeat, it does give rise to serious thinking in this land of the free and home of the brave.

Americans today are vitally concerned, and they have a right to be.

U.S. Taxes Cost Hawaii $230 Million

EXTENSION OF REMARKS
OF
HON. HIRAM L. FONG
OF HAWAII

IN THE SENATE OF THE UNITED STATES

Thursday, April 27, 1961

Mr. FONG. Mr. President, I read with great interest that Hawaii leads 10 other States in the Union in contributions to the Federal Treasury.

In a bylined story in the Honolulu Star-Bulletin, veteran newsman Frank Hewlett has written a succinct article noting Hawaii's rank in the Internal Revenue Service Report of 1960.

Mr. Hewlett, who now heads the Star-Bulletin's Washington bureau, is a former United Press correspondent and was the last war correspondent to escape from Corregidor at the outbreak of World War II.

I ask unanimous consent that this news report published in the Honolulu Star-Bulletin of April 21, 1961, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

U.S. TAXES COST US $230 MILLION

(By Frank Hewlett)

WASHINGTON, April 21.—Hawaii taxpayers shelled out $230 million to Uncle Sam last year for another record. It was $41 million more than in 1959.

A report issued today by the Internal Revenue Service shows Hawaii contributed more to the Federal Treasury in the calendar year 1960 than 10 of the States.

Furthermore, two Southern States which only a few years ago were far ahead of Hawaii are rapidly being overtaken by the 50th State.

Total internal revenue collections for Arkansas were $230 million and Mississippi $240 million compared with Hawaii's $230,589,000.

States with smaller Federal tax collections than Hawaii were Alaska, Nevada, Montana, Idaho, North Dakota, South Dakota, Wyoming, New Hampshire, Vermont, and Maine.

A breakdown of the tax collections by the Honolulu Internal Revenue Service office showed: Corporation income and profit taxes, $41,530,000; individual income and employees taxes, $176,102,000; gift, excise and other miscellaneous levies, $12,956,000.

Our Immigration Law

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1961

Mr. WALTER. Mr. Speaker, under the leave to extend my remarks, I wish to include in the RECORD, the text of a letter sent by Mr. Edward F. L. Bruen, chairman of the committee on American citizenship of the New York County Lawyers Association, to the chairman of the subcommittee on immigration of that committee. Mr. Bruen's letter reads as follows:

NEW YORK COUNTY
LAWYERS ASSOCIATION,
COMMITTEE ON
AMERICAN CITIZENSHIP,
March 28, 1961.

SAMUEL PAIGE, Esq.,
Chairman, Subcommittee on Immigration, New York, N.Y.

DEAR MR. PAIGE: As you know from time to time I send comments to the chairmen of the subcommittees which I think should be in the hands of the entire committee.

I am sure you understand that I do not wish to in any way limit the scope or direction of your work. The following is submitted merely as thought provoking background material for the questions which are likely to come before our members.

Our present immigration and nationality law is the act of a sovereign power which could, of course, keep out all persons who are not citizens of the United States and deport any already within the country merely on the ground that they are aliens. This power was derived by the Federal Government from the people of the individual States. During its early history our National Government like the colonial governments had encouraged immigration largely because of the sparcity of the population on a great continent.

With the need for immigration no longer a practical requisite for survival or rapid development, there still remains a belief that neither our country nor people of other lands seeking U.S. citizenship would be the gainer by barring further immigration. This belief is generally shared by the patriot and all men of good will. We are, however, with the rest of the world experiencing in the United States a population explosion which reliable authorities have estimated will bring our population past 200 million by 1970 and 230,800,000 by 1980. Without any increase from foreign lands, for these new citizens to be born here, we will have to greatly expand opportunities for gainful employment.

There are some few people who have apparently so far detached themselves from the realities of distressed or depressed areas, critical shortage of proper housing, hospital, medical, educational and training facilities as to urge that the United States should adopt a policy designed to drain off the excess population of certain other countries. History shows that migratory movements are not the correct answer to overpopulation. The solution lies within the control of the over-populated countries. For the United States such a task would prove useless. The sovereign ship of state can refuse to take on more passengers for the sake of the comfort of those already aboard. It may keep loading until the safety point is reached; it may ignore the safety limit or it may take on those calculated to scuttle it. Neither of these last courses would be permitted by one loading a lifeboat regardless of whether he was hoping for rescue himself or planning to go down with the mother ship. What is best for the United States may be best for the world also.

The patriot's faith that his country will be the gainer by never closing the barrier would not be matched by his intelligence if immigration should be open to all. Some standards must be met. Guesswork and emotionalism are not proper bases on which to rest a sound immigration policy. The present law, the Immigration and Nationality Act of 1952 (66 Stat. 163; 8 U.S.C. 1101) like most laws is not perfect. It is, however, an understandable standard for the open door. With this standard in effect well over 2 million, quota and nonquota, immigrants have been admitted to the United States during the last 8 years.

This law which like a tax law can never be popular in all quarters is based on the national origin quota system. The quotas are based upon the proportion of our people having a particular foreign national origin. If we look at the ethnological composition which has made our country the greatest on earth and enables us today to offer a better life to those of other lands, we can better understand the basic theory of this system. Our people have demonstrated that they can live together in comparative peace and harmony notwithstanding the fact that they originated in various proportions from different foreign countries. Similar proportions of quota immigration will not only tend to maintain our ethnological composition, but will promote a continuance of the peace and domestic harmony. While it is possible that our people could continue to live together in peace and harmony under different proportions of foreign national origins, no one can guarantee it, and only a few seem willing to risk it outside of the special interest and minority pressure groups who seem to be thinking largely in terms of the desire of the people they favor to immigrate, rather than the unbalance in people, economy, politics and other conditions it threatens.

There are advantages in having each quota computed under the identical formula. This mathematically fixes all quotas at one-sixth of 1 percent of each of our foreign national origin groups. No country knowing in advance what its quota, and that of all other countries will be from year to year, can offer just criticism. The fact that some foreign countries do not fill their quotas does no seem a valid argument for unbalancing the proportions further by admissions from countries whose quotas are oversubscribed. During the last 30 years Congress has consistently declined to accept this idea of jackpot, which would be a source of misunderstanding as a quasi-guarantee that the United States would receive immigrants to the total number of all the quotas. The basic reason for the failure of the "jackpot" bills in previous Congresses was that the scheme is based upon a misconception of the purposes of the quotas. Neither the quotas nor the total

thereof constitutes a number of immigrants the United States either needs or must have each year. They constitute the maximum number of quota immigrants we are presently prepared to receive from each country, whether we need them or not. On the other hand, there is no limit on the number of nonquota immigrants who may enter the United States annually, which is generally in excess of the volume of quota immigrants.

A strong theoretical case may be made for recomputing the quotas upon the basis of the various foreign national origins of the American people as shown by the census of 1960, instead of the 1920 census. The change would perhaps not be advisable in that there is serious question as to whether an increase in permissible volume of quota immigration is desirable. If the jackpot principle should also be applied, the increase could result in 1 million annually instead of the 2 million during the last 8 years. The only true nondiscrimination would be to give each country a quota numerically equal to or identical with that of every other, a system which no one advocates.

Like previous laws it characterizes citizens as native born and naturalized. The latter can lose his citizenship by reason of prolonged residence abroad while the former cannot. This has led to the hardly fair charge of second-class citizenship. A native-born citizen becomes such under our Constitution, which the people of the several States adopted at our national origin, by reason of birth whether he desires it or not. He therefore makes no promise regarding residence as a condition precedent to the acquisition of citizenship. An alien becomes a naturalized citizen on the understanding that he intends to reside permanently in the United States. A more valid charge of second-class citizenship can perhaps be made in that it permits the naturalized person not to agree to bear arms. Naturalized citizens should assume all the obligations of citizenship. Conscientious objectors should be granted exemption from combat military service without regard to naturalized or native-born status.

Another aspect of the act is that criticism with the interest of aliens in mind urges statutory appeal on visa applications. American consular officers abroad issue visas to those seeking entrance which administrative review of their decisions by the Secretary of State. The United States is the only country presently granting aliens access to its courts on a question of their right to enter the national territory upon arrival at a port of entry. It would seem only right that U.S. citizens who seek to enter foreign countries should be assured of receiving reciprocal rights by foreign countries by treaty if we are to give such statutory appeal to them.

Yours faithfully,

EDWARD F. L. BRUEN,
Chairman.

Kansas

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 27, 1961

Mr. CARLSON. Mr. President, many fine articles have been written about Kansas, as we celebrate our centennial year; but none has been more descriptive of the true picture of our State than an article written by John Bird, one of the editors of the Saturday Evening Post.

Mr. Bird is a native Kansan; and he grew up in the midwestern part of our State. His family is one of the old, established families of Kansas; and, with this background, he was able to write a most excellent article. In it he describes the great growth and development of our State, the wealth of its natural resources, its people, their cultural background and mannerisms, and the great part the State has assumed among all the States of the Nation.

Kansas was the first State in the Union to establish a program of rural medical care. This program was established in 1949, during my administration as Governor of Kansas; and its value has been demonstrated by the fact that every community in the State now has a doctor, and most of them have hospitals and clinics.

This program set the pattern for other States in our Nation. Much credit for the program goes to Dr. Franklin Murphy, who at that time was head of the Kansas Medical Center.

Kansas people have always been progressive in ideas and spirit. It is truly a great State.

Mr. President, notwithstanding the fact that the article is estimated by the printer to make two and two-thirds pages at the cost of $216, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KANSAS, MY KANSAS
(By John Bird)

For some reason, my old home State of Kansas long has reminded me of a weather-toughened old dame, prim and frugal in her daily life, but on occasion likely to kick up her skirts in a raffish cancan. This may be at considerable variance with the standard personification of the 34th State as a calm, clear-eyed pioneer mother, but so be it. The old girl is doing some fancy prancing right now, commemorating her 100th birthyear with extensive hurrah and pagentry involving bush-bearded pioneers, gun-slinging cowboys and sheriffs, whooping Indians, painted dance-hall girls and, of course, that flaming old anti-slavery fanatic, John Brown.

When I heard of these festivities, it seemed fitting that I should revisit my native State and wish her many happy returns. True, after growing up on her high plains, I had spent most of my adult years elsewhere. Kansas was still on her bony knees in dust and depression back in the thirties when, along with many other of her surplus offspring, I had fled to gentler climes—and a steady job. But being born a Jayhawker is an incurable disease. Even after long exile the symptoms recur in the form of niggling memories of the vast sweep of Kansas landscape, the magnificant color of her skies, the hoarse, insistent voice of her winds and, perhaps most of all, the inconsistency of her behavior.

This last trait has caused Kansas to be much misunderstood and even maligned by obtuse outsiders. But to the likes of me, it made her far more alluring than if she were completely predictable and respectable. For the Kansas I fondly remembered was as capricious as her volatile weather. Her attitudes seemed to reflect the varied human strains which shaped her into a State—stringy New England abolitionists, hell-for-leather cattlemen, stolid wheat bringers from the steppes of Russia, ascetic religious sects and even a few free-thinkers seeking room for their free thoughts. With equal facility and affection Kansas mothered blue-nosed reformers and gaudy sinners, farsighted educators and bumptious ignoramuses, courageous statesmen and barnlot politicians, writers of great wit and nasty backhouse scribblers, pioneers in medical science and monstrous quacks. Many had this in common: They were individualists; they stood out against the flat horizon.

And perhaps most endearing, my old Kansas has a wonderful sense of humor—a wry one, to be sure, for her life was not easy. Long ago her settlers learned that the great rectangle of earth that is Kansas—about 200 miles wide and 400 long, 82,276 square miles, larger than Ohio and Indiana together—could not be easily subdued, but must be taken essentially as she was, with her droughts, tornadoes and blizzards as well as with her bountiful years and incomparable autumns when the harvest-flavored air was a joyful tonic. Often there was no choice in Kansas but to cry or to laugh—and to the State's everlasting credit she produced more wisecracks than sob stories. I fondly remember the news dispatch of the midthirties from Great Bend, reporting the worst dust storm of years and commenting, "Lady Godiva could ride through the streets without even her horse seeing her."

Thus fortified with memories, I flew to Kansas, rented a car and covered a mere 1,200 miles of the State's 125,000 miles of roads—the main ones are as good as any in the Nation, wide, straight and fast, speed limit 70 miles per hour, except on the Kansas turnpike where it is 80 miles per hour and no dawdling. I headed west, first through the rolling Flint Hills in the eastern third of the State. Local residents are quick to point out that this 4 million acre meadow is one of the last large blocks of true prairie left in the United States. "Lots of tourists still think they are in Missouri when they see these grassy hills and wooded valleys," a friend at Lawrence complained. The rest of the State is not pool-table flat, despite the impression it gives, but a gently swelling plain rising to heights of more than 4,000 feet near the Colorado border.

Some things were blessedly the same. In central Kansas I dropped in on my 97-year-old mother-in-law at her old limestone farm home, standing like a fortress on the prairie. She came here as a bride 76 years ago and here raised 10 children—I got the 10th. She was taking a delicious-smelling roast out of the oven and didn't look a day over—well 80. She was particularly anxious to know whether young Mr. Kennedy would be able to stand up to that awful Mr. Khrushchev. I said time would tell. Farther west, out in Ellis County, I visited my mother, in her early eighties, at her Big Creek farm, which she has run in exactly her own way for many years. She looked fine and recently had been out in the barn lot, helping a small grandson break a colt. "Don't you make anything out of that," she warned. "We hand-raised that colt, and he is as gentle as a kitten."

But almost everything else I saw or heard gave testimony of a fast-moving transition. At her century mark the once-embattled Kansas has become a well-heeled, full-figured dowager, rather smugly proud of her financial solvency, political cleanliness, and widespread but rather bland culture. As one longtime reporter in Topeka, the fast-growing State capital, put it, "There's just not much excitement any more. We're a prosperous and pleasantly stagnant State. Even the college kids are reactionary these days. Our politics are so honest it's pitiful."

Kansas now has a comfortable, gadget-ridden way of life which, in the opinion of some close observers, has "leveled upward."

There are some pleasant surprises for the visitor such as the jewel-like art museum in the little town of Lindsborg, population 2,300. It was erected in the memory of Birger Sandzen, a bold painter, wood carver, and lithographer of Plains and Rocky Mountain scenes; a fine collection of his work is lovingly displayed here, along with that of other, mostly modern Kansas artists.

But at the same time there is a feeling that, from a creative standpoint, the State has become too standardized. Oscar S. Stauffer, Topeka, dean of Kansas publishers, told me. "We're turning out good newspapermen, but they aren't as electric as they once were." Kansas writers, poets, artists, and sculptors are busy and much respected—but they aren't very well rewarded. A surer road to financial prominence is a chain of elevators to store surplus wheat or a flock of productive oil leases.

Kansas is especially desirous that outsiders should appreciate her material progress. As I traveled and looked and talked with a variety of citizens, a definite party line emerged. It was an answer at last to the vitriolic editorial "What's the Matter With Kansas?" published in the Emporia Gazette, which started William Allen White on the road to fame. He wrote it in 1896 when colorful Populist rebels such as "Sockless" Jerry Simpson and Mary Elizabeth Lease were bellowing calamity and urging hungry farmers to raise less corn and more hell. That 1961 reply is: "There's nothing the matter with Kansas."

Much of the evidence on the landscape, in the towns and in the ledgers appears to support the boosters' views. The State's record of well-heeled stability, especially since World War II, is indeed impressive. Total personal income for the State's population, now 2,178,611, has been running around $4,500 million and is well diversified. "We have become an industrial State," John H. Sticher, executive director of the Kansas Industrial Development Commission, told me proudly. "Over the past 10 years the cumulative total of payrolls has exceeded the total of farm net income by almost a billion dollars."

Kansas is still highly farm-minded, even though, as sharp-tongued John P. (Jack) Harris, editor of the Hutchinson News, says, "The yearning for industry has become almost an hysteria." The large, square-cut farms and ranches which cover the State are marvels of productive power, backed with science and hard-won skill. The old Dust Bowl? That area long has been green and the harvests abundant. The gritty ghost of the black blizzards was exorcised for good, Kansans believe, when a dry spell just as serious as that of the midthirties gripped the State for 5 years, 1952–56. Production sagged, of course, but there was no disaster, no exodus of dispossessed. Today's farmers use soil-conservation methods, they have drought-resistant crops such as the amazingly productive new hybrid grain sorghums, and greatly expanded irrigation facilities—all of which soften the impact of drought.

Kansas productivity and affluence are as obvious as her billboards. For much of my journey I was within sight of one oilfield or another, where the knob-headed walking beams of the pumps nodded up and down to one another like amiable storks. Each nod puts money in Kansas pockets; she is fifth among States in oil output, pumping up around $350 million worth of the stuff a year. In the wide, broad-bottomed Kaw Valley—running from Kansas City, Kans., to Manhattan—is a new wave of settlers, housed in attractive modern plants—such notable immigrants as Du Pont's Cellophane, General Motors (Buick-Olds-Pontiac), Hallmark Cards, and Goodyear Rubber Co. Out on the high plains the land spreads out like a god's checkerboard; here are great squares of Kelly-green winter wheat which make her the Nation's No. 1 producer of bread grain. On the skyline—like medieval castles—rise huge new grain elevators, built to guard a peculiar treasure; they store a total of 741 million bushels of wheat, much of it surplus, more than the output of two of the State's bumper crops.

At Manhattan my alma mater, once called Kansas State College of Agriculture and Applied Science, now has been officially renamed Kansas State University, and I needed a guide to take me around the glittering, proliferated campus. When I was a student there in raccoon-coat-and-flapper days, the enrollment was around 2,500, and the native limestone buildings were spired and arched, ivy-covered and shadowy. Today there are 7,500 students; new laboratories, dormitories, classroom buildings, and auditoriums have swarmed up to the hills where we once hid out for interesting experiments with thumbed beer. The new architecture is flatly modern—horizontal lines, bright abstract decorations, great expanses of glass. My first impression of these slick surroundings—designed for the utmost in comfort, correct lighting, and mood of color—was not a generous one. Frankly, I thought, This is too damned good for college kids.

But then I realized that I was an antique. Today's academic facilities may be plush, but the students make better use of their opportunities than did my generation. "The quality of students has improved strikingly in recent years," President James McCain told me. "About 62 percent of them ranked in the upper half of their high-school graduating class. These youngsters who come off the farms and out of the small towns know that many of them can't go back. They are serious. They want to be well prepared to compete anywhere in the world."

The emphasis on education in Kansas is traditional. The pioneers from New England were literate folk who believed that knowledge sets men free. There are 42 State-accredited colleges and universities in Kansas, and as a rule the schools are distinctly "of the people"—they do far more than teach. They react to the State's needs with a multitude of programs and services.

One of the most striking results of this service concept is the "medical renaissance," which has given Kansas a fine rural-medical system—so effective that Dr. W. Clarke Wescoe, chancellor of the University of Kansas, at Lawrence, told me seriously, "I would rather be taken acutely ill in a small Kansas town than in the middle of New York City."

This wasn't always so. Right after World War II, Kansas medicine was "worse off than in the old horse-and-buggy days," I was told. Many communities had no physicians and were unable to attract them. The suggested solution came in 1948 from brilliant Dr. Franklin D. Murphy, then the young dean of the medical school and later to be chancellor of the university. The plan itself was direct enough: (1) The medical school should train more doctors, nurses and technicians; (2) the communities should themselves develop the medical facilities, clinics and hospitals which would attract young doctors; and (3) the medical school, State medical society and State board of health should provide refresher courses and postgraduating training to keep the rural doctors up to date.

The Murphy plan was adopted and financed by the Kansas Legislature in 1949. By 1957, claim Kansas medical authorities, every community in the State had a doctor and most had hospitals or clinics.

To get a sample of this community medical service I stopped at Quinter, a crossroads town of 800 out on the high plains. And here I found a beautifully designed, community-built, 30-bed hospital, staffed by three well-trained young physicians. The doctors, Carl C. Gunter, Herman W. Hiesterman, and Richard L. Penfold, proudly showed me around, pointing out large and sunny rooms with such refinements as piped-in oxygen over every bed, a well-equipped operating room, a modern delivery room, and a nursery with special equipment to keep premature babies under controlled temperature and humidity. Construction will start this spring on a new wing, a 38-bed nursing home for the aged and chronically ill. "Then we'll have the whole works," one of the doctors said.

These doctors chose to practice in Quinter because of their experience in an unusual preceptor program, under which every K.U. medical student must spend 6 weeks as an aid to a practicing physician in a small town. "I served a preceptorship here in 1950," Dr. Gunter told me. "Dr. Hiesterman and I had decided in medical school that we would practice together, and I persuaded him to come here. Dr. Penfold preceptored here in 1955 and liked it enough to come back."

"We're organized so that one of us can be away for advanced study at any time," Dr. Hiesterman added. He took a year, during 1957 and 1958, for a residency in surgery in Lincoln, Nebr., and Dr. Gunter took a year of study in surgery at a Portland, Oreg., hospital.

The three doctors are much in favor, also, of the circuit courses offered by traveling teams of doctors from the K.U. Medical Center. These are monthly sessions presented at strategic localities throughout the State. "The last one covered the recent advances in diagnosis and treatment of cancer," Dr. Gunter said. "It's a sort of a continual updating process."

The young doctors are enthusiastic about smalltown life. No time lost between home and work, no traffic jams, plenty of good hunting and fishing and no problem to go after it, they pointed out. But such proximity has its hazards. Late one night Dr. Gunter, who lives just half a block from the hospital, was called in an emergency. He jumped out of bed and took a shortcut through a neighbor's back yard—where he connected abruptly with a new clothesline the neighbor had installed. "I was in worse shape than the patient when I finally staggered into the hospital," he says.

Perhaps Kansas' greatest virtue, in the eyes of conservative Jayhawkers, is her habit of living comfortably within balanced budgets. "Fiscal sanity," former Gov. George Docking called it. Whitely Austin, young editor of the Salina Journal, couldn't resist nipping editorially that many voters "might believe that it has something to do with the outhouse."

Docking, a hard-shelled banker, was one of those political mavericks which Kansas occasionally produces, a Democratic Governor in a traditional Republican stronghold. He was first elected in 1955 and was much admired for his wizardry with balance sheets. He also qualified as an individualist of the old stripe—a headstrong man with an explosive temper and a knack for searing comment. "George would get up to speak before a large, influential group and couldn't resist verbally jabbing them in the eyes with a burnt stick," one of his friends told me. He told teachers that they were underworked and overpaid and newspaper editors that they were more interested in selling advertising than printing the news. He took a bitter dislike to Chancellor Murphy, one of the most popular men in the State, and when Murphy resigned from K.U. last year to accept the chancellorship of the University of California at Los Angeles, Docking was accused of hounding the educator out of the State. The voters turned against Docking when he ran for a third term last fall—but were happy about the fiscal sanity, which left a surplus of $28 million in State funds.

John Anderson, Jr., the Republican who succeeded Docking as Governor, is a milder mannered type who isn't likely to set the prairies aflame in any great crusade. He came whistling up the stairway at the State capitol to meet me for a Saturday appointment and chanted a few choruses of "Nothing's the Matter With Kansas." He is a handsome, smooth-featured man, looking even younger than his 43 years, and formerly was State attorney general. He emphasized that there are no political bosses in Kansas. "The people run the politics," he said. "There has been no really effective machine for at least 8 years, not since the Republicans got into a big fight between two factions. That's when Alf Landon, who had been the Republican leader, became sort of like an old bull kicked out of the herd by the younger ones. But in any case, Kansas is no place for strong political machines—if one is built up, the people are quick to reject it."

The big issue in Kansas, he told me, was industrial development. "We're losing population from the farms and gaining it in the towns. We need to get more industries and jobs to ease this transition. We have great inducements. We can offer a central location, fine transportation, an excellent water supply, a great supply of oil and natural gas for fuel and a good industrial climate. The people who come off our farms know how to work, and they're willing to work."

His plans for Kansas? Nothing startling. No major reforms. "As any other State, Kansas has to keep its government in tune with the changes in society itself."

Kansas does have some worries—the readjustment she faces isn't easy. But her leaders seem most concerned about the image—their term, not mine—which the State projects to the rest of the country. It may be significant, for example, that some doctors now speak of the "Dodge City syndrome"—meaning the foot and leg wounds suffered by youngsters who shoot themselves while practicing quick draws with a loaded six-gun. Western atmosphere may be good for tourist trade, but Kansas officials want it known that they wear late-model business suits as well as cowboy boots and 10-gallon hats.

"Seriously, one of our main drawbacks is the peculiar idea of Kansas that is held in the East," said Dr. James Surface, Kansas-born, Harvard-trained young dean of the Kansas University School of Business. "People back there, sometimes people in influential positions, are inclined to think of this State as rather primitive, still exclusively devoted to ranching and farming." We were talking in his ultramodern office in brandnew Summerfield Hall, which has more glass than an aquarium. He had been stressing the opportunity offered research-based industries by the scientific brainpower and extensive laboratory facilities available at Kansas institutions.

This problem of a poor first impression is no new one. From the earliest days, casual visitors have given my native land a bad press. The first white-skinned tourist to look down his nose at her was Francisco Vasquez de Coronado, governor of New Galicia, Mex., who came here searching for the allegedly golden Quivira. What he found so disgruntled him that he strangled his Indian guide and complained in his report. "These provinces * * * are a very small affair * * * not any gold, nor any metal at all." I'm glad that the greedy conquistador was thrown out of office when he returned to Mexico.

The Great Plains suffered more badmouthing after the Louisiana Purchase, when the Federal Government sent Capt. Zebulon M. Pike to inspect some of its new real estate. In 1806 he crossed what is now Kansas and noted: "These vast plains * * * may become in time as celebrated as the sandy deserts of Africa." Daniel Webster didn't help, either, when he spoke eloquently, but with typical Ivy League myopia, against western-development plans in 1824: "What do we want with this vast and worthless area, of this region of savages and wild beasts, of deserts and shifting sands and whirlwinds, of dust, of cactus and prairie dogs? I will never vote 1 cent to place the Pacific coast 1 inch nearer Boston."

That gives you an idea. The bloody struggle of Kansas to become a free State added to her reputation as a hard and nettlesome wench. She became a sort of mid-19th century Korea when a wavering Congress in 1854 backed away from the Missouri Compromise and left it up to the Territory of Kansas to settle the question of slavery for herself. Pro-slavery forces from Missouri swarmed into Kansas to terrorize free-soil settlers and to stuff ballot boxes. The abolitionists of New England organized the Emigrant Aid Society to send 20,000 free-State settlers a year to the territory. The area lapsed into anarchy and might well have fallen to the southern forces had not the fiery John Brown and other abolitionist zealots, such as James Montgomery and his Jayhawker guerrillas, forsaken the political niceties and turned to murderous retaliation. It wasn't until 1859 that a free constitution was ratified, and on January 29, 1861, President James Buchanan signed the bill admitting Kansas to the Union. By then the new State had enough New England settlers to mark it for generations with a stern Puritan conscience and, some say, more than a touch of Puritan hypocrisy.

Today certain Kansas scholars are more amused than perturbed by the warped impression their State casts on the TV screen, where some of her frontier marshals, sheriffs and badmen go through gallant, highly improbable maneuvers. Nyle H. Miller, the genial secretary of the Kansas State Historical Society, has been flooded with requests for information about them—even such fictional ones as Matt Dillon. He says, "These frontier lawmen certainly were a colorful lot, but they shouldn't be fitted with halos."

He points out, for example, that the much-televised Wyatt Earp actually was a lowly policeman in Wichita—and his most publicized fight there was with a fellow officer, for which he was fired and given a polite hint that he had better leave town or be jailed as a vagrant. In Dodge City Earp served as assistant or deputy marshal and during an out-of-office interim paid a small fine for clouting Frankie Bell, a dancehall girl, in the chops. Of James Butler (Wild Bill) Hickok, famous for his gunslinging in Abilene and Hays, Miller says, "his nickname should suggest that he was quicker on the trigger than he was in the head. At least once, in Abilene, he shot one of his own policemen."

The 1880 census of Dodge City lists the cane-carrying Bat Masterson as sharing a dwelling with Annie Ladue, 19, "concubine," while Bat's brother, Jim, then city marshal, was playing house with "Minnie Roberts, 16." Miller suggests, "Maybe that was the way they kept their eyes on juvenile delinquents." He also believes the TV producers are missing a good bet in Marshal Henry Brown, who pacified riproaring Caldwell, causing grateful citizens to present him with a gold-mounted Winchester rifle. A few days later a gang attempted to rob the bank at Medicine Lodge. One of the bandits was shot down—and turned out to be none other than good old Marshal Brown.

A key question in Kansas these days can be seen along the backroads where farmhouse after farmhouse stands abandoned, looking out dusty-eyed on a countryside that is largely empty of people. The farms have been mechanized, have consolidated into larger and fewer units. Kansas has been losing farms at the rate of 2,000 a year since the midthirties, now has about 115,000. The rural schools, community churches, and small villages—unfavored in the new scheme of things—have withered away. C. Peairs Wilson, dean of the school of agriculture at Kansas State, told me that farmers in the farm-management associations, sponsored by the university to encourage businesslike methods, now operate about 1,000 acres apiece.

How much bigger can farms get? "That depends on how much bigger machines can get," he said. "Also, on the limits of financing." Wilson pointed out that a 1,000-acre farm may easily require an investment of $200,000 for land alone. A young man with little capital hasn't much chance of starting for himself. "In fact, we may see the development of family farm corporations," he said, "both as a means of financing efficient-sized farm units and for transmitting the business intact from one generation to another." This had a peculiarly ironic ring for me, because back in the late twenties my father, the late John S. Bird of Hays, built up a system of large-scale, highly mechanized farms, operated under a corporate management, as a means of low-cost production of wheat. The farm politicians became alarmed by this efficient development, claiming it would "gobble up the land," and passed a law against farm corporations. Now there is talk of repealing that law.

On top of this technological revolution, Kansas agriculture has been plagued, in spades, with surplus crops, low prices and rising costs. Her gross farm income, divided about evenly between crops and livestock, has been running around $1,100 million a year—but the net farm income has been rising and falling like a roller coaster, with a downward trend. Where it ran in the $450 million to $500 million range in the early fifties, it was down to $411 million in 1960.

If Kansas farm leaders have any surefire answers to the farm problem, they didn't tell me. Consistently increasing crop yields have offset Government acreage-control programs. "We have learned how to produce," said Roy Freeland, secretary of the State board of agriculture. "Now the question is, Can we learn how to market it?"

The wheatgrowers of the State are trying to learn just that. In cooperation with growers in other wheat States they have set up a farmer-financed Great Plains Wheat Inc., headed by Clifford Hope, retired U.S. Congressman and longtime member of the House Agricultural Committee, and have set out on a worldwide market-development program. "Our aim is clear cut," said Hope. "It is to dispose of every possible bushel of wheat at home and abroad and to develop new uses and outlets." The growers have set up offices in many parts of the world, have sent teams of experts abroad to seek out new markets, have helped close soft-currency sales of surplus wheat to needy countries, have improved wheat grading and originated new wheat products and have undertaken nutrition programs to persuade Asiatic peoples, such as the Japanese, to develop a taste for wheat as well as rice. They can't measure results yet, but believe they are contributing to increased exports.

Nor is the industrial theme song without some sour notes. "Our eggs are still in too few baskets," Dean Surface puts it. "We have developed a huge aircraft industry, for example, but it's almost as up-and-down as our agriculture." And down in Wichita, a traffic-heavy city of 254,000, I saw what he meant. Here, thanks to several early birdmen such as Clyde Cessna and Walter Beech, Wichita-made aircraft are flown all over the world. For the past decade, well over half of the general type—private and executive—of airplanes produced in the United States

have rolled off the assembly lines of the Cessna and Beechcraft plants. "This business has doubled in the last 5 years, and we expect to beat this record in the next 5," said Dwane L. Wallace, the long, lean aeronautical engineer and onetime racing pilot who heads Cessna.

But the great Boeing Wichita plant, devoted to military aircraft, is feeling the effects of the shift away from manned bombing planes. Its work here on the eight-jet B–52H will be completed in mid-1962. Boeing's payroll, once at a peak of around 40,000, now is down to 20,000. Although Wichita has succeeded in attracting some new industry, such as a hotel-furniture manufacturer, the town is feeling a pinch as surplus aircraft workers look elsewhere for jobs.

In many ways Kansas is looking inward at her colorful past during this centennial year, but the younger generation of Jayhawkers have many close-at-hand evidences that they are part of an uneasy world. The message is writ in the immensity of the Kansas skies by the white contrails of the nuclear-bomb-carrying B–52's which take off from airbases in Kansas. It is seen in a new kind of "silo" being dug by the dozens in her flat, black soil, not to store feed for livestock, but as undeground nests for intercontinental ballistic missiles.

Nowhere is the irreversible march of the times more clearly symbolized than in the neat, reformed old cowtown of Abilene, where in 1910 young Dwight David Eisenhower, living on the wrong side of two sets of railroad tracks, wrote his Senator seeking an appointment to either Annapolis or West Point. Today that section of Abilene is much visited by people from all over the world. Not far from the old Eisenhower family home is a reconstruction of Old Abilene, a small but realistic reminder of days when herds of longhorns, up from Texas on the Chisholm Trail, met the railhead here, and the six-gun was the law. Next door to the white frame house where a future general and President grew up stands the monumental Eisenhower Museum, crammed with the personal mementoes of a Kansas boy who went a-soldiering.

"Fortunately, the Eisenhowers never threw anything away," said J. Earl Endacott, former Abilene schoolteacher and now executive director of the Eisenhower Foundation, which operates the museum. "Right now we're sorting out the deluge of material from the White House."

Across the street is being completed a huge new library to house the Eisenhower presidential papers and documents. But more poignantly expressive than these multimillion-dollar marble structures is the worn and frugal home, innocent of modern push-button conveniences, speaking simply but powerfully of the human values which produced one of the world leaders of our times.

As I got ready to say goodby to my old State, I realized more than ever that my newspaper friend in Topeka was right—the old rugged flavor had faded. In today's Kansas there would be no place for a Carrie Nation, who when jailed in Wichita for throwing rocks at a saloon picture of Cleopatra, buck-naked at the bath, declared, "You put me in here a cub, but I will go out a roaring lion, and I will make all hell howl"—and did. The puritanical influence has mellowed; prohibition, which Kansas pioneered in 1881, was repealed some years ago, and liquor stores are plentiful.

Even the Kansas newspapers, once noted for their crusading, independence, and earthiness, have toned down. True, I found the Emporia Gazette encouraging its readers to argue, sometimes in verse, about the odors wafted into new suburbs by large cattle-feeding yards. Other editors around the State were chuckling over "the cow-plop war." From my own tender years as a printer's devil on the Hays Daily News I recalled exciting occasions when irate subscribers, differing with the editor's mordant views, came storming into the office and threatened to whip him. He was, necessarily, a nimble man. But now—"The old fighting-newspaper tradition is largely dead," said Jack Harris. "Most editors are too interested in the business side these days, too conservative, too afraid to offend."

Another editor returned the compliment by saying, "You know, just about the time we think Jack is ready for some nice award, he goes off the reservation and kicks everybody in the teeth."

The real truth, it seems to me, is that Kansas really isn't in a fighting mood these days, having very little to fight about. And that lifts an old, old burden from my conscience. This thought came to me when I was leaving my old home town and drove past the public school where, in the fifth or sixth grade, we small fry were required to memorize a poem, "The Call of Kansas," which ran, in part:

Sweeter to me than the salt sea spray,
The fragance of summer rains;
Nearer my heart than these mighty hills
Are the windswept Kansas plains.

I had always felt a bit guilty—as had that poet—about leaving Kansas, as though deserting a battlefront in favor of some balmy shore. But now I know that the State is getting along very well indeed without me.

Quakers Buck Kinzua Dam, Stir Conscience

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. DULSKI. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial that appeared in the Buffalo Courier-Express, Buffalo, N.Y., on April 25, 1961, regarding the Kinzua Dam project on the Allegheny River, which expresses my sentiments.

It is my fervent hope that this administration will take a hard look at this project:

QUAKERS BUCK KINZUA DAM, STIR CONSCIENCE

The Quakers, old and steadfast champions of the causes of the American Indians, have launched a last-ditch appeal to the Federal Government for an independent review of the Kinzua Dam project on the Allegheny River.

Entry of the Society of Friends—popularly known since Colonial times as the Quakers—into the effort to preserve for the Seneca Nation the tribal lands along the Allegheny may be specially effective. For in 1794, four Quakers from the Philadelphia Yearly Meeting of Friends responded to an invitation from both the Senecas and the U.S. Government to participate in negotiating the Pickering Treaty, signed by President George Washington, under which the lands were set aside "forever" for the Senecas.

The Society of Friends thus has an historical association with the white man's obligation to the Indians which would be broken unilaterally if the Kinzua Dam is built without the Senecas' consent. It may be that President Kennedy will intervene to suspend the Kinzua project pending a review if the intervention by the Quakers stirs popular appreciation of the "sacred" nature of the pact entered into in 1794.

Over the weekend, the Indian Committee of the Philadelphia Yearly Meeting of the Religious Society of Friends designated Walter Taylor, national representative for the American Indian program of the American Friends Service Committee, to coordinate a new program designed to persuade the President and other Federal authorities to halt the Kinzua project. It was pointed out that Basil Williams, president of the Seneca Nation, has written to President Kennedy stating "we will abandon our opposition to the Kinzua Dam if and when it is shown by competent, objective evidence that a feasible alternative does not exist."

President Kennedy is confronted with many problems more grave than that of the Indians living along the Allegheny. But we submit that no U.S. obligation is more solemn or more demanding of his thoughtful attention as Chief Executive than the treaty of 1794 by which the Senecas assured a struggling new government of their support when they were being wooed by a foreign power to harass the United States.

These times and the intervention of the Society of Friends surely are auspicious in the Indians' behalf. Foreign powers again strive to destroy us. And entry of the Society of Friends into the Kinzua controversy should call to mind with a stab of conscience for every other honorable American a celebrated picture: Benjamin West's painting of William Penn, the Quaker, treating with the Indians for the peaceful settlement of the Colony of Pennsylvania. Unilateral abrogation of the 1794 treaty will mock all such recollection of our American heritage.

Beating Us With Federal Taxes

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. FORD. Mr. Speaker, many of us are extremely interested in the legislation introduced by our colleague, Representative ROBERT GRIFFIN, concerning the operation of our Federal tax laws pertaining to certain municipal bonds.

The editor of the Grand Rapids (Mich.) Press comments on Mr. GRIFFIN's bill in an editorial of April 18 entitled "Beating Us With Federal Taxes." The bill is H.R. 6368, and under leave to extend my remarks I include the editorial:

[From the Grand Rapids Press, Apr. 18, 1961]

BEATING US WITH FEDERAL TAXES

Michigan and those other States that have been losing industries to the South can't do much about preventing communities in that part of the country from using local tax concessions to lure new industries. But they can do something about preventing Mississippi, Arkansas, Oklahoma, and other States from making it possible for new industries to beat the Federal income tax, and thus using this as an inducement for industries to relocate within their boundaries.

What Michigan and the other victims of this practice can do is support the bill introduced in Congress by Representative ROBERT P. GRIFFIN, of Traverse City. GRIFFIN'S bill is intended to prevent any industry from

deducting from its taxable income the rent it pays on an industrial plant financed by municipal bonds. The income from such bonds is not taxable under Federal law.

GRIFFIN, however, has rightly insisted that permitting communities to use their tax-free bonding powers to build factories for new industries is contrary to the intent of the law. "Such practices," he declares, "amount to cities selling out their income-tax-exemption privileges (on the bonds) to private corporations." It is not the cities that are escaping Federal taxation in such cases but private industries. These industries are competing with other industries that must pay the full income tax.

Actually what is happening is that those communities that do make it possible for industries to claim an income tax deduction for rent paid in such instances are forcing industries in other States to carry an undue proportion of the income tax load. Industries that do not have to pay the full income tax are able to sell at lower prices than their competitors in, for instance, Michigan. Our competing industries, therefore, are being squeezed by having to pay higher taxes and meet lower prices.

This is the second year that GRIFFIN has tried to close this tax loophole. Last year his proposal got through the House but was dropped when House and Senate conferees met to iron out differences in House and Senate bills. This year Michigan's Senators should see to it that a similar provision is made a part of the Senate bill; and they should be prepared to fight for its adoption.

Research on Health Effects of Air Pollution

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 27, 1961

Mr. KUCHEL. Mr. President, the Public Health Service made an announcement a few days ago that under air pollution legislation of the Federal Government now on the books a major research project has been undertaken in southern California, in which the University of Southern California and the Los Angeles Air Pollution Control District will jointly do research on the effects of air pollution from automobile exhausts on laboratory animals.

The Public Health Service announcement goes on to say that this study represents the largest research effort of its kind yet undertaken in the field of air pollution.

Mr. President, I commend the Public Health Service for undertaking this highly important research project under legislation we in the Congress fashioned. Meanwhile, I suggest the need for strengthening the hand of the Federal Government in the effort to cope with the problem of air pollution, because as time goes by, as has been thoroughly demonstrated in discussion after discussion in the U.S. Senate and across the country, the problem becomes more menacing and grows larger.

Mr. President, I ask unanimous consent that the text of the Public Health Service announcement be printed in its entirety in the Appendix of the RECORD.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

A major research project is now underway which should add valuable information to what is known about the health effects of air pollution, the Public Health Service announced today.

The study is a joint project with the Los Angeles County Air Pollution Control District, and the University of Southern California to observe the effects on laboratory animals—mice, guinea pigs, and rabbits—of breathing the same air breathed by people in Los Angeles County. The contaminants of primary interest are those specifically associated with automobile exhaust—hydrocarbons, oxidant, carbon monoxide, oxides of nitrogen, and certain particulates.

While the test animals breathe the air at special sites located at varying distances from the heavily traveled throughways, a control group of similar animals will be living in purified air from which contaminants have been removed.

The study represents the largest research effort of its kind yet undertaken in the field of air pollution.

Commenting on the agreement today Dr. L. Otis Emik, Division of Air Pollution, Public Health Service, stated: "In this field of study we have long needed careful observations of the effects on laboratory animals of precisely the same exhaust contaminated air which people breathe. These observations may give us the opportunity to observe in animals, during short periods of time, effects which in human beings might take decades to occur."

Under the terms of the research contract, S. Smith Griswold, director, Los Angeles County Air Pollution Control District, will direct the establishment of 4 stations at which pollutants will be monitored and animals studied. The initial contract, at a cost of $152,000 will cover the establishment, operation, and maintenance of these stations until June 15, 1961.

The University of Southern California will furnish and operate facilities for housing the exposed and control animal colonies, on the grounds of the University Medical School and at sites provided by the Los Angeles County Air Pollution Control District. The work at the University of Southern California will be under the general direction of Dr. Leslie A. Chambers, director of the Allen Hancock Foundation. Members of the faculty of the Medical School who will participate include: Dr. Paul Kotin, assistant professor of pathology; Dr. Oscar J. Balchum, assistant professor of medicine; Dr. John Mehl, chairman of the department of biochemistry.

Transportation in Interstate Commerce of Alcoholic Beverage Advertising

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. BONNER. Mr. Speaker, I have been advised and encouraged by the Carolina Christian Union, Jesse Seaver, president, to enter for the RECORD their stand in support of H.R. 2221.

This bill has been introduced by the Honorable Eugene Siler, of Kentucky. The purpose of the bill is "to prohibit the transportation in interstate commerce of advertisements of alcoholic beverages, and for other purposes."

I have personally received a list of 284 genuine signatures, all of which endorse the Siler bill. Most of the signers are of my constituency in the First Congressional District of North Carolina.

I take this opportunity to make known the stand of the Carolina Christian Union officially for the RECORD.

GSA Plans To Place a Customhouse in Sargasso Sea of Traffic

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. HOSMER. Mr. Speaker, more than two-thirds of the total land area of central Los Angeles is either roadway or parking lots. This is necessary—indeed, it is not enough—because of the dependence of Los Angeles on auto transportation. But many people believe the saturation point has just about been reached. Charles Luckman, the eminent architect, has suggested in a study that central Los Angeles may eventually strangle in its own traffic, with cars locked bumper to bumper and unable to move. Right now, during rush hours, this is not so far from reality.

Yet, the GSA has proposed to build a new customhouse and Federal office building, which would be the largest office building in Los Angeles, without making a provision for one single off-street parking space for private automobiles of employees or persons doing business in the building. The Southern California Architects Association has protested the building because of this lack of provision for parking. As a matter of fact, the new Federal building would not only add to parking congestion without contributing new facilities, it would actually subtract from parking facilities now in existence. The new Federal building is scheduled to occupy two blocks just off the Santa Ana Freeway. The entire area of one of those city blocks is now a parking lot. The importance of parking to central Los Angeles was underscored by S. S. Taylor, general manager of the Los Angeles Traffic Department, who recently declared:

> Unless an integrated transportation system operates inside the loop of freeways that will surround downtown Los Angeles in 1962, the freeways will destroy the city they were meant to serve. The traffic capacity of the freeways is dependent upon the accessibility and capacity of streets and parking spaces in the terminal areas. A freeway system without parking is like a railroad without a station. It is clogging at the entrances and exits that threaten these great arteries.

Yet the GSA proposes to build a customhouse in the Los Angeles Civic Center that has not merely inadequate, but no provision for offstreet parking. Fur-

ther, the customs service proposes to operate trucks in and out of this building with the further congestion they will cause on access roadways and on the freeways themselves.

There is a sensible solution. Build the Federal office building if it is really necessary, but separate customs headquarters from the building. Put the customs facilities in the harbor where they belong anyway. Use the space saved for parking.

One Hundredth Anniversary of Watertown, N.Y., Times

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, April 27, 1961

Mr. JAVITS. Mr. President, on April 22, the Watertown Daily Times celebrated its 100th anniversary. The Times, which is the largest daily newspaper published in northern New York, has a national reputation as one of the outstanding newspapers in the country. That reputation is richly deserved. Its vigorous international and progressive viewpoint, enlightened approach to journalism, and long record of public service and leadership have made the Watertown Times indispensable to our New York State life. Its editorials have often been brilliant and statesmanlike documents of our times. I am happy to say also that the Times has an outstanding representative in Washington in Alan S. Emory, who has been its correspondent since 1951.

In bringing to the attention of the Senate the 100th birthday of the Watertown Times, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Times' anniversary edition, as well as letters from President Kennedy, Vice President Johnson, and Governor Rockefeller.

There being no objection, the editorial and letters were ordered to be printed in the RECORD, as follows:

ONE HUNDRED YEARS OF THE TIMES

When the first daily newspaper, the Daily Reformer, was printed in Watertown on April 22, 1861, it editorially commended that, "We have reluctantly embarked in the enterprise of publishing a morning daily." That first editorial likened the paper to a merchant who must serve the customers what they desire. It further reasoned that, "Now in this time of national peril the people want the news hourly and will have it, if procurable, two or three times a day." Perhaps this was a somewhat hesitant launching of a new enterprise. Certainly that first day was not inaugurated in anything like the manner that new business is launched today. In fact, even the celebration of this newspaper's 100th birthday probably would not be understood by those who celebrated the first day of publication so quietly and perhaps without much enthusiasm.

The Reformer was almost 10 years old as a weekly before it became a daily. It continued for almost 10 years, known as the Reformer, before it became the Times, its name for the past 90 years. The reluctance to make a complete break with the past is demonstrated by the fact that even when the Reformer and Times continued as a daily, the Weekly Reformer was still printed for many years as an adjunct.

The news which the public was described as wanting hourly was that of the Civil War. Looking backward, one cannot help but give a certain amount of emphasis to that word "procurable," for the business of procuring the news in that day was principally that of a close reading of the mail and a reprinting of what other newspapers far away were printing as their news stories. The only original information and writing was in the editorial column, and even on occasion the editor found that he either lacked the time or the inspiration to write every day. That, however, was not a weakness of the first daily newspaper in Watertown. It was characteristic of all papers of the time. Just as perhaps today's characteristics are that there be the fullest kind of comment and the broadest kind of news coverage.

In that first editorial there was clearly a pledge "to respond faithfully to the high toned demands of an intelligent public for news and wholesome reading." That is the key to the 100-year longevity of this newspaper. For regardless of the editors, of which there have been quite a few, each tried to meet the demands of an intelligent public for news and wholesome reading.

This kind of ideal, together with the individual editor's interpretation, made this newspaper succeed. Its greatest success probably occurred between 1900 and 1930. For that was the period in which it competed with another daily, the Watertown Standard, a struggle that lasted through those prosperous decades. Most significantly the competition ended not in the depression of the thirties but in those months just before the Nation's economy began to falter. This was a newspaper battle that had gone on with bitterness and vindictiveness to the point that one adversary made his decision to sell out. This is not to recount the battles of that day, but there are at least three inheritances in 1961 from that period.

The first inheritance is city manager government for the city of Watertown, an issue that the Times fought for against the opposing newspaper. There is a municipal street lighting plant for Watertown, similarly the materialization of an issue that was fought and won by the Times. Finally, the third inheritance is the Times itself, and some of the material assets that this newspaper has added to this community.

Make no mistake about it, if that battle had not been won in August of 1929 by the Watertown Times, this newspaper probably would not be in existence today. It had no substantial resources as a result of the national prosperity that encompassed the country up to 1930. It possessed, however, a fierce desire for political and economic improvements for Watertown and northern New York. It did not possess economic connections. So had the depression begun with two newspapers in Watertown locked in harsh combat, the winner might well have been the Standard that did have access to financial resources. It had lost money, but the losses were made up for many years in an effort to beat the Times; editorially to contest the liberal political attitudes, whether in municipal affairs or State affairs.

Every so often there have been examples in history of idealism triumphing over economic realities. The moment sometimes is a fleeting one which must be prepared for and capitalized upon quickly and irrevocably. That moment did occur in the case of this newspaper's history when suddenly the financial backer of the Standard decided that further losses in a struggle against the Times were wasteful and unrealistic.

So this newspaper, 2 months before the official signal of world depression, became the sole daily newspaper in Watertown. But the responsbilities upon the Times in this new role were even greater in the eyes of its editor than the desirability of a restrictive consolidation. The Times immediately opened up its news columns. The editor concluded that the Times should meet all the newspaper needs of this community. Readers had to have the satisfaction that the Times was striving to be a better paper than the two that it succeeded.

Thus throughout the 1930's, in spite of the depression, the Times became a bigger and more complete paper with wider and wider circulation. It grew in the 1930's and that growth continued in the 1940's and the 1950's.

Part of the expansion was in radio, both here and in Massena; then came television, the Times owning the three stations. The culmination of 100 years is this new building with the printing press which just has been opened. That printing press is the first brand new printing press ever owned by this newspaper. And there is more to come in the construction of a second new building which will lead to the abandonment of the 100-year-old property on Arcade Street.

Today all these things have been possible through the vigor of this newspaper and the transfer of some of this vigor to its other enterprises. Yet the common ingredient throughout the growth and expansion of 100 years has been news which has been written and edited in an effort toward faithful response to the intelligent public.

This proper handling of news has resulted in the success of today. Future success will only depend upon the continuance of a faithful news response to the demands of an intelligent public.

OFFICE OF THE VICE PRESIDENT,
Washington, March 11, 1961.

MR. JOHN B. JOHNSON,
Editor and Publisher, Watertown Daily Times, Watertown, N.Y.

DEAR MR. JOHNSON: I understand that on April 22 the Watertown Daily Times will celebrate its centennial. I certainly want to add my greetings and to express my congratulations.

The Watertown Daily Times has long been recognized as an outstanding journal throughout our Nation. I know it must give you a great sense of satisfaction to look back upon so many years of achievement and service to the community and to the country.

Sincerely yours,

LYNDON B. JOHNSON.

STATE OF NEW YORK, EXECUTIVE CHAMBER,
Albany, April 17, 1961.

MR. JOHN B. JOHNSON,
Editor and Publisher, Watertown Daily Times, Watertown, N.Y.

DEAR JOHN: The 100th anniversary of the Watertown Daily Times, one of the outstanding newspapers of New York State is decidedly an event for enthusiastic celebration. One would like to have known Beman Brockway, who was already an editor of distinction and a State legislator when he went to Watertown in 1860 to join Lotus Ingalls and L. N. Stowell in the publication of the New York Weekly Reformer.

It took a lot of nerve to turn the Reformer into a daily paper at that time in the country's affairs, especially as Watertown, though starting to grow, had a population of but 6,000. One cannot resist a feeling of nostalgia over the fact that it was started with a capital of $700, $500 of which was borrowed.

The same qualities, with the 20th century complexion, were present when Harold B. Johnson of Gouverneur joined the staff of the Watertown Daily Times in 1904 after journalistic experience in Oregon and Montana.

When he joined the staff, the circulation was little more than 5,000. By the end of his regime it had risen to more than 40,000.

Today, under your able leadership as editor and publisher, the Times is forging steadily ahead to meet the increasing challenges and complexities of the sixties.

I am happy to join with your associates and colleagues in Watertown in saluting you and your able staff, and I hope and am confident that the Watertown Daily Times will score even greater successes in the second century of its history.

Sincerely,

NELSON A. ROCKEFELLER.

THE WHITE HOUSE,
Washington, April 4, 1961.

Mr. JOHN B. JOHNSON,
Editor and Publisher,
Watertown Daily Times,
Watertown, N.Y.

DEAR MR. JOHNSON: I am delighted to learn that the Watertown Daily Times will celebrate its centennial on April 22.

The Watertown Daily Times has set an enviable record of community service throughout the years. It has taken a vigorous role in the clarification of both local and international issues, and it has earned a wide reputation not only in northern New York but throughout the country.

I want to extend to you and to all the members of the staff my warmest greetings on this occasion.

With all good wishes,

Sincerely,

JOHN F. KENNEDY.

A Bill Worth Passing

EXTENSION OF REMARKS
OF
HON. WINFIELD K. DENTON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. DENTON. Mr. Speaker, under unanimous consent, I insert in the Appendix of the CONGRESSIONAL RECORD, an editorial appearing in the April 24, 1961 issue of the South Bend Tribune, of South Bend, Ind., entitled "A Bill Worth Passing":

A BILL WORTH PASSING

State and county wefare departments are watching with interest and understandably hoping that Congress will not turn a cold shoulder on a bill introduced by Representative WINFIELD K. DENTON, Democrat, of Evansville, Ind.

DENTON is proposing a Federal "runaway pappy" law that would authorize the Federal Bureau of Investigation to track down deserting fathers who cross State lines to escape support payments to their families.

Despite reciprocity agreements between States, welfare departments face no end of difficulties in forcing the "runaway pappies" to meet their family responsibilities. In the first place it is often difficult to find them. The FBI could lend valuable aid in this respect because its investigations are not hampered by State lines.

DENTON's bill proposes that any individual who, to avoid compliance with a support order, shall travel or move in interstate or foreign commerce from the State in which the proceedings have been instituted * * * shall be punished by a fine of not more than $2,500 or by imprisonment by not more than 3 years or both.

Wilmer Tolle, director of the St. Joseph County Department of Public Welfare, says the very existence of such a law would have great psychological value.

Noting that under the Dyer Act the FBI locates the thieves of stolen cars, Fred H. Steininger, Lake County welfare director, asks this pertinent question:

"Why should the FBI not be asked to locate deserting parents?" Answering his own question, he says, "Surely the crime of deserting a family and doing it with impunity by crossing a State line is much more serious than stealing an automobile and crossing a State line."

There is logic in that observation.

A law such as DENTON proposes has much to recommend it. It would be a sturdy club in the hands of welfare departments in their efforts to compel deserting fathers to meet their responsibilities to their families. Even if it were only moderately successful in achieving the ends for which it is intended it would be a boon to taxpayers who shoulder the burden the runaway fathers shed. Congress should be disposed to give the Denton bill careful consideration.

Prof. Arthur Burns Analyzes the Administration "Gap" Theory

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. CURTIS of Missouri. Mr. Speaker, Arthur Burns, professor of economics at Columbia University and the president of the National Bureau of Economic Research, recently addressed the 10th Annual Conference of Business Economists at the University of Chicago. In his speech, Professor Burns comments on the "gap" or stagnation theory of economic analysis that has been put forward by the Kennedy administration's Council of Economic Advisers as an explanation of recent economic developments and guidelines for future economic policies. Because of the importance of this subject, I would like to insert this speech of Professor Burns at this point in the RECORD:

THE NEW STAGNATION THEORY AND OUR CURRENT ECONOMIC POLICIES

In discussing so large a topic as our current economic policies, one must make a choice. I have decided to concentrate less on the policies themselves than on their theoretical foundations. Policies are always based on some theory. What I shall chiefly try to do, therefore, is to examine the economic theory that underlies the major economic policies of the new administration.

This task has been made relatively easy by the policy statement submitted by the council of economic advisers to the joint economic committee on March 6.

The council's theory can perhaps be conveyed best by reading a few excerpts. According to the council, the American economy today is beset not only with a recession, but with persistent slack in production and employment, a slowdown in our rate of growth. Further, according to the council, economic recovery in 1961 is far more than a cyclical problem. It is also a problem of chronic slack in the economy—the growing gap between what we can produce and what we do produce. Especially since 1955, the gap has shown a distressing upward trend.

The essential point of this theory is that, quite apart from the recession, there is increasing slack in our economy; there is a growing disparity between actual and potential output; in short, America faces a problem of secular stagnation.

The Council informs us that "the problem of unused potential becomes continually more urgent." The gap between actual and potential output has not only been growing, but has become very large. The gap is said to have been $32 billion for 1960 as a whole. Using annual rates, the gap is estimated at $40 billion for the fourth quarter of 1960 and at $50 billion for the first quarter of 1961.

But what, it may be asked, is the large and growing gap due to? The basic reason, we are told, is that there has been a retardation of investment. The rate of increase in the stock of capital per worker has been declining. The average age of our stock of equipment has been rising. And there has not only been a retardation of investment in business plant and equipment, but public investment has also been inadequate—that is, investment in education, health, research, and development of natural resources.

It follows from the Council's analysis that if our actual output is to approximate our potential output, invesment in business plant and equipment will need to be substantially increased, and so also will public investment, especially investment in human beings.

Furthermore, if we proceed to increase both private and public investment sufficiently, our economic potential itself will rise more rapidly. According to the Council, the rate of advance that our economy now achieves when it operates at full employment is 3.5 percent per year. This rate will be higher if investment is carried out on a larger scale.

The theory that I have just sketched bears some resemblance to the Keynes-Hansen theory of secular stagnation, which dominated economic thought during the 1930's and 1940's.

Just as Hansen saw secular stagnation as he looked back in time, so the council now sees the recent past. And just as Hansen saw secular stagnation as our fate in the future, unless appropriate remedial measures were taken in time, so the council now sees the future.

Hansen, however, believed that private investment was bound to remain inadequate in view of the disappearance of the frontier, a declining rate of population growth, and a shift from capital-using to capital-saving innovations. Hence, he argued that it will be necessary to rely heavily on rising governmental expenditures if we are to escape a chronic condition of mass unemployment.

The council is far less pessimistic about the prospects for private enterprise and investment. Not only does the council argue that larger governmental spending can and will stimulate private investment, but the council also proposes that some of our tax laws be revised in the interest of creating greater incentives for private investment. In other words, the council seems to view the private economy as a dozing giant who, while not capable of realizing his potential through his own efforts, will come fully to life again and stay alive if the Government does its part by spending more and by revising some of the tax laws.

Clearly, the council's stagnation theory is gentler and less pessimistic than Hansen's. Indeed, it must be regarded as a gay and optimistic theory in the light of still older stagnation theories such as Friedrich Engels' or Thorstein Veblen's.

When Engels speculated about the future, he saw only the continuance of depression and the eventual breakdown of capitalism. And when Veblen turned to the future, he likewise saw chronic depression from which, to be sure, our people would be occasionally relieved but only through accidental developments.

The Council's diagnosis of the state of our economy, despite its stagnationist accent, has none of the morbid pessimism of earlier stagnation theories. A theory of secular stagnation such as the Council's therefore need not cause anxiety. Viewed coldly, it merely provides a warning. And the warning may be salutary if there is an empirical basis for the new theory. How substantial, then, is the evidence in its support? Let us turn to this question.

One piece of evidence cited by the Council is the progressive decline of business-cycle expansions in the postwar period. The expansion of 1949–53 lasted 45 months. The expansion of 1954–57 lasted 35 months. The expansion of 1958–60 lasted 25 months. In other words, successive upswings have been progressively shorter, and this is a symptom of noncyclical or secular slack.

In judging this evidence, it is necessary to recall that the expansion from 1949 to 1953 was dominated by the Korean war. This expansion might well have been shorter if the war had not lasted so long.

Historically, wartime expansions have always been exceptionally long. Indeed, the expansions of 1861–65, 1914–18, 1938–45, and 1949–53 are the longest business-cycle expansions that we have had.

Since the expansion of 1949–53 is clearly an abnormal case, it is best to put it aside. We are then left with the fact that the most recent business-cycle expansion was shorter than its immediate predecessor. There is nothing remarkable about this fact. Of itself it surely provides little reason to expect or to fear secular stagnation.

The Council cites, however, another piece of evidence; namely, unemployment was approximately 3 percent at the peak of business in 1953, but about 4 percent at the business-cycle peak in 1957, and about 5 percent at the business-cycle peak in 1960. This evidence seems to suggest that successive upswings are becoming weaker.

However, as I've just noted, the peak in 1953 was a wartime peak of activity. We then had an overtime economy. It seems more sensible to regard the 3-percent unemployment rate of 1953 as an exceptional case than to take it as a yardstick of economic performance.

This is as clear when we look back of 1953 as when we look forward, for the unemployment rate was about 4 percent at the business-cycle peak of 1948 just as it was 4 percent at the peak of 1957. Not only that, but the Council itself regards a 4 percent unemployment rate as signifying a condition of practically full employment.

It is true that the unemployment rate was appreciably higher in 1960 than in 1957. This comparison is entirely valid. But one instance of higher unemployment of itself gives fragile support to the generalization that successive upswings are becoming weaker or to the theory that the gap between actual and potential output has a distressing upward trend.

The Council presents still a third piece of evidence. This takes the form of a direct measurement of the gap between actual and potential output.

Quarterly figures of the gross national product, adjusted for changes in the price level, are taken as a measure of actual output. Potential output is then measured by a curve which starts at the level of the actual output in mid-1955. This curve moves forward in time at an annual rate of increase of 3½ percent, and it moves similarly back of 1955.

Why, it may be asked, does the curve depicting potential output start in the middle of 1955? The reason is that unemployment was then approximately 4 percent of the labor force, and the Council regards a 4 percent unemployment rate as a "reasonable target for full utilization of resources."

And why is this curve of potential output allowed to rise at an annual rate of 3½ percent? Because, we are told, this rate "represents the rate of advance of gross national product (corrected for price changes) that our economy now achieves when it operates at reasonably full employment."

Once the curves of actual and potential output are drawn, the gap between them is obtained by subtraction. It is this gap which is said to show a distressing upward trend, especially since 1955.

The first and perhaps the most important question raised by this arithmetical exercise is why the curve of potential output is passed through the middle of 1955.

True, the unemployment rate was about 4 percent in mid-1955 and actual output may therefore be taken as equal to potential output at that time. But the unemployment rate was about 4 percent also in the second quarter of 1947, in the second quarter of 1957, and in other scattered quarters of the postwar period. Any one of these quarters or dates could have served just as well as mid-1955 for the starting point of the 3½-percent curve of potential output.

The results, however, would have been very different. As the Council draws the 3½-percent curve, the gap between actual and potential output in 1960 comes out $32 billion. But if the curve had been started in the second quarter of 1957, when we also had a full-employment output by the Council's criterion, the gap would have been only $20 billion.

And if the curve had been started in the second quarter of 1947, when we likewise had a full-employment output, the gap would have vanished. In fact, we would then have to say that actual output in 1960 exceeded potential output by over $2 billion.

It is plain from these calculations that if we merely vary the starting point of the 3½-percent curve, and do so without departing from the Council's logic, we can easily draw a more encouraging picture of the recent past than the Council has drawn.

I have thus far followed the Council in assuming that our potential output has been growing at a 3½-percent annual rate. I do not question the plausibility of this figure, but neither would I question the plausibility of a somewhat lower or a somewhat higher figure. We must reckon with the uncomfortable fact that small differences in the growth rate are capable of making a very large difference in projections of national output.

The Council has not descibed the precise derivation of its 3½-percent growth rate. It seems clear, however, from what the Council does say that it did not use a method that is particularly appropriate on its own economic logic.

If it be assumed that a full-employment output exists when the unemployment rate is 4 percent, then every figure of the gross national product at times when unemployment is at this level must express a full-employment output. A curve linking such figures will then automatically show the rate at which real output advances when our economy operates at reasonably full employment.

Unhappily, however, numerous pairs of such figures can be found in the postwar period, and some pairs yield a growth rate of less than 3½ percent while others yield a higher rate.

Let me comment on one of the more decent calculations of this type. As previously noted, we had a 4 percent unemployment rate in the second quarter of 1947 and again exactly 10 years later. Between these two dates, our output grew at an average annual rate of 3.9 percent, which is higher than the growth rate of potential output estimated by the Council.

Let us now see what happens when this 3.9 percent curve is carried forward to 1960. At first blush, it might appear that the gap between actual and potential output would exceed the $32 billion figure computed by the Council. In fact, however, the gap turns out to be only $26 billion.

This illustrative calculation shows, once more, that it makes a good deal of difference whether the curve of potential output is started at one date or another. By starting the curve of potential output in the second quarter of 1957 instead of mid-1955, it is possible to convey, first, that the upward trend of the gap is smaller than the Council found, second, that the gap has lasted a shorter period, third, that all this is true despite the assumption of an appreciably higher growth rate of potential output than the Council estimated.

This concludes what I have to say about the Council's evidence in behalf of its theory. I hope that I have not left the impression that the new theory of secular stagnation is utterly without foundation. That would not be true. This theory is tied to some actual experience. But when the evidence is examined, it turns out to rest fundamentally on one fact, namely, that the business-cycle expansion of 1958–60 was exceptionally short and incomplete. When the expansion ended, our economy was still some distance from full employment.

I do not question the importance of this fact. Nor do I question its disturbing character. But I do question what inference can properly be drawn from this solitary fact.

I would urge two things. First, a theory which has such a slender foundation in experience must be viewed somewhat skeptically. Second, there is a better explanation of what happened between 1958 and 1960 than is offered by the neostagnation theory which of late has become quite fashionable.

Let us note, to begin with, that economic recovery proceeded very briskly until the spring of 1959. Between the first quarter of 1958 and the first quarter of 1959 the Nation's physical output rose by 8 percent. Between mid-1958 and April 1959 the rate of unemployment also fell sharply—from about 7½ to almost 5 percent.

But soon thereafter a sharp retardation of economic growth set in. The expansion of business activity terminated in May, having run its course in only 2 years and stopping at a time when the economy was still some distance from a full employment level.

Many factors undoubtedly contributed to the unsatisfactory character of the business-cycle expansion from 1958 to 1960, but I believe that three developments were decisive.

First of all, we had a violent shift in Federal finances. Between the first quarter of 1959 and the third quarter of 1959 the Federal cash deficit, allowing for seasonal factors, fell from an annual rate of $17 billion to $2 billion. By the second quarter of 1960, we were already operating with a surplus at an annual rate of $7 billion. Thus, in a period of little more than a year, we had a turnaround in Federal finances of about $24 billion.

This was undoubtedly one of the very sharpest shifts of Federal finance in our Nation's history.

Second, the fiscal restraint on general economic expansion was accompanied—indeed preceded—by a tightening of credit conditions.

By mid-1959 commercial banks were already in debt at the Federal Reserve to the

tune of $1 billion. The money supply stopped growing. Demand deposits diminished by nearly $4 billion between July 1959 and May 1960. Interest rates rose sharply, both on short-term and long-term loans. Indeed, long-term rates advanced faster than during a comparable stage of any business cycle during the past hundred years.

Still a third factor contributed significantly to the incompleteness of the expansion of 1958–60; namely, the protracted steel strike in the second half of 1959.

Anticipations of the strike first led to a sharp buildup of inventories and a boom psychology in the spring and early summer of 1959.

Once the strike came and continued to drag on, it caused both concern and confusion in the business community and led to some hesitation in placing orders for investment goods. The strike also led to some confusion in governmental circles and prevented early recognition, which otherwise might well have occurred, of the magnitude of the restraints that were being imposed by our Government on economic expansion.

And when the strike finally ended, many business concerns—having in the meantime had an extraordinary stimulus and opportunity to reexamine their inventory policies—proceeded to practice new economies in managing their inventories.

In all these ways the steel strike contributed to an early end of the expansion which commenced in the spring of 1958.

If this sketch of the background of the recession is anywhere near the mark, we must attribute the incompleteness of the expansion of 1958–60 partly to the steel strike but even more to our governmental policies of restraint.

To be sure, these policies were designed to prevent further inflation and to restore confidence, both at home and abroad, in the management of our national finances. I have no doubt that these policies were sound and even essential. But, as happened in the event, they were pushed with excessive vigor and they were not checked in time.

On my reading of recent history, the neostagnationist theory which is now being widely used to explain the incompleteness of the expansion of 1958–60 is, therefore, quite unconvincing. To be sure, our economy faltered, so to speak, prematurely. But the early onset of recession was due to special factors, to factors of a kind that need not be repeated, rather than to some permanent or growing weakness of our economy.

I have dwelt on two very different interpretations of economic developments in recent years. These interpretations necessarily have different policy implications.

On the basis of the Council's interpretation, and to use its own language, "we face a stubborn problem of chronic slack, and the road to full recovery is a long one."

On the basis of my interpretation, there is no chronic slack of our economy. The problem of recovery that we face is not very different from that which we faced in 1949 or in 1954 or in 1958. Full employment is not a remote possibility. On the contrary, it may well be reached some 15 or 18 months from now.

In view of its interpretation of recent history, the Council logically concludes that "the expansionary effects of Government programs will be welcome even if they occur well after the recession has been reversed."

I believe, on the other hand, that the mildness of the recent recession supports the thesis that the underlying forces of economic expansion are strong and that they have of late been only temporarily suppressed. I believe that signs of economic recovery are already here and are rapidly multiplying. In view of this fact and in view also of the substantial increases of Federal spending that were initiated in the closing months of the Eisenhower administration and the further increases that have been set in motion by President Kennedy, I think that we would be courting inflation and a gold crisis if we now arranged new governmental spending programs so that they would mature when the economy is already advancing without them.

If we accept the Council's view that "we face a stubborn problem of chronic slack," the distinction between governmental spending to spur recovery and governmental spending to spur long-term growth becomes unimportant, and the same might be said of the distinction between governmental spending to promote social welfare and spending to promote economoc growth.

On the other hand, if my diagnosis of the state of our economy is correct, these distinctions are vital. Thus, I would hold that improved medical care of the aged, however desirable it may be in the interests of human welfare, will do little or nothing to improve economic efficiency or to accelerate long-term growth, and that it is entirely misleading to favor better medical care of the aged, as is now being done, on the ground that it will also promote long-term growth.

Again, I would grant quickly that a liberalized social security program, such as President Kennedy advanced in his economic message to the Congress, would help to speed economic recovery. But I must go on and point out that the same can be said of any type of governmental deficit spending. Since the liberalization of the social security program is designed to be a permanent reform, rather than to serve merely as an antirecession aid, I think that it is a mistake to advance such a program in the guise of a recovery measure. The Congress should pass this legislation only after full deliberation indicates that it is likely to promote the national welfare in the long run, and not merely in the months immediately ahead.

Once again, on the basis of the Council's analysis of the state of our economy, the problem of accelerating economic growth requires that we undertake greater public and private investment expenditures. I would readily grant this general proposition. However, the problem of accelerating long-term economic growth is excessively simplified when we suppose that it will be resolved merely by greater investment outlays.

Once aggregate spending is sufficient to maintain full employment, the rate of economic growth must depend principally on the rate at which economic efficiency increases.

Efficiency and productivity are undoubtedly promoted by some types of investment, but they can also often be promoted without any additional outlays or even with reduced outlays. We need think only of the restrictive practices that abound in construction work, in railroading, in agriculture, and in many of our manufacturing concerns.

I think that if we seriously want to accelerate economic growth, we will need to remove many of these impediments to efficiency, whether they arise from careless business management, or from the coercive power of trade unions, or from governmental legislation itself.

I have tried in the course of my remarks to indicate how a difference in interpretation of recent economic developments will lead to some differences with regard to economic policy. But I want to guard against any exaggeration of these differences.

Let me say at once that I see considerable merit in many of the proposals that the President has advanced for dealing with the recession.

I applaud his vigorous efforts to speed tax refunds, to enlarge the distribution of surplus foodstuffs to the needy, to speed early payment of dividends on veterans life insurance, to accelerate governmental lending under existing programs, to speed procurement which has already been scheduled, and to accelerate construction work which is already underway.

I admire the President's appeal for prompt enactment of a temporary program for extending the duration of unemployment insurance benefits. The Congress has already acted favorably on this request and I hope that the Congress will go further and enact, as the President has recommended, a permanent unemployment insurance law for coping with recessions.

I also feel encouraged by the new administration's recognition of the need to revise some of our tax laws in the interest of stimulating private enterprise and investment. I look forward hopefully to legislation along these lines.

But while I find the greater part of the President's recovery program entirely congenial, I am unable—as I have already stated—to regard liberalized social security programs, even though spending on them can get underway promptly, as sound measures for dealing with a recession.

I also doubt the wisdom of proposing a substantial increase of the minimum wage at a time of recession. I do not regard a lifting of the minimum wage as a useful antirecession device, particularly at a time like the present when we are having a serious balance-of-payments problem.

Nor am I able to accept without some reservations the view that greater Federal investment in education, health, housing, research, and resource development is desirable in the interest of accelerating the Nation's long-term economic growth. I think that some of these types of expenditure may be justified on grounds of social welfare and that others may be justified on grounds of economic efficiency, but I fail to see how all of them can accelerate the Nation's long-term economic growth merely because we now call them investment.

Nor am I able to accept the view that new and larger governmental spending programs on education, health, housing, research, and resource development should be welcomed even if they materialize well after the recession has been reversed. This particular view rests precisely on the stagnationist theorizing that I have taken some pains to scrutinize this afternoon.

I have been forced by the nature of the topic on which you have invited me to speak to make some critical remarks on the economic thinking and policies of the new administration. But I also have found much to commend.

I deem it only proper to conclude by saying that the administration has avoided extreme economic views, that it has in no way shown hostility to business enterprise, and that the economic moves actually taken by the administration have been more prudent than some of its economic rhetoric has at times suggested.

A One-Man Corps in Peace and War—Most Reverend Quentin Olwell, C.P.

EXTENSION OF REMARKS

OF

HON. HUGH L. CAREY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. CAREY. Mr. Speaker, much is being said, and we hope much will soon be done, to reconstitute our national im-

age and regenerate the spirit of sacrifice which moves us to greatness.

Among the model lives we would do well to emulate in this regard are those of the American missionaries of all faiths who have left their homeland and seek to serve the spiritual and temporal wants to others in every corner of the earth. They work with the sick and savage. They teach, labor, spend themselves freely in the service of God. We should never overlook the great contribution they also make as Americans for as they carry out their corporal works of mercy they also portray this country in the role of the good Samaritan. It might be said that 1 hour in 1 day of their lives is more lasting and effective in winning friends for our country than is a million dollars in foreign aid. For when they win a soul to God they release a captive from darkness, away from the threat of communism.

A true example of such endeavor is the life of Most Reverend Quentin Olwell, C.P. I have had the privilege of knowing Bishop Olwell and his family for many years. They are lifelong residents of Brooklyn, and I have been pleased to have them as neighbors in the 12th Congressional District, which I represent.

The life and works of Bishop Olwell in China in World War II, the privations and imprisonment he suffered at the hands of the Communists, his labors in the Philippines are all singular instances of courage, denial of self, leadership, and determination.

It is fitting that the church he serves has raised him to her hierarchy. The service he has performed for his country is beyond any temporal reward.

It is with pride and a sense of homage that I commend to my colleagues three articles which recently appeared in the Brooklyn Tablet describing the works of this servant of God and country—"A One-Man Corps in Peace and War."

The articles follow:

BROOKLYN-BORN PASSIONIST WILL BE CONSECRATED

MARBEL, PHILIPPINE ISLANDS.—Very Rev. Quentin Olwell, C.P., Brooklyn-born superior of the Passionist Fathers in the Philippines, will be consecrated here Tuesday, April 25, as the first vicar apostolic of the prelature nullius of Marbel and titular bishop of Tabraca, Africa.

The 4,000-square-mile prelature, which contains 300,000 people, two-thirds of them Catholic, is located on the Island of Mindanao, half way around the world and but 5 degrees above the equator. It was carved from the prelature nullius of Cotabato in January, at the same time that Father Quentin's elevation was announced by Pope John XXIII.

Archbishop Salvatore Siino, papal nuncio to the Philippines, will be the consecrating prelate. Coconsecrators will be Bishop Cuthbert M. O'Gara, C.P. exiled Bishop of Yuanling, China, and Bishop Gerard Mongeau, O.M.I., prelate nullius of Cotabato.

ARCHBISHOP MOLLOY'S CROZIER

Among Bishop Quentin's symbols of office will be a crozier formerly used by Archbishop Molloy and a pectoral cross which is the gift of the priests and people of the Passionists' Immaculate Conception parish, Jamaica, where the new prelate served in 1951.

Archbishop Molloy's crozier is a gift of the Brooklyn Diocese offered through the kindness of Very Rev. Msgr. James W. Asip, associate diocesan director of the Society for the Propagation of the Faith.

The motto on his coat of arms "Gloria Dei et Salus Animarum" (Glory to God and the Salvation of Souls) recalls Archbishop Molloy's motto "Salus Animarum Suprema Lex" (The Salvation of Souls is the Supreme Law").

Expected to be present at the consecration and Pontifical Mass are the new bishop's sister-in-law, Mrs. Evans G. (May) Olwell of 374 East 25th Street in Our Lady of Refuge Parish, Brooklyn; Very Rev. Cornelius Hazlett, C. P., provincial, and Rev. Linus Lombard, C.P., from the U.S. provincial headquarters in Union City, N.J., and Rev. Fidelis Connolly, C.P., an Air Force chaplain stationed in Japan.

Bishop Quentin's brother, who died August 2, 1957, was an outstanding Catholic layman who had served as head of Ozanam Conference, Society of St. Vincent de Paul, Columbus Council, Knight of Columbus Parkville Post, C.W.V., and Our Lady of Refuge parish Holy Name Society.

The bishop is an uncle of Evans G. Olwell, Jr., who lives with his wife and six children in Sea Cliff, L. I.; Mrs. John F. (Mary) Conroy of Marblehead, Mass., who also has six children; Mrs. Charles (Patricia) Montrie, Bethesda, Md., four children; Mrs. Benjamin (Antoinette) Conroy, Uvalde, Tex., three children; and Quentin Olwell of Brooklyn.

MOST REV. QUENTIN OLWELL: BROOKLYN'S PASSIONIST BISHOP FOR PHILIPPINES

(By Don Zirkel)

Father Quentin Olwell is credited with bringing about many significant improvements during his 28 years as a missionary in China, but he admits to failure in one minor detail he would like to have changed.

When his departure in 1951 was featured by the view of several unfriendly guns pointed at him, he could have said, "This is where I came in," because his arrival in 1923 had featured just as many unfriendly guns—and they weren't just pointing, they were shooting.

ST. CECILIA'S SCHOOL

Born Bertram Olwell November 4, 1898, the son of James and Ellen Evans Olwell, he grew up on Marcy Avenue and describes himself as a "charter member" of St. Cecilia's School, Greenpoint, because he was a member of its first graduation class.

He then moved to Staten Island, where he attended Port Richmond High School. He joined the Passionists at St. Joseph's Prep Seminary, Pittsburgh, was professed September 15, 1916, and ordained February 4, 1923, at St. Vincent's Abbey, Latrobe, Pa.

Father Quentin's first assignment was to China, where he labored until expelled by the Chinese Reds in May 1951.

During World War II, Father Quentin was of invaluable assistance to the American forces, having been credited with saving this country more than $5 million through his negotiations with the Chinese Government. He also devised a method of converting high octane gas for planes so that it could be used for army trucks and cars.

During the war he narrowly escaped death on many occasions when the Japanese bombed his mission. Once he was struck by shrapnel and suffered a concussion.

He speaks enthusiastically about the conduct of the American troops in China, declaring that their greatest contribution to friendship with the Chinese was their practice of the principle that the Chinese were their equals and not an inferior people. An estimated 40 percent of the 50,000 American troops in China were Catholics and their spiritual care was entrusted largely to missionaries.

In September 1949, a cable was received from Father Olwell, then superior of the Passionists in China, that the Yuanling Diocese had been occupied by the Communists.

Less than 2 years later—at that time vicar general of the diocese—he was sentenced to expulsion from Red China for counter-revolutionary and reactionary activities.

Specifically, he was accused of having asked the faithful to pray for the repose of the souls of two Catholics who had been executed by the regime as "bandits."

Before the expulsion of the Passionists, the Yuanling Diocese under the direction of Bishop Cuthbert O'Gara, C.P., included 12 central missions, catechuminates, grammar, high and trade schools, hospitals, dispensaries, orphanages and homes for the aged. It stretched across 16,000 square miles of rugged hills from which 5 million natives eked out a hard existence.

Erected as a prefecture apostolic March 13, 1925, it was confided to the American Passionists with headquarters at St. Michael's Monastery, Union City, N.J., where Bishop O'Gara is currently living in exile.

Father Quentin's career in China was such a success that he helped save a soul before he even reached his mission station. But let him tell it in his own words, as quoted from his first letter home, September 16, 1923:

"We arrived safely in Shanghai after a fire on board the boat, and after spending 26 hours in the worst typhoon that hit these waters from many a day. Three ships went down in it. We received the SOS from them but had all we could do to manage our own vessel.

"We took a fairly good size steamer up the Yang Tzye Kiang River, which got us in Hankow about the first of September. Then the fun began.

"From Hankow we were to go to Changteh, and from thence to our central mission Shenchowfu. Well we got on a Chinese launch to make the trip to Changteh.

"No doubt you have read about the bandits in China. They are in reality soldiers from another province. In their own cities and villages they are soldiers but in other places they are bandits, going about looting the people and taking whatever they can get their hands on, and if necessary killing to do so.

IN AN AMBUSH

"We got about a day's distance from our destinations when I realized what it felt like to be in the trenches and have the enemy shooting at you. We had sailed into an ambush of the bandits and they were using us as a target. We immediately stopped, turned the boat and made all haste back to Hankow. Thank God none of us were hit.

"The chief engineer of the boat was shot clean through. The bullet came through the door of his bunk, entered his left side and came out the right, and stopped in the wall. Father Dominic has the bullet.

"We set about using our first aid knowledge but to no avail; the poor man died in about 6 hours. We were rewarded, however, for the man was instructed and baptized before he died. Thus our loss of about $80 fare and the few hardships we had to put up with were nobly repaid, for what greater than to save an immortal soul?

"I seem to have the requirements needed for a missioner, that is the natural ones, God knows I fall down miserably on the others. The missionaries that I have met over here are real saints. No doubt you have read of how they suffer death most courageously. To meet them has been an inspiration to me. Don't begin to think that I shall suffer such things. God calls the giants for these tasks; I am only a pygmy."

SERVED IN JAMAICA

After arriving in and leaving China under gunpoint, Father Quentin served at Immaculate Conception Monastery, Jamaica, and as

pastor of St. Gabriel's Monastery Church, Boston.

But the call of the missions was too strong and in January 1958 he went back to his first love: not to the China mainland still closed by the Communist forces of occupation but to the mission recently entrusted to the American Passionists in the Philippines.

Father Quentin was superior of the group of nine Passionists (including Father Paschal Smith of Hollis) who took over the southern part of the Prelature Nullius of Cotabato on the island of Mindanao, with headquarters at Marbel.

Within 3 years the 200,000 Catholics there were being served so well by the Passionists, now numbering 21, that the Holy See established the Prelature Nullius of Marbel.

And to be first Prelate Nullius of Marbel, Pope John XXIII has called a giant—a man who the Holy Father, his Passionist confreres, his friends in Brooklyn, and his subjects in the Philippines firmly believe has all the requirements, natural and spiritual, to be a great mission bishop.

PAST, PRESENT, AND FUTURE: GROWTH OF CHURCH IN MARBEL

Half way across the world on the Philippine Island of Mindanao lies the Prelature Nullius of Marbel, which Bishop Quentin Olwell, C.P., will serve as vicar general after his consecration there April 25.

The prelature covers 4,000 square miles of the southern part of the province of Cotabato, and has a population of 300,000 people. The tip or toe of Marbel prelature is but 5 degrees above the equator on the Celebes Sea.

It is a land of high mountains and wide valleys with spreading farms and mahogany-rich forests. The region lies outside the path of the terrific typhoons that annually cause such destruction in other parts of the Philippine Archipelago. The climate is favorable.

Malayan settlers entered Cotabato Province centuries ago. In the latter part of the 15th century, the Sariph Kabungsuan of Arabia arrived with religious teachers and proselyted the Malayan immigrants into the worship of Allah. They thenceforth were known as Moors or Mores.

WAS MOSLEM STRONGHOLD

Less than 100 years ago, the Province of Cotabato was an independent sultanate, a Moslem stronghold. According to the 1952 Philippine Guidebook, there were no Catholics in Cotabato before World War I, and before 1939 there were scarcely a thousand Christians there.

After World War II, as a result of a government-sponsored program called the National Land Settlement Administration, tens of thousands of Filipinos were encouraged to uproot themselves from land-poor Huk-ridden provinces of the Republic and become homesteaders in the rich Koronadal Valley of southern Cotabato. The newcomers were mostly Catholic, and soon outnumbered the Mohammedans.

Missionary reinforcements were urgently needed, and the Holy See called upon the Possionist Fathers to take missions in southern Cotabato.

When the first band of Passionist missionairies, under the superiorship of Father Olwell, arrived in southern Cotabato at the beginning of lent in 1958, they entered among a people whose colonizing accomplishments rival those of the Pilgrim Fathers of American history.

Twenty years before, this region was a forest wilderness. Today, the success of these pioneers is a thing of admiration in the far-flung series of settlements that stretch inland to Marbel, the principal city. Here more than 250 population centers have literally, like Jack's beanstalk, sprung from the earth. There are 10 cities, 150 villages called "barrios," and 115 hamlets called "sitios." Over 200,000 of the 300,000 industrious natives who live in these new townsites and peaceful farms are Catholics.

MANY DIALECTS

One of the tasks that confront the missionary is the multiplicity of dialects. The immigrants coming from different parts of the Philippines are inclined to settle in groups according to the dialect. There are a variety of dialects even in the same parish. However, the English language is a great help, and since many of the young folk are learning English in the schools, the missionary can preach in English and be understood by a large number of people.

The Prelature Nullius of Marbel, which has been carved from the Prelature of Cotabato, is fortunate in possessing educational institutions on the college and high school level, called Notre Dame Schools, open to Catholic and Mohammedan alike. In fact, in some of them the Mohammedans outnumber the Catholics.

These schools were established by the intrepid and farseeing Prelate of Cotabata Bishop Mongeau and the Oblate Missionaries of Mary Immaculate. There are 2 small colleges, 10 high schools and elementary schools and some 4,000 students. They are staffed by the American Marist Brothers, the Filipina Sisters of two congregations, the Dominican Religious of St. Catherine of Siena and the Augustine Recollect Missionaries.

There are 10 parishes and many outmissions in the Prelature Nullius of Marbel, where 21 Passionist missionaries labor. The faithful in some 60 of the barrios have built on their own initiative simple chapels of nipa thatch. The missionaries visit these mass centers as often as possible, to instruct the people, administer the sacraments, validate marriages and baptize the children. There is also, aided by the Oblate Sisters of Notre Dame, a secular institute specializing in catechetical work in the villages.

The Oblate Fathers publish a Catholic weekly newspaper in Cotabato called the Mindanao Cross with a circulation of nearly 10,000. They also have a radio station which daily broadcasts the news and religious instruction, etc.

In preparation for the consecration of Bishop Olwell, much work has been done to the parish church which will now become the cathedral. The edifice had been built for practicality and not for beauty and the front had been described as giving the appearance of a gigantic American barn. Two bays have been added and a beautiful facade is under construction.

The future holds great promise for the welfare of the church in southern Cotabato. Under the leadership and inspiration of the new Prelate of Marbel, Bishop Quentin Olwell, C.P., and his zealous Passionist missionaries and untiring missionary sisters and brothers, there is every reason to hope for great things in this new Passionist mission halfway across the world.

A Clear Look at Politics and Politicians

EXTENSION OF REMARKS

OF

HON. ABNER W. SIBAL

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1961

Mr. SIBAL. Mr. Speaker, the Honorable John M. Lupton, a State senator from Fairfield County, Conn., recently addressed the weekly Republican luncheon meeting in Hartford on the subject of "Politics and Politicians." I think his remarks are so pertinent and well put that I would like them reproduced in the RECORD:

A CLEAR LOOK AT POLITICS AND POLITICIANS

Mr. Chairman, our special guests today, my fellow Republicans, instead of a report on some of the legislation moving through the general assembly at this time, I would like to offer a change of pace as my contribution to these weekly luncheon talks. Instead of talking up a Republican achievement, or complaining about a Democratic failure, I would like to talk about some places where in the people's minds both political parties have shortcomings.

Most of us who have spent some years in politics talk among ourselves about how little the public appreciates us. We deplore the low esteem in which politics and politicians are held by most Americans. We know how honest and dedicated we are, but what's the matter with the people, why can't they see it?

It is easy to feel hurt and impatient and left out when we hear community leaders, who are not politicians, call for some aspect of public administration to be lifted above politics. I don't like the growing chorus singing the praises of nonpartisan government (whatever that is). But I think most of all I am worried by the way my fellow citizens too often walk off and leave their self-government. It doesn't interest them, they think it's a low-quality calling. The bare bottom truth of the matter is, they couldn't care less about politics and politicians.

Some of us who are in Government talked about this problem among ourselves. We found it easy to blame the public. It is easy to say that any man who doesn't participate in self-government is "spitting at a mirror," who only insults himself and his country.

It is easy to say these things, and we have said them. But is that the whole story? Have the American people been letting themselves and their country down by their refusal to support politics and politicians personally, or is it possible that politics and politicians of both parties have been letting the people down?

It is quite clear that there are places in which both parties are not answering the country's needs, large areas in which both Republicans and Democrats confuse bad politics with destiny. That's what I want to talk about today.

I believe, we in the two major parties are forgetting our duty to lead. Too often we seek our political opportunities in contests to find appetites to feed. This is not leadership. It is exploration. Like geologists with geiger counters we move among the people with our antenna way out seeking bonanzas of public interest. This is contrived democracy and cannot succeed because it is the product of groups and interests which do not see or care to see the total picture. This brings me again to the necessity for political leaders to lead. They alone are in position to take a clear look at what they are doing.

Subtly, possibly without our even realizing it, this failure of political leaders to lead, is the major reason why politics and politicians enjoy a low rating among the people. Divided among themselves, scarcely aware or interested in each other's problems, the people in various pressure groups are getting just about what they want out of legislators. The ease with which they are able to do this has not increased their respect for the people who take care of them.

I believe that there is a great responsibility of politics and the political parties

to answer simply, the needs of human dignity in every human being.

I know this is a spiritual area from which politics and political parties shy away—but this is my very point: as leaders of a Government whose very foundation is spiritual, can we afford to neglect the spirit of man?

If we do, can we be sure that what President Kennedy calls "our nonmilitary defenses" will not be damaged? I don't think we can be sure. Yet, for 25 years in America this is exactly what we have been doing and the affliction is growing.

This is a primary mistake in the area of public education, and public education is issue No. 1 in Connecticut State government.

Many of us here, most of us, in fact, because I have discussed this with most of you, have told me you were raised in what we fondly call "a flag-waving America." This was the era of rolled up sleeves, when America never won a debate and never lost a war, hot or cold. These were the days when schools taught civics, when our history books were an exciting parade of patriots, when the Fourth of July was a bigger day than the 15th of April. These were the days when we got the message of what America stands for, loud and clear—that it was the land of the individual, not the state. We were taught the "self-evident truths"—we considered them, we explored them, we were taught them. We believed them. They became a part of our character. The days I speak of were before God was objected to, when the Pledge of Allegiance to the Flag was a renewal of faith in the country founded on His full approval of us because we believed and swore to defend His "blessings of liberty." This was before God and patriotism went out of fashion in our public schools.

Let's trace the political history of what I am talking about. First we took the reading of the Bible out of the public schools, so as not to offend. The salute to the flag and the pledge of allegiance have a remarkable history too. They were removed from many schools because a woman in Ohio won a court case which said she didn't have to have her children acknowledge any earthly authority. How could we let a thing like this happen?

What good is it if we give a nuclear physicist a fine education in his science and then find that he spends all of his spare time raising roses, playing chess or pursuing the hobby of cabinetmaking with no time whatsoever for public duty? What kind of a job is public education doing if businessmen can chase dollars from dawn until dusk and spend the rest of their time chasing golf balls or playing cards? These situations are typical which means the people are goofing off their political responsibility. Thus, hasn't our public school system failed in its primary purpose, that of education for citizenship? This is where the lack of moral leadership by our political parties has let the people down. After all, it is we who put the official stamp on the administration of the public schools. We establish the climate in which public education operates.

A second place where we in politics are failing to lead is in our handling of the people's money. There is a thing called across-the-board grants. Across-the-board appropriations where only specific funds for certain areas or individuals are needed is not only a waste of the people's money, it is demoralizing political pandering as opposed to political leadership. Isn't the belief of both parties, that across-the-board grants are the the only the people will go for—a damning admission of their lack of faith in human dignity? How do we know the people won't respond to leadership in this respect? Have we tried it lately? I think the people will respond nobly.

Possibly this two-party position which is timid about granting funds on the basis of need and strong on across-the-board spending is already suspected by the people. This is part of the public relations problem of politics.

This across-the-board thing, as we all know, operates in many areas of Government. The prime case these days is in Federal aid to education. If a few States need public money, apparently we are going to have to vote money for all States in order for the few to get it. If Mississippi needs the money but New York and Connecticut do not, then Mississippi should get the money and New York and Connecticut should not. Yet Connecticut and New York as well as Mississippi should be able to vote for the aid for Mississippi. Any other interpretation is not only wasteful, but immoral.

My third and final example of where we fail to lead is in our attitudes toward public assistance. For example, let's take a clear look at the sick and the aged in our hospitals and convalescent homes. Welfare as most of you know is our second highest cost in Connecticut. Last year it was about 25 percent of the general fund. The number of State-supported cases in nursing homes has risen at a fantastic rate over the past few years. In 1950, welfare patients comprised 25 percent of the total patients in chronic and convalescent hospitals in the State. By 1960, 57 percent of such patients were receiving State aid. Meanwhile, costs have tripled from $2.9 million in 1950 to $8.7 million last year.

By law, it seems we permit more and more grown children who have the ability to pay to shirk their personal responsibilities to provide for their parents and to pass this duty on to the State.

This is a dangerous trend, the direct opposite of basic American traditions of facing up to personal responsibility.

We in politics have a duty to apply a realistic yardstick of ability to pay in all public assistance situations. The present tendency to be overly generous hurts particularly the great number of our citizens who, although in modest circumstances, are nevertheless determined to pay their own bills and take care of their own.

The prime reason that our political leaders should lead is not just to restore the prestige of politics and politicians. That will be a desirable byproduct.

Nor should we undertake leadership only because it will free the people from the imprisonment of socializing taxation. It will do this too, because highly responsible individuals will cost our country far less per person. The urgent reason why our political leaders should lead is to direct our citizens forward once more to self-evident truths—to make them forget the worship of the consequences rather than the causes of our freedom.

I have not been describing a health political condition. What I have given is a partial description of what is actually happening. We are confronted with a conflict of misused political power as opposed to the way of life that was instilled in men wiser than we, and framed in the documents we live, and sometimes suffer by. These are the self-evident truths.

Bucktail Volunteers

EXTENSION OF REMARKS

OF

HON. HERMAN T. SCHNEEBELI

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1961

Mr. SCHNEEBELI. Mr. Speaker, today marks the centennial anniversary of the embarkation on an historic venture of a group of patriotic Pennsylvanians known as the Bucktail Regiment. The House of Representatives of the Commonwealth of Pennsylvania has recently passed a resolution calling attention to the valiant efforts of these patriots; and I am proud to announce that our distinguished colleague, the Honorable LEON H. GAVIN, joins me in calling the resolution to the attention of the House:

Whereas on April 17, 1861, Thomas L. Kane, of Smethport, McKean County, Pa., issued a call by authority of Governor Curtin for volunteer rifles and marksmen "prepared to take up arms immediately, to support the Constitution of the United States and defend the Commonwealth of Pennsylvania"; and

Whereas James Landregan, while lounging in front of the Smethport headquarters, spied a deer hide hanging outside a butcher shop across the street. Noticing that the tail was somewhat larger than the average, he cut it off and stuck it in his hat, little dreaming that he was about to give an entire regiment its distinctive insignia. Thomas Kane thought that there could not be a more appropriate name for an outfit from the mountains of northern Pennsylvania since deer abounded upon every hillside. Kane decided immediately that it would be the "Bucktails"; and

Whereas volunteers from McKean, Elk, and Cameron Counties responded and converged upon the town of Driftwood, Cameron County, Pa., from where, on April 27, 1861, the Cameron County Rifles under the command of John A. Eldred, afterwards Company C Bucktails, mustered on June 1, 1861, mustered out June 11, 1864; the Elk County Rifles under the command of Capt. Thomas B. Winslow, afterwards Company G Bucktails, mustered in May 29, 1861, mustered out June 11, 1864; and the McKean County Rifles under the command of Capt. William T. Blanchard, afterwards Company I Bucktails, mustered in May 30, 1861, mustered out June 11, 1864; all under the leadership of Thomas L. Kane, afterwards commanding officer of the regiment and later a major general, embarked upon four rafts for Harrisburg, where they were mustered into the service of the State and formed the nucleus about which the Bucktail Regiment of the 13th Pennsylvania Reserve Corps, the 42d Pennsylvania Volunteers was organized, which, during the term of service, was almost continuously attached to the Army of the Potomac.

During their services, they participated and were engaged in the following campaigns and battles: Danesville, Mechanicsville, Haines Mills, New Market Cross Roads, Malvern Hill, Harrisonburg, Cross Keys, Catlett's Station, Groveton, Second Bull Run, South Mountain, Antietum, Fredericksburg, Gettysburg, Wilderness, Spottsylvania Court House, North Anna, and Bethesda Church; and

Whereas on April 27, 1908, the Commonwealth of Pennsylvania caused to be erected at Driftwood an appropriate monument to the valor nad glory of this patriotic regiment; and

Whereas the Historical Societies of McKean, Elk, and Cameron Counties are meeting at Driftwood on April 27, 1961, to mark the centennial of the departure of this colorful outfit for enlistment in the service of their country; and

Whereas on May 30, 1961, the present veterans' organizations of McKean, Elk, and Cameron counties, together with descendants of this famous regiment, will gather at the Bucktail Monument at Driftwood to commemorate the centennial of the departure of these volunteer rifles and marksmen for the War Between the States: Therefore, be it

Resolved, That the House of Representatives of the General Assembly of the Commonwealth of Pennsylvania, pays tribute to these valiant men who constituted the volunteer rifles and marksmen who became known as the Bucktails; and be it further

Resolved, That we commend the Historical Societies of McKean, Elk, and Cameron Counties and the veterans' organizations of said counties, for commemorating this centennial event, and for carrying on the spirit, the courage, the faith, and the patriotism of such worthy and hardy men; and be it further

Resolved, That copies of this resolution be sent to the Historical Societies of McKean, Elk, and Cameron Counties.

EDWIN W. THOMPKINS.
ALBERT W. JOHNSON.
WILLIAM F. RENWICK.

Federal Subsidies to Teachers

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1961

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Monroe (Mich.) Evening News of April 18, 1961:

DO TEACHERS NEED FEDERAL SUBSIDIES?

A noted observer of the education scene, Russell Kirk, asked the above question in a recent article appearing in the National Review magazine. It is Mr. Kirk's contention that "in no other country are teachers better rewarded, relatively or absolutely" than in America. And then he offers some sobering figures for consideration.

Since 1930, the real income of teachers (in terms of purchasing power) has increased 106 percent," Mr. Kirk says. And he adds that during this same period the workload of the teacher has diminished through a reduction in the size of classes.

Advocating Federal aid to education to pay in part teachers' salaries, proponents contend that unless teachers' salaries are greatly increased the profession will be unable to recruit enough competent young people for public schools.

Between 1929 and 1956, in terms of 1956 dollars, the overall average of teachers in public schools had their salaries increased by $1,988.

Apparently, according to Mr. Kirk, this hasn't been too discouraging to those seeking a career in education. He says about 32 percent of all college graduates complete preparation for a teaching certificate—that is to say, about a third of all college graduates plan to become teachers. As further contradictory evidence of proponents' position, Mr. Kirk notes that in the last decade the number of certified teachers in the public school system has increased 57 percent. This can be compared with only a 12 percent increase for the same period of the overall American labor force.

Only national defense exceeds public education in expenditures taken from tax sources. Education accounts for some 15 percent of all Government tax revenues—public welfare gets 3.2 percent; law enforcement, 1.3 percent.

Throughout the history of our public education—including all the advances, new schools, greatly increased number of teachers, etc.—local communities and individual States have borne these costs. And of these costs, teachers' salaries have had the major share.

Skillful propagandists and zealous supporters of Federal aid to education have had much to say in support of their position. It is wholesome to see the other side of the coin as reviewed by a competent observer.

Resolution of Bar Association of State of Kansas

EXTENSION OF REMARKS
OF
HON. GARNER E. SHRIVER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1961

Mr. SHRIVER. Mr. Speaker, the Bar Association of the State of Kansas held its annual meeting in Wichita, Kans., on April 22, 1961. The executive council of the Bar Association of the State of Kansas and the general assembly passed unanimously the following resolution:

To the President of the United States, John F. Kennedy; the Honorable Robert F. Kennedy, Attorney General of the United States; the Honorable Byron White, Assistant Attorney General of the United States; the Honorable Bernard G. Segal, Chairman of the Committee on Federal Judiciary, American Bar Association; the Honorable Andrew F. Schoeppel, U.S. Senator from Kansas; the Honorable Frank Carlson, U.S. Senator from Kansas; the Honorable William Avery, the Honorable Robert F. Ellsworth, the Honorable Walter L. McVey, the Honorable Garner E. Shriver, the Honorable J. Floyd Breeding, the Honorable Robert Dole, U.S. Representatives from Kansas:

Whereas by virtue of the retirement of the Honorable Sam G. Bratton, chief judge of the 10th judicial circuit, there is now a vacancy to be filled in said 10th judicial circuit; and

Whereas if, as, and when the judgeship bill is enacted into law, there will be an additional judgeship created in the 10th judicial circuit; and

Whereas the State of Kansas has had no representation upon the 10th judicial circuit since the retirement of the Honorable Walter A. Huxman in 1957; and

Whereas it has been the practice within the 10th judicial circuit to rotate the appointment of judges so that if possible all States within the 10th judicial circuit are represented upon the court; and

Whereas there are now representatives upon the court from the States of Oklahoma, Colorado, Utah, Wyoming, and further, until the recent resignation of the chief judge, New Mexico has been represented, Kansas thus being the only State in the circuit not represented upon the bench; and

Whereas according to the previously recognized practice it is now Kansas turn for the appointment upon the bench of the 10th judicial circuit; and

Whereas the following figures show the population of the six States in the 10th judicial circuit for 1960, to wit:

Oklahoma	2,328,284
Kansas	2,178,611
Colorado	1,753,947
New Mexico	951,023
Utah	890,627
Wyoming	330,066

thus indicating from a population standpoint Kansas should be represented upon said court; and

Whereas the following tables indicate the work done in civil cases both in the district courts of the six States within the 10th judicial circuit and the appeals commenced in the 10th judicial circuit from the six States within the circuit, namely:

Source of appeals and original proceedings commenced in the U.S. courts of appeals, 10th circuit, during each of the fiscal years 1956, 1957, 1958, 1959, and 1960

	Fiscal year—				
	1956	1957	1958	1959	1960
10th circuit, total appeals	241	218	249	229	234
Colorado	46	28	35	36	35
Kansas	43	41	50	38	60
New Mexico	25	23	21	22	23
Oklahoma:					
Northern	23	13	24	13	13
Eastern	17	25	13	18	13
Western	40	32	24	47	39
Utah	22	14	31	17	18
Wyoming	11	12	9	11	6
The Tax Court of the United States	6	18	31	2	4
National Labor Relations Board	4	4	5	8	12
All other boards and commissions	4	4	4	8	9
Original proceedings	----	4	2	9	2

Total civil cases commenced and terminated in the U.S. district courts, 10th circuit, during the fiscal years 1958, 1959, and 1960

	Number of judges	Fiscal year 1958		Fiscal year 1959		Fiscal year 1960	
		Commenced	Terminated	Commenced	Terminated	Commenced	Terminated
10th circuit, total		3,008	2,833	2,581	2,664	2,819	2,587
Colorado	2	416	345	360	339	382	394
Kansas	2	940	880	954	948	969	899
New Mexico	2	409	320	273	341	311	280
Oklahoma:							
Northern	5	309	308	203	187	250	186
Eastern		196	216	154	167	170	143
Western		512	479	391	442	414	376
Utah	2	142	193	155	146	182	190
Wyoming	1	84	92	91	94	139	119

In summary, the figures show that Kansas has approximately twice as many cases in the circuit as Colorado, approximately 3 times as many as the State of New Mexico, approximately 3 times as many as the State of Utah, 10 times as many as the State of Wyoming, and approximately an equal number with the State of Oklahoma, all with no judicial representation upon the 10th judicial circuit now, nor in the last 4 years; and

Whereas the Bar Association of the State of Kansas feels that Kansas should be represented by a judge upon the 10th judicial circuit: Now, therefore

The executive council of the Bar Association of the State of Kansas in executive session and the Bar Association of the State of Kansas in its general session at its annual meeting at Wichita, Kans., this 22d day of April 1961, resolve:

(1) That the State of Kansas has not been represented upon the 10th judicial circuit for a period of more than 4 years;

(2) That all other States in said circuit are and have been represented during such period;

(3) That Kansas is entitled by virtue of the statistics set forth herein to representation upon the 10th judicial circuit;

(4) That by virtue of past practices in rotation of appointments within the 10th judicial circuit, Kansas is entitled to the next appointment to fill any vacancy upon the bench of said circuit;

(5) That the bench and bar of the State of Kansas respectfully and insistently request that the present vacancy upon the bench be filled by an appointment from the State of Kansas; that in the event it is not so filled, then that the next appointment to the bench either by virtue of the new court bill creating an additional judgeship or by a vacancy upon the court be filled from the State of Kansas; that it is the opinion of the bench and bar that Kansas is entitled to the first appointment made.

Passed unanimously by the executive council of the Bar Association of the State of Kansas in its annual executive meeting on April 19, 1961, and by the general assembly of the Bar Association of the State of Kansas in its annual meeting on April 22, 1961, at Wichita, Kans.

ALEXANDER M. FROMME,
President, Bar Association of the State of Kansas.

JOHN W. SHUART,
Executive Secretary.

Astoria's 150th Anniversary

EXTENSION OF REMARKS
OF
HON. MAURINE B. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, April 27, 1961

Mrs. NEUBERGER. Mr. President, a celebration was held on March 25 in Astoria, Oreg., to commemorate the 150th anniversary of the founding of this important port city at the mouth of the Columbia River. The event, which I trust will mark Astoria's emergence into a new era of growth and prosperity, attracted many visitors, including Lord Astor, whose forebear founded the city in 1811 as an outpost of his great trading empire.

Establishment of Fort Astoria by John Jacob Astor 150 years ago marked the first permanent penetration of our western frontier under the American flag. A recent article in American Forests magazine by Don Carlos Miller, entitled "Astor Land," recalls the early origins of Astoria and details some of its many present-day attractions. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ASTOR LAND
(By Don Carlos Miller)

Anyone hearing mention of Waldorf-Astoria immediately thinks of New York City and one of its most famous hotels. Few people associate the name with a remote section of Oregon wilderness. But it was in the Beaver State that a man from Waldorf, Germany, garnered the bulk of a huge fortune, of which he invested some $30 million in Manhattan Island real estate.

Yes, it was largely through his industry that Oregon became known as the Beaver State. While Abraham Lincoln was a small boy he was building a fur-trading empire throughout the West; he built Fort Astoria near the mouth of the Columbia River in 1811—that is, a party of his men did.

Thus, the name of John Jacob Astor is of prime importance in Oregon as well as in New York. Astoria still stands on the south bank of the mighty river, grown and modern but still filled with memories of its historic past. The Astor Column atop Coxcomb Hill in Astoria stands as a visible tribute to one of the great founders of America. Erected in 1926 to a height of 125 feet, the column contains a spiral staircase leading to an observation platform at its top from which tremendous views of the Columbia, the Pacific, and the forestland of the northwest can be viewed, a sight well worth the climb.

At the same time a 7-foot spiral frieze decorate the outer portions of the column. This frieze, the work of Italian sculptor A. Pusteria, depicts many of the historic events that led to the eventual settlement of the area.

However, John Jacob Astor was not the first important personage to exert his influence upon this great and trackless land. The famous Lewis and Clark expedition wintered here in 1805–06. Sent out by President Thomas Jefferson to explore the Oregon country, they sighted the Pacific on November 11, 1805. They constructed a pole fort 4 miles west of Astoria, a replica of which is now used as a museum and is open to the public. They called it Fort Clatsop because of their friendly relations with the Clatsop Indians. Here they waited out the winter in the hope of meeting a trading ship on the Columbia and obtaining fresh supplies. This they never accomplished, leaving a few days too soon.

During their stay they made salt from sea water at a cairn located in the present resort town Seaside, producing from three to four quarts of salt a day. Also, they killed 131 elk and 21 deer, as well as taking a large amount of blubber from a giant whale that was tossed up onto the shore by the stormy seas.

Even Lewis and Clark had their predecessors, there being Bruno Heceta in 1775, and Robert Gray in 1792 who sailed his ship, the *Columbia*, up the legendary river of the West that ran through the land the French trappers called Ouragon, meaning hurricane, probably because of the fierce storms in the Cascades. Then there were the Spanish galleons that haunted the coast for 250 years.

Here the knowledgeable fades into mystical tales of hidden treasure supposedly buried somewhere on Neahkahnie Mountain; these mingle with stories of the abode of Ekahni, the supreme god of the Kiil-a-mox people, which was on the same mountain. Many fortune hunters have dug here and reported finding strange items such as beeswax candles and Spanish coins. One of the latter, dated 1679, was exhibited for many years in the Nehalem Valley Bank. But if there ever was a treasure on Neahkahnie it is still there as far as anyone knows.

While this mountain rises only 1,710 feet it juts sharply upward from the sea and is higher than any other land for miles around, affording the hiker who is willing to climb the thousand feet above U.S. 101, which skirts its base well above the sea, a view of a vast and tumultuous domain of ocean, forest, and mountains.

Astoria is some 40 miles north of Neahkahnie and between the two lies a fabulous region of great ocean headlands, of wide sandy beaches that can scarcely be surpassed in any clime, of rivers and forests and quaint sea towns. Winters are not cold because of the warm Japanese Current that washes the shore, but rain is so common no one pays any attention to it. To see someone swimming in the rain is not strange at all. Summers are temperate with sunshine a fair share of the time.

Of the resorts, Seaside is by far the best known and offers about any accommodation possible, as well as the usual coastal carnival atmosphere. This is almost out of place along the 400-mile Oregon coast; it is a Seaside exclusive.

Fishing and clamming are common sports and the great salmon runs up the Columbia and lesser rivers in September bring thousands of visitors from all over the world. Commercial fishing is one of the chief industries of Astoria, as well as many of the other towns along this coast, and party boats may be hired at most ports.

While much of the best timber of the region has been cut, lumbering is still of great importance. Sawmills are numerous and many of these welcome visitors.

This area once contained the most dense forest of all Oregon, the State that still is the leading producer of lumber and has one-fourth of the available timber of the United States. Here new growth forests cover the mountains prettily, awaiting the day when they reach cutting size.

Near Cannon Beach a great forest burn with huge, gaunt trees stands as terrible evidence of what fire can do; this, while not scenic, is certainly thought provoking and should be included in any tour of this west Oregon region.

Many ships puting into the mouth of the Columbia have misjudged in fog and storm and run aground. Some of these stand starkly in the sands and may be visited when the tides are right. One of these, the Peter Iredale out of England, is a trademark of Fort Stevens State Park 7 miles west of Astoria.

Indeed it is a strange and interesting land, this region that John Jacob Astor, the Lewis and Clark expedition, and the countless nameless adventurers made known in the cities and hamlets of the East; it is hardly less fabulous than they led their fellow Americans to believe. And, while it is much changed from that day, it is one of the great adventure areas of America and will remain just that for many generations.

Authorization for Sale of Agricultural Commodities

SPEECH
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 4728) to amend title I of the Agricultural Trade Development and Assistance Act of 1954.

Mr. HARVEY of Indiana. Mr. Chairman, I have consistently favored the principle of disposal of commodities to the needy both here and broad. Until now this program has been used primarily for that purpose and, incidentally, to help build better international good will.

Under the present proposal, however, there is justification for only little more than one-half of the $2 billion requested. The balance of the amount is purely on an if-and-when basis.

It would look as if the new administration is attempting to convert this commodities disposal program into a giant, global, boondoggling operation.

Keep Raritan Arsenal Open

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1961

Mr. AUCHINCLOSS. Mr. Speaker, the decision by the administration to close down the Raritan Arsenal in New Jersey, thereby throwing out of work about 3,000 persons, is a matter which is of great concern not only to the community so severely affected but to the public at large.

The Raritan Arsenal came into being in 1917 and during all these years has served the Nation well. It is situated on the banks of the Raritan River where vessels can dock and carry supplies to different parts of the world and in times of war this Army post has played a very prominent part. In view of the fact that 9 percent of the total work force in this area is now unemployed, it is certainly a strange policy for the administration which is so concerned about unemployment and the relief of depressed areas to accentuate, at the same time, an area of depression and increase the distress.

The Daily Home News, of New Brunswick, N.J., which plays a prominent part in the life of this community has discussed this matter in various editorials which are factual and persuasive. I am pleased to have permission to insert three of them in connection with my remarks, as follows:

[From the Daily Home News, New Brunswick, N.J., Apr. 1, 1961]

KEEP RARITAN ARSENAL OPEN

We are glad to see a strong and swift mobilization of forces locally to resist the Defense Department's decision to close down Raritan Arsenal and to try to force a reconsideration of this decision.

The impact of the closing of Raritan Arsenal, even though the closing were spread over the full 3-year period indicated, would be a great economic blow to central New Jersey.

We deplore a decision which would throw a civilian staff of more than 2,500 persons out of their jobs here. We deplore a decision which would take a $15 million payroll out of this area. We deplore a decision which would cut off over $3,500,000 of Government materials purchases annually in the area.

Raritan Arsenal has served the Nation well, in war and in peace, since 1917. It has admirable rail and highway connections. It has a big reservoir of skilled workers. It is almost invaluable as a wartime military supply adjunct of the busy port of New York, funneling materials and equipment down the Raritan River and up the Arthur Kill to transocean shipping points.

It seems strange to the laymen that a Government installation which has served so well and on such a vast scale—there were 10,000 people working at Raritan Arsenal in World War II—should suddenly lose its military value and become "surplus." This seems particularly strange at a time when the cold war seems warming up and the international situation is at one of its most critical stages.

There are jobs to be protected in this matter. And there may well be the matter of national security affected too.

We are glad to see such strong support mobilized so quickly to keep the gates open at Raritan Arsenal and to keep this key defense operation functioning.

We are confident that if more key governmental, political and civil workers get into the campaign, Raritan Arsenal, with all that it represents to the area, can be kept here.

[From the Daily Home News, New Brunswick, N.J., Apr. 13, 1961]

DEVELOP SURPLUS LAND OF ARSENAL

As the move to persuade the Government to keep Raritan Arsenal open gains impetus, it would be wise for the area to take out an insurance policy against the possible closing of the arsenal, by persuading the Government to dispose of the valuable industrial land across Woodbridge Avenue from the arsenal.

If the Government has any merit in its contention that the arsenal itself is surplus today, certainly it must admit that this buffer acreage across Woodbridge Avenue is double surplus. This acreage is not used for arsenal purposes. It isn't even fenced in.

Edison Township has been trying without success to get this land sold and put on the tax rolls. The Government has been adamant. Now that the Government says the whole arsenal shebang is surplus, it must admit that this idle acreage is expendable.

By placing this land on the market immediately, the Government will show its good faith. And it will provide Edison Township with needed ratables, while at the same time cushioning the shock of any eventual closedown at the arsenal.

The idle acreage could be converted to industrial uses swiftly, and the jobs thereon might well be available to workers displaced by any eventual closing down of the arsenal.

We believe 100 percent that every effort should be made to keep Raritan Arsenal operating. At the same time it is the course of wisdom to be prepared for the worst. We can prepare in part—with Government cooperation—by pushing industrial development on the land opposite the arsenal.

[From the Daily Home News, New Brunswick, N.J., Apr. 21, 1961]

GOVERNMENT HASN'T PROVED ITS CASE

Despite the Pentagon official's statement that the order closing Raritan Arsenal is irrevocable, we think it's too early to accept that verdict as final.

The outburst of public indignation at the announced closing continues to gain impetus. The campaign of the arsenal workers is eloquent.

But beyond the emotional demonstrations, the facts which are being brought out tend more and more to suggest that the arsenal is a mighty useful enterprise. Certainly the vast printing and publications phases of the arsenal's work can be carried on here, with experienced personnel and modern equipment, as economically as elsewhere. And the move would be costly.

Certainly the arsenal's outstanding warehousing and shipping record belies any suggestion that the operation here is uneconomical.

We can see the missile argument. Maybe the arsenal is not big enough to store missiles safely; and we are not at all sure that the people of the area would like that kind of operation. But we cannot see any new development which suddenly makes heretofore efficient operation here inefficient, or heretofore economical operations here suddenly wasteful.

No one disputes the Government's right to close the Raritan Arsenal for logical reasons. But the Government must make its case plain. So far, it seems to us, the case of those who would keep the arsenal open seems the more convincing. The Government hasn't made its case yet.

A Bill To Establish a Federal Commission on Taxation

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1961

Mr. SHORT. Mr. Speaker, I am introducing today a bill on establishing a Federal Commission on Taxation, for the purpose of making a thorough study of our whole Federal tax structure with the view of effecting necessary reforms.

I would like to insert in the Appendix of the RECORD my statement of reasons for introducing this measure:

THE HONORABLE DON L. SHORT, CONGRESSMAN FROM NORTH DAKOTA, URGES STATES BE GIVEN BACK THEIR TAXING PRIVILEGES—INTRODUCES BILL TO SET UP COMMISSION ON FEDERAL TAXATION TO STUDY NECESSARY TAX REFORMS

WASHINGTON, D.C.—In introducing legislation today which would provide for the establishment of a Commission on Federal Taxation, Congressman SHORT commented: "While I don't hold with setting up commissions for everything under the sun, here is a case where there is a definite need for one. Many of the Members of Congress find themselves in a situation where it is impossible to give adequate time and study to important tax reforms which are long overdue." SHORT stated it was his contention that "the creation of a Commission to go into all aspects of tax reforms and adjustments which would have a stimulating effect on our economy seems to me a most sensible approach, and would prove an assist to the hard-working Ways and Means Committee members, who have before it many important measures which are time consuming in themselves."

Congressman SHORT reiterated his belief that the Federal Government has assumed many of the prerogatives in the taxation field which would ordinarily fall to the States. "If our benevolent Uncle Sam will only give back to the people what is rightfully theirs, we can save a lot of this money that is lost in the shuffle back and forth between the States and the Federal Government. Our paternal Federal Government has in effect been patting the States on the heads as one would a child and saying, "Now if you will just leave everything to me, life will be much easier. Whoever thinks that is just kidding themselves."

"One of the first reforms that could be instituted is to eliminate the Federal excise taxes," SHORT suggested. "Here there is a field that the Federal Government has invaded. These wartime emergency taxes should and can be removed. It would stimulate our economy at a time when it is needed. Later, if the States find they need to avail themselves of this prerogative in order to furnish the services and privileges the public demands, then they have this area available for their use, and do not lose half of the dollars in transit." Congressman SHORT further asserted, "With the taxing reins back in the hands of the States, we can stay in the driver's seat insofar as aid to education, medical care to the aged, etc., are concerned. Control can stay where it should be—at home. It's part and parcel of local responsibilities."

Congressman SHORT went on to point out that "President Kennedy has indicated his belief that there is a need for tax revision, which, after all, is a legislative responsibility, in his tax message which has just come before the Congress. If he is sincere in this expressed belief, let him join in this move to set up this Commission, which should be bipartisan in nature, and urge a thorough, analytical study which can come up with recommendations for reforms; reforms which will permit our American businesses to flourish and grow—reforms which will stimulate and encourage the growth of our economy which seems to be in need of confidence right now—reforms which will allow us to hew to the line established by our Founding Fathers in a Constitution which has weathered the test of time and experience, a system based on the principle of freedom of opportunity which has made our country what it is today—the place on this earth where the individual, regardless of race or color or social or economic position, has the greatest opportunity to exercise his ability and ingenuity, and energy for the benefit of himself and his family, his fellow citizens and his country.

Address by Hon. Gordon Scherer, of Ohio, at the Seventh Annual National Military-Industrial and Educational Conference

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. TUCK. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an address by the Honorable GODRON SCHERER, of Ohio, delivered on April 12, 1961, at the Seventh Annual National Military-Industrial and Educational Conference, Sherman Hotel, Chicago, Ill.:

I feel certain that all of you were impressed by the film which you have just seen, "The Spy Next Door." It has given you, as well as the millions of Americans who have viewed it on television, a better understanding of the enemy we face: his flexible and deadly purpose, his cunning efficiency, the diabolical thoroughness of his spy apparatus, and his utter inhumanity and cruelty. The film has something important to tell all of us about how dangerous an enemy we face and how much we must do if we are to remain free.

"The Spy Next Door" ties in with the theme of this conference because it demonstrates how vital it is for all Americans to know their enemy better, to have a true grasp of the nature of the conspiracy behind the activities the film portrays—a conspiracy which has created the largest and possibly the most efficient espionage network the world has ever known; which maintains the largest standing army on the globe and, at the same time, the largest corps of political propagandists and agitators known to history—along with a fifth column in every free nation.

As you know, an attempt was made to censor this film. A nationwide protest forced its showing and defeated the effort to suppress the truth it conveys. I am sure that all of you, as believers in academic freedom and freedom of information generally, are glad that the suppression effort was defeated.

Because it was defeated the film, today, is still serving the American people. The Armstrong Cork Co. has made it available not only to this gathering but to many others—and will continue to do so as long as it is not used for commercial purposes. The State Department, the Atomic Energy Commission and the National War College have already used it to assist in the education and training of certain of their personnel.

One thing about the film which is not known, except to a few persons, is that this film is based to a considerable extent on information developed by the Committee on Un-American Activities. Six months before the film was shown, Jerry Ross, who wrote the script knew little about Soviet espionage. As part of his preparation for writing it, he visited the committee, and also the Senate Internal Security Subcommittee, talked with its counsel, and was given various committee hearings and reports on the subject. As he has told the committee, "an appreciable amount" of his background material came from these publications. Those of you who have read all committee releases of the last few years undoubtedly saw in the film many familiar items, situations and techniques.

There is material for many more documentaries such as "The Spy Next Door" in the hearings and reports of the Committee—material on Communist directives and techniques for infiltrating our basic industries, our schools, churches, and professions—on Communist wrecking-of-freedom strategy and tactics in all walks of life.

The overwhelming majority of you, I am sure, do not believe that an agency which gives such information to the people, and is charged by the Congress with doing so, should be destroyed and vital data on Soviet espionage and many other aspects of communism thereby suppressed, any more than you believe "The Spy Next Door" should have been suppressed.

Yet, I must regretfully say that certain elements of a group in our society which is represented at this gathering has played, and is still playing, an unduly large role in the effort to suppress such information by bringing about the abolition of the Committee on Un-American Activities.

Earlier this year large ads were published in the Washington Post and the New York Times, ads which made false charges against the committee and urged its abolition. Of the 327 persons who signed this ad, more than one-third, well over 100, were educators.

Last month the American Civil Liberties Union issued a statement signed by 250 professors from 79 colleges and universities, urging that the committee be abolished. Recently, a similar statement came out of Cornell University, signed by 52 professors. In January, 87 Brown University professors signed another statement to the same effect.

The committee's hearings in San Francisco last May were protested by several hundred professors from colleges in the vicinity of that city, even though the purpose of the hearings was to develop information on the leadership, activities, the strategy and tactics, of the important Northern California District of the Communist Party.

I may be old fashioned, but I believe that educators have a duty and an obligation to maintain, defend and strengthen any society, culture and government that gives them the freedom and the opportunity to search for truth, to teach, and entrusts to their care the education of its youth. Certainly, they have no right to use their position and their freedom to mislead youth and to assist in the destruction of that society, culture and government at the hands of a criminal international conspiracy which is a dedicated enemy of political, academic and intellectual freedom. For them to do so knowingly is intolerable. That some do it unwittingly is deplorable.

Just what are these professors up to? What are they trying to bring about?

I will tell you what will have been accomplished, with their help, if the committee is abolished.

They have charged over and over again that the committee has no useful purpose, that it has not fulfilled its primary function of recommending legislation in the area of its jurisdiction, that it has not even tried to live up to this obligation, but has merely sought to expose as un-American innocent persons whose ideas it does not like.

What is the truth?

Independent studies made by the Legislative Reference Service of the Library of Congress reveal that the committee has an impressive legislative record. They reveal that in the years 1941 to 1960 it made 96 separate and distinct legislative recommendations to the Congress, and that 35 of these recommendations have been adopted and are now a part of the body of law of this land which is designed to protect you and the Nation, along with the professors, from the subversive forces of communism.

These studies also reveal that 52 bills and 1 House resolution embodying recommendations made by the committee were pending at the close of the last Congress, the 86th, and that 8 of these bills had been passed by the House although the Senate did not act on them.

Again, these studies reveal that the executive branch of our Government has adopted 13 recommendations of the committee which covered policy matters rather than legislation.

As early as this is in the new Congress, the committee already has before it legislation on more than 30 separate matters.

Many people fail to understand that much legislation in the field of internal security which comes out of other committees is actually based on the work of the Committee on Un-American Activities. Many such bills are recommended by various other committees in every session of the Congress.

The Voorhies Act, or Foreign Agents Registration Act of 1940, has proved to be one of the most effective laws in protecting our country against Communist subversion. That law came out of the Judiciary Committee, yet it was based completely on the investigations and hearings of the Committee on Un-American Activities.

During the last few years the Communists have received a tremendous psuedo-legal assist in their propaganda and agitation campaign to undermine all efforts to uncover and curb their activities. This has been made possible by the fact that, over and over again, the Supreme Court has granted certiorari in contempt cases, even though no substantial new principle of law was at issue in any one of them. Each time a decision has been handed down in these cases, Justices Black and Douglas have delivered

minority, dissenting opinions which are in no way valid or binding. But they have been seized upon by the Communist Party and its fronts and also by some non-Communist newspapers and individuals, and have been repeated and publicized over and over again to create the false and dangerous belief in the minds of many persons that any investigation of communism is unconstitutional, a violation of the Bill of Rights.

To remedy this situation, the chairman of the committee, Mr. WALTER, recently introduced a bill which would require that five members of the Supreme Court must agree before the Court can grant certiorari in such cases. This bill, of course, has been referred to the Judiciary Committee, but it is based on the work and experience of the Committee on Un-American Activities.

Let us go back now to the question asked a moment ago. What will they accomplish?

They will have achieved the destruction of the legislative agency that has done more than any other in the history of this country to protect our national security. This is a basic fact and truth that no amount of high-flown words uttered by them can conceal.

There is another thing they will have accomplished. Congressional committees have a vital informing function, associated with but not identical to, their legislative function. This is their duty to shed light, to bring out as much information as possible, on matters of vital national concern.

Without question, communism is such a matter or we would not be gathered here as we are today. I will not attempt to cover in detail the committee's record in this field, but over the years it has published many thousands of pages of hearings, reports, and scholarly works on this subject. I can say without fear of contradiction that there is no agency of Government that has given the Congress, the executive branch, and the people as much authoritative information on communism as has the Committee on Un-American Activities.

A few minutes ago, I mentioned the film "The Spy Next Door" and its writer, Mr. Jerry Ross. One of the committee publications he was given when he visited our offices was a report entitled "Patterns of Communist Espionage," published by the committee in January 1959 and ignored by some newspapers and treated snidely by others. But the State Department, the British and West German Governments, and the Military Assistance Institute, which trains our military attachés for service abroad, have all secured this report in quantity to use it in the training of their foreign service personnel. This is just one example of the service performed by the committee in carrying out its informing functions.

When the committee's enemies are not spreading falsehoods about its legislative record, they talk about its "methods." This is a timeworn tale, but still good for a ride in liberal journals and organizations.

What is the truth about the committee's methods?

Over 15 years ago, in 1945, the committee requested the Brookings Institution in Washington to prepare for it suggested standards for determining un-American activities, in conformity with the Constitution and the committee's enabling resolution. That study was prepared and the recommendations in it have been followed by the committee since that time.

The Committee on Un-American Activities was the first committee in the House to have published rules of procedure. In addition, it abided by those rules for a number of years before they were put in print.

In the 84th Congress, when the House Rules Committee was considering the authorization of one-man subcommittees, the counsel for the Committee on Un-American Activities appeared before that Committee and argued against this step so strongly, and effectively, that the idea was dropped.

Educators are supposed to search for truth. Have they done so in matters pertaining to the committee? Could they have done so and, at the same time, spread so many falsehoods about its legislative record and "methods"? I think the answer to the question is apparent.

Although polls reveal that the committee is overwhelmingly supported by the people in the grassroots of America, a considerable portion of the public is nevertheless misinformed about the committee on these issues. If this were not so, the type of criticism of the committee so frequently made in the press and on public platforms could not, and would not, be made half as often as it is. It is my belief that educators have a responsibility to get the truth across to the public in this area, instead of promoting the false and irresponsible criticisms that so many of them have.

When the American Bar Association urged, not long ago, that the techniques and objectives of communism be taught in our schools, it pointed out that such a program will be "beset with many obstacles."

Some of you may wonder why this should be so. Certainly, you say, we must know our enemy. The greater the number of people who truly understand communism, the greater the chance that freedom will be preserved and communism destroyed—just as, the more we teach about cancer and heart trouble and the more research we do on diseases, the greater the chance there will be of eliminating them.

I think I can safely say that the Committee on Un-American Activities gets more mail from people in all walks of life and in all parts of the country than any other committee on the Hill. For this reason, I have a pretty good idea of what many Americans are thinking on this and other subjects and can vouch for the soundness of the American Bar Association's observation.

Among those who really know communism and could be qualified as experts or authorities on the subject, there is a fear that many teachers just don't know enough about communism to give a realistic course on it and that much work must first be done teaching the teachers. They believe that there has been a failure here on the part of our educators, who are not now ready to do a job they should be able to do.

Some parents are afraid of the idea because they do not understand that what its advocates urge is, as Allen Dulles has said, the "realistic teaching of the history and policies of communism," with emphasis on the realistic. We certainly do not have in mind what could be called a pro-course on communism. We do not advocate the teaching of the noble-sounding claims of Communist propagandists, but rather the truth about Communist practices, its designs for world conquest, its strategy, tactics, crimes, complete immorality, hatred of freedom and other harsh realities about this tremendous power complex which threatens the world.

Among those who understand the type of course contemplated, a good number are wary of those who will do the teaching. They fear what will happen to their sons and daughters if they take a course in communism under certain professors. As the American Bar Association said: "There will be those who fear that a well-meaning program may itself become infiltrated or perverted."

This is not merely because of the statistics I gave earlier about the hundreds of professors who have urged that the Committee on Un-American Activities be abolished, though it is partly for that reason. Rather, it is primarily because it is unfortunately true that a check of the letterheads of the major Communist fronts of today and recent years reveals all too often that educators comprise one of the largest groups—and sometimes the largest group—supporting these organizations. The same is true of the numerous party-line and Soviet-serving statements released during the past two decades. Consistently, educators have been among the largest groups giving support to such documents.

In the spring and summer of 1959, the Committee on Un-American Activities planned hearings in California. Approximately 100 persons were subpenaed to testify in these hearings. Every one was a teacher or employee of an educational system. Eventually, the hearings were called off at the request of the California Teachers' Association, and the information developed by the committee was turned over to the local boards of education for action, also at the request of the teachers' association.

I do not have a complete record of what has happened since then, but I do know that some of the teachers concerned have resigned their positions rather than face an inquiry by their schoolboards; that others have been dismissed after a fair inquiry.

Last summer, at its annual convention, the American Federation of Teachers adopted a resolution urging the committee's abolition and making unfounded charges against it.

Mr. WALTER, the chairman of the Committee on Un-American Activities, immediately sent a telegram to the federation stating that facts in the hands of the committee contradicted the charges it had made. He invited, and challenged, the federation to present, under oath, evidence of the charges it had made against the committee.

Eight months have gone by since that telegram was sent. To date, no reply has been received. When challenged to substantiate its charges, the teacher group backed down, hoping, apparently, that the committee and everyone else would forget the matter. But the committee has not forgotten it, and I don't believe the American public has either.

What do you suppose the average American parent thinks of facts such as these? Do you wonder that, though they see the logic of teaching the truth about communism and even the need for it, they are wary of the implementation of such a program?

Isn't it natural that they see, and fear, the damage that can be done with the wrong teachers giving such a course?

Those of you in the teaching field may think I am being unduly critical of your profession. I am afraid, however, that many educators have too often been guilty of a rather cavalier attitude toward the people of this country and fuzzy about communism and the welfare of the Nation itself. If this were not so, could there be such strong and widespread feeling in our high school and college faculties against the committee?—which actually means against revealing the truth about homegrown treason, for that is what communism is. The contrast between the "teacher attitude" toward the committee and the attitude of the overwhelming majority of the American people, is one example of how completely out of tune with the public too many educators have been on some vital issues. I am convinced, too, that the fault is not the public's, but rather that of the educators.

Perhaps, for a change, some of our educators should give a little more thought to looking at the mote in their own eye. If they did so, I believe they would see quite a change in the public's attitude toward them.

In closing, I would like to say this: It has not been pleasant for me to say many of the things I have said today about a group that plays so vital a role in our national life and the survival of freedom. But,

though I wish the things I have spoken of did not exist, the fact is that they are all too real and I felt that I should speak of them.

Moreover, I choose this occasion to do so, because I thought it best that they be mentioned before those who are representative of the most responsible and informed element in the educational field, you teachers, professors, and administrators who are here today.

Like most Americans, I have complete faith in the great majority of educators in this country. Like other professions, however, yours is plagued by a vocal, irresponsible minority, which creates a very real public relations problem for all educators.

I think there is only one way you can solve this problem, by being equally vocal and by encouraging many more of your colleagues to be the same way. You must make it clear to the people of this country that this minority is not truly representative of the educational profession—by drowning out its voice with a much larger one.

I realize that, to most of you, teaching is your major interest. You are not anxious to become public agitators, to publicize your names on letterheads, in newspaper ads, and so on. But when Communists, fellow travelers and your irresponsible minority use these legitimate weapons to help to destroy freedom, why should you hesitate to use them to preserve freedom, to defend your country and its institutions?

Of late, the term "the silent generation" has frequently been applied to our youth. I am afraid that for too long, our educators, or at least the best and most responsible element among them, have been silent on too many vital issues, leaving the field of public policy, communism and security wide open to those within your ranks who are actually your enemies and the enemies of your profession.

Again, I urge you to speak up and to get as many of your colleagues as possible to do the same.

Other speakers at this conference have undoubtedly told you that it is very late in the game. They are certainly right. Nevertheless, it is most encouraging that this meeting is taking place, that so many educators who realize their responsibilities are attending it, and steps are being taken to give to the students of America the knowledge they need to preserve the freedoms their forefathers have handed down to them.

I would like to congratulate the sponsors of this conference and all those attending it. A few minutes ago, we saw one kind of "Spy Next Door." We must not forget that in many countries of the world where the people did not wake up until it was too late, there is for every single citizen a "Spy Next Door"— a spy to report his activities and words to "big brother," the totalitarian destroyer of academic freedom and all the freedoms we hold dear. This is a thought we must keep uppermost in our minds and make a guide to our actions—so that communism, the agency which creates such spies, will never dominate the American scene.

Judges and Politics

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. WALLHAUSER. Mr. Speaker, the American public will be appreciative of a nonpolitical approach when the administration makes its appointments of judges to fill the 70 new places on the Federal bench.

Surely this is an area where ability is the basic requirement and I commend the editorial that appeared in the New York Times on April 27 to the attention of my colleagues:

JUDGES AND POLITICS

The appointment of judges to fill the new places on the Federal bench is going to prove a test of the administration's capacity to put ability above politics—where that priority is most necessary. Attorney General Kennedy will take a large share of the praise, or blame, for the quality of the judges chosen.

Congress has set a poor example so far in putting politics in its rightful place. The Democratic majority in the last Congress would not approve any of the urgently needed additions to the Federal bench while a Republican was President. Then came the unseemly haste with which the Democratic-controlled Senate rushed through a bill to create 73 new judgeships after Mr. Kennedy took office. Since then the House has passed a measure to add 70 new places.

We doubt that as many as 70 new judges are actually needed. The Judicial Conference, top administration body of the Federal courts, had urged 59 before the Senate voted for 73, though the conference later upped the recommended figure to 69.

The appointments to fill these posts will be the object of far more public, and partisan, scrutiny than usual. Outstanding merit should be the chief if not the only requirement. And we assume that that test will not rule out all Republicans from the President's—and his brother's—lists.

Human Relations Goes to Washington

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 27, 1961

Mr. CLARK. Madam President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by my colleague from Michigan [Mr. HART] for the March issue of the Committee Reporter, a publication of the American Jewish Committee. This article, entitled "Human Relations Goes to Washington," will be especially pertinent in the months ahead, as we work toward the development of a new Department of Urban Affairs and Housing. Senator HART points out that there is need to plan for constructive programs of community relations designed to improve intergroup relations in our urban centers. As we attempt to improve the physical environment in our cities, which will contribute to greater family stability, to better health, to more effective education, then we also have the opportunity to improve the respect which all groups must all have for one another in order to build true communities.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HUMAN RELATIONS GOES TO WASHINGTON
(By Senator PHILIP A. HART, of Michigan)

Along with usual political promises, presidential campaigns have a way of generating an occasional new commitment to a new idea. This last campaign was no exception. The concept of a Department of Urban Affairs was just such an idea and there is good reason to believe it will soon come into being.

The almost fantastic accumulation of problems facing our cities is not, however, simply a matter of physical decay and technological change. These are enormous problems to be sure: housing, highways, schools, water, transportation, and the like. But continuing population growth, on the one hand, and population movement, on the other, have added a social dimension of equal significance.

Consider, for example, that we have become a nation predominantly of "big" cities; about 108 million or 60 percent of our citizens living in 168 standard metropolitan areas. This is a city-dwelling population larger than the national total in 1920. Not only has our farm population been dwindling from about 32 million to around 20 million during the period, but perhaps the most striking feature of this population shift has been the movement of more than two and a half million Negroes from the Old South to the urban orth and West in the decade between 1940 and 1950. This shift has continued into the sixties. Coupled with it is movement in the East of nearly a million Puerto Ricans from the island to the mainland, and in the West the movement of an estimated 2½ million more Spanish-speaking people from Mexico into the States.

Movements of these dimensions had their counterpart earlier in this century, of course, with the immigration waves from central and southern Europe. It was these masses, agrarian in background, limited in education, with their distinctive cultural language and religious differences, who had become the first victims of the urban slum. It was, in fact, by their strong backs, and with their caloused hands that our cities were built. The heightened intergroup tension before and after World War I, the spread of the Ku Klux Klan into the cities culminating in the mass parade of costumed marchers in broad daylight down Pennsylvania Avenue in the Nation's Capital, the intensity of religious hatred in the Al Smith campaign had characterized the problems of urban adjustment being experienced by the immigrant. In similar fashion, new problems arising out of race were to emerge in the cities as World War II got underway.

Problems growing out of religious differences have perhaps disappeared less than they have changed. The metamorphosis from street fights, rock throwing and vandalism, which characterized the economic fears and competitions between groups, to political factionalism and contests for power in the big-city political machines now has moved on to the suburban ramparts of the country club and the industrial or financial board of directors. Thus the problem of attaining full political participation, equal economic status and true social acceptance remains a continuing challenge to this day's city dweller of the second half of the 20th century, of whatever background, old and new alike.

While the facts demonstrated that there is no inherent relationship between poverty and group background, between illiteracy or dependency or crime and such identity, in making this point we have often failed to appreciate that group identity is a concomitant of such problems. We always make the point that racial or religious discriminations often have created a vicious circle forcing continued limitation on the minority group member who, because of lack of education or

status, is forced to remain dependent. But we have failed to emphasize and add that no attack on poverty or crime or slum housing or urban renewal can hope to be very effective without taking into account the factors of racial, religious, and ethnic group interests which are tied into them.

Fortunately, from experience during the past two decades, we know that both skills and knowledge can be developed to deal precisely with those aspects of urban life which have historically been the most explosive—the problems, tensions, and misunderstandings growing out of group differences. In these 20 years some 70 cities have created official committees or commissions on intergroup or human relations. Some 25 States have established such agencies and have organized informally under the Governors' committee on civil rights. Collectively, these units of government now appropriate approximately $5 million for advisory and regulatory services to assist these communities in dealing with these problems. If growth is a measure of success, then this idea is working. It has even found roots in the South with more and more communities setting up interracial study committees in the face of increasing pressure from the new student sit-in movement.

With the creation of a Federal Department of Urban Affairs, happily now at hand, perhaps at long last it will be possible to establish within it a Federal Intergroup Relations Service. Such a unit could function as a national service bureau for local, State, and regional intergroup relations agencies and could work with smaller communities not having their own intergroup relations committees. Perhaps this is what then-Senator Lyndon B. Johnson was reaching for as a concept when he proposed his Federal Community Relations Service. Such a Federal Intergroup Relations Service is consistent with the objectives contained in the Douglas bill for technical assistance in meeting the school desegregation crisis. It simply extends this idea into other issues and other areas. Such a unit could serve as an information clearing house for both public and voluntary intergroup relations agencies; it could provide badly needed consultative services. It could engage in fact gathering and stimulate research as well as providing help in establishing training programs for professional and volunteers in the field, including the sponsorship of pilot projects.

Federal concern with intergroup relations problems is not entirely a new concept. Appropriately, there are intergroup relations officers in the Housing and Home Finance Agency (HHFA), the agency most likely to become the nucleus for the new Urban Affairs Department. There are similar specialists in the Office of Education, the Post Office, the Defense Department, the Department of Labor. What is now needed, additionally, is a service that is directed toward the community.

Because of its strategic location within a Department of Urban Affairs, a national intergroup relations service would be able to cut across various functional areas all of which are manifest in urban problems. Such a service provides a challenging opportunity to bring to bear all the knowledge we have painfully obtained, all the experience and skills we have gained as part of our total attack on the problems of our cities. To fail to see this, to look upon the urban problem as physical and industrial and financial without some realization of this additional and critical aspect, the cities social existence would be short sighted indeed. If ever there was an illustration of what is meant by a "New Frontier" here is one and the opportunity for action is at hand.

NOTE.—Senator PHILIP A. HART, Democrat of Michigan, was elected to the U. S. Senate in 1959 following 4 years as Lieutenant Governor of Michigan. He is a member of the Senate Subcommittee to Investigate Juvenile Delinquency as well as the Subcommittee on Administrative Practice and Procedure.

Germany's Contributions to Western Unity and Consolidation

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, April 27, 1961

Mr. MUNDT. Mr. President, the free world continues to rejoice over the tremendous political and economic postwar recovery of Western Germany under the inspiring leadership of Konrad Adenauer. The new Germany has come to be looked upon as one of the strongest bastions of freedom existing outside of the Western Hemisphere. In some respects of foreign policy, in fact, the support of West Germany of anti-Communist programs and policies has been much more closely similar to that of the United States than that of our valued friends in the British Isles.

For the further information of the Congress and the country, Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a recent report on West German progress as provided by the Press and Information Office of the Federal Government.

There being no objection, the bulletin was ordered to be printed in the RECORD, as follows:

GERMANY'S CONTRIBUTION TO THE UNITY AND CONSOLIDATION OF THE WEST

(Activeness and efficiency of the Federal Republic in the frame of NATO, bulletin No. 12 of the Press and Information Office of the Federal Government)

At the beginning of 1961 Franz Josef Strauss, Federal Minister of Defense, held a speech before the Economic Club in New York, in which he declared amongst other things: Our main problem after the war was the mastering of a threatening ghost: the immense rate of unemployment; for there was a state, in which the economic circulation had been interrupted by the Iron Curtain, its vast agrarian surplus territories having been separated and ceded to Poland, a state whose remaining ground had been divided into four occupation areas, hermetically separated from each other. Moreover, all this happened in the same Germany, whose apparatus of production as well as transportation facilities were almost entirely destroyed, while a throng of expellees and refugees overflowed into the western zones of the country. We sat on a tiger, so to speak. For even the bayonets of the occupational forces would have been unable to keep in check the desperate and instigated masses. And moreover, how should we procure lodging and subsistence in this already destroyed country, the population of which had increased by 25 percent within a very short period?

Considering your own strong economy as well as the fact that your country, the United States, is not divided, just imagine what it would mean to you, if you would have to shelter, within a few years, 55 million refugees, deprived of their property, if you would have to incorporate the same in the economic situation and to procure them with homes. The above figure shows clearly the extent of the problem, of course with regard to America's state of affairs, however, please, do not forget the fact that the aforementioned throng of refugees reached such a degree that it would correspond to an immigration rate of 700,000 persons per year to the United States.

And even more drastic picture is obtained, if one starts from the principle that the U.S. economic unity of today would be partitioned as follows: twice the ninth part of the territory to be evacuated of its present population and surrendered to the U.S.S.R., i.e., the States of Washington, Oregon, California, Arizona, Nevada, Idaho, Montana, and Utah. Two further ninth parts of American ground to become a satellite state under Communist control and government, i.e., the States of New Mexico, Colorado, Wyoming, South Dakota, Nebraska, Kansas, Oklahoma, and Texas. Finally the remaing 5 ninth parts, separated from the ceded areas by an Iron Curtain, would be forced to shelter 40 million people, destitute of goods and homes, as well as to incorporate these in the economic life.

REPULSE OF COMMUNISM BY NONMILITARY MEANS

Owing to the courageous policy of the Adenauer government as well as to the diligence of the German population we finally succeeded in overcoming this problem in the Federal Republic. With it the first great repulse of bolshevism was gained in a fight with nonmilitary means, for, as is well known, wherever misery and chaos are predominant the professional revolutionaries are in clover. In the years between 1949 and 1960 we provided 6.5 million new places in the labor market, and from 1950 to 1960 we built 5.5 million homes and, year by year, we are paying 12.5 percent of our public revenue for welfare work.

We gratefully admit that the assistance of the United States of America as well as the change of policy on the part of the Western occupational forces has helped us to a considerable extent. That is the truth. And it should not be defined as an "economic miracle" but rather as a victory in the struggle against radicalism.

Sierra Leone Gains Independence

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mrs. BOLTON. Mr. Speaker, today marks the entrance into full independence of a new West African nation—Sierra Leone. As one who has followed the steady progress of her people into freedom, I should like to extend my heartfelt congratulations to Prime Minister Sir Milton Margai and Sierra Leone's 2 million citizens.

Founded in 1787, the new nation enjoys strong historical ties with both the United States and Great Britain. Its capital—Freetown—was established to provide freed slaves a home of their own, while the beautiful "Mountains of the Lion" were chosen by the Anti-Slavery Society to settle a number of freed slaves from 18th-century England and America.

After World War II, Great Britain created a Protectorate Assembly, gradually increasing the measure of autonomy exercised by the Sierra Leone Government. Since May 1960 the Prime Minister and his cabinet have enjoyed a large degree of internal self-government. Our every good wish goes out to them for the successful discharge of their new responsibilities. Let us hope that the relationships between our two countries will proceed in ever greater friendship and understanding.

Under unanimous consent I include the following article:

SIERRA LEONE: INDEPENDENCE WITHOUT PAIN

(By Roy Lewis [1])

On April 27, 1961, a new West African nation will enter the stage of world affairs; it will replace South Africa as the 12th member of the British Commonwealth, and will probably become the 100th member of the United Nations. Sierra Leone's coming of age deserves special interest in the United States because its foundation in 1787 is interwoven with the skeins of American history. For the beautiful, thundery "Mountains of the Lion" off the flat mangrove-fringed coasts of West Africa were selected by the Anti-Slavery Society to settle a number of freed slaves from 18th-century England and America. Moreover, its mighty harbor, Freetown, was the base from which Her Majesty's frigates and gunboats intercepted the slave ships and eventually put down the trade.

LOCATION ENHANCES IMPORTANCE

Sierra Leone is a relatively small country by the standard of the independent African countries de l'expression anglaise, as the phrase now goes, but it is well up to the average of the states that have emerged from the break-up of the French colonial empire in Africa. It's population is over 2 million, about the same as its ex-French neighbor, Guinea, and rather larger than that of its other neighbor, Liberia, whose history is also closely associated with the slave trade and the first aspirations of African nationalism. Sierra Leone is smaller than either of its neighbors—about the size of the State of South Carolina; but because it is wedged between two States representing opposite ends of the African political spectrum, it is of some considerable political importance. Its harbor is the finest in West Africa, though the British never made it into the base that the French made of Dakar.

The past always lives to some extent in the present, and Sierra Leone's past cannot be forgotten in considering its potentialities. Though the colony dates from 1787, the country as a whole did not become a British possession until the 1890's, when a large area of the hinterland behind the colony area was declared a protectorate, and treaties were made with about 150 small chieftaincies, belonging to perhaps 20 major tribal and linguistic groupings.

This is important for several reasons. The small colony was, though rather poor, deeply anglicized. The creoles, though almost wholly African in blood (they had some admixture of English and West Indian ancestry), were detribalized, relatively prosperous, sophisticated, and educated. They thought of the tribal Africans as bush savages, and in return were called black Englishmen. The protectorate as such was administered separately from the colony until very recently; English common law and freehold prevailed in the colony, codified native customary law mainly in the protectorate, where land was communally owned and, ironically enough, some local domestic slavery persisted until 1928. For Sierra Leone to become a nation, this division has had to be overcome; the creoles, now only about 80,000 in number, had to become one with the natives and the tribes had to lose their separateness from each other (though this latter process is far from complete). In the past 60 years, the economic process has been one of opening up the interior and uncovering its wealth, both agricultural and mineral, for the good of the whole territory.

BOUNDARIES FIRM

Sierra Leone, physically, is a more soundly delineated area than many African states, for it is bounded by the sea and the crescent of mountains which form the headwaters of its own many fine rivers on the western side, and of the Niger which flows eastward. The country is a vast draining-board tilted toward the Atlantic, well-watered, hot, and so located that it can grow a great range of tropical produce in a varied climate at the junction of the true tropical forest belt and the savannah belt. Ethnically, it is not quite so self-contained, though only one major tribe—the Mende—overlaps largely into neighboring Liberia.

The protectorate was developed, outwards, from Freetown (and Bonthe, a now moribund port). It was slow work, because of the backwardness of the people by European standards, lack of communications, and the difficulty, at first, of finding any export crops; when palm produce became the territory's staple, the prohibition of land alienation left its cultivation entirely to the African chiefdoms, and this was not very efficient. Development was also retarded by World War I, and then by the depression; but in the 1930's, cobalt, diamonds, and iron ore were discovered, and the mining of these, together with the development of new tropical crops—swamp rice, cocoa, coffee, ginger, piassava, benniseed, etc.—began rapidly to transform the country, a process which received immense impetus after the war, when diamonds were found not to be confined to the single area, Kono, where they were first discovered, but all down the estuaries of the rivers that drain the country.

This rapid economic growth, though painful in many ways, transformed the country politically. First of all, it put wealth into the hands of the tribes of the hinterland, so that the creoles became, in many ways, the poor relations. Secondly, this wealth began to break up the bonds of tribalism, further undermining the foundations of chieftaincy which British rule was already transforming. Thirdly, in letting news, movement, and ideas flow in the protectorate, it spread the gospel of African nationalism—which at first was taken up by creole intellectuals, who became the first teachers of the tribesmen. A strong protectorate movement, headed by some of the chiefs, began to press for more responsible rule and for freedom—not merely from British control, but more particularly from "creole" privilege in Freetown and the colony area.

After World War II, Britain acknowledged the propriety of all this, and set up a protectorate assembly; the colony, like nearly all British colonies in the West Indies and elsewhere, had had a measure of popular representation from the nineteenth century. In the past decade, Sierra Leone's political history has been the usual British colonial one of a succession of constitutions, each more liberal than the last, paving the way steadily towards fully democratic institutions and independence, under the pressure of a nationalist party. But in Sierra Leone this has been complicated (as in Ghana it was not) by jealousies between the creole-ruled colony and the protectorate.

It is the signal triumph of the present Prime Minister, Sir Milton Margai, that in the building of the nationalist party (the Sierra Leone Peoples' Party), he has successfully brought together the majority of the creoles, the traditional chiefs, and the politically-conscious masses of the protectorate. His work of unification is an astonishing political feat, and it alone entitles "the doctor" (as he is affectionately called—he is, in fact, an Edinburgh-trained medical practitioner) to be described as father of his country. He is a Mende.

A UNITARY STATE

Sierra Leone has developed, under British tutelage, as a unitary country like Ghana, not a federal state on the Nigerian pattern. The creoles have retained, however, a certain advantage in representation, and the chiefs also have a reserved place in the assembly; if this is not an exact one-man one-vote equal-district type of representation on the Westminster model (and therefore much criticized by the young radicals), it in fact is not far off it, and takes account of historical factors that cannot yet be ignored.

In the final phase before independence, which has lasted since May 1960, the Governor has only had minimum reserved powers, and Sir Milton has run the country with a cabinet drawn from both the SLPP and the opposition factions. The existence of one small opposition group, not represented in the prevent government, preserves the essentials of a party system—so far at least. Parallel with this constitutional development has gone the steady "africanization" of the civil service, as fast as the growth of schools and higher education permitted. Sierra Leone's Fourah Bay University—the first institution of higher education in Africa—was founded as a college in 1824 by the Church Missionary Society and raised to full university status in 1960.

Economically, the country has done well, and is now fairly prosperous. Its annual budget is around $30 million; its exports from January to September 1960 were $51,849,076 and its imports, $53,189,480—a rapid increase since 1947. In addition to the minerals mentioned above, rutile has been discovered and is being worked, and bauxite is being investigated, but iron and diamonds remain the twin pillars of the state.

Unquestionably, Sierra Leone needs a great deal of development capital. The extension of its iron extraction industry from Marampa to Tonkolili was unduly delayed (in favor, ironically, of the development of Guinea's hematite ores), and much exploration needs to be done. It is vital that national wealth should expand if the needs of a growing population are to be accommodated, if creative work is to be provided for the young people flowing from the new schools, and if the expansion of education, health, and welfare services is to be sustained.

DIAMONDS BRING CHANGES

The great diamond boom has awakened Sierra Leone, once so sleepy, Victorian and conservative, fully into the modern world. Independence, which has ben achieved rapidly, yet with skill and a minimum of disturbances (there have been some), brings a new challenge.

Though in politicians such as his brother Albert Margai, Minister of Natural Resources, Foreign Minister John Karefa-Smart, Minister of Finance Muhammad Sanusi Mustapha, and a dozen others, Sir Milton has a good team, there is still a severe shortage of administrative talent. British expatriates, if in diminishing numbers, will be needed to serve the state for some time in the departments, and technicians may be needed from abroad in increasing numbers, despite the growing outturn of trained Africans from Fourah Bay and British and American universities.

In any analysis of the outlook for Sierra Leone, two dangers that it may be delicate

[1] Roy Lewis, formerly chief African correspondent of the London Economist, is the author of the definitive book on Sierra Leone, "Sierra Leone: A Modern Portrait" (London: Her Majesty's Stationery Office, 1954). Mr. Lewis has recently taken over as head of the Economist's Washington, D.C., office.

to mention ought to be faced. One is internal. The great diamond boom, and the vast smuggling racket that burgeoned from its mishandling in 1953–56, put immense wealth into the hands of the Lebanese and Syrian trading community. This community is not noted for its wisdom or public spirit, and is concerned to keep its gains less by wise entrepreneurship than by judicious influencing of local African leaders. These may not be wholly taken in; but the fact remains that, the British having egregiously failed to make the Lebanese community pay its full share of the tax burden, the Africans must now do so—or risk becoming puppets of an expatriate plutocracy. The Lebanese have performed a valuable role in the Sierra Leone economy—but today they risk becoming an object of jealousy and dislike as a barrier to African traders.

GUINEA WOULD INFLUENCE

The second danger is external, and is complementary to the first: Guinea has certainly every intention of exerting increasing influence on its neighbor, which it regards as very backward in terms of Africanism. Sierra Leone has free institutions—a British-type judiciary, a representative house with an opposition, a free (if inadequate) press, a western tradition more deeply rooted than in most parts of Africa. But is this enough? Young Sierra Leonians, educated abroad and sensitive of Africa's revolution, are restive and critical; since they will soon be in politics, the days of moderation may be numbered. The Soviets are concentrating their efforts in making Guinea a "show place." There will be a very direct rivalry and contrast between Guinea and Sierra Leone in the next few years, between the fruits of the democratic, liberal, British-colonial and Commonwealth method, and the authoritarian (though also African) method of Sekou Toure and his colleagues.

To sustain its sovereignty—including its small army and its new diplomatic establishment—Sierra Leone will need an expanding budget, and more external aid than the £7,500,000 which Britain gave it as a farewell present. What will take the place of the colonial development and welfare funds which now automatically cease? To pay for the heavy cost of economic, and social development—even now, barely 5 percent of the former protectorate people are literate, compared with 80 percent or so in the former colony—swift aid, in loans and technical assistance, are required. In my view, the most vital sectors are education—where the need is greatest for teachers and teacher training—and agriculture. Despite a good deal of agricultural progress, especially in mechanized swamp rice cultivation, the export potential is far from realized, while the many unsolved problems of keeping tropical land fertile cry for urgent investigation. A series of comprehensive studies has been made; what is now needed is men, organization, energy—and money.

SIERRA LEONE

Capital: Freetown (population 100,000).

Area: 27,924 square miles (colony, 256 square miles; protectorate, 26,669 square miles).

Population: 2,260,000 (mid-1958 estimate).

Official language: English (Mende is the principal local language in the south, and Temme in the north).

Imports, 1958: £23,950,000, chiefly manufactured goods, machinery, fuel oils, cement.

Exports, 1958: £19,600,000, chiefly diamonds, iron ore, palm kernels, coffee, cocoa, kola nuts.

Budget, 1959–60: revenue, £11,488,000; expenditures, £12,286,000.

Principal occupation: agriculture.

A Healthy Agriculture Is Necessary for a Healthy National Economy

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, when Orville Freeman, our new Secretary of Agriculture, testified before the House Agriculture Committee on the new omnibus farm bill, he described the scope of the proposed measure. He also stressed the great need for this legislation in the interest of a healthy agriculture and a healthy national economy. Under leave to extend my remarks, I would like to include a portion of his statement in the RECORD.

SCOPE AND URGENCY OF NEW FARM LEGISLATION

In opening the discussion of the Agricultural Act of 1961, I should like to first, describe briefly the scope of the provisions encompassed in the bill as a whole; and second, emphasize the urgency of this legislation.

I. SCOPE

This bill encompasses several different program areas, but they are all essential parts of achieving the goal of the best possible utilization of our agricultural abundance to contribute to the national well-being under conditions that will enable farmers to achieve a fair income.

One part of the bill is directed toward greater consumption of farm products—toward expanding our exports and improving our programs to meet human needs and promote economic development in the emerging nations. This is an essential part of our agricultural program to adjust our agricultural abundance to meet the needs and conditions of our times. We need to expand our exports as well as our efforts to provide an adequate nutritional base for all Americans. And this expanded utilization of farm products must be taken into account in our plans for adjusting production to the quantities and kinds of agricultural products that we can use.

Another part of the bill relates to agricultural credit, and is directed toward enabling all our family farmers to benefit from the improvements contemplated in the farm program, to strengthen the position of family farmers, and to enable them to make their maximum contribution to the Nation's economic growth.

Still another part emphasizes the assurance that farmers' cooperatives will have the legal protection they need to grow and prosper in our modern economy, and by that growth to enable them to make a greater contribution to the economic well being of their members.

The longest portion of the bill, title 1, relates to supply adjustment and price stabilization. It provides the procedures and the machinery whereby farmers can work together, in cooperation with government, to adjust their production to modern needs and conditions; and thereby to achieve for themselves fair incomes, as they make available to consumers adequate supplies at fair prices.

We believe that all these program areas should be treated together as they are combined in this bill, for the failure to act affirmatively in any one of these areas is to cut away one important support of the total program for agriculture.

II. URGENCY

I believe that the early enactment of this legislation is imperative in the interest of farmers, consumers, taxpayers, and the economy as a whole. Its urgency is highlighted by several factors.

This legislation is urgent because the decline in farm income must be reversed

The decline in farm income in recent years need not be spelled out for members of this committee. You are well aware of the facts. But I assure you that it needs to be presented to others. Nothing has impressed me more, during my 3 months in this office, than the extent to which the nonfarm public is unaware of the critically low level of farm income. Emphasis on surplus and subsidy have clouded the true facts.

The annual per capita income of farm people averaged $966 in 1960—only 43 percent of the average of $2,282 received by the nonfarm population. This is a substantial drop from the 1947–49 period, in which the per capita annual income of farm people was about 58 percent of the per capita nonfarm income. Thus, the disparity in income has been increasing, at the expense of the producers of our most essential human needs, at the expense of those whose productive efficiency has made us the best fed people in the world.

Farmers' realized net income from farming in 1960 totaled $11.6 billion, which is a decline of 26 percent from the 1947–49 average. It is true that there are fewer farms today, and therefore the decline in net income per farm is not quite that much. But in 1960 the net income per farm from farming, after adjustment for price level changes, was 20 percent below the 1947–49 average.

	1947–49 average	1960	Percent change
Realized net income from farming (billion)	$15.7	$11.6	−26
Realized net farm income per farm (1960 dollars)	3,224	2,568	−20

These income declines result largely from a 12-percent reduction in average prices received by farmers from the 1947–49 average and a 20-percent rise in prices paid for items used in family living and in farm production. As the result, the parity ratio, which measures the relative price position of farmers, declined from 108 in 1947–49 to 80 in 1960—a drop of 26 percent.

	1947–49 average	1960	Percent change
Prices received by farmers (1910–14=100)	271	238	−12
Prices paid, interest, taxes, and wage rates (1910–14=100)	250	299	20
Parity ratio (1910–14=100)	108	80	−26

Income declines over the past decade have not been the same for all classes of farms. But net incomes in 1960 of representative commercial poultry farms in New Jersey, of representative wheat-fallow farms in the Pacific Northwest, of representative wheat-small grain-livestock farms in the northern plains, and representative cash grain farms in the Corn Belt, all were down to between 20 and 30 percent below the 1947–49 level.

In short, all income data indicates that farm incomes have declined in absolute terms during the 1950's, as other incomes were rising. Thus, in comparison with nonfarm incomes, the comparative position of farm incomes has worsened steadily. These declines have occurred even with the farm programs that have been in force. They are

not going to improve by talking and wishing. They are going to improve only as we take positive action to raise them. Any further delay would have serious consequences, not only to farmers, but to the rest of the economy.

This legislation is urgent in the interest of a healthy national economy

It should be self-evident that a stable, prosperous, and growing agricultural economy is absolutely essential to a stable, prosperous, and growing national economy. But, since this fact is not adequately recognized, I should like to review the contributions that a strong, growing agricultural economy can make to a growing national economy.

There is not an industry or a person in the United States who is not touched in some way by what happens in agriculture. A survey some 5 years ago showed that farmers and their families represented a market for $40 billion of purchases from the economy. Farm families buy the goods and services we all do as consumers. Farmers as business men buy the products of industry in order to produce. When farmers are prosperous—when their incomes grow along with incomes in the rest of the economy—the industries which service them benefit, and the workers employed in these industries benefit. Disadvantaged agriculture means disadvantaged industry and unemployment. For example, farmers spend some $2½ to $3 billion annually for tractors, motor vehicles, and farm machinery. Agriculture is a big market for these items. But agriculture hasn't grown in recent years and we all know that there is distressing unemployment in our key centers of the automobile industry today.

I could recite many facts on how important agriculture and our farm people are to our everyday economic activities: that farmers consume 320 million pounds of rubber, about 9 percent of the total amount of rubber used in the United States; that farmers purchase products involving 6½ million tons of finished steel; that farmers buy 45 million tons of chemical materials; that farmers buy 18 billion gallons of petroleum, more than is used by any other single industry; that farmers use more kilowatt hours of electricity than is used by Chicago, Detroit, Baltimore, and Houston combined.

The point I am making is that when agriculture hurts a lot of other people hurt—whether they live and work in the small rural communities or in the big manufacturing centers far removed from the farm production line. Farmers have a big potential for helping the Nation achieve a faster rate of economic growth and a higher rate of employment. But this will flow only from basic improvement on the farm.

The farm problem is closely related to the problem of unemployment. Workers released from agriculture by technological advances have not been able to find suitable employment in the nonfarm sector and there has been a damming up of labor with the consequent underemployment in agriculture. Next, the low gross returns received by agricultural producers have seriously restricted the market for machinery and equipment, lumber and construction supplies, and operating items such as gasoline, fertilizer, and pesticides. Finally, the low and inadequate net incomes earned by farm families has restricted the market for consumer durables and convenience goods and thus placed a brake upon the full production of these goods and services in the nonfarm sector.

These interindustry relations must be corrected and brought into balance as a means of contributing to overall economic development. We believe that the passage of the Agricultural Act of 1961 will make a significant contribution to the reestablishment of a set of economic relations between the farm and nonfarm sectors of the economy which will contribute to sustained economic growth.

Our New Secretary of Agriculture

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, April 27, 1961

Mr. HUMPHREY. Mr. President, I ask unanimous consent that an article on Secretary of Agriculture Orville Freeman, which appeared in a recent issue of the Catholic Reporter, published in Kansas City, Mo., be printed in the Appendix of the RECORD.

And may I say that this article about one of Minnesota's outstanding sons was written by another Minnesotan of whom we are also proud, Richard T. Greer, assistant librarian of the Senate Library.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

(By Richard T. Greer)

"And I must say the Secretary of Agriculture is working overtime," said President Kennedy at his second press conference. In office only 9 days, Mr. Kennedy had discovered that Orville Lothrop Freeman, the 16th, the youngest and in some respects the unlikeliest Secretary of Agriculture, is a young man in a hurry.

The new administration is nearly 2 months old and the lights continue to burn brightly in the Independence Avenue office of the Agriculture Secretary long past midnight. For his is a formidable and perhaps the most thankless task of all those of the New Frontier.

The fact that he is not himself a farmer, is indeed city born and raised, and is a lawyer-politican suggests to some critics that he is hardly qualified for this most difficult of cabinet posts. But as a three-term Governor of one of the country's leading agricultural States, Orville Freeman is hardly a babe in the woods when it comes to agriculture and its problems.

He knows that the problems he has inherited from a harassed but proud predecessor are viewed by many old political hands as largely unsolvable. He has few illusions about the "mess" in agriculture. Yet he has grasped the reigns of command over the vast and bureaucratic Department of Agriculture with a zest which not a few Members of Congress have greeted with enthusiasm.

"As Secretary," Freeman has said, "I'm going to be selling agriculture." So far two fundamental judgments appear to underpin this salesmanship: the success of American agriculture, and the blessings of our agricultural abundance.

With regard to the first, he puts it this way: "We work less and less and less to eat better and better and better, and the most dramatic success story of the American economy and its productivity, the genius of organization and production, is agriculture * * * and yet somehow we have drifted off where we consider this is a great problem. It is a great success."

While the Nation eats better for less than any other people in the world, the former Minnesota Governor argues, the overwhelming number of farmers who make it possible barely make ends meet. Indeed, farmers have been subsidizing consumers, rather than the other way around.

The blessings of our abundance? "In agriculture, as in so many other things, we live in an age of abundance. Any nation that does not learn to use its abundance for the good of men will fail." He therefore will urge that more food be sent abroad to the world's needy, that other prosperous countries share this burden, that organizations such as the United Nations FAO participate more fully, and that existing machinery to carry on this task be strengthened and expanded.

One midwestern Senator, obviously pleased with these views, told his colleagues it was great to have, at long last, an Agriculture Secretary who believes in going to bat for the American farmer. And from a southerner: "I am happy to see someone come to Washington who makes it his No. 1 objective to try to help the farmers."

Actually, Ezra Taft Benson disagreed little with these Freeman principles. But it is also a well-known fact that though many American farmers agreed with Benson's approach to agriculture, they nevertheless thought he was on the other side—against the farmer. Freeman knows his farm policy proposals will never get off the ground without substantial support from farmers and their farm organizations. Thus he hopes to convince them early he's on their side.

For example, he contends that the American farmer has been the victim of unfair public criticism, among other reasons, because of governmental bookkeeping practices. Farmers are charged in the agriculture budget with a number of expenditures which by no means benefit them alone.

The costs of the school lunch program and Government purchase and distribution of food for the needy in this country should not be part of agriculture's budget. Nor should the costs of selling our surpluses abroad be borne by the American farmer, he points out, since the currencies received are subsequently turned over to other departments and agencies such as the State Department for the construction of embassies abroad or the Defense Department for the construction of military housing abroad.

Furthermore, loans made to, say, the Rural Electrification Administration are repaid in full with interest. Why lump them in with other expenditures? Other items, says Freeman, such as the annual $50 million subsidy to the American merchant marine and $20 million for the purchase of dairy products for the Defense Establishment are charged to agriculture. All in all, over $3 billion of the $6 billion Department budget are used for benefits that accrue to others than the farmer.

But there are tougher and more immediate problems that cry for solution—dwindling farm income, increasing Federal expenditures and mounting surpluses. "I don't come to Washington with all the answers," he remarked to a reporter upon his arrival in Washington. "For quite a while I want to do a lot of listening and not much talking."

In January he listened to the Tower of Babel views of the leading farm organizations at two conferences. He has been dutifully consulting farm-State members of Congress of both parties.

In many ways, Freeman is the exact opposite of Ezra Taft Benson. Unlike either Benson or his boss President Eisenhower—both of whom disdained politics—he is, like President Kennedy, first of all a politician. And unlike conservative Benson, the new Secretary is an unabashed liberal. The former's conservatism found expression in

his advocacy of a return to free-market policies. The latter's liberalism inclines him to use "governmental machinery wherever needed * * *, unhampered by either the worship of the free market or fear of subsidy."

Freeman's gerat-grandfather, Gus Johnson, came to Minnesota from Sweden in the middle of the 19th century. The frustrations of living with so many other Johnsons—getting the wrong mail or pay envelope—caused him to become a "freeman" in name as well as in fact. During his many statewide campaigns in Minnesota, candidate Freeman found it expedient to remind his Scandinavian audiences of this family ancestry.

The Agriculture Secretary was born in Minneapolis 42 years ago. As a student at the University of Minnesota during Franklin Roosevelt's second term, he shared with his new friend, HUBERT H. HUMPHREY, the ferment and unrest of that period. He was president of the all-university council and a letterman on the famous Gopher football squads of those years. He received his bachelor's degree magna cum laude and also a Phi Beta Kappa key. "Even then," Senator HUMPHREY recalls, "Orville was a demon for work. He always had about four jobs, in addition to getting top grades in school."

HUMPHREY and Freeman became convinced that in political action lay the best hope to combat the depression. But the Democratic Party in Minnesota was an impotent third in the struggle for political office. Even the stronger Farmer-Labor Party had fallen on bad days. They decided a marriage of the two was the only road to political victory in the State. Their strategy was proved correct by the election of HUMPHREY to the U.S. Senate and, in time, Freeman's election to the Governor's chair.

Meantime the war came and Freeman was off to the Marines. In 1943 while leading a patrol on a South Pacific island, the left side of his face was shattered by an enemy sniper's bullet. For 8 months he lay in a hospital, his speech seriously impaired. A politician unable to speak passably is little better off than a pianist without an arm. But hard work and a Demosthenese-like determination ultimately paid off. Today he is a first rate public speaker.

After the war Freeman picked up his law degree and became assistant in charge of veterans' affairs to the mayor of Minneapolis—HUBERT H. HUMPHREY. He also served as HUMPHREY's Civil Service Commission chairman.

The now-merged Democratic-Farmer-Labor Party took on a decidedly left-wing complexion in the early postwar years. Progressives, Communists, and others of similar persuasions found in the Humphrey-Freeman team an implacable enemy. After 2 bloody years of political in-fighting, which provided a considerable education in the rough and tumble of political brawling, the undesirables were purged, yet the liberal complexion of the party was preserved.

Did Kennedy offer Freeman the Agriculture Secretary job first? Perhaps not, but if others turned it down because of the trials and frustrations suffered by Mr. Benson, who was Washington's favorite political target, Orville Freeman welcomed the challenge—and besides, he was out of work at the moment, for he had just suffered a sharp defeat in his try for an unprecedented fourth term as Governor of Minnesota.

He had some hesitancy about accepting, he recalls, but after considerable soul-searching and consultation with his wife and two teenage children, he decided he was "anxious to have the opportunity."

Freeman begins with an important advantage that Benson did not have for 6 of his 8 years in Washington. He has a friendly party in control of Congress where new farm policies ultimately must be approved.

Thus far his reception on Capitol Hill has been warm and perhaps even sympathetic. Many old-time members have been secretaries come and go, and they know full well the problems confronting this young man. Realists that they are, they are not lyrically hopeful that things will get better before they get worse. But they know, too, what astute political leadership can do, and they look with quiet expectation upon Orville Freeman.

A recent report prepared for the new administration by a special task force makes gloomy reading for Freeman and his advisers. Total farm output will continue to rise faster than consumption, surpluses will continue to accumulate in Government warehouses, and the yearly cost to the Government will continue to range from $2 to $4 billion, says the report.

Adjusting agricultural production to demand, it contends, will in the long run depend upon other than specific farm policies. It will depend largely upon "the achievement of a vigorous rate of growth for the rest of the economy and availability of nonfarm jobs."

That farmers in greater numbers are seeking nonfarm employment at a time when the national unemployment total rises alarmingly is verified by the recent 5-year farm census. In 1959, for example, 45 percent of all farmers did some off-farm work, and 3 out of 10 worked at off-farm jobs more than 100 days. Thus farm employment problems further aggravate the larger unemployment crises.

At the same time, the revolution in farm technology shows few signs of tapering off. During the past 5 years, according to the census report, "greater changes in farms and agriculture (have occurred) than for any other 5-year period recorded by a nationwide census."

To the task of grappling with these problems, Secretary Freeman brings some impressive assets. For one thing, he has, as even his critics concede, a first-rate mind. (A spokesman for the American Farm Bureau, the country's largest farm organization which is largely unsympathetic to the New Frontier, said Freeman was probably "the best of the men Kennedy could have chosen. He's not a meathead, that's for sure.")

As a former Governor, he also brings a record of genuine achievement in good government. Each of his six budgets was in balance, and though he increased State expenditures on all levels of education, welfare, and rehabilitation, he also raised the revenues to pay the bill.

And he brings to his new job a remarkable administrative ability. No scandal marred his administration. As Governor, he simultaneously raised wages of State employees and cut superfluous fat out of some State functions. Budget-minded Members of Congress are of course delighted to turn such talent loose in the Agriculture Department, which, like an iceberg, has on view in Washington a fraction of its total body.

A policy resolution of the National Catholic Rural Life Conference last year stressed the overriding need to preserve the basic family farm structure of American agriculture if the cultural, religious, and social values of the rural way of life are to survive. Freeman couldn't agree more. In Minnesota, his policies were designed to protect these farms rather than the larger corporate enterprises. However, he believes the family farm competes successfully in the majority of instances with what is called corporate farming.

What general approach to our agricultural problems will the new administration take? Though the President's farm message has not yet been sent to Congress (at this writing), some hint of its directions can be gleaned from the views of Willard W. Cochrane, currently Freeman's top adviser and former professor of agricultural economics at the University of Minnesota.

Cochrane's farm philosophy can be summed up in the term "managed abundance." In his words, it means this: "By supply control I mean the conscious adjustment of supply to demand, commodity by commodity, year after year, to yield prices in the market that have already been determined fair by some responsible agency."

Underlying this approach is the judgment that previous farm programs have failed to sustain reasonable prices and control surplus production. Our current surpluses are in wheat and feed grains. The wheat surplus we now have would satisfy domestic requirements for about 2½ years; other surplus grains equal about a half-year's production.

Freeman points out, however, there is no surplus of protein foods such as meats, oils and fats which must now be purchased on the open market by the Government for school lunch programs, welfare programs, and distribution to destitute families.

A similar situation of oversupply of some products and undersupply of others exists in the world market, he contends. But we dare not dump our grain surpluses on the world market without fear of disrupting the markets of friendly nations such as Canada. Yet many items not in oversupply here would sell readily on world markets, items such as nonfat dried milk.

The managed abundance approach would seek to cut surpluses not readily usable either domestically or in foreign markets and would foster greater production of those products in steady demand at home and abroad.

As a preliminary, the Agriculture Secretary has already set in motion a broad inventory of both domestic and world food and fiber needs. Presumably from this knowledge intelligent engineering of production in this country can be undertaken by the Government.

Can it be done without far more Federal control and direction than we have had in recent years? Will it not require infinitely varied and complex policies and programs? And will the farmer accept it, even with better prices for his products? What about the consumer? Critics argue that he is going to be saddled with higher prices at the food market with this kind of program. And lastly, what about Congress? Will it give such broad powers to the President and his Secretary of Agriculture?

At this point, only one thing seems clear, Orville L. Freeman will be walking an exceedingly thorny path this year and perhaps those to come.

Authorization for Sale of Agricultural Commodities

SPEECH

OF

HON. RALPH HARVEY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 4728) to amend title I of the Agricultural Trade Development and Assistance Act of 1954.

Mr. HARVEY of Indiana. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, apropos the colloquy which just occurred, it came to my attention this week through having a caller on behalf of India regarding

India's desire to have us grant her a portion of our off-shore sugar allotment in the coming long-range sugar program. I told this very fine young man that I had always had none but the friendliest feelings for the great country of India. They are accepting our bounty. It is freely given in the form of the contract our chairman mentioned a few minutes ago concerning wheat. We are in the process of giving wheat to India in substantial quantities over an extended period of time. I had not known of this proposition the gentleman from Iowa [Mr. GROSS] mentioned, that they turned right around and were buying planes from the Soviets. I would not imagine that we would give India a sugar quota, but it does seem to me that it is high time we in the Congress knew what is going on. I think we have every right in these negotiations to be called in, however, as I have heard it expressed a number of times in the past, it seems we are called in not at the beginning but only at the crash landings.

Israel's 13th Birthday

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. CELLER. Mr. Speaker, April 20 marked the 13th anniversary of the birth of the State of Israel. The 13th year is highly significant in the tradition of the Hebrew people. It is on that birthday that a young lad enters on the threshold of maturity with concomitant charges of responsibility.

The growth of Israel toward this kind of symbolic maturity is reflected in the basic facts of Israel's economic life. Whereas in 1948 Israel had a population of 790,000, in 1960 its population was 2,128,000; industrial production hardly existed but in 1960 the figure was $1,070 million. So it is with exports, imports, agricultural production, irrigation, afforestation, water usage, and so forth. More specifically, exports in 1948 amounted to $29,680,000 and in 1960 amounted to $265 million; in 1948 there were only 412,000 acres of cultivated area and in 1960 there were 1,100,000 acres. Today Israel has a fleet of 53 ships which carries 445,000 tons of cargo as compared with the 4 ships she had in 1948, which carried a total of 14,000 tons. The number of Israeli teachers has quadrupled in the same period and its elementary school education has increased almost six times.

We must keep in mind that Israel's infancy was a cruel and troubled time. The barren soil, the absence of industry, the influx of immigrants, the war with the Arabs and the continued hostility of its neighbors were the heaviest of burdens to place in the path of a newborn. But the determination was there and the most important of all resources, men and women, whose daily lives were dedicated to the rearing of this infant without counting the cost of the individual's deprivations and sufferings.

It is little wonder then, that the little country of Israel has been watched with consuming interest by economists, social scientists and educators throughout the world. At its very beginnings there were few who believed that Israel would survive. There are now many who are studying to find the why of its survival.

Israel has become a factor in the rising nations of Africa. By that I mean not the mere establishment of trade relations but the serving of these nations by teaching them the use of methods and tools which have profited Israel herself. This has been done quietly and effectively and in the best tradition of international relations. And this has all been done within the framework of a working democracy. It is understandable then that the world, both hostile and friendly to Israel, marvels at the achievements of this nation only 13 years of age.

May 1 Proclaimed as Industry Day in Pennsylvania by Gov. David L. Lawrence

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter, dated April 18, 1961, which I received from Mr. H. Thomas Hallowell, Jr., president of the Standard Pressed Steel Co. of Jenkintown, Pa., and regional vice president of the National Association of Manufacturers, with which he forwarded a copy of Governor Lawrence's proclamation designating May 1, 1961, as Industry Day in Pennsylvania, as well as additional material associated with that designation.

The indicated material follows:

STANDARD PRESSED STEEL CO.,
Jenkintown, Pa., April 18, 1961.

The Honorable DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

MY DEAR CONGRESSMAN FLOOD: You will be interested to know that Gov. David L. Lawrence has proclaimed May 1, 1961, as Industry Day in Pennsylvania. A copy of the Governor's proclamation and other materials sent to press and publicity media in the State are enclosed for your further information.

Sole purpose of the observance of Industry Day, planned by the initial sponsoring organizations as an annual custom—is to call the attention of the public to industry's contribution to our American life, its qualities as a good neighbor in the community, and its potential for providing all people an ever-richer, fuller life.

We have had Labor Day on our national calendar since 1882. Unlike Labor Day, however, Industry Day is not planned as a holiday. It was conceived as a working celebration.

The selection of the date, May 1, for this observance and recognition is most appropriate, in my opinion, in that it is a perfect counterstrategem to the Communist observance on this day. The observance will also call to mind that the use of capital in the form of plants and tools, provided by savings, makes jobs which grow where an unfavorable climate does not exist, and in which we all have a part as citizens, management, labor, Government, and communities.

Because of the nearness of the date, Industry Day this year will be, of necessity, on a limited basis. But with the date now officially on the Commonwealth's calendar, plans are being formulated for a full-scale promotion of the May 1, 1962 observance, to include at local levels across the State, company-guided tours and open houses, complete newspaper, radio, and television coverage, display advertisements, displays of locally manufactured products in banks and store windows, and similar promotion, all pointing up the important role of industry in our daily life.

Sincerely yours,

H. THOMAS HALLOWELL, Jr.,
President, Regional Vice President, NAM.

PROCLAMATION—INDUSTRY DAY, MAY 1961

Whereas this Commonwealth's industries provide gainful employment for the largest single group of its citizens, and therefore constitute the State's primary economic resource; and

Whereas in this industrial State, it is industry through the teamwork of investors, management, and employees which provides the driving force to the Commonwealth's economy, and makes possible our high standard of living; and

Whereas the success of this Commonwealth's industrial community is in the widest public interest because it has a direct relationship to the personal welfare of all our citizens; and

Whereas a favorable industrial environment is essential to the expansion of existing industry and to the attraction of new industry to the State; and

Whereas the Commonwealth is constantly striving to improve the environment in which the industrial community operates and to increase the property of our State and raise the standard of living of all our citizens: *Now, therefore,* I, David L. Lawrence, Governor of the Commonwealth of Pennsylvania, in cooperation with these efforts, do hereby set aside May 1, 1961, as Industry Day and respectfully request that the Commonwealth's industrial and business community, civic and fraternal organizations, educational institutions, and public and private communications media, share in the observance of these mutually beneficial objectives.

Given under my hand and the great seal of the State, at the city of Harrisburg, this 23d day of March, in the year of our Lord, 1961, and of the Commonwealth the 158th.

DAVID L. LAWRENCE, *Governor.*

By the Governor:

———,
Secretary of the Commonwealth.

HARRISBURG.—Gov. David L. Lawrence today set Monday, May 1 as Industry Day in Pennsylvania.

In a statement, the Governor said "Pennsylvania has long ranked as one of the world's great industrial areas. We are proud of our industrial heritage and the part our manufacturing plays in the Nation's overall economy.

"The latest McGraw-Hill report shows that Pennsylvania ranks third in the Nation in industrial building contracts for 1960, trailing only Texas and Ohio. Industrial construction totaled more than $176 million this past year.

"This shows, beyond doubt, that industry finds Pennsylvania's tax climate favorable for both location and expansion. Perhaps most important is the fact that this industrial construction includes projects undertaken by a wide variety of industries—ranging from the small, local firm to the best known of the Nation's manufacturing and distribution giants.

"Through the observance of Industry Day I hope that public attention will be drawn to the great economic and social contributions industries have made to the American way of life.

"I am, therefore, designating Monday, May 1, 1961 as Industry Day in Pennsylvania. I urge all industrial and community leaders to cooperate in planning appropriate local participation in this statewide event."

Pennsylvania manufacturing employs nearly 1½ million men and women who receive salary and wages aggregating approximately $7 billion.

Latest available statistics disclose that manufacturing industries of Pennsylvania produce over $26 billion worth of products per year. New capital invested by these industries in the State amount to over $690 million annually.

In addition, nonmanufacturing industry, of all types, contributes additional billions in payrolls and wealth to the State's total economy.

Industry Day in Pennsylvania was inaugurated and is cosponsored by the following organizations: The State department of commerce; Pennsylvania State Chamber of Commerce; Pennsylvania Manufacturers' Association; National Association of Manufacturers; and the Pennsylvania Newspaper Publishers' Association.

William R. Davlin, secretary of the department of commerce, is chairman of the Industry Day in Pennsylvania Committee. Others serving on the committee are John H. Seeton, secretary of the Pennsylvania Manufacturers' Association; Bernard S. Payne and James Coffey, regional managers of the National Association of Manufacturers; Arnold L. Edmonds, executive director of the Pennsylvania State Chamber of Commerce; and G. Richard Dew, general manager of the Pennsylvania Newspaper Publishers' Association.

INDUSTRY DAY IN PENNSYLVANIA—FACT SHEET

Date: Monday, May 1, 1961.

Sponsors: Department of Commerce, Commonwealth of Pennsylvania, Pennsylvania State Chamber of Commerce, National Association of Manufacturers, Pennsylvania Manufacturers' Association, Pennsylvania Newspaper Publishers' Association.

Chairman: William R. Davlin, secretary of the Department of Commerce of the Commonwealth of Pennsylvania.

Purpose: To recognize and call public attention to the importance of industry's contribution to the American way of life and to the Commonwealth of Pennsylvania in particular; to its qualities as a good neighbor in the community; and to its potential for providing all people with an ever-richer, fuller life.

History: This is the first of Industry Days in Pennsylvania. Because of the proximity of the date, the promotion of the Industry Day Observance this year will be in a limited fashion. However, the sponsors plan to make Industry Day an annual event, with elaborate plans already being prepared for a full-scale observance for next year, May 1, 1962.

Beliefs: The Industry Day Committee in Pennsylvania believes that a favorable business climate is essential to the further expansion of the economy in the State, the creation of new products and additional jobs for our growing population, and the prosperity of our Commonwealth.

Theme: Pennsylvania Industry, through the teamwork of investigators, management, and employees, provides the driving force to the Commonwealth's economy.

Program: Pennsylvania companies and local chambers of commerce, and manufacturers' associations, can assist in planning local activities designed to tell industry's story to the public. State, county, and municipal statistics may be found in basic source books on the Pennsylvania economy. These include the "Industrial Directory of the Commonwealth of Pennsylvania" and the "Statistical Abstract," both prepared by the Department of Internal Affairs. They can probably be found in your local library or chamber of commerce.

What chambers can do (with and through cooperation of local members):

Remind newspapers, other media of upcoming Industry Day date, urge coverage, assist in gathering local material, facts, figures, etc.

Urge retailers, department stores, banks, libraries to cooperate in observace of Industry Day by assisting in displays, drop-in ads, etc.

Cooperate by cosponsoring with other civic, service clubs luncheon or dinner honoring local industry for their contributions to the community.

Urge member industrial companies to hold open house and plant tours for public.

Devote an issue of chamber publication to Industry Day.

Recommend that schools promote essay contest among pupils as to "How Industry Contributes to the American Way of Life in Our Community."

Suggest to local clergy that sermon on Sunday prior to Industry Day, Monday, May 1, be devoted to "Industry and Its Place in Our Local Economy."

Suggest to company editors of member companies that editorials or articles be prepared in observance of Industry Day.

Suggest to local radio and TV stations the possibility of interview or panel programs using key opinion leaders and company executives.

Suggest to local civic, service, and women clubs that they devote program meeting the week of May 1 to observance of Industry Day, and be prepared to provide speaker(s) if it is requested.

Publicize Industry Day in company publication through articles, editorials, etc.

Use company bulletin boards to display letter (message) from management to fellow employees over official signature of company president.

Enclose letter, brochure, leaflet, etc., to fellow employees and their families in paycheck envelope.

Use Industry Day announcements over your public address system.

Cooperate with other industry in community or area in offering open-house tour of plants to local schoolchildren and public during Industry Day.

Assist, cooperate, with your local newspapers, radio and TV stations. Alert media that Industry Day will be May 1. Assist them in preparing ads, articles, suggest editorials.

Supply local figures and illustrations, etc.

Arrange an interview or panel discussion on Industry Day with local radio and TV stations for company executives in area.

Offer an Industry Day display to local libraries.

Arrange for Industry Day display with local bank, or department or retail store. Display should point up the importance of industry to that particular community.

Contact local manufacturing group or chamber of commerce for cooperation, suggestions, in initiating programs for your entire area.

Interest schoolchildren in writing essays "How Industry Contributes to the American Way of Life in Our Community."

Sponsor an Industry Day luncheon or dinner under your own company auspices, or combine with other local area companies, and invite key opinion and community leaders.

Nineteen Hundred and Sixty-one Essay Contest, State of Hawaii

---

EXTENSION OF REMARKS
OF
HON. HIRAM L. FONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES

Thursday, April 27, 1961

Mr. FONG. Mr. President, this morning the President's Committee on Employment of the Physically Handicapped opened its 2-day conference here. Winners of the 1961 National Essay Contest conducted by the President's Committee were to be awarded prizes at the opening session.

Hawaii's winner is a 16-year-old Kamehameha Boys' School student, Kimo Douglas of Honolulu. In his State-winning essay, Kimo pointed out community and agency programs to rehabilitate the physically handicapped so that they may become useful and purposeful citizens.

I was impressed with this youth's statement that the "rehabilitated individual is transformed from a tax liability to a position of tax support in the community."

Mr. President, I ask unanimous consent that Kimo Douglas' essay be printed in the Appendix of the RECORD.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

JOBS FOR THE HANDICAPPED—A COMMUNITY CHALLENGE

Over 1,000 handicapped persons in Hawaii were successfully placed on jobs during 1960. Many of these were trained or completely retrained through rehabilitation. Best estimates indicate that there are approximately 60,000 handicapped persons in Hawaii who have need of such services according to the State vocational rehabilitation service. Greater efforts will have to be directed toward aiding the handicapped.

Hawaii is fortunate in having one of the finest rehabilitation centers in the United States. Community attention is being made to centralize rehabilitation services near the rehabilitation center of Hawaii so that more can be done for those who need help.

A visit to the rehabilitation center will prove the effectiveness of the rehabilitation operation from the standpoint of medicine, occupational therapy, and sincerity of the trainers of handicapped workers. Such a visit reveals beyond any question it is ability not disability that counts. Agencies cooperating with the rehabilitation center of Hawaii include the Oahu Health Council's rehabilitation committee; State department of health; medical doctors, especially bone specialists who treat a lot of handicapped workers; social service workers of various hospitals; and the State department of social services.

More public funds should be allotted to meet the challenge of rehabilitation. Every dollar spent in effecting rehabilitation of the disabled returns to the community a hundredfold when we consider that the rehabilitated individual is transformed from a

tax liability to a position of tax support in the community. Therefore, rehabilitation not only works for the benefit of the handicapped but also benefits society.

It is encouraging to know that the State employment service has trained personnel who specialize in placing handicapped workers. This agency works in close cooperation with the workmen's compensation service, the various hospitals, and the vocational rehabilitation service in placing handicapped workers.

A study of the reports covering activity of such handicapped workers indicate they are reliable, efficient and in many instances more suited to certain jobs than the average worker. Their attendance records, desire to learn, and their interest in proving ability counts, should indicate to the employer that it is good business to hire the handicapped. Many employers, both large and small, have found that handicapped workers have the ability to perform certain jobs better than other employees who are not handicapped. These jobs should be cataloged and employers encouraged to fill future vacancies by hiring handicapped people.

Each year the local branch of the President's Committee on the Employment of the Physically Handicapped makes every effort to solicit the cooperation of employers in hiring handicapped workers. It is interesting to note that awards made by this Committee to employers for hiring the handicapped range from the largest to some of the smallest employers in the State.

Rehabilitation in Hawaii is making good progress but is not too well understood by many persons who would become more interested if more adequate counseling was provided.

To the handicapped person, rehabilitation is a means by which a feeling of helplessness can be conquered in remaining capabilities developed to a maximum so that a place in society can be assured. This means of development is known as physical restoration. This, of course, is of importance in rehabilitation, but the measure of success depends on job placement. Such employment must be on the bases of skill and abilities equal to those of nonhandicapped workers. When the handicapped worker has reached the maximum in physical restoration, is satisfactorily placed on a job suitable to his ability, then rehabilitation has been successful. A proof of any rehabilitation program is revealed by successful job placement, this requires the greatest cooperation on the part of government services, employers, and the rehabilitee. Sometimes successful job placement requires alterations to working devices which will permit a handicapped person to operate standard machines and other equipment.

To summarize the vocational rehabilitation of handicapped persons is basically an economic problem. The goal of vocational rehabilitation is employment at wages equal to going rates for regular workers. Although rehabilitation records show and rehabilitation agencies publicize data showing that, properly selected, properly trained, and properly placed, the disabled worker does as well as the able-bodied person, there remains much to be done in this area in order that handicapped workers will be given equal opportunity to become successfully rehabilitated. Great care must be exercised in placing handicapped workers so that future records will continue to prove the value of hiring the handicapped.

Disabled workers successfully placed in industry will always be the best advertisement for hiring the handicapped. Teamwork by rehabilitation officials, doctors, placement specialist, and employers will be required to insure the success of this operation. Hawaiian industry and know-how together with our community support should prove equal to the challenge.

Privileged Treatment for High Income Lawbreakers

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article from the New Republic of April 10, 1961. It is shameful that these men, who have cheated the American public out of millions of dollars, should receive special treatment at the hands of the law. They make a mockery of the principle of equality before the law:

WHO YOU ARE

The seven top-salaried executives jailed in the Government's antitrust case against the electrical equipment industry have been released from prison—all of the 30-day sentences having been reduced by Judge Ganey for good behavior. The last to depart, John M. Cook, a vice president of Cutler-Hammer, Inc., of Milwaukee, was also the last to begin his sentence; he had been granted a delay so that he could attend his daughter's engagement party. A newspaper reporter described his exit thus: "Andrew J. White, the prison warden and Mrs. White were waiting when Cook emerged from the cell block into the prison foyer. So was Joseph Swain, Cook's attorney. As Swain tried to help Cook with his bag and the warden stood next to him, it seemed as if a houseguest was departing. 'Thank you for all your courtesies and kindnesses,' Cook said quietly to Warden White. White clapped him gently on the back. 'It's been a pleasure,' he replied."

Mr. Cook is returning to his job with Cutler-Hammer; same salary, same authority.

The president of the Allen-Bradley Co. of Milwaukee got off easier. He was given a suspended sentence by Chief Judge Ganey because his wife was ill. Or Judge Ganey might have been touched by this defendant's candor: "No one attending the gatherings was so stupid he didn't know (the meetings) were in violation of the law. But this is the only way business can be run. It is free enterprise."

On the other side of the tracks it's a different story. Take the case of the international vice president of the textile workers, Boyd E. Payton. In 1960 he was sent to prison for allegedly conspiring to damage the strikebound Harriet & Henderson Cotton Mills. He was convicted largely on the testimony of one witness, who, according to the union, had been employed as an agent provocateur by the North Carolina State Bureau of Investigation. The witness' record showed arrests ranging from intoxication to impersonating a police officer, stealing a police car and assault with a deadly weapon. Furthermore, it was said that he had a grudge against the union for it had refused to take his discharge from the Fieldcrest mills to arbitration.

Payton's trial took place in military-held Henderson, N.C., with a special judge, a special prosecutor and a special jury drawn from a neighboring county. It was concluded in haste and Payton was given 10 years. One difference between Mr. Payton and the president of the Allen Bradley Co. of Milwaukee is that Mr. Loock confessed there had been a plot, that it was carried out, but he chalked it up to "free enterprise" and went free. Payton insisted upon his innocence and the fact that the dynamiting he was accused of plotting had never been carried out. This got him 10 years. There's another difference: Payton can't get his job back for 5 years after he comes out of prison because of the Landrum-Griffin Act.

A Railroad Policy

EXTENSION OF REMARKS

OF

HON. R. WALTER RIEHLMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1961

Mr. RIEHLMAN. Mr. Speaker, my good friend Alexander F. Jones, executive editor of the Syracuse Herald-Journal, is a long-time leader in the American press, an "editor's editor." Casey Jones is well-known in Washington because of his long tour as managing editor of the Washington Post and later assistant to the publisher, where he won the respect of governmental officials and the whole Washington community.

Mr. Jones has written a constructive editorial on railroad consolidations and mergers, and I wish to call it to the attention of this body. Entitled "A Railroad Policy," it appeared in the April 11 edition of the Herald-Journal:

A RAILROAD POLICY

(By Alexander F. Jones)

One of these fine days the White House, the Congress, the Interstate Commerce Commission, and the general public are going to take a good look at the bleak future facing American railroads and actually do something about one of the most alarming conditions facing our economy.

Many of our railroads with a long history of success are losing money today hand over fist.

Many of them are talking merger in an effort to eliminate duplication, to cut losses, and to bring about greater efficiency.

Here in New York the State is lending money to railroads to buy new equipment so commuter service into the metropolis can be maintained. So far as I am concerned, this is the first step towards nationalization.

Everywhere railroads are cutting passenger service, applying for permission to discontinue branch lines and uneconomic trains, both passenger and freight. As a result of the economy steps, equipment and service have deteriorated.

The inroads trucks have made on railroad freight revenue and automobiles and airlines have made on passenger travel are common knowledge and need no elaboration here.

Neither does the tax picture, which is admittedly prejudicial, for railroads are assessed to the hilt and airlines are subsidized and trucklines need only State licenses.

Railroad securities today do not have the attraction as good investments that they once had.

Altogether, American railroads appear to be dying on the vine, outmoded and passé.

The fact is, however, that American railroads are basically as vital in our economy today as they ever were.

Anyone disputing that statement has only to recall what happens in any community or area when a strike paralyzes rail service.

The commodities necessary to keep our wheels turning, steel, coal, oil, foods, and refrigerated items, still come to most communities by rail.

And in wartime our first line of both defense and offense is the railroad system.

Lack of equipment in the movement of men or material would be fatal. Everything must move like clockwork, or a serious jam occurs at port terminals.

Anyone who tries to minimize the basic part railroads play in our scheme of things would be on mighty thin ice.

Then what is the answer?

One answer is the evolution of natural mergers which would eliminate duplication of service.

A board of the best transportation minds in the country, the best financiers, the best equipment experts, the best port and lake traffic men should immediately initiate an overall study of American railroads not only in relation to each other, but also in regard to truck, air, lake and river competition.

There are real solid answers to all of our transportation and distribution problems if we would approach them from a national standpoint and stop listening to proponents of some branch, either rail, air, truck or water, peddling their respective wares.

It seems utterly ridiculous to me to have to sit here and watch Cyrus Eaton, the Cleveland industrialist, try to gobble the Baltimore & Ohio Railroad for his Chesapeake & Ohio system in the hope that if this merger is approved by the ICC he will be able to so cripple the New York Central system it will go into bankruptcy and be easy meat to swallow also.

Today the New York Central system has 61 connections and 98 common points with the B. & O. It has 45 connections and 67 common points with the C. & O. This tremendous duplication of facilities compares with a mere 17 connections and 23 common points between B. & O. and C. & O.

The New York Central wants a three-way merger with these railroads to eliminate duplication and to save millions of dollars.

Judging from the map it is a natural and understandable desire.

I see no reason why the ICC should be exclusively concerned with the plans of Mr. Eaton to pull off a Wall Street coup and add x number of millions to his treasury.

The question here is whether the merger is in the interest of the people and of a more efficient rail system.

Our interest in Syracuse is that a prosperous New York Central will be able to run more trains in and out of this city and give better service.

Wherever you look on a railroad map, competing lines are talking merger and consolidation.

The Chicago, Milwaukee & St. Paul and the Chicago & Northwestern are deep in a merger plan.

The Santa Fe and Union Pacific are contesting control of the Western Pacific.

There are several merger plans cooking among railroads centering in St. Louis.

Here in the East, the Pennsylvania line is deep in several studies.

It all emphasizes a need for a national policy that will not depend on Wall Street coups that smell more than a little of the Jay Gould, Jim Fisk days, and have little concern for the public welfare.

Missing the Mark

EXTENSION OF REMARKS
OF
HON. GARNER E. SHRIVER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. SHRIVER. Mr. Speaker, I wish to commend to our colleagues for their consideration a thought-provoking editorial which appeared in the Wichita (Kans) Eagle on April 15, 1961. It is my feeling that this editorial provides good food for thought as we prepare to discuss new education proposals:

[From the Wichita Eagle, Apr. 15, 1961]

MISSING THE MARK

The administration is rolling up the heavy artillery in its fight for Federal aid to education; but some of the artillery is not aimed too accurately.

The Department of Health, Education, and Welfare has issued figures showing that some of the strongest congressional opponents of the Kennedy school aid program have eagerly accepted Federal impacted areas aid. These Congressmen, the administration hints, should not trumpet their fears about Federal control of education while happily voting impacted areas aid for their districts.

The administration has a point. But it does not follow that these muzzled Congressmen are honorbound to vote for the Kennedy school aid bill. Wichita provides a case in point. Impacted area aid, given to school districts whose school population is swollen by nearby military or defense installations, provides about $1 million a year to the Wichita school system. The Kennedy program, while providing nationwide school aid, would sharply reduce impacted areas aid. Wichita, which would receive $650,000 under the Kennedy plan, would benefit little, and could even lose $350,000 a year if impacted areas aid were eliminated entirely.

Similar situations exist in the hundreds of school districts now receiving sizable impacted areas aid. The Congressmen representing those districts can surely be forgiven if they balk at cutting their own throats.

Praise for President's Message to Congress on Ethics

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. PELLY. Mr. Speaker, I want to say that I applaud the President for his special message to the Congress of the United States on conflicts of interest. I have long taken the position that people must have confidence in their Government and a review of conflict of interest statutes convinces me that an up-to-date law covering ethics of all persons in public service is long overdue.

My only comment at this time, Mr. Speaker, is that regulations covering a standard of ethics and moral conduct should not be limited to those in the executive branch of Government. Congress should examine into the need for reform in our legislative branch of Government.

I was particularly gratified that the President should recognize the fact that you cannot legislate in every detail regarding the behavior of Federal officials and employees. I favor his establishing by Executive order a set of standards for those in Government service. The conclusion of the President that these standards can be maintained best by personal example of those in leadership appeals to me. Many Members of Congress, including myself, have introduced bills to improve the conduct of those in the legislative and executive branches. Now I trust we will get some action.

CWA President Beirne Backs the Peace Corps

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, April 27, 1961

Mr. HUMPHREY. Mr. President, one of the most dynamic, progressive leaders in the labor movement is Joseph Beirne, president of the Communications Workers of America. Indicative of his wide range of interests is his recent article expressing enthusiasm and support for the Peace Corps. His intellectual insight into the corps, its purpose and goal, is to be commended.

Therefore, Mr. President, I ask unanimous consent that Mr. Beirne's enlightening and inspirational article entitled "Peace Corps Exciting Opportunity for Dedicated, Committed Service," in the May 1961 CWA News be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the CWA News, May 1961]

OFF MY MIND—PEACE CORPS EXCITING OPPORTUNITY FOR DEDICATED, COMMITTED SERVICE

(By J. A. Beirne, CWA president)

The most exciting idea yet launched by the Kennedy administration is the Peace Corps. It has caught the imagination of the American people, and has won the admiration and respect of peoples throughout the free world.

What is it? Only the outlines are firm at this moment; there is much planning and thinking to be done. Yet the general scheme of things can be put into words.

America's Peace Corps calls for creation of a voluntary group of dedicated and committed young men and women who will serve the cause of freedom overseas under the most trying conditions. The goal is simply to help underdeveloped countries attain a better and fuller life. It will be, in the hopes of all of us, a real contribution to the cause of peace and human progress.

As we start this exciting and dynamic new program, we must recognize certain restrictions. There are to be no "ugly Americans" among the men and women of the Peace Corps, and (as the New York Times declared) they must not proceed "like Communist agents by stealth and subterfuge * * * they are not to become instruments of propaganda or ideological conflict, except of course, insofar as their aid and bearing give testimony to our ideals and purposes."

This tremendous new idea for making the world a better and safer place in which to live has aroused enthusiasm not only among the people of America—it has created a hustle and bustle even in the world of official bureaucracy.

On the fifth floor of an old building in downtown Washington there is a sense of purpose and mission, an air of dynamism, that hasn't been seen in the typical Government office for many years. It's the head-

quarters of the Peace Corps, and this inspiring project can truly be called an example of that other "idea," the New Frontier.

There are those among us who are afraid that the American fiber is weakening; that we are a nation without ideals or an ideology * * * and that if we don't do whatever it is they want us to do * * * the Communists will get us, or some other dreadful thing will happen.

Anyone who could witness the demonstration of spirit and bounce and moral strength in that old building where the Peace Corps is setting up shop, would feel, as I do, that the United States is as full of the spirit of serving others, as ever before.

It goes back to the spirit of those times when men gambled everything that was sacred to them, in order to bring justice into America. Out of that time in history came the American Revolution—and it is exciting to me, as I know it must be to you, to realize that President Kennedy has ignited the idea for all the world to see. It burns brightly today in Asia, in Africa, in Latin America * * * in all those places where injustice, and hunger, and wornout traditions are causing misery, not progress * * * war, rather than peace.

As you who have followed this Peace Corps idea in your newspapers know, this is a project that came up during the course of the last presidential campaign. And it got, I am told by people who should know, a tremendous response from all segments of the population. It was established early in his administration by President Kennedy, by means of an Executive order, pending congressional action to put it on a permanent basis.

The prime objective is to send to those areas that need them, some of our fellow citizens who have special skills and knowledge: craftsmen, teachers, farmers, builders, or whatever. They will live and work with the people of the country, and I mean the ordinary people, not the wealthy, not the landlords, not the highborn. They will be paid enough to sustain them, no more. Their service with the Peace Corps will not necessarily exempt them from service in the Armed Forces. They will receive no special privileges, no PX's or commissaries or motor pools or household servants.

They will go as the people of our country to the people of another country, openly, with no propaganda ax to grind, no religious doctrine, except that one basic doctrine, common to all faiths, love one another.

Certainly for those who serve in the Peace Corps it will not be an easy life. So many things which we take for granted, will be missing. The corner drugstore with its many comforts, the paved street, running water, electric lights, a telephone: somehow we assume everyone has these, that life without them would simply come to a halt. These will go out of the lives of the Peace Corps members.

Yet, in spite of the obvious hardships of such a life, in spite of the pitfalls and the very real personal risks, the young men and women of America are applying by the thousands because they respond to the American idea of commitment and dedication built into this noble enterprise.

People will be helped to read, to grow two bushels of wheat where only one grew before, to pipe water in from springs instead of bringing it in a pail, to dig their furrows across the hills instead of down them. We can tell others these things.

And it seems scarcely necessary to add that we will also learn things just as fundamental: how the rest of the world really lives, how it speaks, how it thinks, what lies on its mind and on its heart. We will learn how it is possible for life to go on without the things we call essential; yes, and how far wrong we are when we think we know all the answers to the ever-present questions of where did we come from, why are we here, where are we going.

Back in the last century one of the Russian czars fought for a window on the world for his country, a window through which his country could look out and through which the rest of the world could look in. In recent years we have seen that window closely shuttered with only an occasional window giving us and them a peep at each other.

In this country, it seems to me, the Peace Corps is our window on the world, another chance for us to look out, another chance for the rest of the world to look in. I hope it will never be shuttered. And I envy the young men and women who will make this exciting idea a reality.

Results of Opinion Poll

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. MINSHALL. Mr. Speaker, during the 7 years I have served the 23d District of Ohio in the U.S. Congress, I have attempted to keep the closest possible contact with the individual thinking of the residents of this suburban Cleveland area. One of the highest income, high-intelligence districts in the Nation, its constituents are quick to respond to my regular newsletters, opinion polls, and annual traveling office meetings.

The opinion poll is mailed yearly to the home of every registered voter in the district—this year to 135,000 homes in all. The response is excellent, underscoring the interest these voters take in national affairs. This year nearly 25,000 returned the questionnaire, some 1,500 of them amplifying their views in additional letters on key issues. I know of no other district which shows such a high response to similar polls.

This year shows a few marked changes in opinion from past polls. There is an upsurge in favor of Federal aid to school construction, for example: only 35 percent favored it last year; 62.8 percent, this. The division on foreign aid remains nip and tuck, as in the past. One interesting point I have noted in the 1961 returns—citizen confusion on important legislation runs heavier than in the past, with a greater percentage of questions marked, "No opinion." This I feel is the result of increasingly complicated legislation, often obscured by fuzzy and contradictory statements from political leadership, the press and other news media.

I would like to emphasize, as I have in the past, that results of the poll are not used as political weather vanes for any votes I make in the House of Representatives. I am grateful for the outstanding response, and for the many letters accompanying the questionnaires. All are helpful to me in reaching my final decision on the issues.

Results of the poll follow:

[In percent]

	Yes	No	No opinion
Do you favor—			
1. Federal aid to education to provide for—			
(a) School construction?	62.8	31.7	5.5
(b) Teachers' salaries?	32.6	59.5	7.9
(c) Aid to private and parochial schools?	18.9	74.9	6.2
2. Revising the electoral college system?	77.6	14.0	8.4
3. Federal Government assistance in relocating industries?	24.0	58.5	17.5
4. Minimum wage legislation—			
(a) Increasing present hourly rate of $1	57.6	32.9	9.5
(b) Extending coverage?	49.7	31.2	19.1
5. A mandatory program of medical care for the aged?	48.9	42.3	8.8
6. More liberal social security benefits?	55.1	35.8	9.1
7. Resuming nuclear testing if we cannot reach an agreement with Russia for adequate inspection?	75.7	14.4	9.9
8. Increasing postal rates to help reduce this year's estimated postal deficit of $900,000,000?	63.4	30.4	6.2
9. Easing trade restrictions with Iron Curtain countries?	29.7	56.9	13.4
10. Continuing the 1-cent "temporary" Federal gasoline tax to aid our highway construction program?	66.5	28.3	5.2
11. The administration's proposal for Federal aid to "depressed areas"?	55.2	31.7	13.1
12. Continuation of our foreign aid program?	44.4	42.7	12.9
13. Do you think the Peace Corps a good idea?	49.9	33.5	16.6
14. Abolishing the Un-American Activities Committee?	20.9	60.4	18.7

Freedom Flights to West

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES

Thursday, April 27, 1961

Mr. KUCHEL. Mr. President, I wish to draw attention to the vast and increasing number of East Germans who are seeking refuge in the West German Republic. Such flights, especially when under conditions of extreme danger, bear testimony to the oppressions of life behind the Iron Curtain and the desire of those oppressed to live in freedom and to enjoy the opportunities of free peoples.

I ask unanimous consent to have printed in the Appendix of the RECORD a statistical summary of such flights as reported in the Press and Information Office Bulletin of the West German Federal Government.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

ESCAPE FROM THE ZONE

(Memorandum in Bulletin No. 28 of the Press and Information Office of the Federal Government)

According to a report of the Federal Ministry for Expellees, Refugees and War Damages, 16,697 persons fled from the Soviet Zone to the Federal Republic in the course

of January 1961; i.e., 2,298 more than during December 1960. Two thousand three hundred and ninety-nine of these, that is 14.4 percent were juveniles of less than 24 years, 18 of them were members of the volkspolizei (people's police forces) and 45 members of military units of the SBZ.

In the course of 1960 the number of refugees from the Soviet Zone reached a total of 199,188 persons, among these were 31,424 juveniles of less than 24 years, 152 members of the volkspolizei and 555 members of the military units of the SBZ.

Employment of Physically Handicapped

EXTENSION OF REMARKS
OF

HON. WILLIAM H. HARSHA, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1961

Mr. HARSHA. Mr. Speaker, having served in World War II as a Marine and being a member of the Disabled American Veterans and the American Legion organizations in this country and knowing of the many problems that confront our disabled veterans and having a vital interest in their welfare and livelihood, I have read with considerable interest the fine address by Mr. Frank G. Wood, national director of employment relations for the Disabled American Veterans. Mr. Wood has had a long and distinguished career in serving our veterans. After serving in the Army of the United States, he became the national service officer for Disabled American Veterans in 1945. He served in that capacity until 1959 when he was appointed director of rehabilitation for the Department of California Disabled American Veterans. In 1960, National Commander William O. Cooper, of the Disabled American Veterans, appointed him national director of employment relations. Mr. Wood is a member of the Federal Advisory Council for the Bureau of Employment Security of the Department of Labor. He is a member of the President's Committee on Employment of the Physically Handicapped and is a member of the executive committee and the Disabled Veterans Committee of that body. Mr. Wood gave the following address to the Ohio Governor's Committee on Employment of the Physically Handicapped. His remarks in this field are so significant that I feel that they are worthy of the attention of my colleagues and therefore deem it a privilege to insert his address in the RECORD:

AN ADDRESS BEFORE THE OHIO GOVERNOR'S COMMITTEE ON EMPLOYMENT OF THE PHYSICALLY HANDICAPPED

(By Frank G. Wood)

As the national director of employment relations for the Disabled American Veterans and as a member of the Executive Committee of the President's Committee on Employment of the Physically Handicapped, I am very pleased to be with you today in giving recognition to the many young people of this State who have entered the essay contest. I am, of course, also highly honored to have been invited here to witness the presentation of awards to the five winners of the State essay contest.

The need for young people to understand the handicapped person as a fellow American with the same desires as the ablebodied is most important. The ideal of generating through education the cause of the handicapped will assure better understanding which will result in advances or solutions of these problems in generations to come.

The need of the handicapped to achieve the same dignity of man is as great as is this desire in the able-bodied person. Certainly, a program of this type which will alert our young people to this problem will assure us of continued study and the application of new ideas. To you ladies and gentlemen here today, the problem of the physically handicapped is real. You are certainly aware of the present-day situation by reason of your close association with the Governor's committee.

As we look upon the trends that are being shaped for the future of America, we cannot help but recognize that this program is going to assume more importance as time goes on.

The campaign for the Presidency in 1960 was unique in that the basic principle of the need for all of our people to assume leadership and to work together was the same as expressed by both candidates. It is, therefore, most important that we consider the physically handicapped person and his place in the economic philosophy of today. This philosophy demands a supreme effort that must be made to achieve the goals contained in the staggering challenges of today in science, in space, in medicine, and in the problems manifested by automation and its effects upon employment.

The American way of life, free enterprise, is pitted against the collectivism or socialism and the whole future of the free enterprise philosophy is on trial. That system which arrives first in reaching these goals may well win the greatest competitive struggle for man's mind, body, and soul that has been had since the beginning of time. To win this struggle, Americans must learn and practice the adhesive quality of togetherness which is the mobilization of all our people into a gigantic army. This army will be composed of management and labor of white-collar and blue-collar, of egghead and squarehead, of intellect and brawn and all of our people of all colors and religions, ablebodied and disabled.

It is absolutely necessary that this mobilization take place before we can meet the challenge of today and the future. This togetherness I speak of is not just an ideal but a proven fact. We need look no further back than the days of World War II. Surely, if we can mobilize our brains and our brawn into the task of creating the most devastating force known to mankind and to create the most destructive military machine in all human history, we can mobilize in peaceful pursuits with the same high degree of efficiency.

The talents of the handicapped person has an important role in this great struggle to be the first in arriving at the New Frontier or new horizon that is now within our view.

There is a growing recognition in government and labor that it is good business to hire the handicapped. His productive ability is higher than in nondisabled workers. He has a lower absentee record by which is meant that because of his disabilities, he is more caution minded. The fiction of the idea that the handicapped worker requires more absenteeism has been dispelled. We here today know the truth of these statements but we also know that more education is needed to spread the work of these truisms.

It is suggested that this can best be done through groups of persons acting as coordinators for the employment of the physically handicapped both in industry and in government. I would like to call your attention to the great effort made by the AFL–CIO plan which is in effect a coordinator plan to introduce handicapped persons into all phases of labor.

First, there is the plant policy which is established through collective bargaining. Here the plant and the union committee members work together in conducting a survey of the physical requirements necessary in all the operations of a plant. A training program is worked in coordination with placement so that when the handicapped person assumes his job, he has had an indoctrination course which will acquaint him with the job and with the specially adapted measures he must observe in connection with his disablement.

One of the biggest advancements in recognizing the problems of the handicapped has been made in modifying his job to meet the problems of the handicapped worker. Here ways and means are studied to make some slight alterations in machine control or duty assignment to enable the handicapped worker to perform the job.

These methods are the result of long study into these problems and both management and labor is to be commended in the great strides made in utilizing the abilities of the handicapped.

It has been said before but it is worth saying again, the remaining functions of the disabled are many times more acute than those of the nondisabled. For instance, the blinded person has a highly developed sense of touch that makes him specially suitable to certain operations requiring intricate hand movements.

While it is true that management and labor in private industry is doing much to place the handicapped person in employment suitable to his disability, it is equally true that government has likewise concerned itself with this problem. In the Federal Government, we have the coordinator for the physically handicapped program. Many State governments have the same type of program. Here we find that agencies select coordinators whose responsibilities are to place the handicapped person into civil service employment, which is commensurate with the disability.

Although it is true that great strides have been made in the overall program, we have not reached the stage where we can afford to be complacent. Much needs to be done, particularly in the education of the shop foreman or in the case of government, the supervisory level or leadman level. There are still many who harbor an antipathy toward physically handicapped people. The problem of employment of the physically handicapped is not only in the employment but equally in the underemployment of the handicapped person. Too often we find that industry and Government is being deprived of the full potential of the handicapped person because he is placed in a position where his full abilities cannot be used. Today Americans are facing up to the ideal that all persons regardless of race, creed, or color are entitled to equal opportunity.

We recognize that discrimination, in any form, defeats and is repugnant to the great purposes of Americanism. As the tide against discrimination mounts, it will sweep out that discrimination which exists against the handicapped. If we are to prove our case to the world, it must be so.

I, therefore, again emphasize how pleased I am to have been invited to this luncheon to join with you in celebrating another milestone in the education of the youth of this land toward the principle that disability does not mean inability. For every round peg there is a round hole. For every square peg, there is a square hole and for every disability there is compensatory ability.

Michigan Loses by Federal Aid

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. MEADER. Mr. Speaker, under leave to extend my remarks, I include an editorial from the Adrian (Mich.) Telegram of April 24, 1961:

MICHIGAN LOSES BY FEDERAL AID

Michigan residents who favor President Kennedy's school aid proposal—and there are some—should think again. And this second-thinking should be applied to all Federal grants-in-aid. For Michigan is the loser in them.

Last year Michigan paid 4.66 percent of the internal revenue collections, being one of the higher paying States. But when Federal grants were allocated only 3.03 percent of the total handouts came to this State—34 States and the District of Columbia received relatively more than they paid in taxes; 16, including Michigan, received less.

These percentage figures were compiled by Tax Foundation, a nonpartisan and privately operated agency. Using the foundation's figures, Congressional Quarterly in an article presented on this page recently, came up with the fact that for every dollar Michigan contributes in Federal taxes toward grant-in-aid funds it gets back 65 cents. Or to put it another way for every dollar of Federal aid to Michigan we pay about $1.55.

The Kennedy school aid proposal allocates school money by a somewhat different formula than other Federal grants, but so far as Michigan is concerned the results are about the same. Michigan would be the loser. Under the Kennedy program, Michigan would receive $27,070,252, but the cost to Michigan of the $866 million Federal program would be $29,770,000. Michigan would be out of pocket $2,699,747. Some other States would be losers also, New York would pay in $91,-110,000 and get back $37,650,000.

Michigan is said by those supporting Federal school aid to need 10,762 more classrooms, and is rated as being the State with the second largest classroom shortage. New York is placed first with a deficit of 14,000 classrooms. Yet these States, declared to be at the top of the list in classroom needs, would be big losers under the aid program designed to help the States provide classrooms.

By and large, Michigan is doing as much as any State to enlarge its school plant. Every Michigan election finds school financing proposals on the ballots in some school district. On top of that the schools get the largest cut from State tax revenues.

Left on their own, Michigan residents will meet their school needs. They have been doing it and they will continue to do it. These extra classrooms will be constructed under the watchful eyes of residents of the school districts who feel it imperative that they get the greatest possible dollar for their money.

But under Federal aid they would be putting in far more dollars than they were getting back. This extra money would be going to States less diligent in meeting their school needs. Michigan would still be carrying the burden of providing its own school facilities. On top of that, tax money from Michigan would be going to schools in other States. There is no aid to Michigan under Federal school aid. The aid would go elsewhere and in part from Michigan tax dollars.

Report to Congress on Effect of Cabaret Tax Reduction

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. PELLY. Mr. Speaker, I was extremely gratified when the 86th Congress passed legislation in May 1960 reducing the Federal cabaret tax from 20 to 10 percent. It was also a source of great personal satisfaction, inasmuch as I was privileged to offer the first legislation to eliminate this discriminatory tax when I introduced H.R. 858 in the 85th Congress in January 1957.

My original bill called for complete elimination of this tax. However, compromise being a way of life in Washington, we were forced to settle for the 10-percent reduction previously mentioned.

In testifying on several occasions for this legislation, I repeatedly emphasized, as did other interested witnesses, that removal of this obnoxious tax would not result in any appreciable loss of tax revenue. Rather, there were reliable estimates to the effect that total repeal of the tax might well result in a substantial increase in the Treasury's revenue and at the same time materially benefit the unemployment problem.

Now, Mr. Speaker, in support of this statement, under leave to extend my remarks I include a letter which I received recently from Mr. Herman Kenin, president of the American Federation of Musicians, which in my judgment effectively substantiates our most optimistic forecasts. Furthermore, I believe it presents a compelling argument for total elimination of a tax which obviously defeats its own purpose:

AMERICAN FEDERATION OF
MUSICIANS,
OFFICE OF THE PRESIDENT,
New York, N.Y., April 5, 1961.

REPORT TO ALL MEMBERS OF THE 87TH CONGRESS ON EFFECT OF CABARET TAX REDUCTION ON EMPLOYMENT AND REVENUES

When the American Federation of Musicians urged upon previous Congresses a reduction of the so-called cabaret tax, our key premises were that the tax was discriminatory, that it destroy jobs, that net tax revenue loss by reduction would at most be negligible. We promised members of the 86th Congress that we would survey the effects of the tax reduction and report upon it. These are our findings:

Some 650 AFM locals scattered throughout the United States were requested to forward statistical reports to my office comparing cabaret-type engagements for the November, December, January 1960–61, quarter with the comparable similar months of a year earlier. Reports have been received from 426—approximately two-thirds—of our locals, including all the major population centers.

During the quarter, this partial return shows an increase of 8,715 engagement nights for professional musicians, a payroll of approximately $2,265,900. Projected over a year, this totals $9,063,600 in additional earnings for musicians—this, in the face of economic distress in many parts of the Nation. A projection of employment of associated employees (waiters, barmen, busboys)—on a basis of a conservative estimate by an independent research organization—that five and one-half to six others are employed for each musician, shows additional annual payroll of approximately $36 million.

This $45 million total—again estimated conservatively—should yield $4,500,000 a year or $1,125,000 per quarter in income tax increase. Offset against this is the difference in excise tax yield now against prior quarters. Previously the excise yield ran about $10 million per quarter. For the last available quarter reported, that ending December 31, 1960, the excise yield was $8,473,000, a difference since the halving of only $1,527,000. Deducting from this the $1,125,000 increase in income tax yield leaves only a $402,000 difference. This is exclusive of increased income taxes that can be expected to be paid by cabaret operators doing better business.

It is our considered opinion there has been no loss in tax revenues. It also is our considered finding, based upon the results accruing from the one-half reduction of this excise tax, that total repeal would benefit substantially the Treasury's revenues and the current widespread unemployment problem.

Knowing you to be busy as legislators, this report was confined to bare essentials. More complete details may be obtained from the enclosed reprint from the New York Times.

Very truly yours,

HERMAN KENIN,
President.

Proclamation by the Governor of Florida

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. FASCELL. Mr. Speaker, it is my pleasure to call to the attention of the Members a proclamation by the Governor of Florida designating April 30 of this year as Past Presidents' Day.

This day will be observed by all Floridians as a tribute to the past Presidents of our great Nation who shouldered the responsibilities of leading our country with honor and integrity.

In addition to the Governor's proclamation, city officials within our State plan to issue similar statements. The Governor's proclamation follows:

Whereas the Presidents of the United States have been men of great integrity, bringing to the post of Chief Executive the quality of leadership that has made our country admired and respected throughout the world; and

Whereas the achievements of our past Presidents have advanced the progress and development of our Nation, contributed to the general welfare and have led us to a position of world prominence; and

Whereas it is fitting that 1 day of each year be designated to honor those who have so ably led our Nation in peace and war; now therefore

I, Farris Bryant, by virtue of the authority vested in me as Governor of the State of Florida, do hereby proclaim April 30, 1961,

as Past President's Day in Florida, and urge all the citizens of Florida to consider the heavy responsibilities borne by our past Presidents and the sacrifices they have made in guiding the Nation.

In witness whereof I have hereunto set my hand and caused the great seal of the State of Florida to be affixed at Tallahassee, the capital, this 20th day of April, A.D. 1961.

FARRIS BRYANT,
Governor.

Attest:

JAMES ADAMS,
Secretary of State.

Pennsylvania's 12th District of American Legion Opposes Admission of Red China to United Nations

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of transmittal from Mr. Nello S. Carozzoni, 12th district commander, the American Legion of Pennsylvania, dated April 5, 1961, with which he forwarded a copy of a resolution adopted by his organization on March 26, 1961, which opposes the admission of Red China to the United Nations.

The indicated letter and resolution follow.

THE AMERICAN LEGION,
Wilkes-Barre, Pa., April 5, 1961.

Congressman DANIEL J. FLOOD,
U.S. House of Representatives,
Washington, D.C.

DEAR MR. FLOOD: On behalf of my organization—the 12th District American Legion, Luzerne County, Department of Pennsylvania—I am forwarding a resolution which is self-explanatory.

It is the hope and desire of the delegates, who approved this resolution unanimously, to petition our President to give the resolution utmost consideration in the best interest of our Nation.

Respectfully yours,

NELLO S. CAROZZONI,
12th District Commander, the American Legion.

Whereas the 12th district, the American Legion, county of Luzerne, Pa., comprising a membership of some 12,000 veterans, understand a concerted effort is underway to have the United States recognize Red Communist China, and consent to have the so-called Chinese People's Republic admitted to the United Nations; and

Whereas the aforementioned members after a study of the compilation of facts such as: 33,000 U.S. fighting men killed in action in the Korean war, along with numerous others tortured, plus still others wounded, plus some 450 still presumed held prisoners in Chinese jails—with Chinese Reds as the guilty parties in the most of such cases, and finally the fact that we are still officially at war with Red China, thought President Eisenhower obtained an uneasy truce in 1953; Therefore, be it

Resolved, That it is the sense of the members of the 12th district of the American Legion, Luzerne County, Pa., that for the United States to recognize Red China or consent to its admission into the United Nations would cause the United States to "lose face" all over the Far East and put a stamp of approval on all the wrongs committed by Red Communist China; be it further

Resolved, That a copy of this resolution be forwarded to the President of the United States, the Secretary of State, Ambassador to the United States, Senators CLARK and SCOTT of Pennsylvania, and Congressman DANIEL J. FLOOD.

The above resolution was approved and adopted at the regular monthly meeting of the 12th district, the American Legion, Luzerne County, Department of Pennsylvania, Sunday, March 26, 1961.

Respectfully submitted.

NELLO S. CAROZZONI,
12th District Commander, The American Legion.

National Employ the Physically Handicapped Committee of the Great 23d Congressional District, California, Awards U.S. Government Bonds to Five Winners in High School Essay Competition—City Officials, Newspaper Editor, Veterans' Leaders and Business Representatives Act as Judges at Compton, Calif.—Part I

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. DOYLE. Mr. Speaker, heretofore having received unanimous consent so to do, I am pleased and consider it an honor to present to the attention of your own distinguished self and also that of other readers the text of a letter to me from Lillian M. Karnes, chairman, southeast district, National Employ the Physically Handicapped Committee, in the great 23d district, together with five winning essays by high school students, the subject of all of said essays being "Jobs for the Handicapped."

Mr. Speaker, my well-known and long-time interest in jobs for the handicapped makes it a special pleasure for me to produce the text of these five essays so as to make same available to all who read and, furthermore, Mr. Speaker, this matter of jobs for the handicapped extends over into the matter of two bills which have been filed in this Congress, to wit: the one by the distinguished Senator from Minnesota, Hon. HUBERT H. HUMPHREY, being S. 1365; and a corresponding bill filed in the House by me, to wit: H.R. 347. Both these bills are identical in text and ask this Congress to favorably consider issuing a charter to said Indoor Sports, this organization being made up entirely of American citizens, both youth and adult, who are considered permanently physically handicapped.

Mr. Speaker, one of the always anticipated occasions which Mrs. Doyle and I have when we are home in the great 23d district is to be annually invited guests of the Indoor Sports group at Los Amigos Hospital, Downey, Calif. At this great hospital the several dozen physically handicapped Indoor Sports have the advantage of a very worthy, unique, valuable rehabilitation shop and center where they place and invest their sincere desire and ambition to become rehabilitated so that they move forward in an independent, economic condition on their own.

It has been my experience, Mr. Speaker, on several occasions to be also present at an annual awards banquet and dinner at Compton, Calif., when awards similar to those herein mentioned are made and in visiting on such occasions, and other occasions, with the representatives of management who are present and who make it a part of their established policy to employ physically handicapped, I am advised by management itself that it finds the physically handicapped persons as almost always equally productive in their respective assignments in their respective shops and factories.

Mr. Speaker, I know that you and all the other Members of this great legislative body join with me in congratulating the winners of these awards of U.S. Government bonds. Also, that you join with me in congratulating the branch of the National Employ the Physically Handicapped Committee on again conducting this worthy essay contest.

Following is the essay winning first place and one of those winning $25 bonds. Part II of my remarks containing the remaining essays appear also in the RECORD for today.

LAKEWOOD, CALIF., *January 27, 1961.*

Hon. CLYDE DOYLE,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN DOYLE: We recently held our National Employ the Physically Handicapped Annual Essay Contest in the southeast district. Five high schools participated this year. The first prize—a $50 bond—went to a pupil at the Centennial Senior High School in Compton. A $25 bond will go to each of the other contestants of the schools that also won in turn. Arrangements are being made for me to shortly present them to the winners at these respective schools during their assembly. Mayor Del Clawson, of Compton; Jack Cleland, editor of the Herald American newspapers; Guy Warner, manager; and Daniel Quigg, VER of the Compton Department of Employment; Wayne Bowen, chairman of the local veterans' employment committee; and myself as chairman of the southeast district (Compton) Employ the Physically Handicapped Committee, helped to judge the essays. Cash for the prize bonds were provided by Veterans of Foreign Wars Post, No. 2089; American Legion Post, No. 152; Disabled American Veterans; May A. Carson Chapter, No. 32; all of Compton, World War I Barracks, Lynwood; and three members of our local employee the handicapped committee.

Miss Newman's essay has been sent to the Governor's committee to be judged on the State level for a $100 bond and a trip to the Capital. The winning essay on that level will go on to Washington, D.C., where its author will receive a $1,000 bond furnished by the National Disabled American Veterans with possible presentation being made by President Kennedy.

May our committee again ask your indulgence in placing these essays in the

CONGRESSIONAL RECORD this year as you did in past years? It would be very much appreciated if you would do so.

Again our thanks for your help to our local National Employ the Handicapped Committee.

Sincerely yours,

LILLIAN M. KARNES,
Chairman, Southeast District—(Compton)—National Employ the Physically Handicapped Committee.

JOBS FOR THE HANDICAPPED—A COMMUNITY CHALLENGE

(By Constance Newman, Centennial Senior High School, Compton, Calif.)

Rocks crunching fragile bones, blood streaming from pierced arteries—this was the way medieval Europe treated its handicapped people.

Sparks flying, the crackling of blazing flames, a charred human mass among them—this was sometimes colonial America's treatment of handicapped persons who were looked upon as witches or devils because of appearance or actions deviating from the normal.

The sting of a whip, the crack of a gun shot—these marked our country's growth and expansion westward. This was life on the frontier. Excessive heat in the parching deserts and freezing winters in the Sierras were but a part of the hardships. The man who succeeded was the strongest. Here the handicapped could not survive. Since the beginning of time, society and the elements had seen to it that there was no extensive social problem insofar as handicapped people were concerned, for they could not survive the cruelty of man and nature.

As civilization came, the frontier life became less strenuous. Many handicapped people began to live longer lives. The frontier passed and with it its challenge. Other challenges took the place of the primitive ones. Foremost among these challenges is that of providing jobs for the handicapped.

Communities meet this challenge in different ways. The following is an example of a community and an individual who met this challenge and conquered it.

During World War II, many of our men were called to fight for our country. One of these was Tim who was 22 when he enlisted in the U.S. Army. Hating to leave his wife Helen and baby, but realizing his patriotic duty to his country, Tim enlisted. Like many of our men, Tim was injured in the war. Due to this back injury, he was told that he would never walk again. How could he support his family? This was a question that crossed his mind repeatedly. Now, he was like those whom he had once pitied. He was an excellent engineer, but would his handicap be accepted by his family and the community?

The success of his entire future depended on this acceptance.

He must try to prove himself capable. He was determined to do so.

When he returned home to his wife, he could see that he was being engulfed in a sea of pity. He needed encouragement and confidence. Why couldn't she understand and realize that he needed confidence and encouragement. Despite his handicap, Tim began to do things for himself. Helen realized that instead of pity, Tim wanted her admiration and support.

Having Helen's support, he knew that he would have the courage to apply for a job. Tim called for an interview at the California Employment Service. After the interview, he was sent to the Hanson Electronics Co. Would Mr. Hanson hire him or would he think that all jobs require strength rather than ability? Knowing that skill, however, is more important in many jobs, Mr. Hanson placed Tim on a 2-months' trial.

When Tim reported for work, he was placed in the mechanical engineering division. Mr. Hanson introduced him to the 20 workers in his division.

As Mr. Hanson introduced Tim, each of the workers stopped what they were doing and began to stare at Tim. They whispered among themselves. Tim actually heard one man say to another, "Does he actually think that he can hold a job with such a handicap?" Although it wasn't meant for Tim to hear, he had heard it. He felt terribly hurt, but still determined.

When he came to work the following day, he worked very earnestly and diligently. The others were astonished to see him doing so well.

Not only was his work done amazingly well that day, but for every day during his 2-months' trial. The workers of the entire mechanical division of the company wrote letters to the company's president, Mr. Hanson. One man described Tim as "an earnest and very intelligent worker who knows just what he wants from life and intends to get it."

Mr. Hanson called Tim into his office and congratulated him on his fine work. He said, "Tim, not only did the other workers praise your work to me, but your rate of absenteeism has been lower than that of the other workers. You have a permanent job here."

Tim was bursting with excitement. With his job, however, came the depressing thought that there were many other capable handicapped people in the community who had been denied jobs because they possessed a physical defect. How could he help them? He decided to talk to Mr. Hanson.

In his conversation with his employer, Tim pointed out that although 2,600,000 physically handicapped men and women had jobs, it has been estimated that each year in California alone 2,650 handicapped young men and women will need jobs. In 1959 there were 66,000 handicapped who had been rehabilitated and placed on jobs in California. The President's Committee for Employment of the Handicapped with the cooperation of the Governor's committee has done much to publicize the need for employing the handicapped.

"Let us form a local committee of which there are 42 already in the State of California to assist in this worthy work here. Let us help all the handicapped to know the valuable aid that can be given them through the State Office of Vocational Rehabilitation. Let us also arouse the attention of the good people of the community to the fact that our town has its share of the estimated 150,000 handicapped workers who need medical or psychiatric assistance as well as placement in a more fitting job. The hearts of our business men must be touched. Then they must weigh the facts and figures. The voice of the newspaper must be used.

"The national Government is doing its part to promote the employment of the handicapped. Many communities are following the lead of the National Government. Our community must also accept the challenge of finding jobs for the handicapped.

"Employers must make the employing of the physically handicapped people one of their major goals."

Working together, Tim and Mr. Hanson brought the attention of all the community to the needs of the handicapped. The town cooperated in holding an annual NEPH Week dinner which was attended by 125 people.

Thus did this community meet the challenge of finding jobs for the handicapped—through the efforts of dedicated people like Tim and Mr. Hanson.

Let there be no verbal stones thrown in our town at the handicapped; let no handicapped person be burned at the stake of public opinion; let the climate of our town be such that here all handicapped people will be non-handicapped workers.

JOBS FOR THE HANDICAPPED

(By Pat Brenden, Dominguez High School)

Man's basic needs have always included those of security, success, and happiness. The answer to this need has become the acception of some type of work. Since the handicapped are human beings this automatically becomes a necessity on that basis alone. These ungratified human needs can develop into a psychological problem which can be solved only by their admission to some field of work; for the handicapped person requires more than anyone to feel useful to his fellow man.

Through his deformity or injury, the rendered handicapped person suffers greatly. In his suffering he has come to know the real values of life, as few others can understand them. Realizing these values, he will strive to do anything which he feels will help him pay what he believes is his debt to mankind. Because he is working, for this reason he will try to do his very best; a trait which is lacking in many workers today.

The employer has almost positive insurance that he is obtaining a reliable and valuable worker. The small risk that is involved in hiring any worker, which is greatly reduced in this case, is well worth the employer's effort because he is giving one human life the chance to obtain his basic needs of security, success, and happiness as well as dignity and some measure of independence. The employer must also remember that in actuality no man is handicapped except in the eyes of the onlooker.

As proof of the success of the handicapped here in America, let us look first to Franklin D. Roosevelt who was crippled by polio in 1921. Instead of letting this depress him he rose to even greater heights; showing not only the ability of the handicapped to do great things, but, also, doing a great service to the American people by his strong leadership. Recognition should also be given to world-famous people such as Ludwig von Beethoven, whose wonderful music was given people all over the globe, even though at the time of his writing of the "Ninth Symphony" he was totally deaf; Lord Byron, whose poetry has contributed to the literary world, though he was lame in one foot; John Milton, blind writer of classic English poetry; and the more recent Connie Boswell, whose voice thrilled millions even after she was crippled; Alex Templeton, who contributed music to the world on his piano though blinded; and George Shearing, another blind pianist who brings us jazz today. Perhaps a handicapped person who has become a success and who is even closer to home is Mrs. Longbean, an English teacher at Dominguez High School.

What is more is the fact that the handicapped are a part of our society and, as such, a useful place must be found for them. We must accept them into our organization, for if we deny them the privilege and basic right they become a useless organ not only to this country but to themselves as well. Not only must society welcome the handicapped, but it becomes our duty to find a place for them. The employers, as leaders of this body, should feel that it is their responsibility to do what they can to help make our society a smoothly and humanely conducted group.

In welcoming these handicapped, we become unique among the nations of the world. In lesser nations than ours, those who are handicapped are sometimes tolerated, but are certainly not respected, nor are they considered productive human beings. Little does man realize that in these small ways we do our part to uphold the American way of life; these relatively small differences are what make America great and outstanding.

As American citizens who believe in the American ideal, we are obliged to do our part to uphold one of the founding principles which our Nation was established upon; that all men are created equal. This has

been interpreted as meaning that all men regardless of race, creed, religion, or color are equal with uniform rights. It is mandatory that we amend this definition to include every man, no matter what shape, form, or condition, having equal rights and opportunity. Let us not forget this great American ideal which also leads us to believe that since all men are created equal they must each be created for a purpose; and that God wants us to love and help our neighbor. Let our Nation and our society be a perfect model to all nations by showing that we believe that the handicapped are a functional and integral part of our American community.

Air Pollution

EXTENSION OF REMARKS
OF
HON. MAURINE B. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, April 27, 1961

Mrs. NEUBERGER. Mr. President, earlier this session I introduced S. 1187, on behalf of the Senator from West Virginia [Mr. BYRD] and the Senator from New Jersey [Mr. WILLIAMS] to amend the air pollution control law. That bill dealt directly with interstate air pollution. It did not deal with the particular problem of air polluted over a relatively small area by automobile exhausts.

On April 22, the Washington Post and Times Herald ran an editorial entitled "Bye, Bye, Blowby." It dealt with the attitude of Health, Education, and Welfare Secretary Ribicoff, and his predecessor, Secretary Flemming, currently the president of the University of Oregon, toward the practicability of a simple device for destroying automotive crankcase fumes, and thereby reducing automotive air pollution.

The Post editorial indicates that both Secretaries have been enthusiastic about a factory-installed device that would cost about $5 and would control raw gasoline hydrocarbons. I share this enthusiasm.

The automobile industry now has the opportunity to clean its own tailpipe. It can take the initiative in cutting down what I have referred to as "garbage in the sky." Should the automobile industry fail to introduce this depolluting device on its 1962 models as standard equipment, Congress may feel impelled to require it on every car shipped in interstate commerce.

I ask unanimous consent that the editorial to which I have referred appear at the conclusion of my remarks in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BYE, BYE, BLOWBY

Secretary Ribicoff of the Department of Health, Education, and Welfare, like his predecessor, Secretary Flemming, has taken a clear, strong stand on the practicability of a simple device for destroying crankcase fumes of the type called "blowby." Such a device is now available as factory installed optional equipment to buyers of new automobiles throughout the country. "It seems to me," said Secretary Ribicoff the other day, "that this method of reducing air pollution should be put into use as rapidly as practicable." And he added an unmistakable warning: "If the automobile industry does not make the device standard equipment, then legislation to require it should be considered."

We cannot escape a conclusion that the identical view expressed by two HEW Secretaries makes the attitude of the automobile industry seem unreasonably recalcitrant. The industry asserts that no clear need for the device has been demonstrated anywhere save in California and that it is willing therefore to do no more than make the device optional to any individual buyer—with installation to be done by dealers at approximately twice the cost of doing it on an assembly line.

The cost of the device, factory installed, is no more than about $5. It is effective in controlling a secondary source of automotive air pollution, the raw gasoline hydrocarbons that blow by the piston rings. To make this standard equipment would not raise the cost of a car appreciably; and it would indicate a consideration for the public's health and the public's comfort which the automobile makers can hardly afford to forgo.

Cuban Imports

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. ROGERS of Florida. Mr. Speaker, all loyal citizens of the United States were proud of the strong stand taken by our President last week in his speech to the American Society of Newspaper Editors in regard to Cuba and communism in the Western Hemisphere. We feel our true friends in Latin American will respond to vigorous leadership in Washington against communism.

Today the National Security Council is meeting to make a full reappraisal of our position toward Cuba and Communist activities in general, and it is my hope that a very strong and firm policy to be backed up by actions will be decided upon.

A complete economic boycott of Cuba should be instituted by the United States, then a meeting of the Organization of American States should be called to invoke first complete economic sanctions against Castro's government; second, diplomatic isolation of Castro's government; and, third, initiate action to form an inter-American force sufficient to prevent a continuation of communistic activity in this hemisphere.

One thing that should be done by the United States immediately, which has been under consideration for more than 1 year by our State Department although action along this line has been urged by many of us Members of Congress, is to stop Cuban imports into the United States. Does it make sense to buy Cuban products and supply Castro with American dollars to continue his domination of the Cuban people, when we have already cut off exports to Cuba, broken diplomatic relations, and stated in an official Government publication that there is no further doubt about Castro and his Communist police state in Cuba?

Just using one port in Florida as an example, in January of this year over 10 million pounds of agricultural products were received from Cuba. During February over 14 million pounds were imported. During March and April up to date, some 23 million pounds of produce have been imported from Cuba.

Aside from the fact that these products, which include pineapples, oranges, tomatoes, tobacco, cucumbers, and native vegetables, compete with the same produce grown in this country to the detriment of our domestic agricultural industry in many States in the Union, the Castro government is paid U.S. dollars for these products.

The time to act to stop these imports was over a year ago. But action was not taken. There can be no further excuses for delay and inaction. The President has spoken out publicly and the world is waiting to see what we will actually do now. Stopping these imports would be a logical first step, and one which should be taken immediately. Almost 50 million pounds of produce has been shipped into one port during the first 3½ months of this year alone.

I have introduced a resolution expressing the sense of the Congress that the United States ban all imports from Cuba. This resolution should make it clear beyond doubt to the State Department that it is the wish of the American people that these imports be stopped. We stopped exports to Cuba long ago, we should complete the economic boycott by banning all imports also.

The resolution is House Concurrent Resolution 215, and is pending before the Ways and Means Committee. I urge every interested Member of the House to join with me in asking for an early hearing on this measure, and to again ask the State Department to act.

West Virginia University Team Wins National Intercollegiate Rifle Championship and Two Team Members Place First and Second in Individual Scoring

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 27, 1961

Mr. RANDOLPH. Mr. President, the legend of the feud of the Hatfields and the McCoys in the hills of West Virginia no longer rates top billing in the recording of the prowess of the mountaineers with the rifle.

We proudly acclaim our new champions who achieved fame through pursuit of a peaceful and a thoroughly lawabiding utilization of their firearms.

In this instance I am proud to be privileged to call to the attention of my

colleagues the fact that the West Virginia University rifle team has won the 1961 national intercollegiate team rifle championship conducted under the auspices of the National Rifle Association of America.

Not only did the Mountaineer quartet of sharpshooters win the national team title, but its captain, Bruce A. Meredith, made it a sweep for West Virginia University by winning the national individual title with a score of 299 out of a possible 300. In second place was his teammate, Robert I. Davies with a score of 295.

I am sure West Virginians generally join in paying tribute to Bruce Meredith and Robert Davies, and to their teammates, Charles L. Rowan, who scored 289, and Robert I. Gosnell, who shot a 286 score. Their combined team score was 1,164 out of a possible 1,200 points.

Captain Bob Means, coach, and M. Sgt. Charles Haley, assistant coach, of the Army ROTC staff at West Virginia, were appropriately praised for their work with the rifle team by Col. W. E. Roberts, head of the Army ROTC program at the university.

Colonel Roberts pointed out that three of the four varsity rifle team members also fire on the university ROTC team.

I join him in his comment that "those concerned at the university are extremely happy and proud of this achievement," and I concur in his remark that this team championship "will go a long way toward encouraging even more success in the sport or rifle shooting."

Along with complimenting our West Virginia team for its success, I wish also to extend tribute to the women's team of the University of Alaska, winner of the coed rifle team national title with a score of 1,085 points.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the newspaper account of the national intercollegiate rifle competition as published in the April 25, 1961, editions of the Dominion-News, Morgantown, W. Va.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WEST VIRGINIA UNIVERSITY NAMED NATIONAL RIFLE CHAMPION—MEREDITH IS RANKED TOP STAR

WASHINGTON.—West Virginia University won the 1961 national intercollegiate team rifle championship, the National Rifle Association of America announced Monday.

Bruce A. Meredith of the West Virginia team made it a sweep for the Mountaineer club by winning the national individual title.

The team score was 1,164 out of a possible 1,200 points, and Meredith scored 299 out of a possible 300.

The West Virginia victory broke a 6-year domination of the title by Western squads. It was the first win for West Virginia in the 33-year history of the contest, and Meredith's win was the first individual crown won by the school.

Meredith tied a record set by Robert E. Hickey, of Illinois College, in 1959. His victory came in the biggest field ever to shoot in the event—1,376 contestants. There were 295 college and university teams entered.

Other members of the West Virginia team and the scores are: Robert I. Davies, 294; Charles L. Rowan, 289; and Robert I. Gosnell, 286.

Following West Virginia in the top 10 teams were: Arizona State University, 1,154; Kansas State, 1,154; St. John's University, 1,152; University of California, 1,147; St. John's University No. 2 team, 1,145; City College of New York, 1,145; U.S. Naval Academy, 1,145; U.S. Coast Guard Academy, 1,144; and Oregon State College, 1960 defending champion, 1,141.

Second to 10th places in individual standing were: Davies, West Virginia, 295; Bill G. Davis, Kansas State, 293; Kenneth T. Wessels, St. John's, 292; David W. Kimes, University of California, 292; Robert T. Mellen, Jr., Ohio State, 292; John S. Watkins, University of Alaska, 291; Rowan, West Virginia, 291; Ronald J. Pellar, Massachusetts Institute of Technology, 291; and Walter S. Draper, Northeastern, 291.

The women's team of the University of Alaska took the national coed rifle team with a score of 1,085, and Jean Linton, of Akron (Ohio) University was individual titlist with 285.

High ROTC team in the competition was Cornell University with 1,142, and high ROTC individual was Nicholas C. Steen, Michigan State, 292.

CHAMPS LAUDED BY COLONEL ROBERTS

Col. W. E. Roberts, head of the Army ROTC program at the university, last night hailed news of the varsity rifle team's national championship as a great step in advancement of the sport here.

"I confine my interest mainly to the ROTC team," he explained, "but I can't help but feel closely associated with those who participate on the varsity rifle team."

All but one member of the varsity team also fires on the ROTC team.

"Capt. Bob Means and Sgt. Charles Haley have done a fine job with the varsity," Colonel Roberts noted. "I think their men deserve the victory. It's a great tribute to them."

"Those concerned at the university will be extremely happy and proud of this achievement," he added. "It will go a long way toward encouraging even more success in rifle shooting here."

Secrecy in Government Wastes Time and Money

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. MEADER. Mr. Speaker, under leave to extend my remarks, I include the following article from the Ann Arbor (Mich.) News of April 24, 1961:

SECRECY IN GOVERNMENT WASTES TIME AND MONEY

"You can't find out what's going on in Washington," is one of the oldest complaints against the Federal Government. Several events since the inauguration provide a basis for the secrecy charges being made against the Kennedy administration. It is difficult to know which individuals are most to blame, but there can be no doubt that the charges have some justification.

This is a matter of prime concern to newsmen, of course, but it affects all citizens. Most taxpayers feel certain that money is wasted to some extent by the Government, but few seem to realize that economy would be easier to enforce if government had to operate more in the open.

Secrecy charges are coming from a variety of sources. Representative GEORGE MEADER has commented several times recently on the growing tendency toward needless secrecy in Washington. He is a member of the House foreign operations and monetary affairs subcommittee, which recently persuaded the President to overrule a secrecy order issued by Secretary of State Rusk. Before Rusk's order was withdrawn, however, the Soviet propaganda machine made use of it by ending direct censorship of news sent from the U.S.S.R.

Another example: The American Society of Newspaper Editors, which met last week in Washington, is studying a report which says neither Kennedy nor his administration has lived up to a promise of a freer flow of news. Prepared by Eugene S. Pulliam, managing editor of the Indianapolis News, the report says access to individual White House officials is freer than in the Eisenhower administrations, but tells of increased restrictions on news from the State and Defense Departments—which spend a major share of the Federal budget.

Also: Herbert G. Klein, formerly Richard M. Nixon's press secretary and now editor of the San Diego Union, has said flatly that the Kennedy administration curbs the free flow of news more than any other administration in this century. It may be said that this is only sour grapes from a man who wishes he were working in the White House, but there is no denying that Klein is in a position to know what he is talking about.

Rusk's order is only the best publicized of several events which have stymied the work of Washington newsmen in recent weeks. It grew out of a controversy that started in the last weeks of the Eisenhower administration. The subcommittee of which MEADER is a member asked Secretary of State Herter to furnish certain information regarding aid to Peru. Herter said the subcommittee lacked jurisdiction and Eisenhower supported him. Rusk similarly ordered State Department employees not to give the subcommittee information. MEADER and other subcommittee members complained to the press, and the resulting publicity led to withdrawal of the order.

It also led Senator JOHN A. CARROLL, of Colorado, to introduce a "freedom of information" bill (S. 1567), which would require Federal agencies to publish their rules and procedures, and would expand the definition of public documents. Its purpose is to restrict the tendency of bureaucrats in Federal agencies to stamp "secret" on material which has no bearing on national security. Senator CARROLL'S bill deserves wide support.

No one denies that there is a great deal of material which must be classified for security reasons. But there is also a natural tendency among employees at all levels of government, from townships up, to keep their activities from the public eye until they can present completed, dramatic programs. No one but the public, acting through legislators and the press, can discourage this tendency.

Missile Force for Alaska

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Thursday, April 27, 1961

Mr. BARTLETT. Mr. President, in the April 2 edition of Jessen's Weekly,

a newspaper published in Fairbanks, Alaska, an editorial appeared which I believe succinctly expresses the sentiments of many Alaskans who are concerned with the military vitality of this country. The editorial reminds us of the strategic role Alaska should play in the offensive capability of the U.S. military force. I wholeheartedly endorse the idea that Alaska's role in the defense of this country should not be restricted to "a bastion of mere defensive capability" but should be enlarged through the establishment of missile-launching facilities. I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FREEDOM FIGHT NEEDS STRONG ALASKA

Electrifying events recently shattered the familiar patterns of alliance in the deliberations of the United Nations. Just as with the admission of Alaska and Hawaii into the Union, the United States struck another hard blow against colonialism, proving once again, the youthful vigor and idealism of our Republic.

Breaking with our traditional European friends, United Nations Ambassador Adlai Stevenson spoke up forthrightly for the ideals of freedom and independence for all peoples.

The question before the Security Council was a resolution to investigate Portuguese suppression in colonial Angola. The traditional Western bloc had all taken the position that the U.N. had "no jurisdiction."

It was then that Stevenson spoke, charting the course of the New Frontier along a route that had the familiar ring of early American history.

"I regret to find myself in disagreement," Stevenson said. "Angola is but a part of the overall picture of evolution on the African Continent. The views of the United States have not changed since Jefferson wrote: 'We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness.'

"These words reflect, we believe, the basic principles which all governments would do well to observe and to implement with all of the energy at their command.

"The United States would be remiss in its duties as a friend of Portugal if it failed to express honestly its conviction that step-by-step planning within Portuguese territories and the acceleration thereof is now imperative for the successful advancement of all inhabitants under Portuguese administration—advancement, in brief, toward full self-determination."

Stevenson's performance on this, and the many other issues coming before the United Nations, are doing much to restore America's position of world leadership in the cause of freedom.

Here in Alaska, his words serve as an inspiration to those of us who read our history books in the veritable shadow of the Soviet Union.

An America dedicated to freedom for the enslaved peoples of the world must be a strong America. We are inclined to agree with the remarks made recently by Eielson AFB Commander Stephen Henry, that we are militarily "tending toward a fortress America."

And we must agree with the remarks made long ago by Gen. Billy Mitchell in regard to the strategic position of Alaska in world affairs.

Certainly if America is to speak with authority in the cause of a world free from enslavement, then it is axiomatic that Alaska must become more than a bastion of mere defensive capability.

General Armstrong spoke up forthrightly from Anchorage some time ago. He was speaking with deep conviction. Far away in Washington, his plea for retaliatory missile forces in Alaska fell on deaf ears.

Just as Adlai Stevenson spoke honestly and logically in the battle of words at the United Nations, so must the United States be able to speak with the military strength to give those words real meaning.

The time has come for the construction of a retaliatory missile force in Alaska. A warning system is not enough. Defensive missiles are not enough. The strategic location of this vast State makes it imperative that our military forces here be supplied with the tools to keep America strong.

Alaska is an integral part of the United States. It seems foolish to rely on the instability of leased bases in foreign lands, when Alaskan military leaders make pointed stress of the lack of offensive capability in this, the most strategically located of all the 50 States.

In casting aside an archaic portion of recent American foreign policy, the New Frontier has embarked upon a bold rededication to the ideas upon which this great Nation was built. Let us hope that, at the same time, the New Frontier can cast aside, along with archaic diplomacy, the archaic philosophy that has seen military expenditures too often in the past, spent in unlikely areas that happen to have significant representation in the Congress.

It is time too, for the Congress to take an overall look at the defense picture as it pertains to Alaska. Certainly, as far as Alaskans are concerned, we would be far safer to remain as a warning device for the rest of America. It would be far safer to watch missiles sailing over our heads toward the more heavily populated areas of America. With the limited offensive capabilities of the Alaskan military establishment in the Aerospace Age, it would be pointless for a potential aggressor to waste its offensive weapons on us.

But if the words of Thomas Jefferson, so eloquently restated by Adlai Stevenson, are to have full meaning in the world of today and tomorrow, then Alaskans must express their willingness to enter the target area of the timeworn adage that states, "The best defense is a good offense."

Certainly, a good offense dictates the utilization of Alaska to its full military potentialities. This utilization should be of primary concern to the citizens of all the States of the Union, of more concern than the involvement of payroll dollars, of more concern than the other benefits of military expenditures. For after all, the security of the individual citizen and the security of the free world speak more loudly than the materialism of the dollar if only we will stop and listen.

The Record of Ambassador Adlai Stevenson

EXTENSION OF REMARKS

OF

HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, April 27, 1961

Mr. CHURCH. Mr. President, Roscoe Drummond has published in the New York Herald Tribune an interesting comment on the record being written in the United Nations by Ambassador Adlai Stevenson. I concur in his conclusions that Adlai Stevenson's great gift of articulate speech is well suited to this forum, and that he is proving a powerful advocate of U.S. policy within the United Nations. I ask unanimous consent that the article to which I have referred may be printed with these remarks in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follow:

EARLY GAFFES FORGOTTEN—STEVENSON CUTTING LARGE FIGURE

(By Roscoe Drummond)

UNITED NATIONS, N.Y.—Viewed from both Washington and the United Nations, Ambassador Adlai Stevenson is emerging as a powerful figure in the Kennedy administration.

This does not mean that the President is not making the final decisions on policy. This does not mean that Secretary of State Dean Rusk is being detoured as Mr. Kennedy's principal adviser on foreign affairs.

It does mean that, on the basis of his experience, initiative and political prestige at home and abroad, Stevenson is exerting unusually wide influence in the State Department and the White House.

Whatever coolness there may have been in the past, Stevenson and Mr. Kennedy are now establishing a good working relationship. As a consequence, the President's U.N. ambassador is today at the center of policy formulation.

Every delegate here is under instructions from his government. Stevenson is, too. But to a notable extent, his recommendations shape his instructions. And beyond that, his views on the widest range of foreign policy carry great weight in the top councils of the administration.

It was at Ambassador Stevenson's initiative that the United States for the first time voted with the Afro-Asian nations in their colonial resolution on Angola. It was Stevenson, in part because of his long personal acquaintance with Soviet Foreign Minister Andrei Gromyko, who was called upon to conduct the delicate and important negotiations for resuming the disarmament talks with the Russians.

When British Prime Minister Harold Macmillan was in Washington this past week to meet with President Kennedy, Stevenson took part as well as Secretary Rusk.

Mr. Kennedy needs Stevenson in his administration. The President, aware of his close election, wants to keep the support of Adlai's followers. In addition, Stevenson, through his wide travels, has gotten to know personally more world leaders than anyone else in the administration, including the President. This is invaluable for his job as Ambassador at the U.N. He also brings his gift of articulate speech to the U.N., perhaps the best forum for Stevenson's talents.

All of these things give Stevenson a voice in Cabinet deliberations and a degree of access and influence with the President which is exceptional. Yet everything hasn't always gone well.

Mr. Kennedy was annoyed no little when Stevenson guessed publicly that the President would be glad to see Premier Khrushchev if he decided to come to the U.N.—this when the President did not want to give Khrushchev any encouragement to come. I am also told that Stevenson delivered two speeches, not before the U.N., which had not been cleared by the State Department.

But these things were in the early period of the administration's takeover—and have not recurred. Rusk and Stevenson have worked together smoothly thus far.

In his job at the U.N., Stevenson is at many points doing things differently than did Ambassador Henry Cabot Lodge. He is initiating breakfast, luncheon and dinner sessions with the heads of all the 99 delegations, sometimes including wives. For the first time, Stevenson as U.S. representative let it be known that he would be available to meet with the caucus of the Afro-Asian nations on a common matter. They invited him at once.

There is one intriguing thread of sameness-plus-difference between the governor and his predecessor. As U.N. Ambassador, Lodge was, to a degree, seeking to make his political reputation while Stevenson is seeking to conserve his political reputation.

It is premature to guess what Stevenson's record will look like when it takes fuller shape. But at this point he is proving a powerful advocate of U.S. policy within the U.N. and an influential spokesman for his own views within the Kennedy administration.

Lockheed Repudiates Erroneous Press Report Regarding Its Showing of the Film "Operation Abolition"

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. WALTER. Mr. Speaker, on April 13, 1961, there was inserted in the CONGRESSIONAL RECORD an article from the Los Angeles Mirror of March 3, 1961 "relating why Lockheed missiles and space division has stopped showing the film 'Operation Abolition.'"

Under unanimous consent I insert in the RECORD two letters: the first dated March 27, 1961, which I addressed to Mr. Robert E. Gross, chief executive officer of the Lockheed Aircraft Corp., asking confirmation of the above mentioned press release; the second letter, dated April 15, 1961, received in reply from Mr. John E. Canaday, vice president of the company, in which he repudiates the "erroneous press report" regarding Lockheed's halting its showing of the film:

MARCH 27, 1961.

Mr. ROBERT E. GROSS,
Chief Executive Officer, Lockheed Aircraft Corp., Burbank, Calif.

DEAR MR. GROSS: I was somewhat surprised to read in the press that the raging controversy over "Operation Abolition" had caused Lockheed Missiles and Space Division to halt its showing of the film. I am somewhat at a loss to understand this, and am quite sure the release was, perhaps, unauthorized or at least garbled.

I am sure you are aware of the report made to our committee by Hon. J. Edgar Hoover, Director of the Federal Bureau of Investigation, on the subject of the riots in San Francisco and the fact that our committee made a report to the House concerning the legislative purpose for the production of the film. Both of these publications are enclosed for your information.

I would very much appreciate hearing from you as to whether or not the present comments are indeed accurate.

With very best regards, I am,

Sincerely yours,

FRANCIS E. WALTER,
Chairman.

LOCKHEED AIRCRAFT CORP.,
Burbank, Calif., April 5, 1961.

Hon. FRANCIS E. WALTER,
House of Representatives, House Office Building, Washington, D.C.

DEAR CONGRESSMAN WALTER: Mr. Robert E. Gross has asked that I investigate and reply to your March 27 letter. Evidently there has been a misunderstanding about Lockheed's position in regard to the film "Operation Abolition." We have no overall policy against its showing.

Lockheed acquired one print of the film for internal purposes. We have shown it to some of our security coordinators and others. It has been shown to the management clubs at two of our divisions. On a few occasions our print has been shown to outside groups. And we shall continue to lend our single print to such groups when the dates can be worked into the rather tight internal schedule.

I have recently seen the film and feel that it is an excellent documentary-type record of tactics used by the Communists and their supporters. We believe everyone should see it, especially parents who may not be aware of the dangerous influences their sons and daughters may encounter on college campus.

Occasions for showing the film either among our employees or to outside groups with our assistance are limited, however, both by propriety and the regulations and practices characteristic of large industrial firms and Government defense contractors. It would be inappropriate and contrary to longstanding practices, for example, to show the film to employees on the job. And it would be inappropriate for industrial firms like Lockheed to serve as a film distributing agency. Outside groups will have no difficulty in obtaining a print from the commercial film company that produced it and is distributing it.

It was a misimpression that grew out of one or two such occasions that led to the erroneous press report that we would no longer allow the film to be shown.

Sincerely yours,

JOHN E. CANADAY,
Vice President.

National Employ the Physically Handicapped Committee of the Great 23d Congressional District, Calif., Awards U.S. Government Bonds to Five Winners in High Schoool Essay Competition—City Officials, Newspaper Editor, Veterans' Leaders and Business Representatives Act as Judges at Compton, Calif.—Part II

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. DOYLE. Mr. Speaker, the following are the three remaining essays as hereinbefore described by me in the CONGRESSIONAL RECORD for this date and I call these essays to your attention and also to the attention of all readers thereof:

JOBS FOR THE HANDICAPPED—A COMMUNITY CHALLENGE

(By Sue Carter, Hollydale, Calif., Paramount High School)

Any bodily defect that is a disadvantage in normal activities is considered a physical handicap. Public attention has caused programs for the welfare of the handicapped to be concentrated on the more noticeable handicaps like loss of hearing, vision, or parts of the body, and crippling of the bones, joints and muscles. Other disabilities which seriously affect individuals are damage to the heart, veins, or kidneys; difficulties with the nervous system such as cerebral palsy, multiple sclerosis and epilepsy; respiratory ailments, including arrested tuberculosis, silicosis and asthma; diabetes; and speech defects.

Physical handicaps are usually due to accidents, diseases, birth injuries and defects in the development of the child before birth, but the causes of some handicaps are unknown. Rheumatic fever, which damages the heart, tuberculosis of the bones, which causes bone deformities, and infantile paralysis, which results in inability to use muscles, are common causes of crippling in children. Perhaps with the full use of modern medical knowledge 75 percent of all handicaps have been decreasing in recent years because of improved nutrition, prevention of disease and accidents, and better medical and obstetrical care. Many existing physical handicaps can be improved through physical therapy, surgery and other medical treatment, but there are many areas in the United States where such treatment is not available to everyone. In the case of handicaps due to illnesses that tend to reoccur, such as rheumatic fever and tuberculosis, proper health care can help to prevent additional damage. Research is being done by public and private agencies and by individuals in the prevention and treatment of physical handicaps.

Certain handicapped people for example the blind, the deaf and those with severe orthopedic crippling need specially trained instructors in order to have as good an education as other people. The present trend is to enable these people to have a normal home life and contacts with unhandicapped people while having special training. Most States provide boarding schools for blind and deaf children. People realize now that the training of blind and deaf children should be started in early infancy if they are to take advantage of schooling and in some localities there are classes for parents and public or private nursery schools for these children. Some schools provide job training for handicapped children and counseling to advise them concerning suitable occupations.

An ideal program for the physically handicapped, toward which both community and private agencies are working, consists in making available to all handicapped persons means of restoring as much use of their bodies as possible, helping them to develop their natural abilities, and enabling them to lead happy, normal lives as self-supporting, self-respecting members of the community. Such a program must include medical diagnosis and treatment, providing appliances such as hearing aids and artificial limbs, special public education for handicapped people, training for work and placement in a job suited to the abilities of the individual, recreation and counseling to help the individual with his personal problems.

Many corporations in many communities have developed programs for hiring disabled workers as a practical solution to their labor

shortages. Certain aircraft, automobile and farm equipment manufacturers have been most successful. The Federal Government, however, is probably the biggest single employer of the physically handicapped in the United States.

Educational programs based on numerous studies of experience in business and industry have helped to prove to industrial leaders, the general public and fellow employees the fact that the disabled worker is a satisfactory worker when he is properly placed. By job analysis a disabled person can be selected so that his handicap does not interfere with his job performance.

Contrary to popular opinion, experience in employing the handicapped during the war has shown that with careful placement in a suitable job, the handicapped person can be just as efficient as other workers and often has fewer absences and changes jobs less frequently. Education of the community in understanding the needs and abilities of the handicapped is a vital necessity in securing support for such programs.

JOBS FOR THE HANDICAPPED—A COMMUNITY CHALLENGE

(By Ken Perkins, Compton Senior High School, Compton, Calif.)

Ability. This is the keyword to success in our modern, industrial age. It is that substance which employers are constantly trying to find. It is the nucleus around which all successful enterprises revolve. In spite of all this, however, some of the greatest ability in the possession of mankind today is forced to remain idle because of a physical handicap.

The American people boast that in our country any person with ability can advance in his selected field of endeavor. In the great majority of cases, this is true, but in the case of a physically handicapped person, whose handicap in no way affects his capability in his job, this great boast semingly does not apply.

The rejection of physically handicapped people by American industry is not brought about by malintent, but rather by ignorance of the facts. If the employers of America knew the truth about physical handicaps, and were to consign to old wives' tales that have grown up about these handicaps to their proper sphere, this hire-the-handicapped campaign would not be necessary.

The industries of America owe it to themselves and to the public in general to take another look at this matter of job for the handicapped and to find out just what the truth is.

The facts now make it impossible for anyone to make the blanket statement that a handicap of any nature makes a person unfit for a job. A blind man in Peterborough, N.H., tests ball bearings (which are so small that nine would fit in an aspirin tablet) by the sense of touch. With this superdeveloped sense of touch, he is more capable of doing this work than a man with normal eyesight. August Renoir produced some of his finest paintings from a wheelchair. John Milton wrote some of his most beautiful poetry while blind. Even more astounding, Beethoven created some of his finest works after deafness had overtaken him.

No longer can anyone say that a handicapped person is a liability to his firm. There is a company in Long Island, N.Y., called Abilities, Inc., which is run by a man born without legs and is manned entirely by 200 disabled men. After the first year, its insurance rate went down 21 percent. A survey by the U.S. Labor Department has shown that handicapped workers are safer on the job, have better production records, and have no greater rate of absence than normal workers.

The Federal Government has realized the need for employment of handicapped people. Congress has set aside 1 week of the year as National Employ the Physically Handicapped Week. The Department of Labor has made surveys regarding this problem and is constantly encouraging the hiring of handicapped people.

Employing the handicapped is not just something to be done out of decency or charity. As the preceding has shown, it is also good business. But there is something more involved in it than just good business—something that makes it the concern of every American citizen who is conscious of his duties as an American. Perhaps the best way to convey this would be to quote President Eisenhower as he once spoke on the subject—

"In these demanding times, the labor force of our Nation is our most precious asset. Working shoulder to shoulder, the handicapped can add spirit and power to America as we seek to promote the strength of the whole free world."

It is not what the employer can do for the handicapped that is important, but rather what the handicapped can do for the employer and the whole Nation. The hiring of able, handicapped workers is a challenge to America which, in order to survive in this modern world, it cannot neglect.

JOBS FOR THE HANDICAPPED—A COMMUNITY CHALLENGE

(By Michelle Ruth Reynolds, Lynwood, Calif.)

There are in the United States today some 2 million handicapped people who, despite the loss of a limb or one of the senses, still possess skills, talents, knowledge, and the desire to work. But few of these people will be hired; most of them will continue to live in tax-supported hospitals or homes or off tax-paid pensions or benefits.

Yet, it is good sense to rehabilitate and hire these handicapped people. A survey conducted by the Office of Vocational Rehabilitation showed that in 1 year the earnings of some 44,000 rehabilitated workers increased from $6,500,000 to $78 million, quite an increase in tax and spending money coming into the community.[1] Nor was that the only financial benefit. It costs $500 a year to support a handicapped person; only $300 to $500 to rehabilitate him.[2] The cost of supporting the people used in the survey for just 1 year meant the difference between their costing the community and their helping the community.

To a handicapped person, a job is the gateway to self-respect, the means of once again becoming an active worker. It is the difference between idleness and productiveness. It means that he is once again a useful member of society.

But all too often society rejects the rehabilitated. All to often doors are closed to the handicapped. Businessmen say, "I run a competetive organization. I'm afraid a handicapped person would not be able to do the work that would be expected of him."

Is this statement true? Are the handicapped a liability? No, as several highly successful firms who prefer the handicapped person have proven. Goodyear Tire & Rubber Co. and the Brown-Brockmeyer Co., of Ohio, hire deaf-mutes because they are not bothered by the noise of machinery or conversation. Marshall Field and Eastman Kodak employ heart patients. North American Aviation, Boeing Airplane, Bates Manufacturing, Otis Elevator, and the Radio Corp. of America all use blind persons in their factories and offices. The Caterpillar Tractor Co. hires amputees, as well as those who are deaf, blind, or mute.[3]

Most of these companies did not hire the handicapped out of pity, but because they know that the handicapped worker is actually a better worker, as was proven by the Western Electric Co. Western Electric ran a test using two groups of workers, one composed of disabled persons, the other of regular employees. At the end of a year, the handicapped proved superior in all four areas of study.[4] They had seven times less absentees, five times less labor turnover and accidents, and were outproducing the other group. One reason for this performance is that a disabled person is generally more conscientious, more careful, and more stable than the average man.

A handicap is not necessarily a hindrance to work. The Ford Motor Co. estimated that in their organization there were 2,637 jobs that could be done by a one-legged person, 670 a double amputee could handle, 715 a one-armed individual could perform, and 10 that the blind could do.[5] An analysis by the U.S. Civil Service Commission of 6,000 jobs disclosed that 3,500 of them could be performed by the handicapped as efficiently as by the able-bodied.[6]

These are the facts. The handicapped are able and willing to work. Must industry refuse them the opportunity? After fighting to overcome their handicap, must they also fight to overcome the prejudice of a society that is supposedly dedicated to the belief that all men are equals? This is the challenge given by the handicapped to the communities and the people of America: Give us jobs. Let us show that we can work as well and as hard as any other employee. Will the American community accept this challenge?

The Nation's Stake in Atomic Power—Address by Representative Holifield

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 27, 1961

Mr. YARBOROUGH. Mr. President, on Tuesday of this week, it was my privilege to hear, at San Antonio, Tex., an informed and stimulating address before the 18th annual convention of the American Public Power Association, by the able, diligent, dedicated CHET HOLIFIELD, Congressman from California, and chairman of the U.S. Congress Joint Committee on Atomic Energy.

Believing that the facts, information, and thoughts of Congressman HOLIFIELD worthy of wide dissemination over the country, and before the Congress and the Government, I ask unanimous consent to have printed in the Appendix of the RECORD today, his address of April 25, 1961, before the 1961 annual convention of the

American Public Power Association, under the titled "The Nation's Stake in Atomic Power."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE NATION'S STAKE IN ATOMIC POWER

(Remarks by Congressman CHET HOLIFIELD, of California)

I am sure that you gentlemen are aware that the subject on which I speak to you today is not as fashionable as it used to be. Atomic power has lost some of its glamour, and there may have been a corresponding decrease in general public interest.

My principal purpose in speaking to you today is to emphasize that the development of atomic power is no less important now than it was a few years ago, when the Sunday supplements were predicting an atomic power plant in every home and an atomic-powered automobile in every garage. These were fantasies born of ignorance, and it is well that they now are recognized as such.

However, I do foresee a time when many homes will be heated and mass transportation will be powered indirectly by atomic energy—not by individual atomic reactors, of course, but by electricity generated in huge nuclear power stations of several million kilowatts capacity and transmitted over great high-voltage regional grids for distribution to homes, farms and industrial establishments.

Just when this may occur and just what types of nuclear power plants will have been developed by that time, I would not venture to predict. But I am confident that this day will come.

The theme of my talk with you today is that we should hasten this day to the extent that we can by initiating a positive and effective program to develop atomic power plants that are safe, reliable, and economic. This program must include a strong public development effort because this is the only way, as I see it, that the public interest in this new source of energy can be protected.

Right now the importance of protecting the public interest in atomic power may not be too obvious. We generate most of our power from the fossil fuels—coal, oil, and gas—and the U.S. and the world reserves of these seem to be very large. However, this condition will not last forever.

There will come a day when we will foresee the end of our fossil fuel reserves if we do not start soon to tap additional sources of energy. In a careful study made last year, the Atomic Energy Commission concluded that within 40 years the world would be burning up annually above five times a much coal, oil, and gas as in 1958, and the people of the United States four times as much. The study predicted that if no other sources of energy were tapped, we would exhaust our fossil fuel reserves in about 90 years.[1]

Obviously, we cannot let this happen, nor should we allow this point even to be approached. Our fossil fuels will become increasingly valuable as sources of chemical raw materials, and the time may come when people will wonder why we were so wasteful as to burn them up.

The development of atomic power also can bring into our economy a new source of low-cost energy and help to restrain the steady upward march of the prices of the conventional fuels. We all know how the price of natural gas has been rising, despite reported large reserves. Our supplies of coal are far larger, yet I am told that coal prices have shown an upward trend averaging almost 1.5 percent per year compounded.

[1] It is recognized that estimates this far in the future in themselves involve major problems.

Low-cost atomic power, developed without delay, can help restrain this upward drift. If atomic power held back the average cost of fuel for powerplants by as much as one-twentieth of a cent per kilowatt-hour—one-half mill—the savings to the American consumers as of 1980 would amount to between $1½ and $2 billion per year, and the amount would increase each year thereafter.

Atomic energy will not have to supply a large percentage of our total power needs in order to be a restraining influence on fuel and energy. As a matter of fact the threat of atomic energy is already having an effect. As I understand it, the conventional fuel price situation in certain parts of Florida and California have been stabilized or lowered, as a result of proposals to build large-scale atomic powerplants in those areas.

But conventional fuel producers should have no fear that atomic power will supplant coal and oil and gas in the foreseeable future. All of you are familiar with the rapid growth in the consumption of electricity in this country. It doubles every 9 to 10 years. In 1958, power production in the United States was about six times what it was in 1935. If we continue the same rate of growth, total U.S. power production by 1980 will be five or six times what it was in 1958.

Even a small percentage of this large a power industry would be a great number of kilowatts. For example, if only 10 percent of our total generating capacity in 1980 were from atomic power plants, our atomic power capacity would probably equal or exceed the total generating capacity which the United States had in 1950—more than 80 million kilowatts.

This fantastic growth rate in the electric power industry, sustained for more than 50 years, and the fact that our reserves of coal, oil, and gas are not inexhaustible, make it clear that the vigorous development of atomic power will be of great importance to the American consumer.

However, this is a most difficult and complex undertaking. We have made progress in civilian atomic power development, but knotty problems remain to be overcome. There are such technical problems as the development of new metals and ceramics which will not fail under the unusual heat and radiation conditions in a reactor, and designing fuel elements which are both cheap and reliable. There is the problem of how to store large quantities of extremely radioactive waste materials for literally indefinite periods of time.

There are also stringent safety requirements to be met. The nature of the nuclear technology and the magnitude of the hazards require a much greater degree of technical competence and a far higher level of public responsibility by both Government and industry than have earlier industrial technologies. In the past, we have permitted industry to pollute our atmosphere and streams to a considerable extent, but any similar attitude is completely intolerable in the atomic energy industry.

The Atomic Energy Commission has maintained a good safety record, although it was unfortunately marred in January of this year by the fatal reactor accident in Idaho. It will be essential to maintain a good record as the industrial uses of atomic energy spread. This will require substantial research and training, and a sufficiently deliberate approach to widespread industrial utilization, to assure the needed competence and control.

In conjunction with unique technical and safety problems, the development of atomic power presents stubborn economic obstacles. Many utility and industry people said in 1954 that if private enterprise were unleashed by amending the Atomic Energy Act, it would rapidly develop economic atomic power.

However, economic atomic power has not been achieved. The first large private industry plant has been shut down for repairs most of the time since its startup last year. These repairs incidentally arise primarily from causes which are nonnuclear in their origin. Another large plant, the Consolidated Edison plant at Indian Point, N.Y., is estimated to cost more than twice as much as originally estimated. This can result in increased power costs to the consumers of the area of one sort or another.

The costs for the Shippingport pressurized water reactor—the only large Federal power reactor in operation—also are indicative. The capacity of this reactor is to be increased from 60,000 to 150,000 kilowatts equivalent by installation of a new and improved core. This will reduce fuel costs to one-third their present level. Even so, the new fuel cost will still be much too high to be economic.

The lack of achievement of economic atomic power should not discourage us. The problems are not more difficult now than they were in fact in 1954. And we have learned a great deal from our mistakes and successes since then.

Our slow progress, in my opinion, has been primarily due to the adoption by the Atomic Energy Commission in 1954 and 1955 of an ineffective approach to solving these complex technical and economic problems.

As you will recall, the former administration rushed through legislation in 1954 to place primary responsibility on private industry to develop atomic power. At the same time, this same administration proclaimed a grandiose international program of atoms for peace, whereby the peaceful atom was going to replace stockpiles of atomic weapons.

The chosen instrument to achieve economic power in the United States, and to promote atoms for peace abroad, was the so-called partnership approach. This method emphasized U.S. Federal financial participation, without any corresponding U.S. leadership or direction of the programs.

It became evident quite early in the period following the 1954 amendments that we needed greater U.S. leadership if the domestic and international atomic development programs were going to succeed. Together with Senator GORE, I sponsored a bill in 1955 and 1956, to initiate a Federal program of building developmental atomic powerplants.

Following introduction of these bills, and particularly during their consideration by the Joint Committee in public hearings and executive sessions in the spring of 1956, various improvements were made in the bills. Thus, under Chairman ANDERSON'S leadership, the bills authorized both large and small atomic reactors which would be prototype plants for experimental and demonstration purposes. The electric power produced would be absorbed at AEC installations, and thereby hopefully avoid the alleged public power issue.

These bills, as revised, were reported out unanimously by the Joint Committee on Atomic Energy. However, they still were not palatable to some important interests. Our proposals were denounced by Atomic Energy Commission Chairman Lewis Strauss, the private power companies, and others for advocating a wasteful crash program, aimed at nothing more than building a lot of uneconomic atomic power capacity. We were accused of proposing a useless kilowatt race with Russia and the United Kingdom, and of trying to socialize the power industry.

The fact is, of course, that we had no such purposes in mind. The bill was passed by the Senate and defeated in the House by only 12 votes despite the fact that the entire weight of the executive branch was thrown against us. Obviously, a good many other Members of Congress and people elsewhere thought the bill was well advised.

I review this history not for partisan reasons, but because of the effect on the atomic

power program of the defeat of the Gore-Holifield bill. We in the Joint Committee sponsored that bill because we knew that the development of economic and safe atomic powerplants was going to be a long, hard, and expensive job. We knew that the costs of development were far beyond the capacity of private industry, particularly since there were no prospects of early profits on investments. The bill therefore aimed at establishing a positive Federal construction program of developmental plants.

With the defeat of the Gore-Holifield bill, the so-called partnership approach became the dominant pattern for the construction of atomic powerplants. In my opinion, the decision to rely almost entirely upon the approach has delayed the development of atomic power and allowed the privately owned utilities to dominate a program largely financed with public funds.

It has taken at least 5 years to complete the first large plant under the "partnership" approach. This is the project sponsored by the Yankee Atomic Electric Co. The Dresden plant, sponsored by the Commonwealth Edison Co. was built outside the "partnership" program.

A number of other projects are underway and several are nearing completion, as you know. Four of these are under construction in partnership with local public power agencies and rural co-ops but not one is yet in operation. Even in these cases, where the Federal Government has financed the reactor, the rate of progress has been halting and uncertain.

The program has been equally slow in respect to the plants proposed by the private utility groups, where Federal funds are provided for research and development and fuel subsidies. A number have been canceled and others are seriously behind schedule.

Back in 1958, I tried to make some sense out of the partnership approach by advocating AEC leadership and technical direction of the program. This more aggressive approach was spelled out in a report prepared by the Joint Committee staff in August 1958, with the advice of a distinguished panel of consultants. The Joint Committee, as you know, sponsored several projects, including the Oak Ridge gas-cooled project and the Puerto Rico superheat project under this more aggressive approach. However, AEC has not followed through aggressively to carry out its other authorizations.

The "partnership" approach seems to have run its course, at least as the main vehicle for developmental plant construction. The last three projects have apparently been duds. AEC received no proposals at all from the private power companies on the 50-megawatt organic reactor. But it apparently won't build the project itself, as authorized in the 1961 law. On two water reactor projects offered to public power and co-op systems, AEC received proposals but was unable to conclude mutually satisfactory arrangements. One of the three projects has been canceled and the other two are in a state of suspense. Congress authorized all three for construction in 1959.

Although some worthwhile plants have been started and there has been technical progress in the past 6 years, the partnership approach has proved to be clumsy and cumbersome. As a supplement to a strong Federal program, it might have some merit.

It seems to me high time that the Atomic Energy Commission move ahead with the development, construction, and operation of a sequence of developmental projects aimed at achieving clearly defined technical objectives according to a reasonable definite schedule. As the first sign of a new and bolder spirit in the executive branch, President Kennedy's recent recommendation to convert the new production reactor at Hanford to a dual-purpose plant is extremely encouraging. A converted NPR would use the heat from the reactor, which otherwise would be wasted, to produce 650,000 to 750,000 kilowatts of electric power. It will be by far the world's largest power-producing reactor. This step makes me hopeful that the new leadership in AEC will move ahead with a positive Federal program.

Once we get the NPR generating facilities authorized, and ascertain which of AEC's currently authorized projects should go forward, I believe that AEC and the Joint Committee should have a little get-together to see where we go from here. The private power people, the co-ops, and yourselves, as well as the industrial equipment companies have a stake in the development of a more aggressive program. So do consumers everywhere.

I certainly would not preclude the construction of additional plants by the privately owned utilities which they believe are financially justified in undertaking, but the U.S. program should not be primarily dependent on such projects.

As for the municipal and rural co-op utilities, there may be opportunities for additional "second round" projects. However, the costs and economic uncertainties involved probably mean that a relatively limited number of your utilities can or should participate directly in these developmental plants.

During this developmental period, I suggest that you prepare for the future use of atomic power by planning now for interconnection of your public and co-op systems. The economics of atomic power favor large plants even more strongly than those of conventional plants, and it appears that nuclear plants usually will need to be outside the city limits. While you should remain interested in the development of small plants, there is no assurance that economic reactors of less than, perhaps, 50,000 kilowatts can be developed in the foreseeable future. The best way, it seems to me, to prepare for the use of atomic powerplants is to interconnect your public systems so that you can use larger generating units located away from population centers.

In my opinion, it is in your interest also to continue your support of a strong Federal atomic power program. Experience has taught that the most effective way to protect the interests of all consumers is to maintain a strong publicly owned segment in the power industry. Your utilities have been the historical "yardsticks," in many cases in conjunction with the Federal power systems. To continue to provide such a yardstick is one of your important public responsibilities.

In the case of atomic power, during this developmental period it seems to me the Federal Government must carry the main burden of assuring strong public agency participation because of the unusual costs and economic risks involved.

I believe that we do need an effective public effort in atomic power development in order to protect the public interest in this new source of energy. If the Federal role were confined mainly to providing subsidies and research funds, effective control over the rate of atomic power development and its price to the public would come to rest largely in the hands of the privately owned utilities and the large equipment manufacturers. Now I bear no hostility toward either. Both industries are essential and are performing most important functions, on the whole with a high degree of competence.

The fact is, however, that the private utilities are State franchised monopolies which are becoming ever larger and more powerful through mergers and combinations. Their past history is spotted with major instances of consumer exploitation, public progaganda, and the abuse of the great political power they wield as well-financed monopolies. State and Federal regulation have been only partially effective at best in restraining them.

A further factor affected by the lag in the atomic development program is the situation of our private atomic equipment companies. We have had a fairly healthy competitive situation with at least seven major equipment companies in the field of atomic power development. Because of the general overoptimism in the early days, and AEC's exhortations, these companies have tended to overcapitalize on private facilities in the atomic field. Now that the pickings are not so good, it is only Government contracts once again, which are primarily responsible for keeping this industry alive.

Moreover, unless a well-planned Federal directed and administrated program is established we can be sure that only the bigger and entrenched companies can remain in the atomic power development business. Various consolidations and dropouts have been taking place.

I would regret to see atomic equipment development end up with only one or two giants in the business.

We have had a vivid example of what happens when two corporate giants dominate the electrical equipment manufacturing and distributing industry. I speak of the shocking facts which were revealed in the recent indictments of 29 electrical equipment companies and the 45 individuals involved.

I was aware of some of these corporate price-fixing and collusive bidding practices as early as July 20, 1959, when I spoke in the House of Representatives on the TVA-Los Angeles Water and Power Department's purchase of large generating equipment from Swiss and English manufacturers. Westinghouse and the General Electric Co. raised such a hue and cry against these foreign companies which outbid them, that I decided to investigate the facts which were involved.

I proved that their failure to obtain the TVA and Los Angeles Water and Power business was based on managed prices and collusive bidding practices. As you know, my contention was proven by the Department of Justice in their antitrust suits. These suits were decided in the Federal courts and resulted in some very prominent corporation officials taking an enforced vacation in what is sometimes referred to as the "pokey."

Federal Judge Ganey fined the 45 individuals involved in the price-fixing conspiracy a total of $1,924,000. The judge labeled the case as "a shocking indictment of a vast section of our economy." The Justice Department called this case of massive conspiracy the biggest in antitrust history. Judge Ganey also vigorously denounced the conspirators by stating that their actions "flagrantly mocked the image of the economic system of free enterprise which we profess to the country, and destroyed the model which we offer today as a free world alternative to state control and eventual dictatorship."

I mention this case to emphasize the need for continuous objective evaluation of our so-called free enterprise system. It is only one example of our retreat from the principle of competition. Other great segments of business have, for all practical purposes, deserted the principle of real competition. We can point to similar situations in steel, rubber, chemicals, petroleum products, finance, and labor.

We have been told throughout the complete development of our economy that our progress has been based on the incentives of reward under competitive effort in a free enterprise system. But throughout the length and breadth of our land, we can see a pattern of monopoly, managed prices, regional distribution agreements, collusive agreements between great labor unions and their employers, and rigged collusive bid-

ding, gradually taking the place of competitive practices and procedures.

Profits no longer are based primarily on efficiency of production and distribution between real competitors. Profits depend too often upon the elimination of competition through various devices which I have described.

I am deeply concerned with this erosion of the competitive principles. If our system of competitive free enterprise is a valid one, and if it is to succeed in the world struggle against the Communist system of production, it must be allowed to function without crippling distortion. We will not be able to compete successfully with the Soviet system through operating a system that denies the transmission of its benefits to the consumer.

I say we cannot deny to our people the advantages and improvements in the productive and distributive processes of a free society which operates under the competitive principle and which is inevitably stifled when monopoly takes over.

We are in a desperate cold war struggle with the Soviets, not only for the minds, but for the markets and technologies of free and neutral nations. If we are to be crippled with the deadweight of monopoly, managed prices, limited production, and unjustified profits, we cannot win. We are doomed to failure.

In the field of atomic development, the problem therefore is not merely one of maintaining a competitive domestic atomic equipment industry, or of someday achieving economic atomic power on a business-as-usual basis. In many ways the world technological leadership of the United States is at stake. We cannot depend upon the controlled pace of monopolistic groups, dictated by their own limited interests, to maintain this technological leadership. We must provide for the leadership of the Federal Government in the current state of the development of this new energy resource, and insure the full participation of private, co-op, and public organizations in the atomic program for which the Federal taxpayer has contributed billions of dollars.

Omnibus Farm Bill Is in Keeping With American Experience and Tradition

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, Secretary of Agriculture Orville Freeman gave an excellent summary of the principles and programs of the proposed Agricultural Act of 1961 when he appeared before the House Agriculture Committee on April 24. Under leave to extend my remarks, I would like to include excerpts from Secretary Freeman's testimony in the RECORD:

SIGNIFICANCE OF PRINCIPLES AND PROGRAMS OF THE NEW FARM BILL

The Agricultural Act of 1961 seeks to accomplish essential goals by means that are, on the one hand, in line with American experience and tradition, and, on the other, adapted to meet the conditions and demands of today.

The principle of adjusting abundance to current domestic and foreign needs is itself in the American tradition

This Nation, historically, has sought higher standards of living. It has sought to achieve plenty. In agriculture we have succeeded to a greater extent than in any other field. But we have never sought the waste—of both natural and human resources—that occurs when we produce what cannot be used. And so we seek, at one and the same time, in this legislation, to increase our utilization of farm products both at home and abroad and to adjust our productive abundance to those increased quantities. We are realistic enough to recognize that, even with an expansion of programs for increased consumption to the greatest possible extent that is consistent with sound and humane ideas and policies, we will not be able, in the years immediately ahead, to expand consumption enough to absorb all of our potential agricultural productivity. Thus, we must adjust our abundance.

The principle of equality of economic opportunity is basic to our philosophy, and this is all we are asking for the American farmer

The farmer is the only basic producer in our economy who now has available to him no means by which he can adjust his production to demand—and who, therefore, has no effective means by which he can influence the economic rewards of his enterprise.

It is absurd, in any consideration of a farm program, to compare the farmer with the small corner merchant.

Perhaps there should be Government action for small business, but of a different nature for a different reason. But the farmer, as a basic producer and not a retailer, can be more accurately compared with other basic producers—such as, for example, the producers of steel. Government has given to such producers the instrument of incorporation, by which they can become large enough to effectively adjust their production to quantities that can be sold profitably.

Government has likewise given to labor the instrument of collective bargaining whereby millions of individual workers—who, as individuals, would be even more helpless than the farmers—can work together to achieve a fair return for their productive activity.

To achieve economic equality, therefore, we propose programs to provide farmers with the insitutional machinery for coming together and developing supply adjustment programs, and with democratic methods for approving or rejecting such programs. We would specifically provide safeguards for consumers' interest in this process.

By enacting the proposed legislation, the Congress would establish the ground rules and guidelines under which supply adjustment programs would be developed and placed into operation. Then, whenever action is needed with regard to any commodity or group of related commodities, a committee of producers—including one consumer representative—would be selected to consult with the Secretary of Agriculture to develop and recommend a program of supply adjustment for that commodity. The Secretary would recommend a program based on these consultations. Only after such a program had been approved by the President, sanctioned by the Congress, and approved by a two-thirds vote of the producers themselves, would it become binding upon all farmers who choose to produce that commodity. The farmers who serve on these commodity advisory committees would be chosen from nominees designated by farmer-elected county committees and by farm organizations.

It is a part of the strength of this Nation to emphasize self-help and voluntary action

This principle is emphasized in the legislation here presented. I believe that the farmer advisory committees provided for in the bill will have an opportunity to exercise genuine leadership and develop economic statesmanship. They will be chosen because, taken together, they represent every group, segment, and interest that should be heard in the discussion and formulation of commodity programs, and they will therefore consider the broader implications of the policies they recommend. Charged with the responsibility of considering the interests of the farmers they represent, and facing public scrutiny and examination and approval by the Congress, they will, I am confident, once again demonstrate—as Americans have so often demonstrated—that the people themselves have the ability to consider the interest of the people as a whole. I have had experience with citizen committees and voluntary action. I know that members of these committees will recognize that they can "write their own ticket" only where the ticket is in the public interest and acceptable to all concerned.

The proposed legislation further recognizes the principle of self-help in its authorization of the expansion of marketing orders and agreements, as one important means available to farmers for developing and adjusting their industry. They give farm producers the opportunity to jointly plan their production in a manner designed to make abundant supplies of food available at reasonable prices, and yet to avoid the waste which results from excessive production.

Marketing quotas, product diversion, promotion, research, and quality control will provide many agricultural industries with the means of self-regulation. Marketing orders are truly a self-help program in that they are producer initiated, producer administered, and producer financed. And, since consumer interests are adequately protected, as required under the act, this self-help approach should be highly successful with respect to many commodities.

It is in the American tradition to seek to raise the economic level of all segments in our society

It is in this tradition that provisions for agricultural credit are incorporated in this bill.

A number of improvements in our supervised credit program are proposed, directed toward enabling all of our family farmers to benefit from the improvements contemplated in the farm program, toward strengthening the position of the family farmers, and toward enabling them to make their maximum contribution to the Nation's economic growth.

Under the proposed program the Farmers Home Administration could serve the full range of family farmers, including young farmers with farm background and training who are just starting out. It could do a far better job of helping farmers reorganize their farming operations and otherwise meet farm credit needs that are currently neglected. The administration of supervised farm credit would be simplified and improved. Farm management assistance would continue to be provided along with the loans, so that borrowers could get the maximum assistance out of every dollar borrowed. The Farmers Home Administration would continue to serve only those farmers who are unable to obtain sufficient credit from cooperative and private sources, and the legislation would in fact encourage an even greater use of credit from those sources.

Broadly speaking, the legislation would provide credit for financing farm adjustments, for enlarging and improving family farms, for acquiring farms, for making better use of water resources, for minimizing the risks in farming, for improving living conditions, and for financing modern production practices.

It is likewise in the American tradition to use our abudnance to meet human needs at home and abroad, and to utilize our abundance as an instrument for peace and freedom in the world

The provisions in the proposed legislation relating to agricultural trade development will enable us to step up our programs for expanding the export of food and fiber, both for dollars and for foreign currency. They will enable us to make more effective use of our food for peace.

The request for a 5-year extension is the key recommendation to make Public Law 480 a more forceful instrument in U.S. foreign relations. A long-term extension will give notice that the United States is prepared to give greater assurance of a continuing supply of agricultural commodities needed by emerging nations. Many of these countries are striving to promote economic growth through ambitious, long-term plans. A 5-year extension of Public Law 480 will permit the coordination of U.S. agricultural export programs with these development plans. It will also be an integral part of our Nation's plans to establish a national food policy and develop a world food budget—thus assuring our contribution to the world problem of more adequately feeding hungry people. As we increase our efforts for expanded utilization, and as we develop means—in cooperation with other countries—for the more effective use of greater quantities of agricultural exports, these new and increasing demands on American agriculture will have to be taken into account in the formulation of our agricultural programs at home. This is why an extension and strengthening of our food-for-peace program is an integral part of the Agricultural Act of 1961.

I believe that affirmative action by the Congress on the programs we present in the Agricultural Act of 1961 would set the stage and provide the tools by which (1) the farmers of this Nation, in cooperation with Government, can achieve incomes comparable, in terms of labor and capital and management skills invested, to those received by other Americans; (2) a healthy and increasingly efficient and productive agriculture will continue to provide an abundance of food and fiber at fair prices to the consumers; (3) better farm incomes and a sound farm economy will contribute to economic growth and national prosperity; (4) costs of the Federal Government can be expected to decline as programs get underway and become effective; and (5) we can achieve maximum utilization of our abundance to meet needs and promote freedom at home and abroad.

When the Poor Support the Rich

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES
Thursday, April 27, 1961

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Salt Lake Deseret News of April 21, 1961, entitled "When the Poor Support the Rich."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHEN THE POOR SUPPORT THE RICH

As the new emergency unemployment benefits go into effect this week, they offer another example of what so often goes wrong when Federal programs extend into such areas.

Theoretically, Federal aid of all kinds is intended to equalize burdens—that is, to help poorer States take care of problems they couldn't handle by themselves. Otherwise, it would be more economical and efficient for States to spend money directly on their needs rather than having their money make a round-trip to Washington with a slice taken out in the process to pay for Federal bureaucracy.

Well, let's see how that theory is working out in the emergency unemployment compensation program.

The program extends the period of unemployment payments to a maximum of 39 weeks instead of the 26 weeks covered previously. If a State is already offering coverage beyond 26 weeks (Utah had already covered 36 weeks of unemployment), the Federal Government reimburses the State under the new program.

The cost is to be paid by an additional payroll tax of 0.4 percent, to be imposed on all employers of four or more persons. The program—and the tax—is supposed to be temporary, extending only through 1963. Any assumption that it will disappear on schedule, however, would have to be based on an optimism not justified by past experience.

Anyway, here's the joker: In 41 States, including Utah, the tax payments will exceed the benefits received. The nine States where benefits will exceed payments are New York, New Jersey, Pennsylvania, Ohio, Michigan, Alaska, Oregon, Kentucky, and West Virginia.

Of those 9, the Utah Foundation points out, 3 are among the top 10 States in per capita income, and 4 more are among the second 10 States in per capita income.

And so we have the curious phenomenon of poorer States subsidizing richer States through the agency of the Federal Government—an absurdity which is, unfortunately, not confined to this particular program.

House Resolution 211—Special Committee on Captive Nations

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. FLOOD. Mr. Speaker, on March 8, 1961, I introduced a measure calling for the establishment of a Special Committee on Captive Nations in the House of Representatives. This measure is now House Resolution 211. There are not sufficient words to express my profound gratitude and personal delight to the more than 20 Members of the House who joined with me in that most stimulating and very enlightening discussion which took place then on the subject of the captive nations—CONGRESSIONAL RECORD, March 8, 1961, "Russian Colonialism and the Necessity of a Special Captive Nations Committee," pages 3286–3311.

The popular response to House Resolution 211 has been so enthusiastic and impressive that I feel dutybound to disclose the thoughts and feelings of many Americans who have taken the time to write me on this subject. These citizens are cognizant of the basic reasons underlying the necessity of the proposed committee. They understand clearly the vital contribution that such a committee could make to our national security interests. In many cases, they know that no public or private body is in existence today which is devoted to the task of studying continuously, systematically, and objectively all of the captive nations, those in Eastern Europe and Asia, including the numerous captive nations in the Soviet Union itself.

Because their thoughts and sentiments are expressive and valuable, I request that the following responses of our citizens to House Resolution 211 be printed in the Appendix of the RECORD.

BROOKLINE, MASS., *April 7, 1961.*

Hon. DANIEL FLOOD,
House of Representatives,
Washington, D.C.

DEAR MR. FLOOD: I have read about your bill concerning the captive nations and am very happy that someone is taking a deep interest in the nations subjugated by Russia. I think it is high time that someone did.

I think that the committee for captive nations that you plan to establish will do a fine job for the cause of freedom and liberty throughout the world today. It will also enhance the prestige of the United States.

I do hope that this administration will see the value of your work and will work to see that the bill is passed.

Very truly yours,
MARCELLA A. KOZUCH.

UKRAINIAN-AMERICAN ASSOCIATION INC.,
Omaha, Nebr.

Hon. DANIEL J. FLOOD,
New House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: The Ukrainian-American Association Inc., of Omaha, Nebr., wishes to congratulate you on your bold and far-sighted move in introducing the resolution calling for the establishment of a permanent Committee on Captive Nations in the House of Representatives.

This committee will not only serve as a reservoir of information and data on various enslaved nations in the U.S.S.R., but will also inform the American people and the world on the state of affairs behind the Iron Curtain. This no doubt will be of great help in assisting the U.S. Government in formulating its policies with respect to these enslaved nations.

Again we wish to emphasize our great pleasure in seeing this resolution introduced, and we also wish to commend you on your outstanding work in regard to this committee.

We are also writing our Congressmen from Nebraska and asking them for their support of this resolution.

Sincerely yours,
MRS. H. CZECHUT,
President.

ELMSFORD, N.Y.,
April 7, 1961.

Hon. DANIEL FLOOD,
House of Representatives,
Washington, D.C.

MY DEAR MR. FLOOD: Please accept my congratulations on your introducing House Resolution 211 establishing a Special Committee on the Captive Nations. This is a step toward a most worthy goal, that of ending the manmade inequalities that rob men of the chance to develop to the full what possibilities they have.

By making known to the world conditions existing in the captive nations, and by other valuable work to be done by your committee, you are challenging every one of us to work

to make every country a fairer place for all. We each have a part to play in making the brotherhood of man a reality and ending the scourge of war. We are all members of a human family with certain rights. Your committee will help build a foundation on which to build freedom, justice, and peace in the world. I am confident you will be successful. It is a worthwhile endeavor and you are to be congratulated on your work.

Very truly yours,

WILLIAM T. SNYDER.

BRIARWOOD, LONG ISLAND,
April 3, 1961.

Congressman DANIEL FLOOD,
U.S. Congress,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: Your idea for setting up a permanent Committee on Captive Nations is comparable to a medicine for curing cancer. A great weakness in our foreign policy is lack of knowledge and information about the people the Russian Communists are whipping into line as they keep spreading their military power.

The free world keeps forgetting more and more that most of the people in the Soviet Union live under the Russian conquerors' heel and they are very unhappy. With proper and intelligent encouragement, this unhappiness can swell into a wave that will either destroy or, at least, neutralize communism's successes.

Your committee would provide the necessary information for intelligent action concerning the people who are captive but who long for freedom. May God help you in your gallant effort.

Most respectfully yours,

JOSEPH LESAWYER.

MARCH 29, 1961.

Hon. DANIEL J. FLOOD,
House Office Building, Washington, D.C.

DEAR CONGRESSMAN FLOOD: The Ukrainian Congress Committee of Willimantic, Conn., wish to congratulate you on introducing the resolution calling for the establishment of a Permanent Committee on Captive Nations in the House of Representatives. We agree that such a committee is long overdue. The Soviet Union is one of our greatest problems, master of many peoples of various nations. These nations are very eager to be free from such slavery. It would be a great advantage to us to know all the weaknesses of such an existance.

If such a committee were formed, and it must be, it would be a great source of information. Such a committee could help to prove to the U.S. Government and its people and to the people of the world, the great necessity and importance of their work for freedom.

A letter has been written to Connecticut's own Congressman KOWALSKI, informing him of our intentions and asking him to give this matter his greatest interest. Once again congratulations on your good work.

Respectfully yours,

MICHAEL PLESZ,
President, Ukrainian Congress Committee of Willimantic, Conn.

POUGHKEEPSIE, N.Y., *April 5, 1961.*

Hon. DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: Our heartiest congratulations to you in introducing the resolution for the establishment of a permanent Committee on Captive Nations in the House of Representatives. It is our duty, and certainly to our advantage to know all that is possible about the nations held captive by Moscow. These nations, eager to throw off the hated Communist yoke, constitute the weaknesses of the Soviet Union.

A committee such as you proposed would enlighten America and the world as to the state of affairs behind the Iron Curtain. It would also serve as a source of information on the enslaved nations in the U.S.S.R., to assist the Government in formulating its policies with respect to these nations. We will certainly make every effort in urging our Congressman to support your resolution.

Sincerely,

STEPHAN BERNYK.

FAIRFIELD, CONN., *April 9, 1961.*

Congressman DANIEL J. FLOOD,
House of Representatives.

DEAR CONGRESSMAN: I would like to congratulate you on the excellent work you have done in initiating the drive for the establishment of the Special Committee on the Captive Nations.

I certainly don't have to inform you of the seriousness in which we find ourselves—the almost daily reports of further setbacks by the free powers in the psychopolitical cold war. That is why I wholeheartedly support this attempt by you and many others to try to take the offensive in the cold war.

I give my complete support for the Special Committee on the Captive Nations.

Very truly yours,

JOHN J. RELIHAN, Jr.

COURTS OF OYER AND TERMINER
AND QUARTER SESSIONS OF THE PEACE,
Pittsburgh, Pa., April 19, 1961.

Hon. DANIEL J. FLOOD,
Congress of the United States, House of Representatives, Washington, D.C.

DEAR CONGRESSMAN FLOOD: Congratulations on House Resolution 211 establishing a Special Committee on Captive Nations. This most worthy movement will encourage the hopes of those unfortunate enslaved people who are suffering under a brutal atheistic rule of Communism.

I also want to congratulate you on the excellent work you are doing for the people not only in your congressional district but also for the country at large. By this you are giving inspiration and hope to the unfortunate people who have lost their freedom.

With kindest regards and best wishes for your continued success, I am

Very sincerely yours,

JOHN H. SHENKEL,
Consultant, Americanism Committee, Department of Pennsylvania, The American Legion.

MINNEAPOLIS, MINN.,
April 5, 1961.

Hon. DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: As representatives of the named organizations, we wish to express our wholehearted support for the resolution you introduced in the House of Representatives, and we will urge our Congressmen from the State of Minnesota to vote for the establishment of a permanent Committee on Captive Nations in Congress.

We feel your proposal is very important to our Government, because it would constitute not only a source of complete and reliable information about the many nations enslaved by Moscow, but also would make the American people and the free people of the world realize that life in the U.S.S.R. is not as the Communist Party and the Soviet dictatorship would like the world to believe. The Committee on Captive Nations could, we think, present the truth about the peoples behind the Iron Curtain.

Your dedication, effort, and concern for the truth about the nature of Soviet tyranny and the lack of freedom of the people who must live under communism, deserves not only the support of our Congressmen, but of all the people of the United States.

Our sincere greetings,

WASYL FILONOWICH,
Chairman, Association of Ukrainian Veterans and Ukrainian Financial Committee.

VSEVOLOD RADCHENKO,
Secretary, Association of Ukrainian Veterans.

WOLODYMYR ROMANOWSKYJ,
Secretary, Ukrainian Financial Committee.

ANTON ROMANENKO,
Chairman, Ukrainian National Democratic Association.

PHILLIP PRODANCHUK,
Secretary, Ukrainian National Democratic Association.

GILMORE & CO.,
St. Louis, Mo., April 14, 1961.

Hon. DANIEL FLOOD,
House of Representatives,
Washington, D.C.

DEAR SIR: I have read House Resolution 211 and would like to congratulate you on your fine proposal. I have observed the various reactions to Captive Nations Week throughout the world and give my wholehearted approval for your most recent resolution.

I sincerely hope that you can muster the strength to insure its success in Congress.

Very truly yours,

LOUIS A. GILMORE.

Fordham Professor Comments on Electoral College

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, April 27, 1961

Mr. KEATING. Mr. President, a distinguished constituent of mine, Prof. James J. Flynn, chairman of the department of social studies of the Fordham University School of Business, recently commented on the issues underlying the present public controversy over the role of the electoral college. His speech is a thoughtful and reasoned analysis of this subject. It contains much which is worthy of our close attention.

While I personally am of the opinion that the electoral college has outlived its usefulness and should be abolished, I am happy today to invite attention to Professor Flynn's comments. Although he takes a somewhat different position, his statement is indeed an important contribution to the literature on this subject.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

IS THE ELECTORAL COLLEGE DOOMED?

(By James J. Flynn, Ph. D.)

The major TV networks had scarcely switched off their electronic computers on the morning after election when from all

parts of the country came complaints against the electoral college. Every 4 years, the months after the presidential election, becomes open season on the machinery for choosing the Chief Executive.

Senator MIKE MANSFIELD is the spearhead of the current attack on the electoral college. He argues that the college is antiquated and that only the popular vote should decide our choice for President and Vice President. This position, so soon after one of the closest elections in our history, only helps to confuse the issue for the average citizen.

The members of the Constitutional Convention in 1787 found the decision on the mode of choosing a President one of their most difficult. James Wilson, a delegate, stated it this way:

"The subject has greatly divided this House. It is in truth the most difficult of all on which we have to decide."

The final decision to permit the State legislatures to choose the method of picking their electors for the President and Vice President was based on the thesis that the right of appointment was not to be exclusively vested in the people.

What was the intention of the delegates to the Constitutional Convention in deciding on this method of electing a President? One suggestion is that they wanted to keep the people from all participation in choosing the Chief Executive. Another suggestion is that they wanted the electors to be completely free agents without any control by the people. The Founding Fathers would have denied both of these suggestions. James Madison constantly stated "the President is to be elected by the people." Edmund Randolph said "the electors must be elected by the people at large." Such statements clearly refute the view of those who argue that the Founding Fathers feared the people and distrusted their judgment.

It has never been quite understood that under the Constitution State legislatures have the uncontrolled and unrestricted power to fix the manner of appointing the presidential electors. With this great power at their disposal State legislatures have nevertheless, under a kind of moral persuasion, given up their prerogative of changing the present system. By the adoption of similar laws in each State there has developed a uniform method of appointment.

The method of choosing electors in present use is called the general ticket-plurality system. In the election just completed there were 537 electors to be voted on. The breakdown of the number is arrived at by assigning 100 electors to the States on the principle of equality, each State being entitled to 2. The remaining 437 electors (to be reduced to 435 as the result of the census of 1960) are distributed according to the principle of population, each State being assigned as many electors as it has Congressmen. To be elected a presidential candidate must capture a majority of the total electoral vote. In the election just completed an electoral vote of 269 was needed for a nominee's victory.

The Constitution says that electors may be chosen, "in such manner as the [State] legislature may direct." Under the present general ticket-plurality system a citizen enters his voting booth to choose a nominee for President. In fact he is voting for every elector to which his own State is entitled. For example, if you voted in New York State on November 8, you would have faced a voting machine listing the names of Kennedy-Johnson and Nixon-Lodge yet as you pulled the lever for either team you would have been voting, not for your candidates, but for a list of 45 electors previously approved by his political party.

As a result of this system the candidate who wins the largest popular vote in the State receives all of the electoral vote of that State. This makes possible the situation in which the candidate with the total popular vote of the country could lose the electoral vote and the election. An extreme example might be as follows:

State	Candidate A		Candidate B	
	Popular vote	Electoral vote	Popular vote	Electoral vote
	Thousands		*Thousands*	
Alabama	25	0	200	11
California	2,100	32	2,000	0
Massachusetts	1,100	16	1,000	0
Montana	90	0	100	4
New York	3,100	45	3,000	0
Ohio	1,000	0	2,000	25
Pennsylvania	1,000	0	2,000	32
North Carolina	80	0	700	14
Texas	600	32	400	0
Wisconsin	401	12	400	0
Total	9,496	137	11,800	86

The Constitution makes electors free agents who may vote for any qualified man or woman that they feel should be President and Vice President. Our Founding Fathers did not fully recognize the possibility of political parties and thought of the electors as free agents. This myth persists. For example, as late as 1952 in *Ray* v. *Blair* (343 U.S. 214.) the U.S. Supreme Court ruled that a California law requiring an elector to sign an affidavit to support the candidates nominated at the national conventions was unconstitutional. Custom and party pressure almost invariably make electoral delegations vote as a unit. The last exception to this occurred in Alabama in 1956 when 1 of the 11 Democratic electors did not cast his ballot for Stevenson.

Some of those who have agreed that the above system has outlived its usefulness refuse to support the thesis that some system not using the electoral college should be devised. A method called the single-member district system has been suggested as a more democratic way of choosing electors. In this method the candidate receiving the largest popular vote in each congressional district would get the electoral vote for that district. The candidate receiving the greatest popular vote in any given State would garner the two additional electoral votes for the State. For example:

NEW YORK

Candidate A:

Won 23 congressional districts—23 electoral votes.

Popular vote—3,240,600—2 electoral votes.

Total electoral votes: 25.

Candidate B:

Won 20 congressional districts—20 electoral votes.

Popular vote—2,301,306—No electoral votes.

Total electoral votes: 20.

While the single-member district system has gained some momentum, the most effective argument against it is that it would inevitably degenerate into a gerrymandering system. A gerrymander is an artificial arrangement of districts designed to give the political party making it (that is the party in power) a guarantee of electing its candidate to a representative or electoral body. With all the undemocratic overtones to "gerrymandering" it would seem that the single-member district system would be a weak solution to the electoral problem. However, it is generally agreed that this system is superior to the present general ticket-plurality system.

Following the election of 1948, Senator Henry Cabot Lodge and Congressman Edward Gossett introduced a resolution for a constitutional amendment. It was approved by the Senate, but later failed in the House. This resolution would have translated popular votes into electoral votes, and alloted a State's electoral quota among the candidates in proportion to the statewide popular votes polled. All that would be necessary to win would be a 40-percent plurality which would practically obviate the chance of an election being thrown into the House. This proposed amendment would have operated as follows:

NEW YORK

Present System:

Candidate A, 3,260,362—45 electoral votes.

Candidate B, 2,167,367—No electoral votes.

Lodge-Gossett resolution:

Candidate A, 3,260,987—22.6 electoral votes.

Candidate B, 1,999,999—22.4 electoral votes.

The strong argument against a change by means of the Lodge-Gossett resolution is that both State and National Legislatures presently overrepresent rural interests. The present electoral college system, conversely, is the only way to assure that presidential candidates will listen to the demands of urban majorities and minorities in America. The chief interest of southern sponsors of electoral reform is to diminish the alleged power of urban minorities, particularly the northern Negro, in national politics.

It is to be noted that all suggestions for change mentioned in this article are alike in that they modify the electoral college. If the change is to come it must be by amendment, for State reform is unlikely especially in the big industrial States. The same considerations of interest and pride, chiefly the increased weight accruing from an undecided block of electoral votes, which originally induced one after another of them to give up the earlier district system plan can be counted upon to frustrate any attempt, within their own boundaries, to revive it or anything resembling it.

One thing is certain. The elimination of the electoral college system is practically an impossibility. The use of the popular vote as the sole determinant is not practical. Our representative system is based on a compromise between population and regional needs.

From a practical point of view, since the polls closed on November 8 some Republican leaders thought that there should be a recount in 11 States. Some of these recounts were started. A recount in all 11 would have provoked considerable uncertainty and political passion.

But, if the Presidency depended on a majority of the popular vote in the entire Nation, we would then have a recount of the votes in all 50 States. This would open the door to extensive opportunities for fraud in every area where one party had decisive control of the election machinery.

The electoral college system, if it does nothing else, restricts the area of argument to a limited number of States. It does not put the whole country at the mercy of political machines determined to grab everything in sight.

No one really questions that the electoral college system is cumbersome and anachronostic. But it is still very much a question as to whether the change should be made now. The real issue has been posed by President John F. Kennedy: "If we are considering a radical shift in the balance of power in the United States, it should not be undertaken lightly." The cure is often worse than the disease.

The Ad Hoc Committee on Cuba

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1961

Mr. ZABLOCKI. Mr. Speaker, on February 2, under leave to extend my remarks, I included in the RECORD an exchange of correspondence with the ad hoc committee, composed of Milwaukee, Wis., residents, who were critical of our Federal Government for its alleged failure to take any steps to seek peace in Laos.

The other day, I received another open letter from the ad hoc committee. In this letter, the committee has in effect urged the Government to give the Communists a free hand in Cuba.

Under leave to extend my remarks, I would like to place in the RECORD the text of the ad hoc committee's letter, as well as my reply to them. The two letters follow.

AN OPEN LETTER

To President John F. Kennedy, Secretary of State Dean Rusk, Ambassador Adlai Stevenson, Senators Alexander Wiley, William Proxmire, Congressmen Henry Reuss, Clement Zablocki, Robert Kastenmeier, editors of the Milwaukee Journal, and the Milwaukee Sentinel:

We strongly support the declaration of President John Kennedy at his news conference on April 12, 1961:

"There will not under any conditions be an intervention in Cuba by U.S. Armed Forces. This Government will do everything it possibly can, and I think it can meet its responsibilities, to make sure that there are no Americans involved in any action inside Cuba. I wish to make clear also, that we would be opposed to the use of our territory for mounting an offensive against any foreign government."

We affirm this stand because:

1. We see in armed invention the risk of world war III.

2. We do not wish to adopt the methods of the Soviet action in Hungary or the British-French action in Suez.

3. We have faith that there can be negotiated solutions to international disputes.

4. We believe that intervention would forfeit the confidence and friendship of the Central and South American Nations.

While many of us may look upon the Castro regime with disfavor, puzzlement, and disappointment, we are no less concerned with the folly of our Cuban policy which now causes the American people so much anguish. Now is the time for open discussion. It is our conviction that an informed public opinion will make its influence felt upon those who are in positions of leadership.

There are questions deserving serious and immediate attention. For example: (1) What are the minimum conditions for reestablishment of diplomatic relations with Cuba? (2) What should be our attitude toward social and economic upheavals in Central and South America? (3) In what specific ways does the social revolution in Cuba threaten the fundamental interests of the American people as a whole? (4) Is there anything in American policy toward Cuba which has contributed to her dependence on the Soviet bloc? (5) What are our obligations under the Charter of the Organization of American States?

We think that James Reston, political analyst of the New York Times, has clearly stated the principle involved:

"Everywhere in the world the United States is trying to defend or establish a simple overriding principle: That force shall not be used, directly or indirectly, to achieve political ends, and that all international disputes shall be settled by negotiation. This is the principle we are trying to sustain in Laos, where we are arguing against the shipment of Soviet arms for use against a government we support. This is the principle we supported even against the British and French in the Suez war. This is the principle we are trying to defend in the Congo, in Indonesia, in the Middle East, in Algeria, and in Berlin.

Surely that same principle applies in our relations with Cuba and the other Central and South American nations.

People striving for economic betterment, political freedom, and national independence, sometimes use methods we abhor or go to extremes we deem unwise. Even in such cases we must uphold the principle of nonintervention. Our claim to moral leadership demands it. Intervention points to disaster.

Sincerely yours,

The ad hoc committee: Rev. Roy Agte, W. Robert Brazelton, Louis Becker, Dr. Neal Billings, William Brown, Dr. Gladys Calbick, Dr. Martin Cohnstaedt, Wilma Ehrlich, Jack Eisendrath, Rev. Roger Eldridge, Dr. Hugo Engleman, Donald Esker, Mrs. Maxine Franz, Richard Franz, Wayne Gourley, Dr. Alan Grossberg, Mrs. Ruth Grossberg, Mrs. Leon M. Hamlet, Dr. Dorothea Harvey, Rev. Herbert J. Huebschmann, Edward Jamosky, Harvey Kitzman, Dr. David Luce, Dr. Willie Mae Gillis, Mrs. Virginia Parkman, Mrs. Louise W. Peck, Dr. Sidney M. Peck, Mrs. Annette Roberts, Mort Ryweck, Dr. Gordon Shipman, Dr. James W. Skelton, Rev. Kenneth L. Smith, Max Taglin, Mrs. Thelma Taglin, Corneff Taylor, Arthur Thrall, Nick Topping, Frieda Voigt, Rev. Lucius Walker, Theodore Warshafsky, Jack Weiner, John Werner, Rev. Herbert Zebarth, Leonard Zubrensky.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., April 26, 1961.

Dr. S. M. PECK,
Milwaukee, Wis.

DEAR DR. PECK: This will acknowledge your open letter of April 25, outlining your ad hoc committee's views on the situation in Cuba.

I have noted your views and I wish to reassure you that, as in the past, I will continue to support efforts made by our Government to resolve international problems through peaceful negotiation. However, we can only expect constructive results from such negotiations if we negotiate from a position of strength, not of weakness.

I must add that I am amazed at your committee's apparently unshakable faith in the peaceful intentions of the commies and their willingness to reach negotiated settlements. It would seem to me that your belief in the sincerity of Communist statements and pledges should be wearing thin. What do you find in the record of the past 15 years—and in the record of recent developments in Cuba, Laos, Vietnam, and other areas—to sustain your faith? I would be interested in receiving your reply.

There is one last comment that I would like to make: Apparently history has failed to persuade you about the true nature and the real objectives of communism. You are, of course, puzzled and disappointed with Castro; according to your letter, many members of your committee even look upon him with disfavor. But the last paragraph of your letter indicates to me that you still consider Mr. Castor, and others in his category as basically well-meaning agrarian reformers, social reformers, or political reformers who—on occasion—may go to extremes which you consider unwise. Your advice in those instances is that we should sit tight and do nothing.

I do not believe that we should try to run the affairs of any nation other than our own, or attempt to rule the world. At the same time, we should not sit back and watch the Communists swallow up the free world bit by bit until they accomplish their objective—world domination. As a free nation, as a responsible world power, and as leader in the free world, the United States has a responsibility to its neighbors which goes beyond sitting back and engaging in intellectually stimulating discussions, or in passing resolutions, or in composing open letters. I am confident that the vast majority of the American people are conscious of that responsibility and are determined to live up to it.

Yours sincerely,

CLEMENT J. ZABLOCKI,
Congressman, Fourth District.

Lessons and Danger

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1961

Mr. ALGER. Mr. Speaker, there are many dangers and lessons in the article here presented—Human Events, April 21, 1961:

GERMANY IGNORED ECONOMIST HELLER, AND PROSPERED

Imposing evidence has only recently come to light to show that leading New Deal economists, including Prof. Walter W. Heller, are capable of giving some mighty bad advice. This is important because Mr. Heller is now Chairman of President Kennedy's Council of Economic Advisers.

The State Department has declassified a 1951 report in which Mr. Heller, Prof. Alvin Hansen, and several others solemnly warned that the German economy could not possibly improve without a thorough immersion in Keynesian-New Deal philosophy (reported in Human Events, Mar. 17, 1961). Events have proved that the forecast was silly.

The professors were members of a Marshall plan team whose mission was to tell the new German Government how to manage its economy. Their 400-page report, said to be largely the work of Mr. Heller, expressed the opinion that the German economy was bogged down on a sort of plateau and that proper measures must be taken if the possibilities [of further progress] are to be realized.

Fortunately for Germany, the Bonn government disregarded the report. In every important matter it kept on doing precisely what Mr. Heller and his colleagues said it should stop doing, and Germany has wound up better off than the report considered possible even if its recommendations had been followed.

The report said Germany would never achieve the necessary rate of industrial expansion if it continued to worry about inflation; that it should not confuse wartime inflation with the normal operations of peacetime credit; that it had an excessive concern for price stability; and that it was

overly timid in allowing the creation of new credit.

Germany has continued to guard against inflation (as successfully, in fact, as any industrial country) and has kept a tight rein on the expansion of credit.

The report called for easy money and said that a rate of interest high enough to stimulate any large volume of personal savings would seriously curtail investment.

Germany has kept a high rate of interest.

The report said that tax concessions granted to industry, such as depreciation allowances, were being abused and that in any case they represented only an expenditure of tax funds which would otherwise have been collected by the Government. Accordingly, the report said, a compulsory investment program would be more effective. Under the recommended program, all industries were to be assessed for the fund and the government was to distribute the money to industries where there was a crying need for expansion.

The Government did nothing of the kind.

The key bottleneck in German industrial expansion, the report said, was an inadequate supply of coal. It recommended vast Government programs for stimulating the production of coal.

Little was done along this line. Coal has become a drug on the market and the problem has been how to dispose of the surplus.

The report proclaimed that "the nostalgic hopes * * * looking toward a revival of the 19th century role of the capital market are doomed to disappointment. The capital market plays no such role in any modern country and there is no prospect that it will."

The capital market is still functioning much as it always did, here as in Germany, in spite of persistent attempts to dislodge it.

Finally, the report drew a distinction between Germany, squeezed between too great a demand for imports and not enough exports, and the United States, "where there has never been any fear of a squeeze or an external drain."

Today, having disregarded all of Mr. Heller's recommendations, Germany has turned the tables on us. It has built up an enormous trade surplus, accumulated nearly $8 billion in reserves, and the squeeze is on the United States—to such an extent, indeed, that we are begging Germany to help us out.

What actually happened just couldn't happen, according to Mr. Heller and others. They go on pretending that the United States must take the same medicine they prescribed for Germany even though Germany recovered precisely because it poured the nasty stuff down the drain.

Now, what are the dangers and lessons?

First. Danger: Security classification by the State Department which withholds information from our people.

Lesson: Public knowledge and discussion will show up the fallacies of regimented bureaucratic thinking, foreign to a free enterprise constitutional Government society.

Second. Danger: The gentleman whose views are so thoroughly discredited, Mr. Heller, is now the top economic adviser to the President.

Lesson: A President can surround himself with fuzzy thinkers.

Third. Danger: While Germany disregarded these fallacious economic theories, of no need to worry over inflation, easy money, Government aid to industry, misunderstanding the capital market, the United States is obviously following them, witness recent Presidential messages and legislation—the tax recommendations, area redevelopment bill, the housing message, and the like.

Lesson: Government regimentation, Federal bureaucratic planning, taxing, and control is no match for free private enterprise and people left alone by Government.

When will our people wake up to the dangers which our Nation faces and remember the lessons learned by our leaving the Old World, our revolution and formulation of our form of limited constitutional Government?

Confidence in Uncle Sam: Unlimited

EXTENSION OF REMARKS
OF
HON. JOHN J. FLYNT, JR.
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. FLYNT. Mr. Speaker, on Monday and Tuesday, April 24 and 25, 1961, Quimby Melton, Sr., publisher of the Griffin Daily News, Griffin, Ga., initiated a campaign entitled "Confidence in Uncle Sam: Unlimited." I personally endorse the thoughts of this patriotic American, and it is with personal pleasure that I include an editorial written by Mr. Melton, which appeared in the Griffin Daily News issue of Tuesday, April 15, 1961:

CONFIDENCE IN UNCLE SAM: UNLIMITED

The suggestion made Monday, in this column, that every family in Griffin and Spalding County show their confidence in Uncle Sam, by buying a U.S. savings bond, is beginning to "snowball." There are indications that this suggestion may catch on as a nationwide campaign.

Today, the city commission has issued a proclamation calling May a month for showing "Confidence in Uncle Sam: Unlimited." In this proclamation the city fathers urge everyone to buy a bond during the month of May. If every family in Spalding does this it will mean $150,000 they are investing in a fund to help preserve democracy and freedom in this Nation.

Numerous persons have called, not only locally, but several from out of the county, approving the plan. Today we are featuring the proclamation of the city commission in another story. Tomorrow we will comment on what folks are saying in support of this campaign.

It all started when we were impressed by the statement of President Kennedy, that he was determined that our freedoms should not be curtailed by communistic aggression.

We asked ourselves, "What can I do to help?" Then came up with this idea of buying a bond—taking stock, as it were, in the "Confidence in Uncle Sam Unlimited" organization.

To fill out the column today, we'll just recount a conversation with two men.

One, a businessman, said, "I'm going to buy a bond for each of my three grandchildren. I want to do my part to help guarantee that they never live under the rule of a totalitarian dictator."

The second man, a large property owner and a man who owns many gilt-edge stocks and bonds, said:

"I have never bought a Savings Bond. For I can earn more interest with my money by other investments. But this can be called a national emergency. I'm going to buy at least $1,000 worth of bonds, not as an investment, but as a contribution to my Government. I realize, looking at this from a hard-boiled business viewpoint, that if the Communists take over, all the property I own and all the stocks and bonds in my safety deposit box will not be worth a dime."

There you have two viewpoints.

The businessman, who wants to help guarantee that his grandchildren will enjoy the same freedoms as he enjoys; and the hard-boiled investor, who wants to guard the value of his property, stocks and bonds.

Few of us can buy $1,000 bonds—but each family can well afford to put $18.75 into one bond and have a part in saving this Nation of ours from Communist domination.

Come on Griffin and Spalding County—let's all buy bonds.

Another Try at Cuba

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. KOWALSKI. Mr. Speaker, I applaud the leaders of the Democratic and Republican Parties for supporting President Kennedy's foreign policy at this crucial time. There can be only one foreign policy of the United States, and the President is solely responsible for its execution. Certainly history has shown that once a decision is made the people of this great democracy have never flinched from the consequences of that decision.

Past events, however, have also demonstrated that the American people do not have closed minds. They seek information and even welcome debate. They are eager to explore alternatives. They have faced up to war, but overwhelmingly they desire peace.

Because we are an intelligent people, I believe, Mr. Speaker, there is room and indeed a need for an objective appraisal of the Cuban situation.

The invasion of Cuba was a horrible fiasco. The American people join with those who grieve for the young Cubans, so uselessly sacrificed on the beaches of their beloved land. Furthermore, it is no secret that many Americans have lost confidence in those who conceived and led this unfortunate invasion. Most significantly, the American people are deeply disturbed by the terrible blow which the invasion debacle has dealt the prestige of the United States.

It matters little whether the United States did or did not finance, organize, and arm the invasion forces. The cold fact is that the world believes we did. And so, Mr. Speaker, we cannot escape the indictment that the failure of the anti-Castro counterrevolution was an American failure.

But why did the invasion fail?

As a military action, it was doomed to failure from the beginning because the invasion force was militarily inade-

quate. It was no match for the defending forces available to Castro.

The invasion failed also because it was ill conceived, poorly planned, and lacked necessary military capability. It is difficult to believe that the Pentagon was very pleased with the operations. I am inclined to think that our military leaders were skeptical onlookers, thoroughly amazed at the ineptness of amateurs playing at war. It would appear that on the American side, the invasion was encouraged essentially by a group of enthusiasts who really believed that Cubans by the thousands would leap to arms in support of the counterrevolution. They were wrong and our position must be reoriented.

But most important, the counterrevolution failed because it had no roots in the people of Cuba. It failed because it had no appeal for the farmer and the worker. It failed because it appealed mainly to the dispossessed—those who had and lost. Unfortunately, there were many, many more of those who had nothing and were promised much.

There is strong evidence today that the recent invasion of Cuba was only a probing action, that there will be other invasions of Cuba, supported and encouraged presumably by the United States.

Before we support other invasions of Cuba, let me caution the sponsors of future invasions to read carefully the lessons on revolution written by Che Guevara in his manual on guerilla fighting in the Castro uprising. Whatever Americans may think of Castro, he is nonetheless a living example of a success revolutionist. He understood and still thoroughly understands the Cuban farmer and worker. He won in Cuba, because he fanned the burning desire of the peons for land and reform. He has maintained himself in Cuba, because he fans the great pride of Cubans in Cuba and in themselves. Unless the architects of future invasions ignite a similar spark in the hearts of the Cuban farmers and workers or crush them outright with overwhelming military power, it is doubtful that these recent guerilla fighters will desert the Castro revolution.

So much for the invasion which failed.

We have also failed to starve Castro into submission. The sugar embargo has failed and so have our efforts to isolate Cuba. As a matter of fact, these efforts have aroused sympathies for the Cubans throughout South America and in many parts of the world. The great Yankee democracy is pictured as a heartless colossus crushing the little people of Cuba.

But why are we so overwrought about Cuba?

Historically, the United States has always feared the presence of an alien force on Cuba. In the Castro regime we have a hostile government which has accepted foreign military and economic assistance of great potential danger to the United States. Cuba is being built up not only as a hostile military base, but a stepping stone for international communism—a friendly door inviting Soviet penetration into this hemisphere. This we cannot permit. What frustrates us in Cuba is that we are unable to come to grips with the real culprit, the Soviet Union.

The United States has every right, under international law and under the inter-American treaty arrangements, to defend itself and the hemisphere from external attack, direct or indirect, whenever such an attack has occurred or is being prepared. It has no right, however, under international or domestic law, and no moral justification for taking action but pretending that it is not doing so.

Moreover, as long as the pretense exists, any such action must be covert, ineffective, and doomed to failure. We thereby compound cynicism with defeat.

Before we took action in Cuba or supported others, in so doing we should have ascertained whether we had full legal and moral justification for what we did. Our experts in international law know that frequently there is a legitimate conflict of legal principles which creates doubt as to our legal rights. However, we have the right and duty to apply those principles which sanction actions essential to protect ourselves and to oppose aggression if such a threat in fact exists. If the facts did not justify such action, we had no course but to withhold action.

We have always stood before the world as the defenders of international law. We therefore cannot afford to be vulnerable to a charge of violating it.

Nevertheless, the conclusion seems to be that we must destroy Castro and his regime. We could crush him with our military power like an elephant might crush a mouse, but we dare not. And so we have decided to sympathize with, support, and encourage a counterrevolution in Cuba.

In the light of this decision, other invasions of Cuba are coming. Who will be the invaders? Reliable sources have suggested that they will be Social Democrats. Each one of us will have his own views of what is a Social Democrat, but it is reasonable to assume that the United States will support Cuban patriots with liberal views. The invaders can be expected to support progressive social and land reform programs. The fundamental political objective of the invaders will be to reestablish freedom and democracy in Cuba.

The last invasion failed to communicate its objectives to the people of Cuba; and future invasions, I regret to observe, will have the same difficulties. For in a popularity contest in Cuba, Castro is the hero. It was Castro who seized the sugar lands. It was Castro who seized the banks and factories from foreigners and wealthy Cubans. It has been Castro who has seized the imagination of the Cuban people.

As Americans, we hope patriots will find a way to ignite the spark of desire for freedom which could destroy Castro, but I doubt that the peons and the bearded ones can really understand the noble intricacies of a social democratic counterrevolution. I must reluctantly conclude that in any future invasion as in the past one, they will remain loyal to Castro.

It has been reported that during the last invasion, great masses of people were armed and ready to fight off the invaders. Accordingly, if an invasion of Cuba by "Social Democrats" or any other group is to succeed, it seems quite certain that U. S. military forces will have to play a determining role. The invaders must be strong enough militarily to destroy sizable Castro forces on the beaches and in the interior. This will require the recruitment, training, and equipping of major rebel invasion units. It will require naval and air support. Bluntly, it will require at least limited military intervention by the United States. This course will lead us to horrible bloodshed and slaughter.

We might get some other South or Central American country or countries to do the recruiting, training, and equipping for us, but this is a doubtful expedient. It would certainly entail the possibility of the inherent danger that the countries of South America might choose up sides.

Is there then an alternative, or must we take the calculated risk of supporting with military power a counterrevolution against Cuba? There must be an alternative.

If negotiations, cease fire, and a neutralist government are preferable to war in Laos; if endless meetings and discussions on control of nuclear weapons are more acceptable than unilateral nuclear testing; if insults and abuse can be endured better in the United Nations than a clash in the Congo, then surely reason dictates, even though emotions cry otherwise, that the United States is big enough to talk to Cuba.

"It's too late for that now," the cry echoes every time negotiations are suggested.

Yet, if this is a sincere statement, then one ventures hopefully that there might have been a time in the past when the United States might have negotiated with Castro. And, if we could have negotiated in the past, then why not now? How will we know whether some acceptable rapprochement is not possible unless we try?

I am inclined to think that this country might well exercise a little restraint and patience with Cuba. Governments and regimes have come and gone in Central and South America. We have weathered storms before. Castro may be an unpleasant irritant, a thorn in our side, but I certainly hope no one believes Cuba is a serious challenge to the United States.

I suggest that:

First. The American people can accept the land reform program and the social and economic changes inaugurated in Cuba, providing the Government of Cuba will undertake to reimburse the original owners for the properties taken from them.

Second. The American people are ready to consider the reestablishment of normal trade and commercial relations between our two countries, and even to

offer economic aid to Cuba providing the Government of Cuba will cease its build-up of Soviet armaments in this hemisphere, and

Third. The American people are eager to extend the helping hand of a good neighbor and accept the Cuban people as full partners in the inter-American society of nations, providing the Government of Cuba will stop to serve as a base for Soviet penetration into this hemisphere.

I am suggesting that there is room for exploration of alternative accommodations. I am not suggesting, however, that this Nation can stand quietly by while Cuba builds up a base hostile to our way of life and dedicated to support Soviet Union penetration into this hemisphere. What I am saying is that we should give Castro one more opportunity to demonstrate to the world and to the United States that he is not a tool of Soviet subversion. If he is willing to do this, he has nothing to fear from the United States.

President Kennedy, in his inspirational inaugural address, addressed himself most eloquently to the problem which faces us today. He said:

> Finally, to those nations who would make themselves our adversary, we offer not a pledge but a request: that both sides begin anew the quest for peace, before the dark powers of destruction unleashed by science engulf all humanity in planned or accidental self-destruction.

The question then is, Should we make one more try to find an acceptable rapprochement with Cuba? If we succeed in this try, we will have demonstrated to the world our own greatness and a leadership truly worthy of the New Frontier. If we fail, then we will have shown the world that Castro is, in fact, a madman condemned to his own destruction.

Mr. Speaker, before we support another invasion of Cuba, an invasion which ultimately can be expected to involve our own military forces, let us pause to ponder the words of our great President:

> So let us begin anew—remembering on both sides that civility is not a sign of weakness, and sincerity is always subject to proof. Let us never negotiate out of fear. But let us never fear to negotiate.

Liberalism Is American Tradition

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks I would like to insert the following editorial by Mr. C. L. Dancey of the Peoria Journal Star in the Appendix of the RECORD:

LIBERALISM IS AMERICAN TRADITION

(By C. L. Dancey)

Dear anti-Communist friends, Sunday, we urged you not to hunt subversives, since that is a very difficult task even for professionals and is no place for us amateurs.

Today we'd like to talk about liberals, the people that we believe some of you confuse with the real enemy.

Liberals should not be confused with Communists. (The Reds aren't liberal at all.)

A genuine liberal has a liberal or generous and open-minded approach to all problems. He is opposed to prejudice or discrimination on the basis of race, religion, color, economic status, or social status.

He believes that every person involved in a crime is entitled to the benefit of the doubt until proven guilty by processes assuring him every right and safeguard under our great liberal Constitution. And he further believes that the convicted criminal should be treated with no thought of punishment but in a manner best calculated to salvage and rehabilitate that human being.

These are all noble sentiments.

You have no quarrel with liberals.

However, there are also some mixed up folks who call themselves liberals, usually loudly. And this is where the confusion comes in.

You might say they usually exhibit a violent underdog complex and a "McCarthy syndrome."

These are the folks not satisfied and not emotionally cut out to be liberals, so instead of no prejudice they specialize in reversing the historic prejudices.

They are usually violently prejudiced up the social or economic scale, instead of down. Sometimes, instead of maintaining an absence of prejudice and a liberal view even on matters of race and religion, they develop a passionate prejudice on behalf of minority groups against majorities.

(NOTE.—This is understandable, and in some circumstances commendable, but it certainly is not liberal.)

Finally some of them are so thin-skinned and jittery about their supposed liberal beliefs that they are scared to death they will be linked with Communist philosophies, so they strike out with passion and prejudice at the very idea of people being curious about Communist activities.

They are afraid of where it will lead, and history has given them some cause for this.

That's why they aren't the least bit liberal toward anti-Communists. The word knocks them off balance.

So remember that the liberal tradition is part of America from the days of the Founding Fathers, and is part of the true character of our Nation.

Be liberal yourselves. Study with objectivity, not emotion. Study with an open mind, not prejudice.

If you still have outspoken enemies, ignore those who are mixed up liberals. Don't confuse any special personal enemies with the great enemy of us all. Don't be distracted by jittery people.

The more you learn to know your enemy and his real nature, the less time you'll have to waste on these other folks.

C. L. Dancey.

A Realistic Approach to Our Educational Problems

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. COLLIER. Mr. Speaker, a joint resolution adopted by the 72d General Assembly of the State of Illinois might be of keen interest to the Members of the House deliberating on the proposed Federal aid-to-education legislation. It is interesting to note that the resolution was originally offered by 29 members of the Illinois Legislature who are closest to the problems in education in my State.

I submit that this resolution, as placed in the CONGRESSIONAL RECORD of April 17 by Congressman ROLAND LIBONATI, is a realistic approach to the real problem which faces the parents and taxpayers, not only in Illinois, but across the other 49 States.

Editorials Appearing in the VFW American Security Reporter for March 1961

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I wish to call to your attention, and the attention of my other distinguished colleagues, two articles appearing in the March 1961, issues of the VFW American Security Reporter, published monthly by the Veterans of Foreign Wars of the United States.

Mr. Speaker, it is my own personal experience over a long term of years that the Veterans of Foreign Wars is one of several national organizations of distinguished veterans of wars in which the United States has been involved which is doing a vigorous and valiant and necessary patriotic service to the cause of our national security. The editorials follow:

COMMUNISTS ANNOUNCE OPEN WARFARE

The Communist Party, U.S.A., has now disclosed openly that destruction of the U.S. defense establishment is a major objective of its "peace policy."

General Secretary Gus Hall rolled out the broad outlines of the campaign at a meeting of the party's 60-member National Committee in New York January 20.

He said that Communists' biggest job in the immediate future is to agitate both inside and outside of established peace organizations to destroy public confidence in the U.S. defense establishment. He declared: "It is our task to reveal to every American that big business and big brass are today the chief force for war. We must make clear that their talk of defending freedom is a fraud."

Moreover, he said, Communists must step-up their work inside peace organizations and work to "widen the struggle for peace, to raise its level, to involve far greater numbers, to make it an issue in every community, every people's organization, every labor union, every church, every house, every street, every point of gathering of our people. It is imperative to bring everyone—men, women, youth and, yes, even children—into the struggle. The fight for peace is basic to the cause of progress and socialism."

He indicated that this would mean many more "mass marches, demonstrations, peace walks, picket lines, postcard campaigns, letters to Congressmen and Senators, delegations, meetings, and many others."

Further, he said, Communists should look toward the formation of a super peace organization "possibly of the type of the British Peace Council" which "is linked with peace movements in all other countries through its association with the World Council of Peace." (WPC has been cited as a Communist world front organization.)

An analysis of Gus Hall's lengthy policy statement shows that we can expect these main features of the attack:

They will charge that the system of U.S. oversea bases is "needless and useless for the defense of the United States and a waste of the taxpayers money."

They will praise the policy of peaceful coexistence, and propose plans "for the use of the billions being squandered on arms for houses, hospitals, schools, roads, and other social service and social welfare needs."

They will demand universal disarmament as a panacea to end the threat of war. And they will continue a day-to-day harassment of the "big brass" for stepping up the armaments race and for "provocative warlike moves" in regard to Cuba and other countries.

Above all they will carry on a running attack, charging that the "monopolies, the Pentagon, and their political henchmen are sacrificing the national interest, hurting our national prestige, degrading our democratic heritage, undermining the security and liberty of every American, and jeopardizing the very existence of the American people."

While this is going on inside the United States, similar campaigns will be launched in other countries of the free world. For this drive is worldwide. It is based upon an agreement made by 81 of the world's 87 Communist Parties in Moscow last fall, an agreement which Gus Hall quoted as his guide in launching such activities here.

Communists obviously are aiming to whip up public mob hysteria against the U.S. defense establishment both here and abroad, thus gain their real goals of weakening U.S. ability to defend herself and her allies against the rising tide of Communist "peaceful" aggression.

What can be done? Counteraction must take into account the fact that the vast majority of people in peace groups think of themselves as non-Communists and even as being opposed to Communist tyranny.

For this reason, counteraction must avoid attacks against individuals, and must avoid any blanket statements about a particular peace group or about the peace movement in general.

What veterans can do, however, is to inform fellow citizens in peace groups, in unions, in fraternal, women's and youth groups correctly and repeatedly on issues of vital importance to our national security.

All of the people in peace groups which Communist hope to exploit for their own ends must be made aware how Communists are working to use their idealistic views to speed the destruction of free institutions and the means to defend them.

Only by a constant flow of information on the role of the defense establishment in defending free institutions and in furthering man's hope to live in a world at peace can Communist agitation be counteracted and defeated.

What Communists are trying to do, in effect, is to use a chain forged in Moscow to harness American peace groups to haul the Communist chariot ahead. You have it in your power to break that chain.

HOW REDS ARE MOVING IN LATIN AMERICA

In an unimpressive building in Mexico City on March 5, Red Chinese Delegate Chou Erh-fu wound up a ringing speech that had been punctuated by shouted slogans of, "Long Live China" and "Long Live Mao Tse-tung."

The audience was made up mostly of Latin Americans, including a large delegation from Fidel Castro's Cuba, attending the Latin American Conference for National Sovereignty, Economic Emancipation and Peace.

The conference was called by former Mexican President Lazaro Cardenas, a 1959 visitor to Peiping and a top member of the Executive Bureau of the World Peace Council which is run by the Chinest and Soviet Communists.

As was expected, the meeting ended with a string of resolutions condemning alleged U.S. aggression in Cuba, seeking repeal of hemisphere treaties for mutual defense and cooperation, opposing U.S. military missions to Latin America, opposing all U.S. aid, and supporting efforts to "liberate" territories held by Western countries in Latin America.

The real importance of the meeting is the fact that it was held in the first place. It was at an Afro-Asian Solidarity Congress in Cairo in December 1957 that campaigns were launched which have brought us the Congo and the turbulence in Africa.

We can expect that the meeting in Mexico City means the launching of an intensified effort by Communists to create chaos in Latin America, to break up the unity of the Western Hemisphere, and to further isolate and weaken the United States.

Action to counter such a Communist campaign can be taken by trade unions, by other private organizations which have regular relationships with friends in Latin America. The most effective action, however, can only be taken throught the offices of the U.S. Government.

In the case of Africa there was a time lag of about 2 years between the Afro-Asian Solidarity Congress and the outbreak of chaos. There are some signs in Latin America that we might not have that much time left there in which to act.

The Dilemma of Business

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article which appeared in the April 3, 1961, issue of the New Republic. Mr. T. K. Quinn here concludes his enlightening discussion of the price-fixing case involving the electrical manufacturing companies. On March 23, 1961, and April 26, 1961, I inserted articles by Mr. Quinn on this same subject. The importance of the matter commends it to our attention:

THE DILEMMA OF BUSINESS

The decision, the jail sentences, the fines, and the disillusionment following the electrical machinery price collusion case in Philadelphia could mark the beginning of a new understanding of the economic and political issues involved if the actual conditions are frankly faced. This is much more vital than the passing, publicized settlements and new Federal lawsuits against the price fixers promised by the Attorney General.

We are obliged to begin, as Judge Ganey said in Philadelphia, with the conclusion that the chief officers of 21 corporations had guilty knowledge of "the vast conspiracy." After all, price control is a common practice in many industries. General Electric, the principal offender, has a long record of antitrust violations dating back 50 years. On an average of once every 2 years for half a century the company has had some governmental action brought against it. The policy of violation is well established. Similar indictments, although not so regular or quite so often, have been brought against such other giants as General Motors, Du Pont, A.T. & T., Westinghouse. There have been a number of convictions despite almost insurmountable obstacles the prosecution must overcome.

The plain fact is that the big corporations are caught in an impossible dilemma. On the one hand, they know from experience that unrestricted price competition is destructive and that if it actually prevailed markets could be disrupted, profits reduced or eliminated, and industrial instability result. They could, of course, crush smaller concerns because of their capital advantages but would in time be themselves broken up. When giants fight there is bloodshed.

Adam Smith is outdated in this modern age largely because fixed overhead has become a principal factor in total cost, and because corporations have swollen so big as to make our whole society dependent upon them. They simply refuse to take price chances wherever they can be avoided, often regardless of the law.

On the other hand, anything less than seemingly enthusiastic support of competition as a constructive force would be inevitably interpreted as an attack against free enterprise, so faithfully advocated and guarded by its honest believers and practitioners as well as by those who, being in positions of capital and market advantage, insist upon the license to charge and do as they please, free from all governmental interference or public controls of any kind, and regardless of inflation or any other harmful effects. What they really want are easy profits, assured, continuing and increasing.

So big business, preaching one thing and practicing its opposite, is obliged to pretend that it favors competition and the antitrust laws while it secretly opposes them, establishes uniform and administered prices, sets up barriers against the entry of new companies into its fields, stalls costly technological innovation and curtails production. Thus, otherwise respectable businessmen—the conforming bureaucrats in big corporations—become the carriers of misrepresentation and falsehoods and degrade themselves. They are victims of a dilemma most of them don't understand.

In about one-third of the national economy—an area that includes automobiles, steel, cigarettes, cement, oil products, chemicals, roofing materials, electric light bulbs and machinery—price competition has been eliminated by mutual understanding, legally or illegally, among the corporations represented. They have taken the position, in practice, that prices should be substantially uniform and profits so made secure.

Now, if the American public is ready to accept this condition then the only remaining question is who should fix the prices and what standards should be adopted. Shall we permit these and other private collusive interests themselves to decide what their "take" is to be? If so, then the laboring man should also be permitted to set his own wages.

Before pursuing this absurdity further, let us quickly say that obviously the public interest must come first, and it becomes the duty and responsibility of the people, acting through government, to set the prices which would otherwise be under private collusive control. The situation is not changed in the least by resorting to name calling—i.e. "socialism." We would simply be recogniz-

ing the conditions brought about by big business overreaching itself.

The Government need not interfere in that two-thirds of the economy where honest price competition prevails. Every business concern could have a choice between the acceptance of maximum prices set by the Government or prices set by competition without Government regulation. Antitrust laws would be more strictly enforced. Uniform prices would require standard wage patterns, and a Federal Price and Wage Board would have to be established to supervise the regulation, as was done during the last war.

The public would, in effect, be saying to the monopolists and oligopolists: "As long as you insist upon uniform or controlled prices, we insist upon refusing you the right to set them. We would rather not have Government intervene but you leave no alternative:"

Members of a Price and Wage Board would be selected with the same care as Justices of the Supreme Court. They would have to be high principled men more interested in service and honor than in accumulating material wealth. The Board would be a most important public body.

It becomes more apparent every day that powerful, giant, private corporations cannot safely continue to be treated as wholly private institutions. They have power over investment, output, employment, sales, and wage policies that substantially affect the markets in which they deal, and therefore all of us whose lives are conditioned by those markets. Moreover, they aspire to an ever-increasing role in our educational and political lives, as so much of the subsidized literature demonstrates. They have made a captive of competition in many industries and are more controlling than they are controlled.

Their preeminent positions might be tolerable as long as the public could believe the corporation officials were more or less unselfish, public spirited, unusual men of the highest integrity. But this illusion has been shattered by excessive salaries paid to quite ordinary executives, by the stock option racket, high prices and by illegal and unethical conduct.

The country will be a long time recovering from the shock of the Philadelphia price collusion verdict. It served to dramatize to the general public what only a relatively few have long known concerning the unsavory practices of big business. They are by no means limited to the companies or the disclosures in that one case. All of us have in some measure been morally hurt. But it will not have been in vain if we can now get on with the business of bringing the freebooters under public control and striking at the sources of the evil. Let us give more support to the Department of Justice and to the Senate and House Antitrust Committees under the able chairmanships of Representative CELLER, of New York, and Senator KEFAUVER, of Tennessee. These men have nobly struggled against handicaps that would have discouraged lesser men.

In addition to the establishment of a Price and Wage Board, we should now reconsider such proposals as public representation on the boards of directors of the biggest corporations, which by the very nature and size of their operations and ownership are quasi-public organizations. A tax on corporation profits graduated upward, instead of the present flat 52-percent tax, would discourage the trend toward even bigger private institutions, which is proceeding by leaps and bounds—and not for reasons of increased efficiency, as is so commonly misrepresented, but to secure more financial and marketing power. This undemocratic authority is bankrupting small business and has become so great that it threatens the continuance of our freedoms, especially when it becomes further concentrated as it is now in a handful of bankers acting as trustees for equity funds with controlling interests in all the giant corporations.

T. K. QUINN.

Speech of Mayor John J. Buckley, of Lawrence, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. LANE. Mr. Speaker, I am pleased to include the well prepared speech which was delivered at the annual installation banquet of the Julian Stopyra Post, Polish-American Veterans, on April 16, 1961, by the Honorable John J. Buckley, mayor of the city of Lawrence, Mass., and also member of the Governor's council, representing Essex County and part of Middlesex County, Mass. The speech received enthusiastic approbation to a degree which I consider justifies recording it in the CONGRESSIONAL RECORD, since I know that Mayor Buckley is a fine after-dinner speaker and a very interesting and able orator:

SPEECH BY THE HONORABLE JOHN J. BUCKLEY, MAYOR OF THE CITY OF LAWRENCE, MASS., DELIVERED AT THE ANNUAL INSTALLATION BANQUET OF THE JULIAN STOPYRA POST, POLISH-AMERICAN VETERANS, LAWRENCE, MASS., APRIL 16, 1961

It is indeed an honor and a pleasure for me to join with you in this occasion of the joint installation of the officers of Julian Stopyra Post, Polish-American Veterans and its auxiliary.

It is both vital and commendable that a patriotic organization such as yours exists and takes such a deep interest in maintaining our hard won heritages.

We need active groups like the Polish-American Veterans in order to insure at no time can a certain nationalistic minority, even though unorganized, be dismissed as of no significance or consequence.

Basically, the true purposes of nationalistic organizations such as the Stopyra Post Veterans lie in their recognition of the human values of democratic freedom, dignity of the individual, and the guarantee and assurance of equal opportunity.

Although the waves of immigration from European shores have decreased in volume as compared to the years gone by, I think it is most praiseworthy that their sons and daughters, aware of their own particular role in American society, have continued to maintain a consistency of effort and unity in order to perpetuate the noble heritage of their nationalistic origin.

Thus, in the same sense, I, although of Irish extraction, share the same motivation, ideals, and purposes which have energized your activities since the founding of this post some years ago.

I would say that it is because of our mutual backgrounds and environment that we, like our immigrant forebears, embrace with loving devotion the ideals and the principles of the Constitution of the United States.

Recent political events have borne out the validity of my remarks. Only a few short weeks ago, we in this country witnessed the culmination of all the hopes, the dreams, and the aspirations of every immigrant, who upon descending the gangplank and setting foot upon the soil of the United States, felt within his or her heart that someday, despite the peasant origin, a descendant of theirs might gain the highest honor to be achieved by a natural-born citizen of these United States.

John Fitzgerald Kennedy, President of the United States is only three generations removed from the same classification which identifies so many of us here today.

It was his great grandfather who sought the opportunity to better his lot by leaving his native Ireland much for the same desirable reasons which brought so many natives of Poland to this land of democratic freedom and opportunity.

The election of John Fitzgerald Kennedy as President of the United States is the fitting culmination of an Irishman's dream, and I am equally certain that his victory is a direct reaction of attitudes transformed into action by not only the Irish and the Poles but also by other nationalistic groups who by their collective efforts succeeded in making their influence felt in the selection of this "son of an Irish immigrant" as President.

I expect John F. Kennedy to be one of our greatest Presidents.

I believe that he will reflect in his official actions the compassion bred into him for the trials, tribulations, and difficulties experienced by all immigrants and their offspring who have made up the working class since the beginning of the industrial revolution in America.

Social progress in the true democratic sense as opposed to statism and communistic collectivism made its greatest advance in the early years of President Roosevelt's administration. The war intervened. I expect to see a resumption toward the goal of human betterment despite the financial obligations and national difficulties we face and have faced since the end of World War II.

John Fitzgerald Kennedy assumed the task of President of these United States under a similar set of circumstances which 100 years ago saw a nation divided. Today, it is not a nation but a world that is divided. The road which lies ahead for our new President will be long, hard, and arduous. It may well be that in the immediate years which lie ahead in the unending struggle for mankind to achieve its ultimate destiny, the geographical frontiers we know today will not move an inch beyond the Iron Curtain.

But I am certain that the frontiers of religious misunderstanding, the fears and bitterness of political and sectional animosities, the very ramparts of economic selfishness have already been breached by the turn of events which resulted in this victory for the common man.

So it is, that in a lesser geographical area, namely, the fifth councilor district, the contribution of the Polish spirit was a factor in placing me as an elected State official in the vanguard of the assault forces upon the new, conquerable frontiers of (1) housing for the elderly, (2) general urban renewal and obliteration of blighted areas, and (3) medical legislation and higher minimum wage laws.

Your continued assistance as a patriotic veterans organization is needed to achieve our national goals.

Five times in the last century, the Polish people have been ground under the heels of oppressors. Never in this long period of tragic history has the fighting Polish spirit faltered. Even today, that fighting spirit has caused the present communistic and atheistic masters to recognize and permit a lessening of the hardness so prevalent and existent in the countries under Red domination.

Why is this so?

Because the Polish spirit lives on, undaunted, in Poland and throughout the world. It is because for the period since the Julian Stopyra Post of Polish-American Veterans and its auxiliary has been founded, this spirit has been nourished by the courageous purpose of providing not only civic interest in the community at large but also by providing both spiritual and charitable assistance to kindred both at home and abroad.

In conclusion, just one more thought to leave with you.

We in the United States, a country founded in strength have always surged forward in times of stress and uncertainty. We shall reach these new frontiers which lie ahead. We shall overcome the stresses which beset our generations with the same high degree of courage displayed by our predecessors.

Many gains have been made. We shall hold this high ground. In such a spirit, I wish the Julian Stopyra Post, Polish-American Veterans and its auxiliary Godspeed.

Needed: A Foreign Policy

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1961

Mr. DEROUNIAN. Mr. Speaker, in our foreign relations, I am ready and anxious to support our President, completely and vigorously. I ask only that the President advise our Nation as to what his foreign policy is. I recall that Senator Kennedy was extremely critical of President Eisenhower's foreign policy, but in the days since he himself has been President no clear-cut policy has come forth, and I am deeply troubled by the news on all sides. I bring to your attention two editorials that appeared in the Wall Street Journal on April 27 and an article by Carroll Kilpatrick that appeared, the same day, in the Washington Post:

[From the Wall Street Journal, Apr. 27, 1961]

THE COLD WORLD

The verbal beating the United States is taking around the world in the wake of the Cuban defeat ought to occasion some sober thinking, in Washington and in the country, about America's foreign relations.

There is no little irony in the situation in which we find ourselves. Fifteen years ago the United States proclaimed, with some fanfare, that it was forswearing isolationism forever. Yet today it is visibly being isolated to a considerable degree by the rest of the world.

Our enormous outpouring of aid, nearly $100 billion since the end of World War II, goes ignored or is greeted with cynicism. Our obvious concern for man's freedom is disbelieved. In Laos we try to help a people that apparently have little understanding of, or interest in, freedom. In Cuba we try to help a people dislodge a monstrous Communist tyranny, and get castigated for our pains. In Britain and elsewhere the tides of Communist-serving neutralism and pacifism run high.

At the same time the Communists get away with murder at the bar of world opinion. They hold hundreds of millions in slavery, they smash Hungary and Tibet; yet the Russians are fawned upon and the agitation increases to get the unspeakable Chinese Communists into the United Nations.

What is the matter with such a world?

One thing, plainly enough, is that clear political thinking is a rare commodity. That has always been true, but it is aggravated today by the emergence of scores of little nations that would merit no attention were it not for the Communist conspiracy and the forum the United Nations provides for the pompous.

An even more basic difficulty is that the concept of freedom itself is a difficult one for most of the world's peoples to grasp, let alone practice. The life of liberty in world history has been but a fitful and frail one. Most people have never experienced it; for political leaders it is infinitely easier to run a police state than a free society, and far more gratifying to their egos.

These fundamental circumstances—gullibility, ignorance of freedom, dictatorial ambitions—are made to order for the Communists. In a sense they are offering the world what most of the world knows best. They can portray the United States as just the opposite of what it is, and gain credence.

That kind of deceit is extremely difficult to combat, as President Kennedy is beginning to notice. The Communists can subvert peoples and governments against freedom, but it's a contradiction in terms to talk about subverting people to freedom.

Still, the United States has not been blameless in the distorted picture it has acquired in many places. We flipped too far and too fast from isolationism to internationalism. We assumed our new "role in the world" with an excess of zeal and an excess of sentimentality. We know that we have the world's true interests at heart and we supposed, naturally enough, the world would recognize it and be able to see the most obvious fact of our times—the Communist conspiracy to capture all nations.

Well, it didn't work that way. In trying to be kind to everyone, we too often seemed soft. We worried too much about what the world would think of this or that. We seemed to adopt the notion that war is the worst of evils when in fact it is not; a world in Communist chains is the worst.

In these observations perhaps lies a clue to a somewhat different direction of our national attitudes toward the world. We must realize, first, that we are being isolated not because our way of life is wrong but because most people just don't get it. We must do the things that are necessary in dealing with our vicious enemy without fretting unduly over the reaction in Africa or India.

That is not to advocate isolationism but simply an American foreign policy. It is to say that it is time we stopped running after the world; we had better start looking at its realistically from our own point of view. We should be willing to help, but only to the extent the world understands we are trying to stave off a dark age.

If we act with dignity and aloofness we may expect respect. Indeed, a certain amount of coldness in a cold world and a cold war might be the approach most likely to awaken other nations to an awareness of the true situation and the real perils.

[From the Wall Street Journal, Apr. 27, 1961]

OVEREAGER WOOING

As an example of how not to deal with those who make the world a cold place for opponents of communism, take the administration's red carpet treatment of Indonesia's visiting President Sukarno.

Following a 21-gun salute, President Kennedy hailed his guest as "a distinguished national leader, father of his country, and a leader in the world." That description was so extravagant that even Mr. Sukarno protested: "I am just a small mouthpiece of the Indonesian Nation."

He is indeed a spokesman. At home, Mr. Sukarno speaks for a guided democracy which amounts to a thorough-going socialist totalitarianism. Abroad, he speaks for the curious kind of noncommitment which is willfully blind to Communist aggression and hostile to every free world response. Naturally, he is sharply critical of the United States' support of Cubans trying to free their homeland from communism.

Of course, the United States cannot pretend that Mr. Sukarno doesn't exist. But it is surely permissible to wonder if we must be all this ardent in our wooing.

[From the Washington Post, Apr. 27, 1961]

AIM IS TO ASSURE SUCCESS: KENNEDY ASKS BROTHER, SORENSEN TO HELP HIM OUT ON FOREIGN POLICY

(By Carroll Kilpatrick)

In the wake of the Cuban fiasco, President Kennedy has turned to two of his oldest and most trusted advisers and told them that in the future they must help him on foreign policy problems.

They are the President's brother, Attorney General Robert F. Kennedy, and Theodore C. Sorensen, special counsel to the President and chief ghostwriter.

Far more than telling these two men that they must help on foreign policy, which is the President's primary preoccupation these days, he seems to be saying that they must help him consider every foreign policy problem in terms of its effect on the President's own authority and prestige—as well as the Nation's.

Neither Robert Kennedy nor Sorensen has any special competence in the field of foreign policy. Indeed, they are amateurs in a field usually reserved for the experts.

But they have one qualification which the experts lack: they rose to their present positions of power with the President by looking at every issue in terms of his interest and advancement.

WORLD POSITION WEAKENED

Neither the President nor any of his advisers seems to have looked at the Cuban problem in those terms, and the failure in Cuba seriously damaged the Presidency itself. The President's own personal position before the world was weakened.

It is hard to explain why John F. Kennedy should make such a mistake. More than most Presidents he was thought to understand the essentials of Presidential power, the importance of success, and the necessity always to think in terms of the effect of actions on the high office he holds.

In a book published last year called "Presidential Power," Richard E. Neustadt, now a special assistant to Mr. Kennedy, wrote of two cases in which President Truman and President Eisenhower neglected to consider actions in terms of the effect on their power and prestige.

"The lesson of these cases is that when it comes to power, nobody is expert but the President; if he, too, acts as layman, it goes hard with him * * *.

"What occurred in these cases is what always tends to happen. While experts in all spheres except his own advised the President from where they sat, their judgments hid from him the need for personal prospective.

"NO BAD INTENT

"They did not take his own look for him (how could they?) but neither did their presentations prompt him to start looking. Presumably, there was in this no 'sabotage,' no bad intent. In neither instance is there much indication that advisers acted irresponsibly. Each seems to have performed his duty as he saw it; none sat where the President did * * *.

"Both [Presidents Truman and Eisenhower) were the victims of reliance upon issues and advisers to do more than any President can count on them to do—to clarify his stakes of personal power."

It would almost seem that Neustadt was writing about the Cuban failure—or the U–2 case—both of which occurred after his book was written.

And the President is said to believe that there was no "sabotage" or "irresponsibility" among his experts. He has taken the full responsibility on his own shoulders.

By all that he has said since last week, Mr. Kennedy seems to have taken this lesson to heart. He is obviously trying to recapture the position he held in the eyes of the world before the abortive landing on the Cuban coast.

NO CRITICISM SEEN

White House aides insist that in asking Robert Kennedy and Sorensen to concern themselves with foreign problems in addition to their other responsibilities no criticism is intended of any of the President's other advisers.

They will continue to assist him as in the past and to carry the same burdens.

When the President was forming his Cabinet it was apparent that he strongly felt the need to have his brother close at hand. He did not think he should be in the White House or have a Sherman Adams role. He made him Attorney General, and now he has made him much more.

Sorensen and the Attorney General were the chief assistants in the Kennedy presidential campaign. They proved that they were shrewd and tough men who could say "no." They demonstrated their ability to see issues and men in terms of the Kennedy needs and aspirations and success.

President of U.S. Chamber of Commerce Publicly Declares President Kennedy "Doesn't Have a Socialistic Bone in His Body" and Also Says "President Kennedy's Program Designed To Energize Weakening Economy"

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. DOYLE. Mr. Speaker, in the Los Angeles Times, February 3, 1961, I read a release which was in text as follows:

KENNEDY'S NO SOCIALIST, SAYS U.S. CHAMBER HEAD; PRESIDENT'S "PUMP PRIMING" MEASURES SEEN AS SPUR TO NATION'S LAGGING ECONOMY

Arthur (Red) Motley, president of the U.S. Chamber of Commerce, and an outspoken apostle of free enterprise, said here Thursday that, while he may disapprove of some of President Kennedy's antirecession measures, he would hardly go so far as to call them socialistic.

"He [Kennedy] doesn't have a socialistic bone in his body," said Motley.

The red-haired chamber president, by turn critic and defender of the President, told a news conference in the Biltmore that he's convinced the administration's "pump priming" is designed to "energize" the country's sagging economy, not destroy it.

And, because, in my humble judgment, the direct quote in said newspaper by the President of the U.S. Chamber of Commerce should be specifically observed by as many Americans who really think as possible, I am pleased to present the text thereof. President Motley surely knows whereof he speaks about President Kennedy.

And, Mr. Speaker, please note what he says about President Kennedy's administration, its purposes and design.

The Feelings of an American Citizen

EXTENSION OF REMARKS
OF
HON. FRANK J. BECKER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. BECKER. Mr. Speaker, I commend to the attention of my colleagues in the House, as well as others, the reading of a letter which has come to me and I have asked that it be printed in the RECORD. For the past several months, I have received letters of a similar nature but this letter is so expressive of all the others I deemed it wise to give it as much reading opportunity as possible:

Hon. FRANK J. BECKER,
House Office Building,
Washington, D.C.

DEAR MR. BECKER: I have often been tempted lately, with the trend of things as we face our New Frontier, to write to you and let you know how I feel and what I think of some of the silliness that is proposed. But after waiting a bit and cooling off, I realize how close you are to your people and, knowing that you represent a large majority of reasonable and generally conservative people, you indicate by the record that you are truly representing the wishes of most of us.

So, why pester you with letters? You have enough to answer without mine. Still, once in a while you should know that what you have been doing has the notice and the approval of your people. Of course I can speak only for myself and my family, but I hear only approval of your record in Congress amongst my friends.

But there comes a time when one gets just so fed up with what the New Frontier proposes, that one just has to let you know how they feel and what they think. Like most of your constitutents, I am just an average person, working for my living, earning about $7,800 before taxes. I have two children, one in high school and the other in college. I own my own home (no mortgage, thank goodness, I saved and paid it off) and pay some $650 yearly in local taxes—not to mention the Federal and State income tax bites. All of that, with college tuition (nondeductible), shaves it pretty closely, as you can well imagine. Through the years I've managed to save a bit above and beyond the reserve one needs in a savings bank and thus I have become a moderate investor in both A.T. & T. and LIL Co. stock.

Now we are getting close to the meat of this whole thing. No doubt you read of it, but I'd like to call it clearly to your attention. At Chicago, the opening game between the White Sox and the Senators drew 16,637 people. On the same day in Chicago, the A.T. & T. annual meeting drew 20,000. Total A.T. & T. shareholders exceed 1,910,000. As one newspaper put it, "When a stockholders meeting can outdraw a major league opening game, it seems to prove that people's capitalism is a genuine American phenomenon and not just a slogan."

Someone will have to get over to the President and the egghead breakfast club that only a minority of the stockholders belong to the champagne set—and I guess it will have to be you fellows in Congress. Stockholders, by and large, are investors without which the whole American economy will bog down. To keep on, through restrictive legislation and tax legislation to make such investment unattractive will only backfire on the Government in the long run. I have always honestly declared stock dividends and savings bank interest and I think that most people do. I believe that the present setup of having such dividend and interest payments reported to the Internal Revenue Service by the paying corporations is quite sufficient for them to check on the taxpayer's honesty and I believe that it is up to them to do so. I am opposed to any further "withholding at the source," believing what we already have is an infringement of our rights. I am opposed also to discontinuing the $50 exclusion and 4 percent credit on dividend income over that amount.

Now, I'd like to prove to you that I am small-time, that I have invested for additional income which is needed these days just to keep one's head above water and not for speculation: I own 74 shares of A.T. & T. and 19 of LIL Co., all purchased at much less than the presently inflated prices, and with no intention of selling for capital gain unless something happened to me or my family and there was no other alternative. And, the good Lord forbid, if I had to do this, isn't it enough that the Government would collect 25 percent of my profit as tax on capital gain? They would collect this amount on my foresight, my saving to invest, my attempt to provide for the future of myself and my family.

Please, Mr. BECKER, stay on our side.

Very truly yours,

_____.

I Believe in America

EXTENSION OF REMARKS
OF
HON. ALEXANDER PIRNIE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. PIRNIE. Mr. Speaker, in this trying period in the history of our beloved Republic, expressions of faith in America are not as commonly voiced as are reports of her failures.

I was impressed by the following letter to the editor of the Utica Observer-Dispatch written by a resident of Utica, N.Y., who is a native of the Republic of Lebanon.

His love of country is self-evident from his eloquent statement of beliefs which I commend to the attention of the House:

To the EDITOR:

In spite of the Russian success in orbiting Yuri Gagarin around the world and in spite of words such as "complacent" and "lagging" in reference to our space program, my belief in our beloved United States remains firm because:

I believe in this bighearted country of ours and I believe in its destiny, as I have always believed in its glowing liberty and justice for which it stands.

I believe in our American Government, in its Constitution and in its flag as firmly as I have always believed in the versatility

and generosity of our people, whose limitless gifts and contributions to the human race of 3 billion people have surpassed the combined efforts of the Grecian, Roman and Phoenician Empires.

I believe in our family and in our youth who are fearless, daring, curious and intelligent, as firmly as I believe in their honesty, sincerity, fairplay and in their upbringing.

I believe that every time I see our American children, they seem to be saying to me: "Here we are, and in our veins runs the blood of our fathers who have dazzled all continents with so many achievements that people have long stopped talking about the 'Seven Wonders of the World.' "

I believe in our schools and in our teachers, collectively, who have profusely given us and the world great men and women in every field and branch of human endeavor.

I believe in our American ingenuity and creativity as I believe in our bridges, buildings, tunnels and other titanic feats, which became realities because the world, like Yuri Gagarin, had challenged us in saying, "They couldn't be done."

I believe we have been orbiting around the world with the innumerables, the immeasurables and the impossibles—zooming, darting and thunderously blazing with honor and glory on land, in the sea and in the air—and we shall continue to do so.

I firmly believe that our country's stockpiles of secret weapons are ready to earthquake every inch of the world with mass death and pulverization, if we are forced to fight.

I believe that Uncle Sam is a giant standing between heaven and earth, who could rule the world if it weren't for the heaven in his heart.

Oh, U.S.A., I know you. I believe you are as eternal as the Cedars of God in Lebanon, believe me.

PETER KHOURY.

J.F.K.: What a Difference 90 Days Make

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Journal Star to be printed in the Appendix of the RECORD:

J.F.K.: WHAT A DIFFERENCE 90 DAYS MAKE

There was a striking picture on page 1 of Sunday's paper—two men strolling down a wooded path, talking in comradely, confidential fashion of the crisis in Cuba.

From the rear, it was a little hard to tell just who they were. We have the photographer's word for it, though, that they were President Kennedy and former President Eisenhower.

The mind's gears growl a little here as one attempts to put this in perspective. Would this be the same man who, as Candidate Kennedy, was so critical of the Eisenhower administration's handling of Cuba?

Well, apparently it is. For that matter, it's the same President Kennedy who, shortly before meeting with Mr. Eisenhower, met also with Richard Nixon and Senator Barry Goldwater to discuss the Cuban situation.

What a difference a few weeks in office—and a crisis—make. Who would have thought that Candidate Kennedy, so critical of Republican efforts where Cuba was concerned, would, as President Kennedy, confer with those same Republicans on the very subject where he cast doubts upon their capabilities.

Last week, sidestepping questions about the Cuban trouble, President Kennedy cryptically said: "Victory has a hundred fathers—defeat is an orphan."

He meant, evidently, that had rebel efforts against Fidel Castro succeeded last week, plenty of people—including both past and present administrations—would have been willing to share in the credit for its success.

But, instead, an orphaned infant named Defeat has been laid on the White House doorstep.

It must be acknowledged that President Kennedy is not ducking responsibility. He admits that as head of the U.S. Government he is responsible for the U.S. backing—to whatever degree it existed—of the rebel effort against Castro.

He is also finding out that the White House diplomatic nursery is a lonely place in the bleak hours. And he is willing—overlooking what he said as a candidate—to call upon some who have been there before, pacing the floor with earlier orphans named Defeat.

So what we are seeing is not a legal proceeding to establish paternity. Instead it is a family conference to discuss just what to do with the colicky babe.

Real Voice of America

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. GROSS. Mr. Speaker, since coming to Congress in 1949, I have read with interest and profit the columns of Mr. Constantine Brown which appear almost daily in the Washington Evening Star.

It is with regret that I note Mr. Brown is being assigned to Rome, Italy, for the next 2 years for his has been an effective voice on the Washington scene. I am pleased, however, that his columns will continue to appear in the Star and from his vantage point in Europe I am sure there will come much needed appraisals—fairly, clearly, and courageously written—of the involvements of the U.S. Government and thus the citizens of this country in the Middle East and Europe.

Constantine Brown, the veteran reporter and columnist, knows that the people and byways of America, not Washington, provide the true heart and soul of this Republic.

With his many friends and admirers, I wish Mr. Brown well during his sojourn in foreign lands, and I am pleased to insert in the CONGRESSIONAL RECORD his column from the Star of the date of April 25, 1961, which follows:

In a few weeks this reporter will sail across the Atlantic and up the Mediterranean to Naples, and thence by train to Rome. For the next 2 years, the assignment will be to cover at first hand the extraordinary developments in Western Europe's almost miraculous recovery, political as well as economic, from the disaster of World War II.

And, of course, from the vantage point of the Italian capital, we will be close at hand to cover the next manifestations of militant communism's penetration of the Middle East and Africa.

Except for occasional trips to Europe, the Middle East, and Asia, this reporter has covered the Washington scene for more than 31 years. There comes a time when long concentration on the undoubtedly world significant but relatively small area between 1600 Pennsylvania Avenue and Capitol Hill induces, we think inevitably, too much concern with the impact of the U.S. political drama on international affairs. One loses, to some extent, the perspective needed for the balanced view.

Particularly these days, with events crowding each other for the attention of the world and so very much happening in parts of the political spectrum that only yesterday, in a sense, were colonial backwaters or decadent former empires, a closer affinity both physical and psychological is essential. This we are going to try to achieve.

On leaving our old "beat" for a while, however, it seems a few reflections might be in order. We would like to leave a few observations on the nature of things American today as they appear to a reporter on the point of leaving for a new environment and new perspectives. Here they are.

First of all, every American ought to know that the true voice of America is not in Washington, not in that fascinating stretch of American Government between the White House and the Hill. It is in the hearts and minds and throats of all Americans. It is in America's homes, its schools and universities and colleges, its Main Streets and city halls, its prairies and mountains, its churches and lodges, its baseball diamonds and picnic grounds. It is in America and in Americans all.

Our true ideologies are not necessarily truly expressed in Washington. Only a few of their trappings are visible here. They can be found on the family hearthside, on the kitchen range.

Freedom, as the Founding Fathers meant it to be, will never be preserved in the Nation's Capital. It will never be realized in its true nature through political parties, movements or programs that in their very nature are the antithesis of American freedom and integrity and self-reliance, the kind that made us the Nation we have become.

Young America seems to be sensing these facts, even after 30 years of indoctrination and familiarity with New Deals, with one-world diplomacy, with internationally minded compromiser diplomats and so-called statesmen who have been leading the Nation down the glory trail, in the wrong direction, for more than a generation.

Take a look at the map of the world as it is today. Indeed, in the light of most recent developments, take a look, if you can, at a map of the universe itself. Try to realize, as you look, that the reactionary concept of political, social, and economic life reflected in the growth of imperialist communism, erroneously labeled "revolutionary" but in truth a reversion to tyranny, albeit of a new type, has come to dominate much of the world and to threaten all of it.

America is manifested in its fundamental truths in people like the man who donated 16,000 copies of J. Edgar Hoover's "Masters of Deceit" to as many high school libraries. It is to be seen in the Freedom Library, with subscribers donating unselfishly that America may know the truth. If the wife of a bus driver contributes her little mite, so can you.

And the truth shall, in truth, make you free.

The Agricultural Situation Is a Many-Sided Thing

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, the urgent need for enactment of long-range and forward-looking farm legislation was emphasized by Agricultural Secretary Orville Freeman when he testified before the House Agriculture Committee April 24 on the proposed Agricultural Act of 1961. He cited the current technological explosion in agriculture and the magnitude of the storage problem as two of the reasons why this bill should be enacted into law as soon as possible. Under leave to extend my remarks, I would like to include this portion of his testimony in the RECORD:

TECHNOLOGICAL EXPLOSION HAS INTENSIFIED THE FARM PROBLEM

THE URGENCY OF THIS LEGISLATION IS FURTHER EMPHASIZED BY THE CURRENT TECHNOLOGICAL EXPLOSION IN AGRICULTURE

The magnitude of the technological revolution in agriculture is too little recognized, and its consequences—in the present and for the future—are not sufficiently realized or understood.

Agricultural efficiency and productivity have advanced so rapidly during the past decade that agriculture has tripled its output per hour of labor while industry's output has only doubled. Output in agriculture increased much more rapidly than the commercial market increased. During the 1950's farm output increased by 28 percent while population increased only 19 percent. Since the domestic demand for food is tied closely to population changes this means that supplies have outrun demand. Supplies have pressed against population needs in the United States and given rise to a constant downward pressure on farm prices.

This increase in output has been accomplished with the use of only 2 percent more resources than were used 10 years ago. The composition of these resources has changed sharply, with about one-third less labor and 6 percent less cropland. But the use of machinery, fertilizers, pesticides, and other purchased inputs has risen sharply. Overall efficiency, in terms of output per unit of input has gone up by 25 percent. These changes in resource needs have had a sharp impact on declining farm employment, increased capital requirements, and the decreasing opportunity for young people to enter farming.

This technological revolution in agriculture has only just begun. Only a few of our farmers are using all of the new technology to the best advantage. Economists in the Department of Agriculture recently estimated that a population of 230 million people in 1975 could be provided better diets, and our export markets readily satisfied, from a crop acreage no larger than that in use just prior to the start of the Conservation Reserve program, simply by using presently-known methods of production on most farms. If all farm production in 1975 were to be carried on with only the best techniques in use in the late 1950's, not all of the cropland acreage now in use would be needed for food and fiber production.

* * * * *

It breaks down to this: If American farmers are given some assurance of relatively favorable prices and incomes in the 1960's, and if we provide a sound program for adjusting our production to that which can be used, we will have a highly productive and flexible agricultural plant—one capable of responding to any foreseeable food production emergency. This is the kind of an agriculture we want.

But, in the absence of such a program, results could be disastrous. What are the potential consequences?

Farmers could, in the absence of such a program, use their productive capacity indiscriminately. In that event, if support programs were continued, the burden on the Federal budget would become intolerable, and the stockpiles of surplus completely unmanageable. Or—and more likely—the public would refuse to continue such supports, and prices and incomes would be driven down so low that results could be catastrophic. Millions of farmers, their incomes depressed below subsistence level, would swell the ranks of the unemployed, would crowd already crowded areas of our cities, seeking jobs. And many of them would be neither trained for jobs or adjusted to city life. The economic problem would be complicated by the social problem.

This is not all. I should like to point out here how such a development would in the end be likely to add higher consumer food prices to its unfortunate results. Further decline in income for the family farm could lead to a corporate type agriculture controlled by outside capital. Hired labor would increasingly replace work done by the farm operator, and the costs of management, supervision and labor would go up. For one of the major reasons why the American family farm has become the most efficient agricultural producer in history is that the owner-operator is on hand, to do the work and to supervise the work. Neither collective farms nor large corporate landowners are able to mtach the efficiency that results.

If low incomes squeeze out all but a few corporate-type farms, there would doubtless result the kind of supply control that would result in high prices, without regard for the public interest, or the consumer interest, or interest in our programs to expand the use of food abroad in the interest of peace and economic progress.

We deplore the collectivization of farms in a part of the world, and we would encourage land reform in those other areas where huge landholdings have—like the Communist collective farms—proved so inferior to our family farm economy. How ironic it would be if we allowed that family farm economy, that has proved its superiority socially as well as economically, to be destroyed for want of the tools it needs to meet conditions of today.

The family farm in this Nation has reached a pinnacle of success in its primary function, the production of an abundance of food and fiber to meet human needs. It has made this abundance available to the consumers of this nation at a lower real cost than ever before in history. The consumer now spends about 20 percent of his disposable personal income for food, as compared with more than a fourth in 1947. The consumer in America works fewer hours to feed himself and his family than in any other country. The American public should pay tribute to the farmer for his contribution to our standard of living. Even Khrushchev pays that tribute. A little over a week ago he was quoted as saying that the Soviet triumph in space "must not detract the attention of the Soviet people from other targets, and these include catching up with the United States in the standard of living."

To insure our continued superiority in this field in which we have unquestioned leadership, we propose a program that will end the current paradox in which productive success has led to economic distress. This happens, in a large measure, because of the inelasticity of the human stomach, hence the inelasticity of the demand for food. A little too much in the way of food supplies leads to dramatic farm price declines—hence to a farm income problem. And a little too little in the way of food supplies leads to skyrocketing food prices and a real income squeeze on consumers—this is the food problem so often encountered in wartime.

* * * * *

In fact, paradoxical as it may seem, these gyrations and this instability can hurt both producer and consumer at the same time. The instability adds to the risk of farming, and risk always increases costs. And the uncertainties of economic ups and downs make for an inefficient use of the productive plant the farmer has, and which he must maintain whether prices are good or bad. This, too, increases costs.

This leads to my final point with regard to the technological explosion and its effect on both farmer and consumer. Only if we put into effect a program that succeeds in adjusting production to that which we can use and that at the same time provides a fair income for the farmer, only if we thus promote economic and price stability in agriculture, only then can continued technological improvements in production be expected to result in an eventual lowering of prices to consumers while maintaining farm incomes. Without such a program the farmer must pay the cost of risk, and of inefficient use of his productive plant, as I have described. Without it he must maintain greater financial liquidity than would otherwise be the case; he must pay more for credit; he is forced to use older and less efficient methods than he would otherwise use.

Supply adjustment programs that serve to reduce and minimize the extreme and uncertain price fluctuations in agriculture would reduce the costs borne by the farmer. They would mean a gain in production efficiency, and this in time would mean a reduction of the per unit cost of production. This would really set the stage for both the maintenance of farm incomes and an eventual orderly lowering of prices to consumers, consistent with the march of technological advance.

The urgency of this legislation is demanded by the magnitude of the storage problem.

The cost of the storage is so great that we cannot expect it to be long continued. This is an immediate and pressing burden. Eight years ago, agriculture's house was in order. Commodity carryovers were at reasonable levels. Producers had no burdensome surpluses hanging over their heads.

These were the quantities, held in public and private hands, of principal crops carried over into the marketing year of 1952–53:

Feed grains: 20.1 million tons which was 18 percent of the amount used in that year.

Wheat: 256 million bushels, or 26 percent of the amount used in that year.

Cotton: 2.8 million bales, or 22 percent of the amount used in that year.

The coming marketing year confronts us with a different picture:

Feed grain stocks will be around 84 million tons, or half of a year's needs. Over 85 percent will be Government owned or under CCC loans.

Wheat stocks next July 1 will amount to about 1½ billion bushels, or more than a year's expected domestic and export needs. About 90 percent will be under CCC loan or in CCC inventory. Cotton stocks, at 7½ million bales, largely in private hands, will be down

sharply from recent highs, but almost 3 times as large as in 1952.

The growth of feed grain and wheat stocks did not occur overnight.

Feed grain stocks have increased in every year since 1952, as a result of excessive production. Wheat stocks have increased in 6 years out of 9.

How can we convey the magnitude of the storage problem?

Taxpayers should know that Government costs of carrying and handling commodity stocks have risen from $238 million in fiscal 1953 to $1 billion in the current fiscal year. These costs include storage, transportation, and interest. The CCC investment in price support at the end of this fiscal year will be about $8.5 billion. Wheat and feed grains will account for 67 percent of this.

We must face the problem of working down these large stocks. As long as they exist, they pose a threat to markets and to price stability that extends beyond these commodities to the livestock industry.

We cannot reduce stocks as long as the supplies that come out of inventories are more than replaced from excess current production. Each recent year has added an average of 7 million tons of feed grains to stocks. Annual additions of wheat have been about 130 million bushels. We cannot expect to reduce CCC inventories until we have the legislation and programs that will effectively adjust production below total annual needs. This is a major goal of legislation here proposed.

More About the CIA From the Press

EXTENSION OF REMARKS
OF
HON. WILLIAM FITTS RYAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. RYAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Post for Tuesday, April 25, 1961, by the able Washington columnist, Mr. William V. Shannon. I am bringing this item to the attention of my colleagues in another effort to point out that we are getting our information on this super secret organization only from the press. From the press we learn of the ineptness of the CIA in the Cuban invasion. We were given no advance notice that our Government was involved in the plan. Mr. Shannon's article again points up the need for this body to exercise some direct control over what has become something of an autonomy—an overseer of our foreign policy—inside the executive branch:

CIA KEPT ITS SECRET—EVEN FROM THE REBELS

(By William V. Shannon)

WASHINGTON, April 25.—The strange story of how the Central Intelligence Agency mismanaged last week's misadventure in Cuba can now be pieced.

According to information from exile Cuban sources which has been reluctantly confirmed by Administration officials, the leaders of the Cuban Revolutionary Council had no part in directing the actual military operation and no opportunity to coordinate with the Cuban underground.

The CIA held the six leading members of the Council incommunicado near an abandoned airfield somewhere in Florida while the "invasion" was underway. They were not permitted to join the rebel forces or speak in their own name. Statements were issued in their behalf of which they had no knowledge.

Only after it was clear the invasion was going to fail were they consulted by top-ranking U.S. officials.

HELD 3 DAYS

The story began on Sunday, April 15, when members of the revolutionary council in New York received word that they should go to Philadelphia. They were then flown from Philadelphia to an abandoned airbase somewhere in Florida. They were quartered in an old, rambling house in a deserted area. Armed guards were posted outside.

Provisional president Jose Miro Cardona, defense minister Antonio de Varona, and Manuel Ray were among the six civilian exile leaders kept incommunicado in this house for the next 3 days.

The reason for holding them in this fashion was apparently a desire on the part of U.S. intelligence officials to maintain tight security.

OFF GUARD

The Cuban exile leaders first heard of the invasion from radio news bulletins on Monday. The timing of the operation caught at least some of them off guard. It provided no opportunity to work out plans with the underground inside Cuba to set off sabotage and diversionary incidents. The coordinator of the Cuban underground had a few days earlier journeyed from the island to Miami in order to make such plans. The invasion caught him flatfooted and as a result, there was no sabotage or uprising. Some of the Cuban exiles blame the CIA for this failure. The CIA explanation is that it did not wholly trust the underground and chose not to rely upon it.

On Tuesday, the exile leaders were briefed on the military situation in Cuba by a U.S. Army colonel. They grew restive, clamored for more information, and demanded to be allowed to confer with their supporters.

At 1 a.m. Wednesday morning, Adolph A. Berle, coordinator of the State Department task force on Latin America, was routed from his bed in Washington by an urgent call from the White House and directed to fly to Florida. He was told the invasion seemed definitely to have failed. He arrived at the guarded house in Florida shortly after daybreak and spent the morning canvassing the situation with the Cuban exiles.

COMPLETE DISASTER

That afternoon, he flew with them back to Washington where the group met twice, once in the late afternoon and again early in the evening, with President Kennedy. The President meanwhile was working between conference on an entirely new draft of the speech he made the next day to the American Society of Newspaper editors. After conferring briefly with him a third time the next morning, the Cuban exiles were released from the CIA's protective custody and allowed to go their own ways.

The only member of the revolutionary council to participate in the invasion was Capt. Manuel Artime, the youthful ex-Castro follower whom the CIA had developed as a protege. He broadcast appeals to the Cubans to overthrow Castro, speaking from a ship off shore. This ship was subsequently sunk by Castro's planes and Artime's whereabouts are now unknown.

The landing itself was apparently a disaster from first to last. There was only one landing, not several. It took place on a mile-long strip of the coast of Cochinas Bay. Three roads lead inland but Castro's forces succeeded in blocking them all. The United States provided air cover against the attacks by propeller planes, not jets, used by Castro's air force. The rebels captured an airstrip near the coast, but the plan to use it to bring in supplies went wrong because Castro's men had rendered the strip useless by heaping mounds of gravel on the runway.

About 1,200 or 1,300 men were landed. More than one-third were captured by Castro's troops and most of the rest were killed. Castro's forces apparently did not fight with any great distinction but they had so many natural advantages of position and terrain they were able to crush the landings in less than 3 days. Very few, if any rebels made their escape to the Escambray Mountains.

FOUR BIG MISTAKES

The CIA is known sarcastically in Miami as the Cuban Invasion Authority. The more liberal wing of the Cuban exile movement is convinced the disaster took place because the CIA overestimated Castro's weakness, refused to cooperate wholeheartedly with the underground, put too much reliance on sheer military force—and then did not provide enough of that.

The Cuban exiles believe that the CIA's treatment of them during the invasion as so many puppets was the natural outcome of this basically contemptuous, paternalistic approach. U.S. officials deny that all of the Cuban complaints are justified but they concede that the CIA's attitude contributed heavily to the making of the fiasco.

Controversial Committee

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I wish to call to your attention, and the attention of my other distinguished colleagues, an editorial appearing in the Christian Science Monitor on Wednesday, March 1, 1961, entitled "Controversial Committee":

CONTROVERSIAL COMMITTEE

The life of the House Un-American Activities Committee continues to be a stormy one. Riots have attended some of its hearings and new efforts have been launched in Congress to curb it. Yet a great many Americans feel its work is necessary to keep the Nation alert as to Communist infiltration. And the Supreme Court, in a narrowly split decision, has just upheld jail terms for two witnesses who refused to answer the committee's questions.

The chief significance of these cases is in their confirmation of the Barenblatt decision in 1959. That ruling signaled a halt in the Court's trend following the McCarthy era. In the Watkins case and some others it had castigated the abuse of investigating committees' power and set up stern limits. But then in the Barenblatt case and now in the Wilkinson and Barden cases, the Court has supported wide authority for such inquiries.

The majority, speaking through Mr. Justice Stewart, specifically declares it is making no judgment as to the wisdom of "the creation or continuance of this committee."

It sought rather to decide whether the committee was operating within the authority conferred by Congress. It said it found nothing to indicate that Congress intended to "immunize from interrogation all those (and there are many) who are opposed to the existence" of the committee.

These latest cases differed from several earlier ones mainly on this question of harassment or intimidation of critics. Mr. Justice Black in his dissent said that if the present trend continues:

"Government by consent will disappear, to be replaced by government by intimidation, because some people are afraid the country cannot survive unless Congress has the power to set aside the freedoms of the first amendment at will."

The defendants in these cases had not resorted to the fifth amendment but had relied on the first amendment in denying the committee's right to question them as to their political beliefs. The Court seems to be saying that the amendment affords no protection on that score as against the authority of Congress to investigate subversive activities.

From the start serious questions have dogged the committee. It has become far more circumspect in many of its operations since the Martin Dies and Parnell Thomas days. Yet courts have refused to uphold many of its contempt charges. And there have been cases of great injustice where its hearings have been used for unsupported accusations that harmed innocent persons. A film the committee has made is bitterly criticized as one-sided. College students have also raised the question of intimidation, protesting that even peaceful distribution of critical statements where the film was being shown brought arrest.

Committee supporters declare it is essential to turn a publicity spotlight on Reds and their sympathizers. They say that the FBI and the courts do only part of the necessary job when they spot and halt punishable acts, that the public must be alerted to resist subversion of opinion. If this function is to be added to the recognized one of investigation for legislative purposes, it must be safeguarded against political abuses. This watch should be maintained first by Congress. But it is well that many other patriotic Americans (including at least four High Court Justices) are also concerned to protect individual rights.

The U.S. Navy in the Antarctic

EXTENSION OF REMARKS

OF

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 28, 1961

Mr. FISHER. Mr. Speaker, the U.S. Navy has distinguished itself in the Antarctic in recent years, and has added to its laurels during the past year. Under the able direction of Rear Adm. David M. Tyree, our scientific project there has contributed substantially to the storehouse of scientific knowledge.

Admiral Tyree returned to Washington last week following a period of 6 months at his command post at the Naval Air Facility at McMurdo Sound. There on that almost inaccessible continent that has been icelocked for ages at the very bottom of the world, the admiral made the most of the Antarctic summer. At the McMurdo base, at the Byrd Station, and at the South Pole Station, all under his command, a record of vital construction and scientific research was achieved.

As the Antarctic winter got underway, the Navy was called upon to evacuate a sick Russian scientific observer from the Byrd Station, an inland and inaccessible scientific post. But to the U.S. Navy it proved not to be inaccessible. And a historic rescue was carried out.

As a recognition of Admiral Tyree's accomplishment in the Antarctic I include a message to the admiral from the Chief of Naval Operations, Adm Arleigh Burke. I share the sentiments contained in that message, which follows:

"As your ships and aircraft withdraw from Antarctica, all hands can have more than normal feeling of pride and accomplishment. Operations this year have been marked by great forward strides in Antarctic communications, preparation of the nuclear reactor site; completion of three major construction projects; a deep peneteration into the Bellinghausen Sea and increased utilization of C–130 aircraft. The long, hard Antarctic months endured by all in your party have made it possible for the United States to maintain its dominancy in scientific achievement and other peaceful pursuits in this area of increasing international importance; well done and welcome home to all hands."—Arleigh Burke.

U.S. NAVY PLANE MAKES HISTORIC FLIGHT TO ANTARCTICA TO EVACUATE SICK RUSSIAN

(From the New Haven Register, Apr. 14, 1961)

CHRISTCHURCH, NEW ZEALAND.—The Russians may hold a lead in space travel, but the Americans again have proved the validity of their claim as the world's greatest humanitarians.

For the first time in history, a U.S. Navy ski-equipped Hercules cargo plane risked a landing this week in near darkness on Antarctica's McMurdo Sound ice. Its mission: to evacuate a Soviet scientist requiring medical treatment from Byrd Station.

With the arrival of the Hercules at international airport here on Tuesday, the U.S. Navy successfully completed one of the longest mercy flights ever—6,300-mile round trip to isolated Byrd Station, deep in the heart of the white and frozen wastelands of Antarctica.

BALKED BY WEATHER

The long winter night and sudden, fierce storms always in the past have prevented ships and aircraft from landing at Antarctica at this time of the year.

As a result, scientists and Navy personnel now serving at the three chief U.S. bases in Antarctica, bade farewell to their supply ships in February and settled down to endure the cold and darkness which will last until September.

That, at least, was the plan until the Russian scientist, Leonid Kuperov, became ill. Kuperov, a physicist, was stationed at the Byrd base under an exchange agreement with the Soviet Union.

Facilities at the Byrd station were not considered adequate to treat him properly for 7 months until the relief planes arrived on their normal schedule in October. He is suffering from a duodenal ulcer.

DELAYED 5 DAYS

The record flight, which was the first an aircraft has ever made into Antarctica after March, was delayed for 5 days in Christchurch because of adverse flying weather at McMurdo Sound Naval Air Facility, major U.S. supply base on the icy continent.

The *Hercules* departed last Sunday morning, piloted by Comdr. L. E. Newcomer of Air Development Squadron 6 (VS–6). It arrived safely at McMurdo 8 hours later. After making final preparations and waiting favorable weather for a fast turnaround flight to Byrd station, the plane took off at 5:42 a.m. Monday.

On the flight were the Deep Freeze 1961 flight surgeon, Lt. Jack Potter, and Lt. Comdr. James Corley, a Russian linguist (Kuperov speaks only Russian).

The C–13 OBL *Hercules* covered the 917 miles to Byrd station in just under 3 hours, picked up Kuperov and returned to McMurdo, jumping-off place from Antarctica for New Zealand. With just a short stopover for refueling, the plane was again airborne on the last leg of its mission.

Upon arrival at Christchurch, Newcomer, and his crew were congratulated by Rear Adm. David M. Tyree, Operation Deep Freeze commander, who had delayed a scheduled departure for Washington, D.C., to oversee the rescue effort.

Kuperov was taken to the Christchurch Hospital for further observation, diagnosis, and treatment.

Preparation for the mercy flight meant a lot of extra work for the personnel stationed at McMurdo. To safeguard the aircraft, McMurdo's commanding officer, Navy Comdr. J. J. Brosnahan directed reinstallation of air navigational aids, ground control approach equipment, and preparation of a skiway on the ice over the Ross Sea.

The unscheduled rebuilding of a landing strip was necessary because the past summer's heat had broken up the ice over the water. Now, however, the seas are again solidly frozen, and a new field was quickly laid out.

Meteorologists carefully plotted weather reports received from the Antarctic stations of France, New Zealand, Argentina, Norway, Chile, Australia, Belgium, England, Russia, Japan, and the United States to give the most accurate forecasts possible for the history-making flight.

Meanwhile the U.S.S. *Staten Island*, already on weather duty between New Zealand and Antarctica, remained on her mid-ocean station to serve as a beacon for the Navy Hercules and to supply a steady flow of up-to-the-minute weather information.

The mission was accomplished at almost the last moment before total darkness overtakes McMurdo Sound Naval Air Facility on April 25 (6 months of night arrived at the South Pole Station on March 23).

This flight, however, was regarded by many of the airmen as the first step in ending the traditional winter isolation of the ice-age continent.

T. G. Masaryk and the Voice of Truth

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following two articles. The first is from the December 20, 1960, issue of Chess Life and the second from the March 30, 1961, issue of the Calais (Maine) Advertiser:

[From Chess Life]

THE HEIGHT OF SOMETHING OR OTHER

(By Fred M. Wren)

Walter Muir, chess champion of Roanoke, Va., recently sent a move in a correspondence game to an opponent in Czechoslo-

vakia. The postcard happened to bear a U.S. postage stamp through which this country honored the 110th anniversary of the birth of the founder and first President of the Czechoslovak Republic, Thomas G. Masaryk. The card was returned to Muir, bearing notations in several languages that it was not admissible to Czechoslovakia. When Muir sent a second card, with another kind of stamp with less dangerous political connotations, it went through without difficulty. And the Communists call us stupid. Messrs. Pachman or Opocensky are offered equal space in Chess Life, if they care to explain or comment on this incident.

(If, after reading the preceding paragraph, you feel that you may have seen it somewhere before, you are probably right. It appeared on this page in the issue of September 20, 1960, and is reprinted now to set the scene and tempo for the following letter from Karel Opocensky, international master, international arbiter, and editor of the FIDE Quarterly, who wrote from Prague on Nov. 3, 1960:)

"In No. 2, volume 15 of Chess Life of September 20, 1960, I read the article 'The Height of Something or Other.'

"In this article, you ask Grand Master Pachman or myself to comment on the case outlined in the article. Since Grand Master Pachman is at present in Leipzig at the Chess Olympics, where he is defending the colours of his country, there remains just myself to reply:

"First, permit me to recall an era of the recent past. At that time the Czechoslovak people stood alongside the American people in the fight against Nazism. At that time, my wife and all my relatives died under the Gestapo ax. I consider that they laid down their lives in the fight for freedom, not only for the Czechoslovak people but for the Americans as well. And this circumstance justifies my answering you frankly.

"We will not argue on the significance of T. G. Masaryk. We probably hold different opinions. But this question is not the main issue of your article and has not, and cannot have, anything in common with my opinion on the whole affair. It is natural that at the time when the U.S. Government is conducting a cold war against all the Socialist countries in Europe, every method of dealings of American citizens with those of all the Socialist countries is of special import. And stamping the letter of Mr. Muir to the Czechoslovak chess player with a stamp bearing the picture of T. G. Masaryk must be considered as a rude political provocation and an attempt at political infiltration. And every such attempt, be it a stamp or transmissions of 'Voice of America' or any other act will find only one answer today and in the future, not admissible.

"But all the Czechoslovak chess players want to live in friendship with American chess players. Please take special notice of this. They want to play correspondence matches with them and exchange experiences and wish, from the bottom of their hearts, great success to American chess players, but only on the basis of mutual respect and mutual understanding. Permit me to present one example: This year your students achieved outstanding success when they won the world university teams championship. An ironical note is that they won this world championship in Leningrad, the city of Lenin, and won it in a contest sponsored by the Democratic Union of Students, which you consider Communist. But we rejoiced at your victory because in it we perceived the sound results of mutual competition even on a politically difficult basis, and we would like in the future to meet with American chess players again.

"I, personally, have been attentively following the development of your young, talented players, the work of Fischer and Lombardy, and your organizational work "Operation M," where you are trying to develop chess playing in the United States.

"I wish you much success as becomes the land of the chess tradition of Morphy, Pilsburry, Marshall, and others and also the land with the traditions of Abraham Lincoln and Benjamin Franklin."

In the last editorial which I shall have the pleasure of writing for Chess Life I should like to comment on the fourth paragraph of the letter quoted above. In the first three sentences the writer indicates that the name of T. G. Masaryk may be dismissed as being without significance, to the matter under discussion. The hell it can! Masaryk was to the Czechoslovak Republic what George Washington was to the United States—its founder and its first president. His name, therefore, belongs to history, and to the world. If the United States Government sees fit to issue a memorial stamp honoring the 110th anniversary of his birth, communications bearing the stamp should pass freely through the mails of any country in the International Postal Union. Reverting to the comparison with George Washington, I remind Master Opocensky and our other European readers that Washington led a successful revolutionary movement nearly 200 years ago, which resulted in thirteen colonies breaking away from the mother country, England, and in the formation of the United States of America. The Revolution was a bloody affair of 7 years duration, and England has never ceased to moan the loss of her American colonies. England has little reason to revere the name of Washington, who was—let's face it—a traitor to the British Crown. Or the names of Lafayette, or Pulaski or Von Steuben, to name only a few who contributed in such large measure to his success. Yet memorial stamps bearing the names and faces of these men have for years carried mail from the United States to and through every part of the British Commonwealth, without the slightest idea on the part of the American correspondents or of the British postal authorities of rude political provocation or attempt at political infiltration.

I well remember your beautiful city of Prague, Master Opocensky, and the friendly people who lived there in the early 1930's. As I remember it, several of the public squares contained statues of T. G. Masaryk, and I know there was a large one of Woodrow Wilson, through whose vision and efforts the ancient dream of a Czechoslovak Republic became reality. I remember that several of my Czech friends spoke with pride of the constant fight for freedom which their ancestors had made, of the unsuccessful Czech revolt which culminated in the famous battle of the White Mountain in 1620, and of the subsequent religious and political persecutions to which they had been subjected under Austro-Hungarian rule—now all happily ended with the establishment of responsible government, free elections, and religious and political freedom. Where are they now—the friends whom I cherished, and the institutions which they loved? Some of them undoubtedly perished along with your family in the hands of the Gestapo. But, since I have gone so far in my attempt at "political infiltration" I may as well go a bit further and remind you that Gestapo axes cut no deeper, nor more impersonally, nor more finally, than those of any other totalitarian police state. Some of the Czech friends mentioned have discovered the truth of that statement in the last seconds of their lives. I am happy to say that others have fled—over, or under, or through the Curtain—and are now living in various decadent capitalistic centers, where they may listen to "Voice of America" or "Voice of Moscow" with impunity, and after listening, decide for themselves—again with impunity—which one is the "Voice of Truth."

This brings to mind Big Brothers's Ministry of Truth in Orwell's "1984"—you should read it, Master Opocensky—the government bureau in which the book's hero labors daily. His work? Writing and rewriting history in terms of the whims and policies of Big Brother's administration; elimination of names and dates and photographs and all other references to events which Big Brother thinks best forgotten. It would appear that such a "Ministry of Truth" is now operating in Czechoslovakia, and that Masaryk's name and deeds have been expunged from the history of the country.

I share your wish, Master Opocensky, that the chess players of your country live in friendship with the chess players of my country. On behalf of the chess players of the United States I accept your congratulations on the achievements of our world champion student team, and thank you for your interest in the development of our young grandmasters, Fischer and Lombardy. We have the same admiration for the achievements of the great Czech players—no list of whom would be complete without your own name at or near the top. Your appreciation of the chess tradition of Morphy, Pillsbury, and Marshall is gratifying to all Americans. Your references to Abraham Lincoln and Benjamin Franklin—two controversial political figures in the light of historical research—prompt me to toss in your direction a quotation from each.

"As I would not be a slave, so I would not be a master. This expresses my idea of democracy. Whatever differs from this, to the extent of the difference, is no democracy." (A. Lincoln.)

"They that can give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety." (B. Franklin).

It is possible that these reactionary sentiments may result in the ejection of Lincoln and Franklin from the current Czechoslovak version of history. If such should be the case, I take comfort in the thought that they will nevertheless undoubtedly retain their proper places in world history, along with Masaryk, and Benes, and the many others whose names and whose ideas have proved distasteful to the Big Brother of today, but whose names and ideas may even survive those of Gottwald and Navotny.

[From the Calais Advertiser, Mar. 30, 1961]

It is probably no secret that Fred M. (Monte) Wren's columns "I See by the Papers" have attracted attention outside the confines of Washington County, and that what was written with the original intention of getting our readers in this area interested in and discussing current events has become required reading for some of the legislative solons in the 100th legislature in Augusta. That his literary work has received international recognition may interest friends in this area.

In December 1960, while editor of the U.S. Chess Federation's bimonthly newspaper Chess Life, he entered into an editorial controversy with one of Europe's best known chess masters and chess writers, Karel Opocensky of Czechoslovakia. The bone of contention was the action of Czechoslovak postal authorities in refusing to accept into their country mail posted in the United States bearing U.S. postage stamps honoring T. G. Masaryk, Czechoslovakia's first president. Mr. Wren commented on this incident of bureaucratic stupidity, and invited an explanation from any of the known Czech chess masters.

Karel Opocensky took up the challenge, and justified the Czech postal authorities by saying that sending mail to that country

with stamps bearing the picture of T. G. Masaryk must be regarded as a rude attempt at political infiltration comparable to our attempts to corrupt their people through "Voice of America" radio broadcasts.

Mr. Wren's reply to Mr. Opocensky has been referred to as a classic being a full page editorial in the December 20, 1960, issue of Chess Life. Last week he was informed that his editorial had been translated into several foreign languages, had been published in a New York Czech-language newspaper, and that the well-known "Radio Free Europe" wants to use the editorial verbatim in Czech, Polish, Russian translations for radio broadcasts beamed to the people behind the Iron Curtain.

National Brotherhood Award of the National Conferences of Christians and Jews to Barry Bingham, of Louisville, Ky.

EXTENSION OF REMARKS
OF
HON. FRANK W. BURKE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

Mr. BURKE of Kentucky. Mr. Speaker, during the recent observance of National Brotherhood Week, the National Conference of Christians and Jews conferred upon a distinguished Kentuckian, Mr. Barry Bingham, president and editor-in-chief of the Courier-Journal and the Louisville Times, its National Brotherhood Award as a tribute to his outstanding public and community service and the unparalleled contribution which he and Mrs. Bingham have made to a better understanding among people of all races and religions. I have had the privilege of knowing Barry Bingham for many years during which I have seen how well he exemplifies those admirable traits which the National Conference of Christians and Jews seeks to bring out in all men of whatever ethnic and religious backgrounds.

Mr. Speaker, I would like to share with my colleagues the inspired message of the President set forth in his letter to the President of the National Conference of Christians and Jews endorsing the observance of National Brotherhood Week and the President's remarks in a film shown at the national brotherhood dinner this year. In addition I urge my colleagues to read the following letter written by the President to Mr. Bingham and the addresses given at the National Brotherhood Award dinner in Louisville, Ky., on February 23, 1961, by the Honorable Charles W. Morris and Senator Thruston B. Morton:

THE WHITE HOUSE,
Washington, D.C., February 14, 1961.

Dr. LEWIS WEBSTER JONES,
President, National Conference of Christians and Jews, New York, N.Y.

DEAR DR. JONES: I heartily endorse the suggestion of the National Conference of Christians and Jews that a period of time again be set aside for the observance of Brotherhood Week. In celebrating National Brotherhood Week we honor the human values upon which our country was established. As long as men fear or distrust one another because of race, religion, or ethnic origins, as long as any of the gates of opportunity are closed to the deserving, as long as there is unreasoning biogtry, instead of understanding and tolerance, our Nation will fall short of its full power and greatness.

Across the world new nations are struggling for survival and progress. These nations, composed of men of all colors and faiths, are looking for leadership and guidance in their effort to construct new societies. Only if we demonstrate that the freedom which we advocate is available to all our citizens will these new nations look to us for this guidance. Yet on the choices of these new nations hinge our own ultimate survival.

Thus brotherhood is not just a goal. It is a condition on which our way of life depends. The question for our time is not whether all men are brothers. That question has been answered by the God who placed us on this earth together. The question is whether we have the strength and the will to make brotherhood of man the guiding principle of our daily lives.

I therefore urge all Americans to join a nationwide observance of Brotherhood Week from February 19 to February 26, 1961.

Sincerely,

JOHN F. KENNEDY,
President.

TEXT OF PRESIDENT KENNEDY'S FILMED MESSAGE

I have on many occasions taken part actively in dinners such as the one in which you are participating this evening and it is therefore a great pleasure to speak to you from the White House and to express my strong support for the work in which you are engaged.

These dinners are held and have been held for many years in order to place before us a goal to which this Nation has been dedicated since its earliest beginnings—the goal of men and women of different creeds, different races, different origins living together harmoniously and in brotherhood.

I know that there is a constant feeling that we fail to achieve our goals and in spite of the work of this organization and on the part of dedicated men and women across our country, that we still stand a good distance from the standard which was raised in the earliest days by our Founding Fathers and which has been the national goal ever since. I hope that no one in this room feels that disappointment. National progress has been made on a whole variety of fronts.

I want to congratulate, therefore, all of you on the work that has been done in other years. But I also want to suggest that we still have a good deal of distance to go, that the work in which we are engaged is more important than it ever was, not merely to us as individuals and as fellow Americans but as leaders of the free world and as strong believers in the future of our country and the things for which it stands.

We seek to lead the free world against an alien system but we cannot do so unless we ourselves match our actions to our words. We look for support and brotherhood to millions, hundreds of millions of Americans of different creeds, of different colors, who share our aspirations but sometimes are not convinced that we believe strongly in the doctrines that we preach. I believe we do. I believe as a nation we must be committed to these goals. I believe as a nation increasingly we will be, and I believe that when we eventually reach these goals it will have been due to the work of organizations such as yours.

I want to thank you on behalf of our country for the effort in which you are engaged. It is an effort to which all of us give, I hope, not only lipservice but also commitment. The brotherhood of man under the fatherhood of God is a basic principle which has directed this Nation through many years and I am confident will direct it with increasing vigor in the years to come.

FEBRUARY 21, 1961.

Hon. BARRY BINGHAM,
The Louisville Courier-Journal,
Louisville, Ky.

DEAR BARRY: I am delighted to learn that on Thursday you will receive the National Brotherhood Award of the National Conference of Christians and Jews.

Your public and community service as well as your distinguished editorial career surely merit this recognition. I hope you will extend to all your friends and to your family my warmest wishes on this occasion.

With all best wishes,

Sincerely,

JOHN KENNEDY.

ADDRESS BY HON. CHARLES W. MORRIS

Mr. Chairman, distinguished guests, ladies and gentlemen, it is my proud and pleasant privilege tonight to represent the National Conference of Christians and Jews in bestowing an honor long postponed and richly deserved.

As we all know, the American vocabulary is growing like Topsy. Words that Shakespeare never imagined—that Einstein never dreamed of—constantly crop up in the language—words like framework, finalize, in terms of, project, expertize, and now it has become increasingly popular, especially among psychiatrists, advertising men, educators and columnists to employ the word, "image." We read about the "father image," the "son image," et cetera, et cetera. Indeed, Senator MORTON, I seem to recall having read recently in the papers that a distinguished Kentuckian spoke about the Republican image. Now I'm not sure just what these learned people have in mind, but I am convinced that if there is one "image" around these parts that prevail over all others—if there is one name which—like that of Browning's Abou Ben Adhem—leads all the rest, then that image and that name is Barry Bingham.

It has been his prerogative and, at the same time, his burden to exercise a greater influence upon the minds and hearts of his fellow citizens, in Louisville and in Kentucky, than any other man I know. There are occasions, of course, when almost every one who reads the Courier-Journal or the Times, or who listens to, or watches WHAS, may find himself in disagreement with some official position, some editorial, some headline or comic strip or some other feature of the compound of communication which yet another Barry (Mike, by name, the erudite editor of the Kentucky Irish-American) likes to call "the monopoly press" (I confess to a compulsive aversion to Dick Tracy and David Lawrence). But this much we know—our man is forthright: he is not afraid to take a stand—often an originally unpopular stand—and stick by it (as Marse Henry Watterson was wont to say) in spite of hell and high water.

Behind this attitude there is simplicity, courage, and a profound and often prophetic understanding of human rights—a devotion to the kind of community, local, State and National, which symbolizes the dreams of our Founding Fathers—a community where every citizen, Christian or Jew, white or black, rich or poor, shall have a chance to make use, without let or hindrance, of the opportunities with which he has been endowed by his creator, for life, liberty and the pursuit of happiness—and to use these endowments, if you please, with dignity and self-respect.

Embellishing these qualities are modesty, humility and that rarest of gifts—a real sense of humor.

It is significant that this meeting should be held the day after the birthday of George Washington—who declared that our Government gives to bigotry no sanction (and) to persecution no assistance.

Barry Bingham typifies the highest and truest ideals of the organization which honors him this evening; and it is fitting and felicitous that he should receive this tribute.

Will Rogers used to say that all he knew was what he read in the papers. I think that applies to most of us here tonight—and most of us are impressed by the consistent dedication of the Bingham press to those rights which are guaranteed to all citizens by the first amendment: freedom of religion, freedom of speech, freedom of the press, and the right of peaceful assembly and petition. If the news is occasionally a little oblique, thank God it is directed toward the attainment of these constitutional guarantees. Now add to this dedication a generous and sympathetic devotion to all good causes and a mature, even-tempered day-by-day crusade for a decent and progressive community—and you will understand why we pay this tribute to our guest of honor.

I would be both ungrateful and ungracious were I to fail to pay another tribute—a tribute to the lovely and brilliant lady who sits at his side. Mary Caperton Bingham became Protestant cochairman of the Louisville Chapter of the Conference of Christians and Jews when the chapter was in its formative stage. She—more than any other single individual—is responsible for its remarkable growth and success. She is a true aristocrat—because she has a profound sense of noblesse oblige—an understanding that social eminence, good fortune, wit and charm involve a grateful recognition of other people's rights.

And may I say to our honored guest that though providence has chosen you as an instrument for brotherhood and for good, and crowned you with rare and precious gifts—influence, a certain power, good looks, good health, a fine family, comfort, yes, affluence—your richest gift and your rarest possession is your gracious and charming wife.

And so, Barry Bingham, we tender to you this citation—you have deserved and received so many, from schools and colleges and foreign nations, from your country and your fellow publishers, your city and your State, that you may find no place to display it upon your walls or on your desk, but each of us here finds an immense gratification in taking part in this ceremony and vicariously your recognition will speed each of us on to greater dedication. The liberty of no nation can rise higher than its source—and that source is and must be the individual dignity and the general liberty of man.

ADDRESS BY SENATOR THRUSTON B. MORTON

During the national observance of Brotherhood Week, it is a high honor for me to speak at this dinner honoring one of Kentucky's most famous sons—a man well-deserving of his national award from the National Conference of Christians and Jews.

As editor in chief of our great Louisville newspapers, Barry Bingham long has been a tower in the encouragement of the ideals for which the National Conference works: enlightened tolerance—the application of reason and understanding to human conflicts which arise from the pits of prejudice and misguided emotions.

Barry has not limited his dedicated lifetime of public service to the editorial pages of his newspapers, either. In countless other activities, both here in Kentucky and on the national scene, he has pressed his basic goals with untiring dedication.

In politics, Barry and I sometimes have been on the same side of the fence—sometimes on opposite sides.

But even when we were on opposite sides, I do not believe that any basic conflict was created—it was simply a matter of us choosing a different means for the progress that we both want.

Unfortunately, this is not the situation with all people in America on opposite sides of a fence.

In many instances, both in individual and group situations, being on opposite sides of a fence—a racial fence, say, or a religious fence—has created sharp conflicts that leave deep scars unless they are mediated by the forces of moral and religious leadership.

Barry has been one of the country's leaders in mobilizing public support of these tempering forces, and it is for this work that he is being given the Brotherhood Award tonight.

But while our specific purpose tonight is to honor Barry, we really are saluting a great cause—of which he is one shining exponent.

This great cause is one to which this organization has devoted its creative energies since 1928, and for which Barry has done so much in our area and in the Nation.

The cause will end most of the world's troubles when it is achieved in full. It is understanding and tolerance, applied to bring about community unity.

The National Conference of Christians and Jews has worked long, hard, and successfully to alleviate the tensions that arise from religious and ethnic misundertandings. And these conflicts must be eliminated, for they are dangerous as well as morally wrong.

At home and abroad, Americans in the exciting decade of the 1960's face unprecedented dangers and unprecedented opportunities—both at the same time.

Americans are challenged in the 1960's to avoid the dangers while reaping the opportunities.

To do this we must face the challenges united—united in moral principle and united in moral purpose, no matter what different edifices or ceremonies we individually attend in our personal worship of God.

Nothing can defeat a morally united America—but a morally disunited America can never fulfill our historic promise of greatness. It is to this crucial unity that the work of the national conference is dedicated.

To a U.S. Senator, this is a somewhat unusual organization. It has no legislative goals. It does not lobby. It does not file lawsuits nor does it pressure legislators to enact special-interest laws.

This national conference is more of an educational group—though many concrete advances have been made.

The conference proceeds by mobilizing religious principles and bringing them to bear on problems which divide Americans.

One theme of President Kennedy's inaugural address seems to apply to the national conference's approach. While he was referring to foreign policy, a paraphrase of his thought is appropriate.

Let us concentrate, the President advised, on the things that unite us rather than the differences that divide us.

That's what the national conference does as it proceeds to rally religious principles that will spur civic actions solving community problems.

Our three great religious groups—Protestants, Catholics and Jews— differ in philosophy and procedure, of course. But through all of them run common strands of moral conviction that can, and do in the national conference, combine into a mighty educational force that is greater in power than the sum of the three.

While country-wide in its organizational structure, the national conference to my mind essentially is local in character. While it has general national and international goals, its most dramatic advances and its most penetrating work have been done on the local level—and this is one reason Barry should take much pride in his award tonight.

To share in the work of the national conference, a person is not asked to leave his home and community and strive elsewhere for one specific national goal. He is asked to enlist for the duration in the war against prejudice, intolerance and divisive misunderstanding in his own community.

In a phrase, a participant in this great organiaztion is summoned basically to follow the political advice Theodore Roosevelt gave excited partisans who wanted to help his cause but could not discern what to do.

TR's sound instruction was: "Do what you can, with what you have, where you are."

Here in Kentucky, this wise dictate was being followed when the local chapters rallied public opinion against religious and racial bigotry in elections; when you organized many human relations programs at our high schools and universities, and when you promoted National Brotherhood Week observances among schools and civic groups.

From such advances in Kentucky and in all the other States, the national conference is a dynamic part of America's effort to create a broad, national climate of moral unity from the Atlantic coast to Hawaii and Alaska.

And this we will need as we move into the challenges that lie ahead.

America, and indeed the entire free world, face from atheistic communism a dangerous challenge of monolithic thrust.

Divided in any basic way, we will not be able to muster the national response necessary to overcome this awesome challenge.

Divided in any basic way, we will not be able to develop at home that national consensus under which we can minimize political and economic differences and take bold, constructive action to make America even more solidly prosperous than in the past.

Divided in any basic way, America cannot agree on action to rid itself of those prejudices that sap the potential strength of the Nation.

Toward all of these goals, the national conference strives.

But in this organization the work is definitely not aimed at some compromises of expediency—in which social conflicts are merely swept under the rug with a "let's don't talk about it" policy.

More effectively than I can state, the deeper aim of the national conference was stated 2 years ago by your eminent president, Dr. Lewis Webster Jones.

Dr. Jones said this:

"Adjustment by itself is not an adequate social ideal. It can be barren and self-defeating. The religious view of man, on which the work of the NCCJ is based, assumes that man is responsible, as a free moral agent, for his own acts, and for the ethical climate of his own society. Something is required of him by adjustment. Conformity to corrupt practices, however general they may be or however successful, is simply wrong. Unless we recognize this fact, American civilization will not fulfill its promise. It will not even survive, nor deserve to survive."

If all of us, regardless of whether or not we are members of the national conference, can summon this spirit—when we are faced on a personal level with a situation of social conflict—such conflicts largely will pass out of our lives.

And when this happens, the reality for everyone will be those words in the salute to the flag which appear as a keynote phrase in so much of the national conference's literature:

"One Nation, under God, indivisible, with liberty and justice for all."

That's what we're working for and the national conference, with such distinguished and energetic leaders as Barry Bingham, is in the forefront of the struggle.

I endorse your program. I praise your progress. I congratulate you for having the mature judgment to see the need for such enlightened work.

Wetlands Acquisition and Water Pollution Control Are on Wildlife Federation's Priority List

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, when delegates to the National Wildlife Federation's 25th annual convention met in Washington, D.C., last month, they adopted a series of resolutions that include a priority program on objectives of major conservation importance. That program lists two objectives on which I have already introduced legislation in the 87th Congress, namely, an expanded and strengthened water pollution control program and a crash program for the acquisition of waterfowl wetlands.

Under leave to extend my remarks, I include a portion of the Wildlife Federation's priority program in the RECORD:

FEDERATION'S PRIORITY PROGRAM

Be it resolved, the National Wildlife Federation, in 25th annual convention assembled, March 5, 1961, in Washington, D.C., hereby declares and affirms its endorsement of the following objectives deemed of major conservation importance:

Acquisition of waterfowl wetlands. In view of mounting competition for land and water areas, drainage, and other factors, it is believed that the next decade will be critical for the future survival of continental migratory waterfowl population. Unless adequate provision is made for the acquisition and preservation of suitable habitat especially vital nesting areas, throughout the North American Continent, flights of migratory waterfowl will dwindle to the point where they are of little or no interest to an important segment of the public. The National Wildlife Federation, therefore, proposed the immediate initiation and implementation of the following crash program: (a) that the U.S. Department of the Interior be authorized a $150 million advance loan, to be repaid with funds resulting from annual sales of migratory bird hunting (duck) stamps, from the U.S. Treasury for the acquisition of suitable waterfowl habitat while still available at reasonable cost; (b) that official State wildlife agencies be authorized advance loans, to be repaid from sources of income available to them, from the U.S. Treasury in the aggregate of $100 million for the acquisition of suitable waterfowl areas to supplement the Federal program; and (c) that the Government of the United States operating through appropriate channels or an international commission, arrange to grant adequate funds to official Canadian wildlife agencies, Federal or Provincial, for cooperative acquisition and preservation of suitable waterfowl nesting areas in that nation. The National Wildlife Federation also supports the principle that appropriate agencies of United States and State Governments should actively pursue every suitable means at their disposal to insure that the unlawful taking of migratory birds be reduced to a minimum throughout the entire North American Continent.

Establishment of public recreational areas: Recognizing that the expanding human population, enjoying more leisure time and improved modes of transportation, is making ever-increasing demands upon outdoor recreational resources, including fish and wildlife, it is believed essential that the establishment of adequate public recreational areas and facilities, particularly in the eastern part of the United States, be included as integral parts of all land-and-water resource planning on National, State and local levels. As the expansion of urban areas and extension of industrial areas, airports and highways, etc., create competition with recreational uses for many land and water areas, it is viewed as particularly urgent that those possessing exceptional qualities for fish and wildlife, boating, swimming, and scenic, historic, or educational appreciation be reserved for present and future public use.

Multiple use of public lands and waters: Now that multiple use is an official policy of the Government of the United States as relating to national forests, it is essential that the same principle be applied to public domain lands administered by the Department of the Interior and to public waters. Public domain lands should be managed equitably for outdoor recreation (including public access), range, timber, watershed protection, and fish and wildlife, as well as the development of mineral resources, without domination by any one or several user interests. Public waters should be managed for fish and wildlife and recreation as well as for domestic, municipal, stock water, irrigation, mining or industrial purposes. The United States should never surrender any right with regard to water which it presently has and the Federal Government must assert and maintain its right to reasonable use of water on all public properties for recreation and fish and wildlife; furthermore, project plans for impoundments financed by or with the use of Federal funds should include provisions for maintaining conservation or minimum pools or streamflows in the interest of fish and wildlife resources, and for developing other public recreational facilities, including access. It is recognized that all lands and waters are not suitable for all purposes; therefore, application of the multiple-use principle in a broad sense entails determination of optimum, or best, use in the public interest of specific areas.

Water pollution control: Since increasing demands are being made upon limited supplies, the necessary reuse of water makes pollution control a matter of vital concern to all Americans. Because State and local water pollution control agencies, with only limited resources available, have been and are unable to cope adequately with the overall national water pollution problem, it is viewed as urgent that the Federal Water Pollution Control Act of 1956 (Public Law 660) be strengthened to include: (a) increased Federal grants to municipalities for accelerated construction of waste treatment facilities; (b) extension of Federal water pollution law enforcement to navigable intrastate waters when invited by appropriate officials of the State so concerned or when local or State authorities are unable to eliminate pollution; (c) incentives which would stimulate adequate treatment of industrial wastes, including agricultural chemicals, and reduce siltation; and (d) upgrade the Federal water pollution control program within the Department of Health, Education, and Welfare, probably to the status of an office or administration, in keeping with its importance to the public.

Wilderness preservation: Public lands of the United States under jurisdiction of Federal agencies include areas of true wilderness which possess great educational, scientific and recreational capabilities for the public as well as watershed protection values. It is believed that these areas should be established as soon as possible in a National Wilderness Preservation System which provides for orderly procedures for the protection and addition, modification or deletion of particular areas.

Chemical pesticides: While it is necessary that agricultural and forestry losses caused by insects and pests be controlled, some chemicals now in use for this purpose result in extensive, longtime damage to wildlife population, fish and other aquatic organisms and threaten to contaminate public water supplies. It is believed that the public would benefit in many respects through the adoption of a Chemical Pesticides Coordination Act requiring any Federal agency conducting or contributing to a chemical pest control program consult on plans with the U.S. Fish and Wildlife Service and the Department of Health, Education, and Welfare and appropriate State agencies prior to their initiation. Further, research should be expedited upon the development of selective, short-lived chemicals which would perform control functions without damage to other values, including wildlife, aquatic life and public water supplies.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Appendix

The House Rules Committee Can Speed an Investigation of the Adequacy of Existing Laws To Protect the Public From the Consequences of Undue Speculation by Favorably Reporting the Kearns Resolution

EXTENSION OF REMARKS
OF
HON. CARROLL D. KEARNS
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. KEARNS. Mr. Speaker, stock-market prices influence the personal expenditures of consumers, as well as the market for other investments such as Government bonds.

The New York Stock Exchange, taking note of recent heavy trading in securities, has warned the public against unsound investment practices. Keith Funston, president of the stock exchange, said on April 4, 1961 that—

There is disquieting evidence that some people have not yet discovered that it is impossible to get something for nothing, and they are attempting to make improper use of the facilities of the investment community.

Mr. Funston said, according to the New York Times of April 5, that the exchange had received reports indicating that some would-be investors were trying to buy shares of companies whose names they could not identify, whose products were unknown to them and whose prospects were highly uncertain.

A resolution which I have sponsored, House Joint Resolution 21, as amended, requests an investigation of the monetary and financial structure of the United States, by the Committee on Banking and Currency of the House of Representatives.

The House Rules Committee can speed an investigation of the adequacy of existing laws to protect the public from the consequences of undue speculation by favorably reporting House Joint Resolution 21, as amended.

I include as part of my remarks a joint memorandum which my dear friend and colleague the gentleman from New York [Mr. MULTER] and I have issued. I also include, as part of my remarks, articles from the New York Times and the Washington (D.C.) Post and Times Herald, which underscore the need for the type of study and investigation my resolution, as amended, would provide:

APRIL 26, 1961.

JOINT MEMORANDUM TO CHAIRMAN HOWARD SMITH AND THE MEMBERS OF THE HOUSE RULES COMMITTEE

From: Representative ABRAHAM J. MULTER, Representative CARROLL D. KEARNS.

Subject: Resolutions calling for study of monetary system, etc.

1. I have for many years been urging the Banking and Currency Committee to undertake a study of our monetary and fiscal policy in all its facets.

Since 1952, I have been introducing resolutions directing the Banking and Currency Committee to make such a study. The resolution, House Resolution 21, as amended, by Congressman CARROLL D. KEARNS, also seeks such a study.

I join Mr. KEARNS in urging that a resolution be reported by the House Rules Committee, calling upon the Banking and Currency Committee to make such a study of our monetary system in all its aspects.

ABRAHAM J. MULTER,
Member of Congress.

2. Since testifying on April 25 on my House Resolution 21, as amended, my attention has been drawn to other resolutions calling for similar studies, and that the House Banking and Currency Committee has jurisdiction over the subject matter of my resolution.

I therefore suggest that my resolution be further amended to direct the House Banking and Currency Committee to undertake the complete study of our monetary system and report to the Congress its findings and recommendations.

From discussion with members of the House Banking and Currency Committee it is my view that they would welcome making such a study of our monetary system.

CARROLL D. KEARNS,
Member of Congress.

[From the New York Times, Apr. 5, 1961]

FUNSTON CAUTIONS PUBLIC ON RECKLESS INVESTMENTS—URGES CARE IN SELECTING STOCKS—SECURITIES AND EXCHANGE COMMISSION SEEKS STRICTER AD RULES

The New York Stock Exchange, taking note of recent heavy trading in securities, warned the public yesterday against unsound investment practices.

At the same time, the Securities and Exchange Commission proposed strict new regulations against deceptive or fraudulent advertising by investment advisers. The new rules would apply to 1,800 investment advisers licensed by the Securities and Exchange Commission.

Keith Funston, president of the stock exchange, said in regard to the activity in the stock market:

"There is disquieting evidence that some people have not yet discovered that it is impossible to get something for nothing, and they are attempting to make improper use of the facilities of the investment community."

Mr. Funston said the exchange had received reports indicating that some "would-be investors" were trying to buy shares of companies whose names they could not identify whose products were unknown to them and whose prospects were highly uncertain.

He urged investors to follow "time-tested guideposts" advocated by the exchange as a means to sound investment, including skepticism about tips.

The Securities and Exchange Commission's new rules were proposed under a law enacted last year. No date was announced as to when the new regulations would go into effect. Under them, advertisements would be prohibited from doing the following things:

Representing any "graph, chart, formula, method, system, or other device" as able to indicate when to buy or sell securities, "without disclosing, in close juxtaposition and with equal prominence, the limitations and difficulties" in using such techniques.

Containing testimonials about the investment adviser or his product.

Referring to an adviser's past recommendations, which may have been profitable.

Offering any service as free unless it is, in fact, entirely free and subject to no charges or obligations, direct or indirect.

The agency said other practices might have to be curbed, and it invited suggestions to be submitted by May 15.

The investment advisers licensed by the Securities and Exchange Commission sell advice on stocks and bonds in weekly letters to subscribers or in pamphlets, reports, analyses, and brochures. Their advertising is aimed at attracting buyers for this material.

A violation of Securities and Exchange Commission regulations can result in a $10,000 fine or 2 years in prison. Usually, however, the agency brings proceedings against violators, suspending, or revoking their licenses. It can also seek a court order enjoining illegal practices.

The president of the American Stock Exchange, Edward T. McCormick, endorsed the Securities and Exchange Commission program to stop indiscriminate investment recommendations. He added, however, that he did not think it unreasonable for persons assuming the risks inherent in the purchase of common stock to expect in the reasonably near future a dividend return of 5 percent on their investments.

Mr. Funston, in cautioning prospective investors, listed some of the guideposts for sound investing.

Investors, he said, should have well-defined objectives and should choose securities to meet these objectives. They should recognize that there are risks as well as rewards, and that stock prices go down as well as up.

He also advised investors to keep an emergency reserve for family needs, to get the facts from a member firm broker and not to invest on the basis of tips and rumors.

"There is no question that investors should exercise the same care in seeking securities as they would in purchasing a house, or a car or in making any other major investment," he said. He added that the recent market activity was a natural part of an expanding economy, and an overwhelming majority of investors are using the market place soundly.

Yesterday's warning against unsound investment practices was the exchange's second in 2 years.

In April 1959 an article by Mr. Funston, "A Word of Warning," was read on television in commercial time relinquished by the brokerage firm of Sutro Bros. & Co. The article was published in the exchange's monthly magazine and its message promoted by a $250,000 advertising campaign.

At that time, Mr. Funston said:

"It would be most unfortunate to have any part of our business reflect unsound or unreasoned transactions—whether it be based on tips or rumors, or concentrated in low-price issues merely because the price is low."

Wall Street observers have not been disturbed over the recent heavy volume of trading so much as they have been concerned by the soaring prices of many so-called glamour stocks. These are often cheap in price and represent the securities of new companies, especially in the electronics and missile fields. They are companies whose futures could be extremely disappointing, and investors—actually, speculators in these instances—could be financially hurt.

Trading on the New York Stock Exchange set a record in volume last month and in the first quarter of the year, exceeding even the trading of the crash year of 1929. Daily volume has climbed over the 5 million-share mark many times this year.

Yesterday, 7,080,000 shares changed hands. That was the largest volume since September 26, 1955, which was the first trading day after former President Dwight D. Eisenhower's heart attack, when 7,716,650 shares were traded.

Trading on the New York Stock Exchange has exceeded 7 million shares only 17 times—and 8 of those occasions were in 1929.

[From the Washington (D.C.) Post and Times Herald, May 1, 1961]

OVER THE COUNTER AND INTO THE BLUE—BROKERS WARN OF FLAMBOYANT STOCK-BUYING

(By Frank C. Porter)

Six months ago, a construction laborer with muddy shoes and khaki work clothes walked into a Washington brokerage house, plunked down $25, and asked to open an account.

The chary broker tried to steer him into a safe and sound mutual fund, but his new customer would have none of it. He took successive flyers in a number of highly speculative local stocks—buying Servonics at 10 and selling at 18; National Research Associates at 1½ and selling at 4; and Nuclear Research Associates at 2¾, which he still holds and which is now selling for about 6.

For a total investment of $100, the construction worker now has paper profits of more than $1,000. Recently he breezed into the broker's office in a natty new blue suit and pearl grey vest. "What looks good today?" he asked.

The construction worker reflects a new wave of flamboyant stock speculation sweeping the country. As the contagion spreads, it invites invidous comparison with 1929 and worries overworked brokers and exchange officials, who realize a blowup in the securities market could give them a black eye and bring more stringent Federal regulation. As one of them puts it:

"When the house of ill repute is raided, everyone gets arrested."

Others describe it more delicately, but no less vehemently:

"The fact is that now the whole country is rapidly trying to get into the blue sky."—Walter K. Gutman, Stearns & Co., New York.

Some "would-be investors" are buying shares of companies "whose names they can't identify, whose products are unknown to them, and whose prospects are, at best, highly uncertain."—G. Keith Funston, president of the New York Stock Exchange.

"A colossal wave of greed is building up among uninformed people."—A. Dana Hodgdon, Hodgdon & Co., Washington.

"The over-the-counter market has become a veritable gambling arena which causes grave concern to those who lived through and survived similar phases."—Jacques Coe, Jacques Coe & Co., New York.

"Unfortunately, some people are going wild, like an 18-year-old boy who suddenly discovers that girls are wonderful."—Sidney B. Lurie, Josephthal & Co., New York.

"Today we have people buying stocks merely because the company's name has the word electronic or space or computer or automation or infrared or vending or cryogenics in it * * * They haven't the slightest idea what they're buying."—A partner in Johnston, Lemon & Co., Washington.

"Earnings are not cutting too much ice one way or the other right now. So many people are out after a fast buck these days they don't know what they're buying and don't seem to care."—Theodore R. White, Hornblower & Weeks, New York.

Others insist that trading in common stocks today is sound and orderly, that there is no concern for alarm. All agree, however, that there has never been such a period of broad public participation in the market.

In the first 3 months of this year, trading on the New York Stock Exchange topped 300 million shares—a record for any quarter in history. Daily volume on April 4 soared above 7 million shares, highest since former President Eisenhower suffered his heart attack in September 1955.

A New York Stock Exchange seat was sold last month for $225,000, the highest price in 28 years.

"Our business has been terrific. It's doubled just in the past month," reports Edgar B. Rouse, partner in Rouse, Brewer, Becker & Bryant, a large Washington brokerage house.

Clerks at member firms of the New York Stock Exchange have been working far into the night to clear up backlogs of orders on the busiest days. Many have to work Saturdays, sometimes Sundays as well. Partners at some of these houses have been regularly eating lunch at their desks and complaining that they rarely see their families any more. Switchboards become jammed and phone service slows.

As the volume rises, mistakes and delays multiply disproportionately. A customer who has ordered 10 shares of General Time may wind up with 100 shares of General Tire. Transfer agents have lagged as much as a week in the delivery of share certificates.

NOT A COMPLETE MEASURE

But while volume on the New York Stock Exchange, commonly called the Big Board, has been setting records since the turn of the year, it is not a complete measure of today's speculative activity.

Actually there are two stock markets. One comprises listed shares, those that are traded on the big board, the American Stock Exchange, and the various regional exchanges such as the Midwest, the Philadelphia-Baltimore, and the Pacific coast stock exchanges.

The other is the over-the-counter market, where vast numbers of unlisted securities are sold directly by dealers without the offices of an intermediary exchange.

While the New York Stock Exchange lists some 1,500 issues, and its smaller sister, the American, about 900, the common shares of some 50,000 other firms are sold in the over-the-counter market. New York Stock Exchange member firms employ about 28,000 registered representatives, the "customers men" who actually serve the individual investor. By contrast, nearly 100,000 registered representatives are listed by the National Association of Securities Dealers, the trade association which polices the over-the-counter market (many of the latter also work for stock exchange member firms).

How much business is done in the over-the-counter market? Nobody knows or is even willing to estimate it. But it is huge—probably several times the size of the volume on the exchange. The OTC market, about which little is known by the public, can be likened to the great bulk of an iceberg lying beneath the ocean's surface.

OTC MARKET BOOMS HERE

It is in this vast, less closely regulated market that today's wildest speculation is taking place. Shares listed by the exchanges are generally seasoned issues of well-known firms in mature industries. Although the OTC market has its own blue chips—American Express Co. or Weyerhauser Co., for example—it also includes thousands of untried fledgling firms, many with extremely romantic names, which permit the fledgling speculator's imagination to run riot.

Nowhere is this better illustrated than in Washington where a brisk over-the-counter market has developed in recent years to match the scores of exotic-sounding small research firms sprouting throughout the area and the growing appetite for stocks of Washington's relatively well-heeled population.

At the end of World War II there were possibly 2 dozen purely Washington companies with stock in the public's hands. Today the figure approaches 200, with more being added every month.

To meet the demand, new brokerage houses have sprung up at an amazing rate. Ten years ago, there were less than 30 in the metropolitan area, today there are just short of a hundred.

Although the bulk are firms of established integrity, the high-pressure tactics and questionable ethics of a few have caused alarm in the industry. Several have been closed down by the Securities and Exchange Commission in the past year.

Brokerage houses in the District of Columbia incidentally, are unregulated at the local level.

Public Power in Texas and in the Nation

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, May 1, 1961

Mr. YARBOROUGH. Mr. President, I have been requested to place in the RECORD the address I delivered before 18th annual national convention of the American Public Power Association at San Antonio, Tex., on April 24, 1961. I ask unanimous consent that my remarks on that occasion titled "Public Power in Texas and in the Nation" be printed in the Appendix of the RECORD today.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PUBLIC POWER IN TEXAS AND IN THE NATION

(Speech by U.S. Senator RALPH W. YARBOROUGH, of Texas, at the 18th Annual National Convention of the American Public Power Association at the Granada Hotel in San Antonio, Tex., April 24, 1961)

Mr. President, members of the American Public Power Association, guests, it is a great pleasure to welcome the American Public Power Association to Texas, here to

the historic old San Antonio, where the American hero tradition reached its fullest flower. Here, 125 years ago, public duty even unto death was chosen voluntarily by every man of that heroic Alamo force. They set an example in time of peril that Americans today must be ready to emulate if we would keep our freedom secure. The spirit of Travis, Bowie, Bonham, and Crocket lives in the hearts of the people of Texas more securely than those stone walls of the Alamo which stand a stone's throw away from this hotel.

PUBLIC POWER IN TEXAS

In keeping with the spirit of her founders, Texas has a tradition of progresisve protection of the people in the field of public utility development. Under Texas' greatest Governor, James Stephen Hogg, the Texas Railroad Commission was created 70 years ago to regulate transportation abuses; along with Wisconsin, these were the first two States to create such public regulatory commissions. And U.S. Senator John H. Reagan from Texas, one of Texas' four greatest statesmen, was the author of the Interstate Commerce Act, creating the present Interstate Commission. Texas is proud of her old traditions and her great statesmen; they earned their place in history as you are earning yours, as open servants of the people, and not as covert agents of the people's opposition.

In keeping with its early tradition of public duty and welfare above private gain, our State has played an important part in public power since the early days. Texas also has had something to do with the founding and rapid growth of the American Public Power Association.

As you may know, Max Starcke, longtime general manager of the Lower Colorado River Aurthority, was one of the early leaders of your American Public Power Association board of directors along with the late E. F. Scattergood of Los Angeles, James D. Donovan of Kansas City and other American Public Power Association pioneers.

Although I can't claim having any part in the formation of American Public Power Association, I have had a keen working interest in public power since 1935, when I was appointed, in February of that year, by the late Gov. James V. Allred, to the original board of directors of the Lower Colorado River Authority of Texas, created to harness the Colorado River of Texas. One of the authority's principal purposes was to provide a low-cost power supply for municipal electric systems and rural electric co-ops. It was created even before the Rural Electrification Act of 1935 was passed.

As early as 1886, when there were only 30 municipal electric plants in the United States, there was a municipal plant in Texas. Unfortunately, the early records do not indicate just where all of those 30 plants were located.

But the first municipal plant in Texas that he know much about was set up in my home city of Austin in 1895. Greenville's plant was established in 1889, Brownsville's in 1907, Terrell's in 1908, and so on.

The city where you are holding your convention—San Antonio, Tex., mother city—has one of the newer municipal electric systems in Texas, but already it has established an outstanding record.

Texans formed their own electric systems for the same reason the people in hundreds of communities in other States decided to provide electric service to their residents: They were impatient to enjoy the full benefits of electricity, and no private companies were willing, at that time, to serve them adequately.

The result has been very similar to the situation which developed years later, when the rural electification program was established. The power companies couldn't see any profit in serving small, isolated communities and it was not until after the communities had taken the initiative and started their municipal plants that the potential growth of both the small cities, and their quantity of electric usage, began to impress the private companies. After the success of municipal electric plants was assured, the private companies were more than willing to buy them out and provide the necessary service.

In rural areas, private interests also wanted to go slowly in building lines, thus putting the responsibility on the rural people themselves to prove that they were good customers.

More than 30 of our State's municipal systems have been sold out over the years. A study by the Bureau of Municipal Research of the University of Texas reports that "at no time during the operating of municipal plants were they free from the attacks of private power companies." I suppose this statement would be true in any of the States of the Union. During the twenties, according to the study, many municipal systems were sold at several times their cost to power companies which put a high price on the nuisance value of these plants.

Fortunately, a contrary trend in Texas during the thirties, due at least in part to the creation of the Lower Colorado River Authority. Between 1939 and 1942, 17 municipalities started their own electric systems in order to distribute power from the Lower Colorado River Authority.

With the coming of the Lower Colorado River Authority, a source of low-cost wholesale power was opened up to residents of a 31,000-square-mile area centering around our capital city of Austin. More than 30 cities now buy all or part of their power supply from LCRA.

Low-cost power has been, in a sense, a bonus from the control of the Colorado River of Texas. This turbulent stream had a history of severe floods and alternating droughts, which would turn the stream into a mere trickle, insufficient to provide even enough drinking water for the communities along its banks.

The legislature of Texas in 1934, created the Lower Colorado River Authority as a State agency charged with controlling floods, conserving water for irrigation, creating power, and for other useful purposes, and protecting the watershed through prevention of erosion, and development of forests of the area.

This is a State public water and power development authority, based on the national TVA.

The authority has accomplished these purposes without levying any taxes and without direct appropriations for operation or construction by the State of Texas. Its water-control dams are financed through revenue bonds and its own revenues. Its multiple dams (six in all) on the Colorado River of Texas represent the finest power development in Texas.

I have recited this brief history of public power in Texas as a sort of prelude to your convention's theme—"A New Era for Public Power."

PUBLIC POWER IN THE NATION

Changes in the power industry during the past 10 years probably have been more rapid than during any comparable period in our history. But the next 10 years promise to bring even more dramatic changes in our methods of producing, transmitting, and distributing power, as well as a new surge in usage of electricity, some of it for appliances and electric servants which have not yet been invented.

On the policy side, great strides will be made during the coming years by an administration in Washington dedicated to moving ahead rapidly with the Federal power program and to stimulating what President Kennedy called in his message on natural resources "sustained heavy expansion by all power suppliers—public, cooperative, and private."

The President declared that if this Nation's power facilities are going to keep pace with the growth of our economy and national defense requirements "intensive effort" will be required by all segments of the power industry. Installed capacity should triple by 1980, he said, if we are to meet the needs of essential economic growth.

This is a great challenge to local public power systems. Tripling of capacity in less than 20 years is going to mean a big investment, larger and larger generating plants, and a greater degree of cooperation among the smaller utilities to make the most effective use of their generating plants.

The Senate Select Committee on National Water Resources has called for a vast new program of water-resource development to meet expected needs for water, and I am sure that Senator Moss, who was a member of that committee, will give you more details on that when he speaks at your meeting later this week.

However, it is significant that the President endorsed the select committee's report as "very excellent and timely" and urged the Bureau of the Budget to schedule "a progressive, orderly program of starting new projects to meet accumulated demands" in his resources message.

Obviously, the Federal Government can be expected to give dynamic leadership during public power's new era through resource development, extension and interconnection of the Federal transmission systems, and through devotion to the preference principle in the marketing of Federal power.

With the Federal program providing a strong base of low-cost power in many areas, what will be the future for public power in these areas and in those parts of the country where Federal power does not now exist?

SOUTHWESTERN POWER ADMINISTRATION

Let us review for a moment the situation in the States of Missouri, Arkansas, Kansas, Oklahoma, and northeastern Texas, where the Southwestern Power Administration serves as marketing agency for Federal power.

I use Southwestern Power Association as an example both because it is important to Texas and because the local publicly owned electric utilities in the area are eager to share in the benefits of this Federal power supply.

Today, relatively little of this Federal power has found its way to the municipal electric utilities in the area, for a variety of reasons. In some cases, the municipalities themselves are just beginning to realize the enormity of the benefits which they can gain from tapping this great power source. In other instances, restrictive contracts already signed, plus roadblocks put in the way of an aggressive policy of transmission line construction, have not permitted the full benefits of Federal power to be realized.

What might be called the "golden age" of Southwestern Power Association lies just ahead—in the new era.

Here's a rundown on the additional power capacity scheduled for installation during the next few years:

Bull Shoals Dam, 90,000 kilowatts in 1961 and 90,000 kilowatts in 1963; Greers Ferry, 96,000 kilowatts in 1963; Dardanelle, 31,000 kilowatts in 1964, 62,000 kilowatts in 1965, and 31,000 kilowatts in 1966; Eufaula Dam, 90,000 kilowatts in 1964; McGee Band Dam—52,000 kilowatts in 1965; and Beaver Dam, 112,000 kilowatts in 1965.

Although not all of this will be firm energy, the quantities involved are substantial, and could have a tremendous impact upon the public power situation in the five-State area.

I am confident that the new administration will see to it that this power is sold to the municipalities and rural electric cooperatives of the area under a strict compliance with the preference provisions in Federal law. The President made clear his own adherence to this principle when he said in his resources message that the Federal power marketing laws "recognize the prior rights of the general public, consumer and taxpayer who have financed the development of these great national assets originally vested in them." The President's message emphasized that power disposal "shall be such as to encourage widespread use and to prevent monopolization."

In Southwestern Power Administration it may require extension of the Federal transmission system to make such a power policy work. I believe that this administration will not hesitate to request funds for such an extension if it appears necessary.

So, for the municipalities in Kansas which are exploring the possibilities of joining together to obtain Southwestern Power Administration power, this kind of national leadership can have real dollar-and-cents meaning.

SOUTHEASTERN POWER ADMINISTRATION

For communities in the southeast, the extension of the new Federal policy to the Southeastern Power Administration service area can mean lowcost power supply from the Hartwell, Walter George, and Barkley Dams, which will bring a combined total of more than 250,000 kilowatts on the line within the next 4 years. Aggressive planning for the marketing of the new power soon to become available, with Federal transmission lines where appropriate, can mean a larger flow of low-cost power to consumers who own their own electric systems.

The question of transmission comes up again and again in connection with the Federal power program, and I believe that in this field the previous administration has as poor a record as it has in the actual construction of multipurpose projects.

It is true that the "No new starts" policy shut off the flow of Federal power at the source. But it was the timid marketing policy, relying heavily on private utility lines, which has deprived the consumers served by many local public agencies of their share in the benefits of the Federal power program started under previous administrations.

There is ample evidence that the new administration is giving attention to the transmission line problem. Imaginative proposals for huge interregional interties such as the Pacific Northwest-Southwest intertie, under study by the Interior Department, give evidence that there is an appreciation in the administration of the power facts of life.

AMISTAD DAM AND PUBLIC POWER

A new development of interest to all of us is the impending construction of the giant Amistad Dam on the Rio Grande, in Texas and Mexico, above Del Rio. The issue of public power is the most important unsolved issue about that dam. Some private companies want the United States to build this great dam, but sell them the "falling water" for a song while the taxpayers pay the fiddler, on the theory that the Federal Government can't develop the power.

I regard this as 19th and not 20th century thinking. Your association members, the TVA, the LCRA, and the REA prove that a public authority can ably generate and distribute public power.

It is my hope that the Federal Government will develop the power on this great project. It would be a tragedy of Texas and the Nation if it is given to private power companies under the falling-water concept, as some are now trying to do.

The claim that it isn't feasible to develop pulbic power at Amistad Dam because there isn't enough demand for it, fails to take into account America's anticipated population growth to 235 million people by 1975. People are hunting the sun; the great migration into California, Arizona, and Florida will hit southwest Texas from San Antonio to El Paso when there is water and power available which Amistad Dam will furnish them. I charge you to work with all your might and main to keep both water and power from Amistad Dam in public hands.

PUBLIC POWER IN THE FUTURE

For my part, I have always supported and will continue to support a program of full development of our water resources. In addition, in the light of new development, we need sufficient Federal transmission of sufficiently high voltage to tie together some of our great Federal power systems and to make the most efficient use of the installed capacity of these systems. Where Federal lines are needed to carry this public power to the load centers of the publicly owned plants of municipalities and rural electric cooperatives, authorization of such lines and the appropriations needed to build them should be granted.

This support will come from me, not because I am against private business, but because this is the only way to get adequate public power distributed to the public agencies who need it to build a stronger America.

Some of the experts in the power field contend that the United States has fallen behind Western Europe and the Soviet Union in the construction of high-voltage transmission. While I am not such an expert, I am impressed by evidence that Western Europe is tied together in a huge power grid, greatly increasing the available supply of electricity. The special Senate subcommittee which visited electric power installations in Russia inspected a vast network of high-voltage transmission lines. Since private industry hasn't built such a network of transmission lines here, public power must again shoulder part of the job.

We need to get on with the job of bringing our transmission system up to date in preparation for the vast increase in power requirements which we can expect during the stirring sixties, or, to use your convention theme—the new era.

In this effort, of course, the individual utilities have a big part to play.

Already steps are being taken by some of you toward interconnection of your systems; proposals for joint power supply are underway. I am glad to see that you plan to devote an entire session to this subject tomorrow at your panel on "Joint Power Supply—Pattern for the New Era."

One of the best pictures of the new era that I know of was prepared by your own association for the Senate Select Committee on National Water Resources.

The American Public Power Association pointed out in a detailed memorandum to the select committee that estimates of future power needs characteristically are too low. The official estimates of the Federal Power Commission have been worked over and revised periodically, as the actual use of electricity has far outstripped Federal Power Commission estimates.

In setting a high goal for itself, public power is bound to have a stimulating effect upon the economy as a whole. But its devotion to providing more power at lower cost to consumers, public power can help all American consumers both by doing a good job for its own consumer-owners and by needling the private power companies to do a better job.

While I haven't talked much of our friends of private power, not because I don't appreciate the vast importance of their 80 percent of the consumer market, but because I confidently expect the public power systems and rural electric cooperatives to lead the industry in experiments, venturesomeness, and new ideas, as we enter the new era of electrical abundance.

With 80 percent of the market they control, it seems to me private interests could find enough to do to prepare constantly for that expanding market, without wasting so much money on a propaganda campaign of distortion against our public power authorities.

Certainly, I don't question the need for both private and public power in this country, and I recognize that many of the private companies are doing a good job for their customers.

I do feel, however, that too many of the leading lights of private power have resisted change, have opposed a low-rate policy, have fought public power competition in an unfair manner, and generally have been about as enlightened as William McKinley.

In public power, the private companies have a challenge and they recognize it clearly, but their response is not to get out and sell electricity at competitive rates, which is right and proper. Their methods have been to destroy the opposition by political pressures, by propaganda, and by that highly regarded new science known as molding public opinion.

The time has come, I believe, when we should have a progressive effort by both private and public power to meet the great and growing electrical power needs of this Nation and the free world.

Today, with communism in Cuba just 90 miles from our shores, we have little time for fighting among ourselves for any reason. Today, with the crisis in Laos bringing us to the brink of a planetary war with the onrushing hordes of communism, we cannot afford to waste so much time in an effort to destroy one another here at home.

Demands of tomorrow in a vibrant, powerful expanding economy—our first line of defense against those who would wipe freedom from the earth—will dwarf the electric power requirements of the past.

We are heading into a 15-year period in history where it is predicted that our electrical power requirements will quadruple. It is estimated that by 1975, we will be using 2⅓ times as much power per worker in industry and about 2½ times as much electricity in the average home. The result is that by 1975 more than four times as much power will be consumed each year.

Mankind's progress in this age of science and technology does not depend alone on the success of our research scientists. It depends in greater degree on our ability as a people to accept change and to seize our opportunities for a better life for all men.

We stand near the threshold of a bright new world, where nuclear research may cure most dread diseases; where salt water may be made fresh so "the desert may bloom as the rose"; and where men may travel to the stars and bring back treasures more precious than Columbus and other explorers found in the New World.

There is a great challenge before us on President John F. Kennedy's New Frontier. It is a challenge not just for the few, but for the many; not just for the wise, but for the courageous; not just for those wealthy in bank accounts, but for those rich in compassion, hope and vision.

Some of the decisions before us will be more revolutionary and controversial than the public power program was in its beginning, and much more important to the destiny of man.

In the final analysis, we and our children will be called upon to decide whether America—as the torchbearer of world free-

dom—will practice the social justice freedom demands; whether as a people professing the Christian ethic, we will find it in our hearts to follow the gospel of "Brotherhood among men to feed the hungry and care for the ill"; whether as a people intelligently pursuing peace while zealously protecting the ideal of human liberty, we can find a way to endure in a world "half free and half slave."

These are some of the grave challenges before us on the New Frontier. But with Americans like you leaders in the public power field, leaders who have demonstrated vision linked with faith, I have no doubt we can meet these trials, and more, so long as we "do justly, love mercy and walk humbly with God."

The Inter-American Appropriation Bill

SPEECH
OF
HON. JOHN B. ANDERSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 6518) making appropriations for the inter-American social and economic cooperation program and the Chilean reconstruction and rehabilitation program for the fiscal year ending June 30, 1961, and for other purposes.

Mr. ANDERSON of Illinois. Mr. Chairman, the House on last Tuesday passed and sent to the Senate H.R. 6518, the inter-American appropriation bill. I deeply regret that I could not give my support to that proposal.

I fully realize the seriousness of the present international situation and that it provides the backdrop for the administration's desire that H.R. 6518 pass without delay.

Nevertheless, I am unable to support this program because I do not believe that the solution to our present difficulties lies simply in the appropriating of large sums of money.

It seems to have become a tradition in our Federal Government to attempt to alleviate every international crisis with more Federal aid. Some have said that if the House failed to pass this inter-American appropriation bill the result would be a serious blow to our relations with Latin America. I understand that some Latin American countries, in looking forward to this newest bounty, have referred to it as "the Castro bonus."

It has been said by supporters of this program, that its passage would help achieve greater political solidarity within the Western Hemisphere. The fallacy of this argument has already been amply demonstrated. For in spite of the anticipated approval by the Congress of the full $600 million requested by the administration in H.R. 6518, only seven Latin American countries were sufficiently grateful to vote in the United Nations General Assembly recently in favor of the extremely moderate request that the Organization of American States bring about a peaceful settlement of the United States-Cuban difficulties. Thus even at this early stage in its development, it appears that this program, like all of our earlier efforts in Latin America, will fail to buy the United States any additional friends in the Western Hemisphere.

There is considerable doubt in my mind, as I am sure that there is in the minds of many of my colleagues, that the fruits of our generosity in projects like this are actually enjoyed by the people of the countries involved.

With the background of waste, misuse, and poor administration of funds that has been so prevalent in our foreign aid programs, you would have thought that the administration would have come before the Congress with a detailed set of plans for the expenditures to be utilized under this appropriation. However, instead the measure was railroaded through in the most slipshod manner conceivable. The remarks of the ranking minority member of the Appropriations Committee during the general debate certainly support this conclusion. If for no other reason than this, I could not have supported this bill.

I understand that many Members felt that the present critical international situation required that they act quickly. I am sure that every Member of this House wants to do whatever is possible to assist the President in alleviating the present crisis. However, I must warn you, my colleagues, that certain dangers, perhaps even more serious than the present ones, will arise if the House of Representatives continues the course of action it initiated on Tuesday when it approved an appropriation bill, involving $600 million, without even requiring that the administration present the Congress with specific plans for the employment of the funds involved.

Never before has the Congress so readily relinquished its fundamental right to demand from the Executive justifications for the amount appropriated. The House, by acting to present the administration with a blank check, as it did in this instance, opened the door for an untold number of future programs, whereby the Congress will again be asked to abdicate its responsibility for fiscal prudence.

For these reasons, Mr. Chairman, I find it impossible to support the administration's program as stated in H.R. 6518, and I sincerely hope that the Senate will pay far greater heed to its responsibility than did the House on last Tuesday and refuse to reduce the appropriating process to a meaningless formality.

The Increase Came in 1960

EXTENSION OF REMARKS
OF
HON. PAUL FINDLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. FINDLEY. Mr. Speaker, rising farm income has attracted much attention, but no one mentions that most of the increase came in 1960.

The seasonally adjusted annual rate of flow of farmers' realized net income went up from $10.2 billion from the first quarter of 1960 to $12.4 billion in the last quarter.

My reference is the Economic Research Service of the U.S. Department of Agriculture.

Broadcast Over Wisconsin Radio Stations

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, May 1, 1961

Mr. WILEY. Mr. President, over the weekend, I was privileged to review some of the major challenges confronting Wisconsin and the Nation in a broadcast over a network of Wisconsin radio stations, reflecting upon a number of issues now before us in Congress.

I ask unanimous consent to have excerpts from the address printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

The problems confronting us, of course, are extremely difficult and complex. Consequently, the creation of solutions for such problems require the cooperation and dedication not only of our citizens, but also of our leaders in Government.

As of now, the major legislation approved by Congress includes:

Establishment of a 1-year experimental feed grains program, aimed at curbing surpluses of barley, corn, and other feed grains;

Extension of unemployment compensation benefits for jobless, whose benefits have expired;

Authorization to create a program for economic assistance to chronically depressed areas;

Legislation to create additional Federal judgeships for our overcrowded and overworked courts. (This measure has passed both Houses of Congress and is awaiting action by a Senate-House conference committee.)

And other measures.

However, there are a great many significant, and some controversial, issues yet to be considered at this midway mark in this Congress. These include:

Liberalization of the minmum wage laws;

Aid to education;

Expansion of the housing program;

How to finance the highway construction program;

Adoption of improved ways to meet the needs of our 16 million folks over 65;

Strengthening and, as possible, streamlining our defenses;

Stepping up our space program;

And other issues.

LEGISLATION OF SPECIAL INTEREST TO WISCONSIN

In addition, there are a number of pieces of legislation of special interest to Wisconsin.

These include:

Appropriations for port and harbor development, including projects at Milwaukee, Green Bay, Superior, Menomonie, and other ports along the Great Lakes;

Enactment of the Wiley bill, S. 1515, to provide supplemental funds to carry forward the school lunch program for the current fiscal year;

Extending the time for termination of Federal control over Wisconsin's Menomi-

nee Indians, to enable the tribe to get its economic house in order; and

Getting approval of funds for expansion of the Forest Products Laboratory at Madison, Wis.

These, then, are the highlights of the legislative workload ahead of us in Congress.

WORLD OUTLOOK

As Congress attempts to grapple with these and other problems of significance to progress in Wisconsin and the Nation, there exist ever-present and overhanging crises in world affairs.

Around the globe, the Communists are stirring up trouble, creating wars, sparking rebellions, attempting to overthrow existing governments, and engaging in a wide variety of espionage, sabotage, subversion, and other legal and illegal efforts to expand their influence and control. Today, there are an estimated 36 million Reds operating in about 50 countries, attempting to further the aims of world conquest by the Reds. Because the Red conspiracy is so widespread, it is difficult to predetermine when, or where, the next explosion—sparked by Red action—will occur in the world.

In spite of our difficult problems, however, we must not allow "curtains of gloom" to descend over the Nation; rather, freedom, in my judgment, will triumph if we are willing to make the necessary effort now to stop Red aggression and promote the cause of peace and freedom.

Overshadowing the activities of Congress then, and, yes, the world, is the Communist threat to world peace.

The creation of peace is still the great challenge. Questions remain:

Can we develop ways to accommodate, or at least negotiate, the great differences between the East and West? Can we stop the Reds without war?

Can we meet the great and growing demands of the billions of "have-not" people in the world for more of the good things of life?

These are grave and serious questions that need to be faced, and resolved, in our time. Ultimately, we must find realistic answers, if there is ever to be stability and peace.

REVIEW OF HOTSPOTS IN THE WORLD

Briefly, now, let's take a quick look at some of the "hotspots" around the world.

In Cuba, the Red-tinged Castro regime has become more firmly entrenched.

In Laos the Reds, though professing a desire for a cease-fire and negotiations for settlement of the difficulties, are continuing military operations to attempt to extend their control over more territory.

In the Congo, Mr. Khrushchev is still the No. 1 troublemaker.

In Berlin also there are recurring threats of Red action to create tension which would possibly result in war.

Overall, the Reds continue to build bonfires around the globe which threaten, if allowed to spread, to lead to a global conflagration.

Now, what can we do about it?

The free world, in my judgment, must soon develop more effective ways for combating Red expansionism, if we are to survive.

The balance of power, and of world opinion, for example, once was largely on the side of the Western nations. Now, this balance is teetering precariously.

If we are to defeat the Communists' aim of world conquest, then we need to adopt a stronger, nonmilitary offensive against the Communists. Among other things, this, in my judgment, should include—

First. Strengthening our information-spreading program to beat, not be beaten by, the Communist propaganda machine.

Second. Adopt more effective machinery against infiltrative penetrations, the fruits of which are being witnessed in Cuba and Laos.

Third. A sharper counteroffensive to penetrate the Iron and Bamboo Curtains, not leave this as untouchable territory for the Reds.

Fourth. Better tailored U.S. programs, such as the Latin American plan, to meet special needs in Asia, Africa, and elsewhere in the world; and

Fifth. Finally, undertake a more dynamic effort to present the efforts and objectives of U.S. policies to the people of the world.

In summary, the United States needs to adopt a stronger political, economic, social, and ideological counteroffensive against the Communists. By experience, we know that a so-called containment policy is obsolete and unworkable. For the most part, the result has been loss of more and more land and people until the Reds now control nearly a billion people and vast natural, manpower, industrial, scientific, and military resources.

Unless we are willing to dedicate the effort, manpower, and resources to stopping the Communists now, the survival of our way of life—indeed, of freedom itself—will be in serious jeopardy.

The Mexican Peace Corps

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mrs. ST. GEORGE. Mr. Speaker, these are, to say the least, difficult times. Nevertheless, we must keep our sense of humor. It is the one great thing we have that the Russians lack.

The following article by Mr. George Dixon appeared in the Washington Post of April 27. It is certainly good for one hearty laugh, and that will do us all good. It is also reassuring to know that Mr. Dixon has not lost his sense of humor; some of us were beginning to fear he might be going political on us.

THE MEXICAN PEACE CORPS

(By George Dixon)

Mexicans who come into this country to lend us assistance with our agricultural problems resent being called braceros and wetbacks. I have thought of a sure fire way to assuage this resentment. Instead of referring to this contingent with approbrious names, let's call it the Mexican Peace Corps.

If you will look at it squarely and objectively you will see this group meets all the qualifications for enjoying such a title. It is already doing all the things our Peace Corps says it contemplates doing.

Members of the Mexican Peace Corps already are offering us assistance several points better than point 4. They have made themselves indispensable to our very existence. It is no exaggeration to state that our crops which require stoop labor couldn't be harvested without them.

The former braceros and wetbacks meet all the other requirements for Peace Corps membership. First of all, they're volunteers. They come willingly. Secondly, they go only where they're asked. Thirdly—and most importantly—they would be only too delighted to live like the natives.

They teach us agriculture, and give us technical assistance. They bring in their own technical know-how.

They are prepared to work with our natives—even if our natives won't work with them. They don't set themselves above us—even when they get to know us.

Before coming here they take cram courses in the rudiments of our language and try to improve themselves in our strange tongue while sojourning among us. In the words of their great leader, El Sar-hentry Shrivero: "Quiero hablar mas Ingles, caramba."

They strive at all times to improve our lot by setting us an example. They demonstrate the virtues of hard work, singleness of purpose, and devotion to duty. They teach us that a man should employ his strong arm, or bracero, to support his family.

Without the Mexican Peace Corps we would harvest no cotton, berries, or vegetables, because the only members of our native population who will be caught bending over are those with the Central Intelligence Agency. But the peace corpsmen have much more, mucho mas, to offer. They can if they will, teach us the Mexican way of life.

This is the most restful man has ever known. It is predicated on all the virtues we allege to hold dear.

The Mexican way of life, as brought to us by the dedicated missionaries of the Mexican Peace Corps, would help us cut down divorce, reduce the mortality rate from heart attacks, and practically outlaw ulcers. It would give us the siesta and the fiesta, instead of the sleeping pill and the cocktail ordeal.

Legs, Braces for Indonesians

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES

Monday, May 1, 1961

Mr. ENGLE. Mr. President, my attention was called recently to an article in the Pasadena Star-News about a young businessman who is a fine example of the many Americans who are giving their time, money and energies to help make the voyage of the SS *Hope* the great success that it has been in its maiden 5 months in Indonesia.

In mid-May, Mr. Jay Greene, president of the U.S. Manufacturing Co., of Glendale, Calif., will leave for Indonesia where he will work with doctors aboard the SS *Hope*, as well as ashore, in setting up rehabilitation centers for amputees. Mr. Greene's work in Indonesia will not only give hope and comfort to handicapped Indonesians but will help to solidify the friendship between this country and Indonesia. The story in the Star-News tells of Mr. Greene's dedicated efforts to help the handicapped. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Pasadena Star-News, Mar. 24, 1961]

A FREE SERVICE—LEGS, BRACES FOR INDONESIANS

(By Peggy Powell)

Jay Greene of La Canada has probably helped more amputees to walk again than any other person in the United States.

It's true he's become a wealthy man in the process but Greene is one of those rare

young businessmen who has a heart as expansive as his bank account.

Hundreds of the handicapped he is now helping will never pay him a cent.

Greene started 15 years ago with a $1,000 investment and has built his Glendale concern into the largest in the United States manufacturing artificial limbs and braces.

Through the Veterans' Administration, Green's company was asked to take charge of the SS *Hope's* rehabilitation program. Currently, one of his technicians, Charles Scott of La Canada, is in Jakarta making a survey of amputee needs.

When Scott returns with his report, Greene will then supply the equipment needed to help the handicapped of Indonesia.

Soon Greene and two of his technicians will leave for Jakarta, along with two doctors who are volunteering their services.

This five-man team will spend 3 months in Jakarta, instructing the Indonesians on how to make, fit and adjust the appliances and teaching amputees how to walk again.

Greene is paying the salaries and transportation costs of his technicians and is supplying all the equipment.

Toward the end of the trip, Greene will be joined by his wife, Margaret, and the two will travel back home togeteher.

The SS *Hope* is not the only charitable enterprise of this enterprising young man.

He has also made a very generous offer to members of the California Association of Highway Patrolmen. Any officer or member of his immedate family in need of an artificial limb or a brace will be supplied free of charge.

Furthermore, they will be given the advantage of technical advice from the UCLA Medical Center, with which Greene works closely in developing better equipment.

This is not a one-shot offer on Greene's part. It is a continuing thing because amputees require new appliances about every three years.

Greene is a modest man. He speaks reluctantly of his contributions. He prefers instead to talk about the people who have been helped.

"It's a very gratifying occupation," he said. "There's no thrill like seeing an amputee take his first step on two legs."

Dr. Oscar Fisher Blackwelder

EXTENSION OF REMARKS

OF

HON. HUGH Q. ALEXANDER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. ALEXANDER. Mr. Speaker, on Thursday, April 6, 1961, Dr. Oscar Fisher Blackwelder died. He grew up as a boy in my home county and I had the pleasure, after I came to Washington in 1953, of attending his church and getting to know him intimately. I considered him one of my best friends.

In paying tribute to Dr. Blackwelder, I would like to include an editorial from the Concord Tribune, Concord, N.C., of Thursday, April 20, 1961, which expresses my regard for his outstanding accomplishments, his wide scope of influence and his depth of character, better than any words I could choose. The editorial is as follows:

For two decades, 1933–53, Dr. Oscar F. Blackwelder, of Reformation Lutheran Church, was one of the city's clarion pulpit voices whose messages were heard throughout the country.

Since 1953 he suffered with an illness that steadily drained his strength and curtailed his public appearances, but during these trying twilight years, Dr. Blackwelder never lost his friendly spirit and gracious manner. He was made pastor emeritus of Reformation Church in 1953.

Those who knew and heard him at his peak will never forget the Lutheran pastor's gift of poetic expression and solid doctrinal content. Dr. Albert J. Shirkey of Mount Vernon Place Methodist Church said "for beauty of expression and intellectual and spiritual content, few preachers in America were his equal. He was in more constant demand across America than almost any other minister."

Dr. Blackwelder had a definite concept of his mission as a preacher. As Dr. Robert Van Deusen, Washington secretary, National Lutheran Council, said, he wanted to be "a voice rather than an echo; he wanted to shape the social conscience of the church."

When he came to Washington in 1933 from Christ Lutheran Church, Baltimore, the preacher told Dr. Joseph R. Sizoo, now George Washington University professor of religion, it was to "study and think and write and read. The seemingly limitless resources of the Library of Congress and contacts with Members of the Congress, among other items, served as an impetus to his inquiring mind and spirit."

As a man, Dr. Blackwelder had an ebullient personality that made the whole world kin. Dr. Edward Hughes Pruden, pastor of the First Baptist Church, called him "a warm hearted pastor, an inspiring Christian leader, and a wonderful friend." And Rabbi Norman Gerstenfeld, spiritual leader of the Washington Hebrew Congregation, observed "He was a saintly man, ready to work together for the common good of the larger community."

FBI Director J. Edgar Hoover, a Presbyterian layman, summed it up by saying Dr. Blackwelder was "an outstanding religious leader who made splendid contributions to the welfare of not only his own community but also the Nation. His life, devoted to God and dedicated to the service of others, will long serve as an inspiration to all those who were privileged to come in contact with him."

Last Monday (April 10) Dr. Blackwelder was laid to rest at Roanoke, Va., where he went to college and served his first pastorate. His body will lie in the grave there but his spirit will long be present in Washington not only among those who knew him but among those who will know of him through them.

The Big Leak Is at Detroit—Chicago Diversion of Lake Michigan Water

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, May 1, 1961

Mr. DOUGLAS. Mr. President, the Illinois Members of the House and the senior Senator from Illinois have succeeded several times in securing congressional authorization for the diversion through the Chicago River of a small and controlled amount of additional Lake Michigan water.

The additional diversion was requested for a brief period to permit a study of Chicago and northern Illinois sanitation problems. Although the Congress twice approved our request, the Eisenhower administration vetoed it.

Opponents and critics of Chicago's diversion of lake water have claimed it is responsible for changes in the Great Lakes Basin. Agency studies of the causes of fluctuations in the lake levels are now in progress.

The Chicago Tribune, in an editorial of April 22, 1961, reports that Mr. Ivan W. Brunk of the Chicago office of the Weather Bureau has found, after several years of study, that Chicago diversion is not the cause of fluctuations in the lake levels. In a paper presented recently at a conference on Great Lakes research at the Universvity of Michigan, Mr. Brunk concluded that practically all of the drop in the lake level has been caused by natural and artificial downcutting of the outlet control system of Lake Huron. In other words, as the Tribune puts it, "the big leak is at Detroit, where water from Lake Huron flows through the St. Clair and Detroit Rivers into Lake Erie."

Mr. President, I ask unanimous consent that the Tribune editorial, entitled "Where the Lake Water Goes," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHERE THE LAKE WATER GOES

We hope that the Michigan politicians who have been complaining about Chicago's diversion of lake water will read the latest study by Ivan W. Brunk of the Chicago office of the Weather Bureau.

Mr. Brunk has spent several years studying causes of changes in the levels of Lakes Michigan and Huron, which are really a single lake. The paper which he presented last week at a conference on Great Lakes research at the University of Michigan concludes that practically all of the drop in the lake level has been caused by natural and artificial downcutting of the outlet control system of Lake Huron.

In other words, the big leak is at Detroit, where water from Lake Huron flows through the St. Clair and Detroit Rivers into Lake Erie.

The flow through this channel is about 194,000 cubic feet per second, Mr. Brunk says, compared with 1,500 through the Chicago River.

More important than the actual rate of flow is the downcutting of the Detroit outlet. By this Mr. Brunk means the deepening of the channel by erosion and dredging. Erosion, he says, can be natural or can be caused by the wash of powerful propellers. Dredging has been done mainly to deepen the ship channel, and also in the commercial excavation of sand and gravel. As the outlet becomes lower, so does the lake level.

There is nothing new about this. The lake level has been subsiding for thousands of years. Geologists report that in the last 2,500 years, the level has dropped 16 feet—or about 8 inches a century. In the last 70 years—comparing 10-year averages in the 1880's and 1950's—the lake level has dropped 18 inches. Mr. Brunk has found that changes in the direction or rate of flow in the Chicago River have had no noticeable effect on the lake level. But it was in 1885, significantly, that large-scale dredging began in the Detroit Channel.

If the receding shoreline is as great a threat to Michigan as its politicians would have us believe, they should stop wasting

their time fussing about Chicago. They should consider instead building a weir across the Detroit Channel, thus narrowing the channel and substantially reducing the flow into Lake Erie. But this, of course, would bring protests from Ohio and New York.

The Greater Williamsport Community Arts Festival of 1961

EXTENSION OF REMARKS
OF
HON. HERMAN T. SCHNEEBELI
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. SCHNEEBELI. Mr. Speaker, yesterday I was privileged to attend the ceremonies marking the opening of the weeklong Community Arts Festival in Williamsport, Pa. I consider this activity, under the outstanding leadership of Mr. Bernard C. Taylor, to be a highly significant adventure in community effort; and I am proud that the district which I represent has, within it, generated an idea which seems to me likely to grow up from the community and outward even into the area, and into the Nation. It is an idea of today, not possible in another era. Not possible, because the need was not apparent. But now, with leisure hours and a high standard of living as a challenge for the value of time, it is of significance to see people in a community getting together to dig out all the art organizations and activities contained in it and going further to bring authorities in each art field to it to help stimulate the growth of art in its area. It is a good thing to use leisure time in this way.

From an idea born of a need to bring industries into the city of Williamsport, the chamber of commerce searched the town for a person who could coordinate all art activity. There are an assortment of art groups involved, plus the public schools, churches, and organizations which as a policy have never done more than listen tolerantly to an artist speak. The art groups have set up the schedules for their day: Visual arts, music, dance, drama, crafts, literature, and architecture, photography, graphics, fashion designs. There are two leaders of each art, generally one from the local college, Lycoming, and one from the public schools or local art groups.

There is a workshop each morning, the service clubs have taken guest speakers at noon luncheons, and the women's associations have sponsored the speakers in the afternoons. These programs vary with dancing and demonstrations as a part of the whole. There are also dinners sponsored by clubs and the evenings are devoted to entertainment and the performing arts. To add excitement a beaux arts ball will be held.

The best part of the festival is watching artists work with sponsors. One hundred and thirty-five guides have been instructed by college professors in a capsule course of the arts. They will stand by at all the exhibits which are housed all over town: in the public library, the college, the hotel, and the banks. On the final Sunday, after a week of stimulation, there will be a garden arts show which has been held in the spring for a few years.

Already within the city, an orchestra has been organized that did not exist before though the musicians were there, the arts and crafts have had the stimulation of working up to standards. Artists have felt the stability of interest and enthusiasm from supporters who are businessmen, industrial men, ministers, clubwomen, workers, and school and college instructors. The industrial school has done the bulk of the building of easels and display panels. Very little money has been spent in display. The emphasis has been on the value of participating in art and absorbing its benefits.

This is the reason the movement for a concentrated showcase for the arts is a product of today, for the good people find for their time, and for a forward look into a productive, peaceful community.

Betty Beale Views Washington in the Spring

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Monday, May 1, 1961

Mr. RANDOLPH. Mr. President, as the month of May brings the full and changing glory of spring to Washington, we pause to reflect on the unique charms of our gracious Capital City.

Such feelings doubtless stimulated Betty Beale, staff writer and nationally known columnist of the Washington Star, in writing the recent article in which she rhapsodized her continuing love affair with the city of Washington. We are indebted to Miss Beale for clothing in such expressive language the charm, the vitality, and the electric quality of life which Washington holds for so many of us.

I solicit the attention of my colleagues, and all who cherish beauty, to the poetic perceptions of Miss Beale and ask unanimous consent that this portion of her column in the Washington (D.C.) Star of Sunday, April 30, 1961, be reprinted in the Appendix of the RECORD:

There being no objection, the column was ordered to be printed in the RECORD, as follows:

EXCLUSIVELY YOURS—ABOUT THE MAGIC OF WASHINGTON

(By Betty Beale)

The magic of spring now encompasses this city of ours that has its own brand of magic. Washington the fair, Washington the great, Washington the powerful, means many things to many men.

The quiet of foliage-filled midcity living; the rutless mentality of its citizens; the petaled loveliness of dogwood dappling the town like sunlight.

The whole town's love of history where history is made daily; the scope of fashionable addresses from the studio in the alley to the farm on the outskirts; the worldwide scope of its newspapers' page 1 news.

The celebrity-filled parties; the celebrity-filled Halls of Congress; the celebrity-filled press corps; the pride they all take in their Capital.

The 15-minute-by-car accessibility of every important place; the number of multiacre estates right in town; the compassionate figure of Lincoln watching over the city with his immortal spiritual strength.

The stimulating fluidity of the population; the incredible variety of bigtime interests in a smalltown atmosphere; the reassuring sturdiness of the Capitol dome; the quality of cultural equipment.

The southern neighborliness of friends and the nonpryingness of neighbors; the inclusion of all that is typical of America to make an untypical town; sunlights 12 months of the year; the weird enchantment of Islam's call to prayer floating out from the mosque.

The wonderful cleanliness known only to a factory-free city; the extraordinary informality of elegant Georgetown; the redbirds that fly into my garden to be fed the minute I step outside.

The extreme up-to-the-minuteness of the news discussed everywhere; conversation at social gatherings in a community where conversation is not a lost art; the cosmopolitan attitude of residents toward the most bizarre foreign dress.

The massive white majesty of the classical buildings; the grand avenues that radiate with Parisian formality from statue-filled parks; flag-draped embassies on significant days in history; the fascination of so much foreign soil and diplomatic life.

The number of VIPs waiting their turn in a reception line; the dearth of police escort sirens despite the abundance of big names; the very interested but dignified attitude of inhabitants toward Presidents of the United States.

The endless influx of the great; the endless vigil by the Tomb of the Unknown Soldiers; the ever-imposing dignity of Robert E. Lee's home gazing down from the banks of Virginia on the Capital of the Union.

The line of eager sightseers entering the White House; the multitude of private gardens owned by city dwellers; the sylvan rockfilled stream that winds through the city; the infinite number of handsome residences within its 69 square miles.

The 50 American flags that fly with the unison of Rockettes around the base of the Monument; the historical significance of all the Capital's preserved antiquity; the sleepy stillness of the old canal; the weeping cherry trees on the French Embassy lawn.

And above all, the continuous excitement of this nerve center of the free world.

This is Washington—to me.

Industry's Plan

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. HARVEY of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Shelbyville (Ind.) News of April 11, 1961:

[From the Shelbyville (Ind.) News, Apr. 11, 1961]

INDUSTRY'S PLAN

American industry's program to create more jobs quickly is now in the hands of Congress.

Senators, Congressmen, and other Government officials are considering the program offered to them by members of the National Association of Manufacturers.

We think it's a vitally important and interesting one.

The proposal to provide for new jobs states that just two major governmental actions are needed:

(1) Immediate tax-rate reform.

(2) Curbing of abuses of union power.

From NAM's executive vice president, Charles R. Sligh, Jr., came this view on new jobs:

"The vast majority of new jobs will have to be found in private industry.

"Industry, for its part, will not be satisfied until the only people who want to work and are out of jobs are those who are between jobs."

The program points out that jobs are created when private individuals are impelled, in the hope of making a profit, to undertake activities which involve the employment of others.

The NAM jobmaking report, entitled "Creating More Jobs—Now," sets forth what a business faces today when it considers expansion or the introduction of a new product.

"Expansion, new products, and new businesses involve risk. If you invest today, as always in the past, you risk all you invest.

"But today you are also assured that if you succeed, the Federal income tax rates will take 52 percent of corporate profits, and the unincorporated business will have to pay anywhere from 20 to 91 percent.

"It is no accident that new business has been slow to spring up and new jobs have failed to open in sufficient numbers under these conditions."

Mr. Sligh emphasized the necessity of tax rate reform in order to restore the incentive to invest.

He cited the Herlong-Baker tax rate reform bills which would gradually reduce all personal and corporate income taxes over a 5-year period, and recast the depreciation allowances as well. And he emphasized that legislative curbs on the abuse of union power could reestablish true collective bargaining.

The NAM program also called on the Government to avoid or defer action which would further hamper the job-creating process.

Among these are the proposed increase in the Federal minimum wage which would throw many out of work in marginal industries; increasing payroll taxes and thus further reducing profits from which job creation is financed, and giving aid to depressed areas, which would shift employment rather than create new jobs.

Aged People in Desperate Need of Medical Aid

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, May 1, 1961

Mr. YARBOROUGH. Mr. President, I have received a letter from Mr. A. L. Thomas, of Gonzales, Tex., dated April 26, 1961, which states the need of our elderly for medical aid with eloquent force. The letter is self-explanatory.

I ask unanimous consent to have this letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

GUS THOMAS INSURANCE AGENCY,

Gonzales, Tex., April 26, 1961.

Re medical aid for the aged.

U.S. Senator RALPH YARBOROUGH,

Washington, D.C.

DEAR SENATOR YARBOROUGH: An elderly couple have been living near Gonzales, in utter poverty. A neighbor lady noted the other day that she had not seen them lately, so she went over to check on them.

She found the lady had been burned terribly several days earlier, and was just laying there suffering. She and her husband got her to town to the county doctor. He treated her and quickly used up the old man's $69, and sent her home to the shack, with no food, no medicine, not even an aspirin, and said she was all right.

The neighbor persuaded another doctor to look at the old lady; he threw up his hands, said she was dying and needed to be in a first-class hospital, such as at Galveston. He treated her, and is having her bandages changed daily, per the report.

The neighbors have gone to the county authorities, the Red Cross, the welfare, without getting any aid for the burned woman. Now, the neighbors are poor people too; they are feeding the couple, but they can't help the old woman in her misery. It is anticipated that she will die quickly and be out of her misery.

I make a few points for medical aid for the aged through social security. Charity will not get the job done; 51 percent of our citizens over 50 years of age are doing without medical care; the medical doctor's union (AMA) is not about to treat poor folks for free; we are spending untold millions of dollars treating previous members of the services for non-service-connected ailments; we are pouring untold millions into foreign aid, without buying one friend; we are running second in more than just space development. Time is running out.

Sincerely,

A. L. (GUS) THOMAS.

Resolutions of Essex County Commissioners

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include several very interesting resolutions adopted by the Essex County Commissioners at Salem, Mass., at their recent meetings:

Whereas Richard Cardinal Cushing recently said, "When we hear murmurs of graft and bribery, or payoffs and grabs, we know that these charges are not the products of the imagination of fanciful people"; and

Whereas a serious deterioration in moral and ethical standards is reflected in many people generally; and

Whereas we believe that unless our governmental leaders, especially, are made to act according to principle and higher ethical standards, the very foundations of our democracy and freedom are threatened; and

Whereas we must preserve confidence in our county government; and

Whereas public opinion and vote reaction need to be stimulated by providing a simplified standard from which to judge our public officials; and

Whereas men in public life must give immediate and serious thought to the rising public demand for higher and better standards: Now, therefore, be it

Resolved, That this day, March 21, 1961, the Essex County Commissioners endorse the following code of ethics for county officials and all public officials and urge its distribution and promulgation among all citizens of Essex County:

Code of ethics for Essex County officials and all public officials:

1. He will put loyalty to the highest moral principles and to country above party and persons, and uphold the honor and dignity of his office.

2. He will be a scrupulous trustee of all public funds, will not permit nor condone unjust enrichment of himself at the expense of the public, and will not accept expense money in excess of his actual expenses.

3. He will not promise his constituents improvements or public works that cannot reasonably be accomplished.

4. He will not take credit of any kind properly due someone else.

5. He will make no promises of any kind which compromise the duties of his office.

6. He will never accept for himself or his family favors or benefits that might influence the performance of his duties.

7. He will not make his office a means for employment of persons not qualified.

8. He will be consecrated to the consideration of economy in the interest of economic stability.

9. He will endeavor, in the performance of his duties, to expedite good Government and avoid delaying tactics.

10. He will avoid special concessions to lobbies detrimental to the public.

11. He will endeavor to awaken the apathetic and complacent to their responsibilities as citizens.

12. He will strive for clean, honest, and decent administration of public affairs with integrity as the keynote.

That the county commissioners of Essex County, Mass., congratulate President John F. Kennedy upon his inaugural address, which reaffirms every principle of our forefathers; had a real ring of realism, and delivered in a spirit attuned to our times, with a ringing challenge to the communistic world.

As a new generation looks upon the threatening state of the world in terms of opportunity, we extend to him our sincere best wishes and the fervent prayer that he display courage, judgment, integrity and dedication in retaining those human rights while preserving the values for which our forefathers fought.

That the county commissioners of Essex County commend President John F. Kennedy upon his forthright stand in his unswerving determination to keep Laos out of communistic hands.

We strongly and unreservedly support the goal of an independent neutral Laos, tied to no outside powers. We firmly believe it is the President's responsibility to establish foreign policy and our duty as Americans to support him.

We also back his decision that the United States has obligations under the Southeast Asia Treaty Organization (SEATO) in dealing with the Lao situation which must be met.

We unequivocally endorse the President's noble utterance, nobly delivered, that, "Every American will want his country to honor its obligations to the point that freedom and security of the free world and ourselves may be achieved."

That the County Commissioners of Essex County highly commend U.S. Ambassador to the United Nations Adlai Stevenson upon his inspiring and forthright speech in the United Nations in reply to the Russian representative on the U.S. position on the Laos situation.

It was a message of hope, high purpose, and of resolution, which reaffirms every principle of our forefathers. It had a real ring of realism and displayed stamina of purpose. It meets the challenge of our time, and lets the world know that we face the threat not with dread and confusion, but with confidence and conviction, as America accepts the responsibility of the free world's leadership.

Soviet Anti-Semitism

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, May 1, 1961

Mr. KEATING. Mr. President, recently an excellent series appeared in the Rochester Democrat and Chronicle written by Rabbi Stuart Rosenberg of Toronto, formerly of Temple Beth El in Rochester. The series deals with anti-Semitism in the Soviet Union. From the author's own experience it is clear that the Jews in the Soviet Union live under the continual threat of religious, and even personal, persecution. Synagogues are closed; Jews are refused high level jobs; efforts are made systematically to eradicate the Jewish culture; books are no longer printed in Hebrew or Yiddish; and rabbis and other religious leaders are appointed by the state only after they have passed the requisite tests for political compliance and loyalty.

Soviet policy toward the Jewish people is a sham and a hypocrisy, as Rabbi Rosenberg has pointed out. I sought to have this question thoroughly discussed before the United Nations Economic and Social Council, but the administration did not see fit to press, so no action was taken.

Rabbi Rosenberg's informative articles follow.

I ask unanimous consent that Rabbi Rosenberg's informative articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

SOVIET ANTI-SEMITISM?—NO BIBLES, PRAYER BOOKS

(By Dr. S. E. Rosenberg)

The Soviet Union can land its spaceships on the moon, its sputniks can orbit the heavens but apparently it cannot produce a Jewish prayer book or a Hebrew Bible. According to Paul Anatolovich Dazhorozny, vice chairman of the Soviet Council of Religious Cults, no Hebrew Bible has been published under the Soviet regime because the Hebrew alphabet is strange and esoteric, difficult for printers in the state publishing houses.

Bibles and prayer books for all of Russia's religious denominations have been printed in recent years. But Russia's 3 million Jews apparently do not need these religious appurtenances. "If they want a Bible," added Mr. Dazhorozny, "they should ask for it. Since they haven't asked for it, we must assume that they don't need one." This was the answer I received from many Russian officials whom I interviewed, every time I pointed out the glaring discrepancies between official policy and actual practice, as regards religious privileges available to the Jewish community in Russia.

I can only conclude from what I observed that the Council of Religious Cults has closed down Jewish printing houses throughout the country as part of its plan to reduce Russia's Jews to spiritual and cultural poverty. My conclusion is based upon a detectivelike, cloak-and-dagger experience I had while trying to track down a Soviet-printed Jewish prayer book.

In the Moscow synagogue there is a single volume of a Jewish prayer book published by the Soviet Union in 1956. I had it in my hands and studied it for some time but was required to return it to its lone possessor. The nature of this prayer book and the sham it reflects soon became clear to me.

In 1956 the first and last official contingent of an American rabbinical delegation visited Russia. Upon their return, these rabbis protested publicly that in all of Russia, since the revolution, not a single Jewish prayer book was printed by the Soviet authorities. Apparently, in response to this pressure from the outside, the Soviets determined to erase this exposure of their cynical hpyocrisy—for Russia continues to proclaim its desire to help foster the religious life of all its believers regardless of sect or denomination.

Thus, not long after this visit, the first Soviet Jewish prayer book did appear under the general editorship of the late rabbi of Moscow, Rabbi Solomon Schlieffer. Some 4,000 to 5,000 copies were published and made available to a very limited number of Jews in the Soviet Union. Even of this small number of books, many were sent to other Iron Curtain coutries—for export—to serve as propaganda window dressing to other Jewish communities in Communist-dominated lands.

For 10 days I tried to acquire a copy of this book. I made appointments at midnight in dark alleys; I sought out supposed owners in secret places; I even held a copy in my hand for a moment in anticipation of receiving it as a gift. But all to no avail. Always at the last moment, this book was taken from my hands by frightened Jews who knew instinctively why it could not freely be given to a Western Jewish visitor.

It all seemed fantastically strange. At first I could not understand why a book of this kind could not be given away without tremendous fear of reprisal on the part of their own fellow Jews or government agents. When I sat with Dazhorozny I understood. As a lead question I asked how it was that the Soviet Council of Cults had published prayer books and Bibles for all of Russia's religious denominations except the Jews. He probably didn't realize that I had seen the book myself and was somewhat taken aback with my response to his suggestion that such a prayer book was indeed published in 1956.

"No, it was not," I told him. "That showpiece 'prayer book' is a photocopy of a prayer book printed in New York City by Hebrew Publishing Co. of America, a prayer book brought as a gift by American rabbis in 1956. What has happened," I challenged him, "to Russian printing presses? Why did you have to take a Jewish prayer book printed in America and photograph it? Perhaps, Hebrew type in Russia has been destroyed?"

It was then that he suggested how difficut an alphabet the Hebrew language possessed. But when I pressed on and reminded him that in 1960 the Koran printed in Russia in the Arabic language did not seem to be difficult, he became quite perturbed. He reached excitedly into the top drawer of his desk and pulled out a Jewish religious calendar, ostensibly "printed" a few months ago and distributed by his committee to Jewish synagogues.

He didn't know that I already had a copy of this in my possession and could tell him, much to his feigned amazement, that this calendar, too, was not printed, but photographed from a handwritten copy, undoubtedly prepared by some local Jewish scribe.

I have a deep fear that in the Soviet Union today, the land of enlightened and humanitarian culture, where all nationalities are free to foster their unique cultures, Jewish printing houses and type for Jewish books have actually been destroyed or hidden. Hitler burned books—Jewish books by the ton. I have an eerie feeling that the Soviets may be more clever. Have they, perhaps, avoided the need to burn Jewish books by the simple device of not printing them?

Soviet criminal codes provide special penalties for interference with the regular performance of religious worship and the law of the land prohibits the establishment of government regulations which would restrict or limit the freedom of conscience.

One wonders if the Soviets truly believe in the humane principles of their own constitutional guarantees. If they did, the spiritual hunger and the slow starvation of Jews robbed of Judaism and Jewish culture might not stare a visitor so plainly in the face.

SOVIET ANTI-SEMITISM—JEWISH "CHIEFS" VENAL

(By Dr. S. E. Rosenberg)

I traveled some 5,000 miles to Russia to speak with my fellow Jews and to hear with my own ears what they had to say about their life in the Soviet Union. If I had to rely upon the Jewish chief of the synagogues and religious communities alone I would have spoken to none of them.

It seems clear that only those who have proved their unquestioned loyalty to the Soviet state can be elected to serve in positions of leadership in the Jewish community of Russia. Upon my arrival at these synagogues I was greeted at the door by these heads of communities. I was welcomed, even embraced, but then quickly moved off into a corner and reduced to a condition of incommunicado. If I tried to walk about the synagogue, to observe and possibly chat with some of the folks who were there, these Jewish officials walked with me.

If I had any doubts about the political functions of these lay religious heads of Jewish communities in Russia, they were quickly dissipated by one of their kind who, in response to my protestations over his annoying conduct, took me off to a private room, locked the door, and then proceeded to lecture me.

"Why should we even think of giving you free access to Jews here? You will abuse the privilege. We remember well what happened in 1956 when a delegation of American rabbis came to Moscow, Kiev, and Leningrad.

"What did they do when they returned to America? They maligned Russia. They composed articles for the capitalistic press about the conditions of Jews here. They said that we were persecuted as Jews. What an abominable falsehood. Have you seen Jews persecuted in Russia? This you cannot see here. Perhaps in the West where men exploit fellow men, where Jews and Negroes and other minorities are the vic-

tims of gross injustice—perhaps there, among your imperialists, you will find Jewish persecution. Not here."

Time and time again during the course of his tirade he pounded the table, pointing his finger at me, creating the impression that I had come with nothing more in mind than to tell lies about Russian Jewry.

This man claimed that he was no Communist, that he was only a humble self-sacrificing lay leader of the Jewish religious community and had only its interest at heart. Finally, I realized with whom I was talking for his unguarded answer to a simple question unlocked the amazing mystery. I merely asked how he came to be elected president of his community. His answer was a revelation. "There are free elections by the Jewish religious community. Of course," he added, "those elected must be acceptable to the government and its council of religious cults."

Here are a few choice answers to a number of specific questions I put to him:

Question. How is it that so many of the Jews whom I met expressed great interest in the possibility of leaving Russia and going to Israel?

Answer. This is not true. You are telling a lie. Don't try to fool me. The Jews of the Soviet Union are not going to Israel because they do not desire to go. What else is Israel but a puppet of the capitalist states doing the bidding of the United States and Britain? Zionism is supported by Western capitalists for their own filthy reasons.

Question. You seem so well dressed. Why are not the others also similarly attired?

Answer. I receive a fine pension, having worked as an engineer all my life. They, too, will be well off when their time for pension arrives. Economically, like all others here, the Jews of the Soviet Union are well off. Their coreligionists need have no fears about their material or their spiritual well-being.

Question. If this is so, why don't the Jews in the Soviet Union help other Jews in the world who are in need of help, as Western Jews have been doing freely for so many years?

Answer. If you mean by this that we Russian Jews should send our money to help the Jews in Israel, then I have already given you my answers. We shall not do it. American Jews help the Jews of Israel not because they are good or compassionate, but because they are forced to do the rotten work of American capitalists in supporting the Zionist imperialist state.

The existence of such hand-picked Jewish leaders who act as the spokesmen of their religious community is, in itself, eloquent testimony to the captive state of Jews within the Soviet Union. The spiritual stagnation which such purchaser leadership reflects can ultimately be more harmful to the religious and cultural conditions of Russian Jews than any overt or physical persecution.

ANTI-SEMITISM IN RUSSIA—JEWS CALLED VICTIMS OF COMMUNIST HYPOCRISY

(By Dr. Stuart E. Rosenberg)

What light does the current position of the Jews in the Soviet Union shed upon the general world situation?

Before coming to Russia I had read many of the reports on the Jewish situation. I was perplexed and saddened by the curious intensity of recent attacks upon Jews in the Soviet press and radio.

Yet I tried honestly to judge the Russians on their own merits, and waited to learn from them at first hand their interpretation of the facts.

The comments made to me by Mr. Kreshin and Mr. Sokolov, editors of the "Moscow News," fairly well, sum up the strange Russian interpretation:

When people in the West read what are labeled as attacks on Jews in the Soviet Union, they misunderstand the motivations and the reasons for such articles and statements. We, in fact, carry on a campaign not against the Jews, but against Judaism, as part of our basic Communist position, which sees religion as a reactionary force for evil in the world. When we write against certain ritual practices of the Jews, we are not attacking them as people, but rather on the basis of our belief in scientific atheism."

He reiterated his hope that liberal opinion in the world would understand the Russian position, and would appreciate the fact that calumnies against Jews did not reflect an antiminority prejudice, but was rather part of the Soviet Union's general attack upon religions, which they would very much like to uproot.

The attacks upon Jews in the Soviet Union and their mounting disabilities go far beyond antireligious measures alone.

Here is a little documentary list.

1. There are more than 100 Soviet nationalities in Russia, all of whom are granted the right to their own cultural institutions, their own schools and the use of their own language. The Soviet Union regards the Jewish people in Russia as members of the "Jewish nationality," and yet Jews are the only nationality in Russia which is deprived of any semblance of nationality rights.

Yiddish schools, Hebrew schools, instruction in Jewish cultural life, publications and Jewish theaters—all of these are prohibited.

2. All major religious groups in Russia are permitted to have national or regional ecclesiastical organizations, in order to maintain contact with their local constitutents all over the country. Only the Jews are prohibited from official contact with one another.

3. Churches and mosques throughout Russia continue to attract adherents, and in some communities religious buildings have been expanded and added to. This is not the case with Jews.

Russians distrust the Jews for they see in them a potentially disloyal element. Thus they aim to force the Jews into isolation from one another, by a continuing and relentless program of intimidation and hostility.

What can be done to help? And in helping to ameliorate the Jewish condition in Russia will we also be doing more than assisting the Jews alone?

The West must continue to expose Russian democratic hyprocrises on every occasion. Every public forum, every legal and just means must be utilized to publicize internal Russian autocraey and its cynicism toward its own peoples.

Far from being the defender of peace and the protector of helpless minorities, Russia must be exposed for her civilized barbarities, her hypocritical and cynical attitudes toward those who cannot defend themselves.

Letter to Douglas W. Johnson

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 12, 1961

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks I include the following letter which appeared in the Washington Daily News for April 26, 1961:

LETTER TO DOUGLAS W. JOHNSON

DEAR MR. JOHNSON: When you found in a Los Angeles street a bag containing $240,000 in unmarked bills, you had no thought except to get it to its rightful owner as fast as you could.

A lot of us thrilled at this evidence that old-fashioned honesty had not gone from this country, as some had feared.

Brink's, from whose armored car the package of money had flopped, gave you a reward of $10,000. You have just reiterated that you thought it was "nice of them." That's what the public thinks, too. For, like honesty, gratitude is a prime virtue.

But now we are concerned to hear that you have been made unhappy by people who write to you that you were a fool to return the money, and that your son, too, has been disturbed by kids saying his father was "dumb."

We are writing to tell you that we warmly admire you for what you did. We are sure that the persons who said you were a fool are only a very small fraction of the American people. We are sure we are speaking for millions who have not written you when we say that you did the only right thing.

You have done a fine thing. You have dramatized respect for private property, on which our national prosperity depends. You have exemplified human dignity. You have brought honor to yourself and your fellow men.

Spring Comes in the North

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Monday, May 1, 1961

Mr. BARTLETT. Mr. President, writing from Alaska for the Wall Street Journal, Ray J. Schrick in an article published in that newspaper on April 26 told about the big guessing game of the North—guessing when the ice will go out in the spring at Nenana on the Tanana River. Mr. Schrick treats of other subjects, too, in the article which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ALASKANS BET $100,000 ON TIMING OF SPRING ICE BREAKUP IN RIVER—MANY PUSH FOR OTHER LEGAL GAMBLING TO AID STATE'S BUDGET BUT GOVERNOR BALKS

(By Ray J. Schrick)

NENANA, ALASKA.—Any day now, a five-legged stand frozen into the ice in the middle of the Tanana River here will begin floating downstream, as the ice thaws. The moving stand will gradually stretch taut a rope attached to it and the rope, in turn, will pull a pin from a stationary clock ashore. This will stop the clock, marking the exact moment the ice went out.

The breakup of ice will signify far more than the coming of spring to most of Alaska's 226,000 citizens. To the person or persons who guess correctly the precise minute the clock stops, there will be a big pot of prize money, possibly as much as $100,000. The explanation? The so-called Nenana ice pool is a lottery, one of unusual type and proportions.

This is one of the few legal gambling events still permitted in the once wide-open

North. Only Alaskan or Yukon residents are eligible to participate in the 44-year-old event, which in the past 10 years alone has dispensed over $1 million in prize money. However, the time may be coming when gambling activities are increased in the 49th State and made available to all comers. One reason: Many Alaskans believe the high costs of statehood can only be met by a return to the free gambling of gold rush days—with a tax on the gambling.

THE ONLY WAY TO PAY FOR STATEHOOD

"Men would rather gamble than pay taxes," declares 66-year-old Fred Muller of Nenana. Adds an Anchorage businessman: "I'm for legalized gambling. It's the only way to pay for statehood."

Such sentiments have been stimulated by the legislature's recent boosts in taxes on personal income, cigarettes, gasoline, auto licenses, and liquor. Among the factors boosting State spending is higher welfare outlays; at last report, 21.2 percent of the State's labor force was unemployed, compared with a national figure of 7.9 percent. The high unemployment rate stems in Alaska from sharp cutbacks in Federal military construction spending in the State.

Democratic Gov. William A. Egan and other top State leaders firmly oppose legalizing gambling. Attorney General Ralph Moody explains the opposition this way: "Organized gambling brings in an undesirable element. It doesn't contribute anything to the State." The State legislature in 1960 passed over the Governor's veto a bill to legalize church bingo and certain other noncommercial operations such as the Nenana ice pool, which actually had been conducted illegally down through the years, according to Attorney General Moody.

The Nenana lottery is operated by the Nenana Ice Classic Association, membership in which is made up of every resident over 21 in the town. A six-man board and a manager are elected by the association and sometimes hot political races develop for these offices.

As insurance against any claims of dishonesty, the town puts out in advance of the ice breakup a book about the size of the telephone directory of a major U.S. city. This book lists the names and time guesses of everyone who has plunked down $1 each for one or more lottery tickets. The book is distributed around the state.

YON CAN'T HOLD BACK THE ICE

"It's the squarest game there is," contends one Nenana resident. "You can't hold back the ice as you could a horse." The ice has gone out in the past anywhere from April 20 to May 16. Each year a few ticket buyers—last year 37—predict the ice will go on April 31, a date that doesn't exist.

As breakup time nears, a watchman stands by the clock 24 hours a day. Only the $2,000-a-year hired manager winds the clock; he also sets the clock daily. An electric clock once was used but fluctuations in the electric current in town raised questions as to the clock's accuracy.

As the ice begins to move, a rope from the ice to a shore tower sets off a siren so townspeople can flock to the shore. Then, as the ice structure gets around 100 feet downstream, a second rope pulls the pin from the clock.

If no one guesses the exact minute the clock stops, the two closest guesses on either side of the exact time share the pot.

Of the total proceeds from sale of the lottery tickets, $20,000 a year is set aside for wages of persons working on the operation and up to 5 percent can be deducted for charitable purposes (The town of Nenana has built a $50,000 civic building from proceeds in this category). One intangible asset: The free publicity Nenana gets for its efforts—publicity which, as one town official says proudly, "puts us on the map."

President Kennedy Signs Area Redevelopment Act—Charleston (W. Va.) Gazette Terms the Measure a Tribute to Democratic Concern

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, May 1, 1961

Mr. RANDOLPH. Mr. President, when President Kennedy signed into law the Area Redevelopment Act earlier today, a long-past-due measure of assistance for depressed chronic labor surplus areas and underdeveloped nonurban areas became a reality.

Many communities which have been forced into economic decline by excessive unemployment will be stimulated by this act to take steps to improve their outlook and their stake in the future.

The Area Redevelopment Act will not, in itself, solve the problems of any section. But it will afford a means whereby numerous towns, cities,, and counties can act to help themselves. Nothing will flow to any community as a consequence of this measure unless its leaders and citizens demonstrate ability to plan and initiate positive programs calculated to revitalize its economy.

The incumbent President's predecessor had two opportunities—in 1958 and 1960—to sign area redevelopment legislation into law. On both occasions his actions were negative instead of positive.

For President Kennedy, the experience of affixing his signature to the 1961 act at a White House ceremony this morning doubtless was a most satisfying one. Along with the esteemed senior Senator from Illinois [Mr. DOUGLAS], and other able Members of the Congress, the President, as a Member of the Senate, was a devoted apostle and stalwart proponent of aid for depressed area legislation. As a candidate for the Democratic nomination for President, Mr. Kennedy stated forthrightly his positive position concerning the need for such an act, and as his party's nominee he vigorously supported the Democratic national platform pledge to continue the battle for enactment of area redevelopment legislation.

But as gratifying as was the honor which came to President Kennedy in being privileged to perform the final action which gave this legislation the status of law, he very properly paid special tribute to our diligent and effective colleague, Senator DOUGLAS, and other Senate and House Members whose perseverence and devotion were applied to area redevelopment bills during sessions of the 85th, 86th, and this 87th Congress.

Those of us who have been afforded opoprtunity to work for this legislation were gratified to have been participants in the White House ceremony.

Mr. President, the Charleston Gazette, Charleston, W. Va., which has been a strong and consistent advocate of area redevelopment legislation, published an appropriate editorial in its April 28, 1961, editions. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AREA AID BILL A TRIBUTE TO DEMOCRATIC CONCERN

To those who argue that party labels mean very little, enactment of a bill to aid depressed areas this week should shake them out of their comfortable indifference to party politics.

On two occasions, a Republican President vetoed essentially the same bill, thus delaying aid to West Virginia and other States faced with pockets of chronic unemployment which defy State and local solutions. The overwhelming majority of Republicans in Congress also have opposed the bill over the past decade.

It took the election of a Democratic President, John F. Kennedy, and a Democratic Congress cooperating with him to assure its long overdue enactment. The bill is a tribute to the Democratic Party's pragmatic concern for people in trouble.

The tragedy is that Republican fear of trying something new—in the face of obvious need—delayed the bill's passage for so many years. This chronic, GOP standpatism has prolonged the agony of thousands of jobless citizens in West Virginia and the Nation.

President Kennedy, U.S. Senator PAUL DOUGLAS, Democrat, of Illinois, the longtime champion and author of the depressed areas bill, and West Virginia's eight Congressmen deserve praise for their efforts in finally obtaining a national program for a national problem. By working for its passage, President Kennedy fulfilled one of his major campaign pledges to the people of West Virginia.

Now it's up to the governmental agencies and citizens of West Virginia to make immediate plans to take advantage of the bill's provisions. Valuable time already has been lost because of Republican short-sightedness. West Virginia can afford no more costly delays in building for a more prosperous future.

Depressing Victory

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following editorial from the Wall Street Journal of April 28 says clearly and concisely what many of us felt when we voted against final passage of the so-called depressed areas bill.

How long are these barefaced raids on the U.S. Treasury going to continue? How long is it to be before Congress resumes its constitutional right and duty of the power of the purse? The answer seems to be, "Never."

DEPRESSING VICTORY

The final passage of the depressed areas measure is being hailed as a victory for President Kennedy, and of course it is, in the purely political sense. That is appropriate, for it is a purely political bill.

The public interest is another matter. We have here, in one untidy package, an impressive assortment of evils. No one seriously expects the bill to relieve unemployment or put so-called depressed areas on their feet. At the same time, its financing

provisions ought to give even politicians the horrors.

Out of the $451 million to be dished out over 4 years, $300 million will be dispensed without benefit of Congressional review. The Treasury will just sign for it—and then go out and borrow the money, as though the Government didn't have enough debt, deficits and inflationary potential. Apparently Congress just doesn't give a hoot any more about its once-prized power of the purse, at least not when it conflicts with the vision of all those millions pouring into selected Congressional districts.

Well, no one need have supposed the present Government would be anything but active on the ward-heel political level. Even so, nearly half a billion dollars is a stiff price for turning the general good into a depressed area.

Polish Constitution Day

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. McDOWELL. Mr. Speaker, we in the United States have many close ties with Poland, which it is my pleasure to review each May on Polish Constitution Day. The provisions of the 1791 Constitution proved that the Polish people at the end of the 18th century sought a liberal government from the medieval feudal elements, just as we had sought and won our freedom in 1783. A historian has written of the Polish Constitution:

> Posterity * * * joins with the best contemporary opinion in deeming the Constitution of the 3d of May one of the greatest achievements in Polish history.

For this reason the Polish people have remained true to their ideals, first expressed in this Constitution no matter where they have moved in the world. Polish immigrants to this country brought with them their love of independence; Polish people helped settle our country and built its cities and towns. They have contributed to our music and our literature. They have brought to us all the elements of their society which it has been so difficult for them to maintain under Soviet domination. Thus, I take great pleasure in honoring them on this most important day in their history.

In the United States, wherever Americans of Polish descent live, in cities and towns from coast to coast, this holiday is observed with appropriate exercises throughout the month of May to pay tribute to the Polish nation and to remind fellow Americans that Poland was one of the first pioneers of liberalism in Europe.

It was on May 3 in 1791, barely 2 years after the adoption of its Constitution by the United States in 1789, that Poland without a bloody revolution or even without a disorder succeeded in reforming her public life and in eradicating her internal decline. But this great rebirth and assertion of democracy came to the Poles too late and did not forestall the third partition of Poland in 1795 by Russia, Prussia and Austria.

POLAND PIONEERED LIBERALISM IN EUROPE

The greatness of the May 3 Polish Constitution consisted in the fact that it eliminated with one stroke the most fundamental weaknesses of the Polish parliamentary and social system. The Poles raised this great moment in their history to the forefront of their tradition rather than any one of their anniversaries of glorious victories or heroic revolutions.

We Americans who have been reared in the principle given us as a birthright by the founders of our great Republic, the principle of the sovereignty of the people in the state, which is the primary postulate in the 1791 Polish Constitution, can see how this truism cut off the Poles and the Polish political tradition completely from both the Germans and the Russians, who have been reared in the principle of state, and not national, sovereignty.

The light of liberalism coming from Poland was then, as it has been throughout the years that followed and even unto today, a threat to tyranny and absolutism in Russia and Germany. In 1795 Russian and Prussian soldiers were sent to Poland to partition and rape her. In 1939 Russian and Prussian soldiers met again on Polish soil, as the absolute totalitarianism systems of naziism and communism again felt the danger of true liberalism coming from Poland just as in 1791.

In the Polish 3d of May Constitution this liberalism was formulated in these words:

> All power in civic society should be derived from the will of the people, its end and object being the preservation and integrity of the state, the civil liberty and the good order of society, on an equal scale and on a lasting foundation.

In Wilmington, Del., the Council of Polish Societies and Clubs in the State of Delaware will mark the adoption of Poland's first constitution on May 7.

Participating in the observance will be the Delaware division of the Polish-American Congress. The observance will be held at Modjeska Hall, in Wilmington.

Prominent Polish and American speakers will address the gathering. St. Hedwig's Choir and children of Polish Saturday morning classes will take part in the program, as will various officials of the city of Wilmington, and of New Castle County.

The Council of the Polish Societies and Clubs in the State of Delaware recently pointed out, in announcing the plans for May 7 that:

> During the past two centuries, Poland, which was the most powerful nation once, became partitioned four time; [has been] ravaged, despoiled, persecuted, and enslaved by greedy neighbors. No nation could suffer so much without leaving a deep scar.
>
> It is the hope and prayer of Polish people everywhere that a spirit of justice, understanding, and cooperation prevail among all the nations for a glorious and lasting peace on earth and good will among men.

The committee on arrangements for the May 7 observance of Poland's Constitution Day in Wilmington, Del., consists of Adam J. Rosiak, chairman; Joseph Falkowski, Ludwig Kopec, Frank J. Leski, Mrs. Frank J. Obara, and Mrs. Charles Kilczewski.

A Lesson for Kennedy

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. DEROUNIAN. Mr. Speaker, the experienced have much of value to give to the theorists and I offer to my colleagues the following article by Ruth Montgomery, as it appeared in the Long Island Press on April 28:

NIXON'S A GOOD POKER PLAYER, AND FAR FROM OUT OF THE GAME

(By Ruth Montgomery)

WASHINGTON.—Richard Milhous Nixon despite his Quaker upbringing learned to play poker well and profitably during World War II. This should be a warning to those who are ready to count him out of the national political arena.

The relaxed young man who is now going about the business of making a nongovernmental living for the first time in 19 years seems totally unware of the dire predictions that he is through.

He talks with the calm assurance of a leader who expects to lead. He speaks without rancor of the erstwhile Democratic rival who defeated him by the popular vote margin of only sixteen one-hundredths of 1 percent. He obviously respects his own judgment about foreign affairs, and comments on it without boasting.

He seems, in fact to be an extraordinarily well adjusted individual. In talking of the Cuban debacle, Nixon recalled the 3-hour session with Fidel Castro in his Senate office 2 years ago, and his immediate appraisal of the bearded Cuban leader as "a captive of communism."

With dispassion he commented that he was in the minority then, but that top officials at the State Department came around to his way of thinking in March of last year.

Nixon, who is a master in the art of timing, thinks and talks in the vernacular of the poker table. In speaking of our present day foreign policy, the Republican standard-bearer said it is important never to talk any bigger than we are prepared to act.

The biggest bluffer in a card game, he pointed out, is the one most likely to call your bluff, and Soviet Premier Nikita Khrushchev is a big bluffer.

The worst mistake for a poker player to make, he continued, is to throw in his hole card before it is necessary. The parallel with the abortive Cuban invasion was obvious, although he voiced no direct criticism of President Kennedy.

While the rebels were pouring into Cuban beaches, in the hope of liberating their homeland and inspiring others to defect, Kennedy and Secretary of State Dean Rusk were telling the world that the United States would not raise a finger to intervene.

This was the hole card that was turned up too soon. As a result, many Cubans were afraid to defect. By contrast, during the tense days and weeks of the Quemoy and Matsu crisis, President Eisenhower and Secretary of State John Foster Dulles carefully concealed the hole card. They left

doubt in the Communist mind as to what extent they would be willing to commit U.S. strength in the Formosa Straits. The Reds finally backed down.

Nixon suggested this analogy, even as he praised Kennedy for his courage in deciding to back the Cuban rebels. The mistake was in not being prepared to go all the way, if necessary to insure victory, when America's prestige had been so heavily committed.

It is out of character for Kennedy, who always plays politics to win, to settle for defeat in the much grimmer business of fighting guerrilla warfare with the Communists.

We are losing to the Reds in Cuba and Laos. We fear Communist coups in Iran and elsewhere. We have infuriated the Portuguese over Angola, and the Dutch over New Guinea. We are enmitizing old allies faster than we are creating new ones.

It is obvious that Nixon hopes Kennedy will find time, in the busy days ahead, to brush up on his poker game. He wants him to win for America.

A Policy on Cuba

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. COHELAN. Mr. Speaker, much speculation, projection, and analysis has taken place during the last week concerning the recent Cuban fiasco and the role played by the United States.

While continued, exhaustive inquiry into the whys and wherefores of this lamentable operation is necessary, it is now time to turn our attention to the future; to determine what policy our country is to follow regarding Cuba.

The New York Times in a recent editorial has placed the problem confronting us in sharp perspective. The Times has wisely pointed out that—

The chief danger to the United States and the rest of Latin America is not Cuba by herself, but Cuba as a possible model for other revolutions, and Cuba as a base for the spread of anti-Yankee or communistic doctrines.

The Times goes on to emphasize a sound course of action which includes the defense of the security of the United States, but rightly places its emphasis on proving our support for the Latin American people's demands for social reform, and which proves that we ask partnership and cooperation, not subserviance.

I urge my colleagues to read this editorial carefully:

A POLICY ON CUBA

What next in Cuba? The Cuban exiles have been defeated militarily and the United States, which supported them, has suffered a political defeat. However, history is not like a boxing match or a baseball game. It flows like a river. The United States and Cuba are too much intertwined by history, geography, economics, and strategy to be separated. Cuba has been caught up in the vast storm of the cold war. All the forces unleashed by the Cuban revolution are still operating.

Therefore, something has to happen, and the instinct is to say; something has to be done. The first thing to recognize is that whatever is done should not be done hastily. There must be no repetition of the incredibly inefficient intelligence analysis of the Cuban situation which preceded last week's fiasco. To those who knew the situation in Cuba and knew the formidable strength of the leaders and their reigme, the outcome of such an invasion attempt was inevitable. And even had it succeeded, the CIA concept of putting in a rightwing government that would have been branded as a Yankee creation was dreadfully wrong. It is obvious that the first step must be to reorganize the personnel and methods of the Federal officials dealing with the Cuban problem today. Any policy, any action to be taken in the future must be based on an accurate assessment of the situation.

There are certain developments that would force the United States to act; and such action would be fully understood by the world at large. If the Russians, for instance, were to set up missile bases or move in with a dangerous degree of military support; if Americans were killed and the lives of the remaining Americans were jeopardized; if Premier Castro were to attack Guantanamo Bay or mount military invasions against his Caribbean neighbors—in such cases the United States would, of course, have to intervene directly, and presumably so would other members of the Organization of American States.

Barring such obviously dangerous, although unlikely, developments the United States should not intervene. Why not? The grave political consequences; the blow to the moral standards and principles by which we live and which are a source of strength in the cold war; the fact that armed intervention without the clearest provocation would reduce our policies to a crude contest in power politics; the loss of needed allies; the perilous international complications—these are the results that would flow from such armed intervention by the United States in Cuba.

Even more basic than our differences in economic system is our philosophic difference with the Communists; we believe in freedom and the rule of law among individuals and among nations. This is the essence of what America stands for in the world, and it is our greatest source of strength. We must preserve it.

The hegemony of the United States in the Western Hemisphere is threatened for the first time in a century. It can only be defended by a positive, creative policy, one that builds. Of course, we are strong enough to crush the Castro regime, but to do so by force would lose us far more than we could gain. It is hard to be patient under such provocation and defeat as we have experienced. Yet it is the mark of true strength to take both defeat and victory in one's stride.

The chief danger to the United States and the rest of Latin America is not Cuba by herself, but Cuba as a possible model for other revolutions, and Cuba as a base for the spread of anti-Yankee or communistic doctrines. How to counter the creeping subversion of the totalitarians is the great problem for the free world, as President Kennedy has recogniezd. It cannot be done by adopting their methods. That would be to surrender.

Defend the security of the United States. Continue by all legal means to encourage the anti-Batista, anti-Castro Cuban exiles in their determination to establish a free and democratic regime with social justice. They must not be abandoned.

Above all prove—by deeds not just words—that we are determined to support the demands for social reforms throughout Latin America; that we are not merely anti-Communist; that we will oppose rightwing, reactionary military dictatorships as we do leftwing, communistic dictatorships; that we ask partnership and cooperation, not subservience. This is the only kind of "intervention" that can permanently succeed in Latin America.

Forgotten Remedy for the Voteless Negro

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. MULTER. Mr. Speaker, it is my pleasure to commend to the attention of our colleagues the following article which appeared in the January 21, 1961 issue of the Nation. This excellent discussion of the 14th amendment to the Constitution is of particular importance to this body and should be of interest to us all:

FORGOTTEN REMEDY FOR THE VOTELESS NEGRO
(By Thomas I. Emerson and Arthur E. Bonfield)

In the current debate over methods of assuring the Negro in the South his right to vote, very little attention has been paid to section 2 of the 14th amendment. For many years major interest in this amendment has focused on section 1, which prohibits the States from denying to any person due process of law or equal protection of the laws. Not many people are aware that those who framed and adopted the 14th amendment viewed section 2, rather than section 1, as its most important provision.

Section 2 provides that representatives in Congress "shall be apportioned among the several States according to their respective numbers, counting the whole number of persons in each State, excluding Indians not taxed."

But (it continues) when the right to vote at any election (for Federal or State offices) is denied to any of the male inhabitants of such State, being 21 years of age, and citizens of the United States, or in any way abridged, except for participation in rebellion, or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens 21 years of age in such State.

In addition to section 2 an almost unknown statute, originally passed in 1872 and still on the books, contains the same requirement.

Neither the constitutional provision nor the statute has ever been successfully invoked to reduce the representation of any State in Congress. This failure to adhere to the plain language of our Constitution and law is a continuing national scandal. The matter is now of particular importance for two reasons.

In the first place, there is serious doubt that the Civil Rights Acts of 1957 and 1960, or indeed any legislation based upon judicial procedures, can effectively secure the Negro's right to vote. Thus three of the six members of the Civil Rights Commission, in the first report of that body, characterized proposals for amendment of existing laws as stopgap measures. They urged the adoption of a constitutional amendment eliminating all restrictions upon the right to vote except

age, residence and legal confinement. As will appear, this proposal seeks to accomplish by direct prohibition on the States what section 2 of the 14th amendment, if enforced, would accomplish indirectly through reduction of State representation.

Secondly, a new apportionment of House seats, based upon the 1960 census, will be made shortly now that Congress has convened. Hence the new administration will have to face squarely the question whether to enforce or continue to ignore the constitutional mandate.

An examination of the possibility of implementing section 2 of the 14th amendment would therefore seem to be in order.

In the reconstruction of the Union following the Civil War, the North was united on one question—the legal abolition of slavery. The 13th amendment, providing that "neither slavery nor involuntary servitude shall exist within the United States," was quickly ratified in 1865. On other issues there was bitter controversy.

One of these involved the political terms upon which the seceding States would be readmitted to the Union, and more particularly the relative strength of the Southern States in a reconstituted Congress. Prior to the war, southern representation in the House, under the original constitutional provision, was based upon counting a slave as three-fifths of a free person. The abolition of slavery would, therefore, result in additional southern representation in the House. The victorious North was unwilling to accept such an increase in southern power, particularly if based upon a disfranchised Negro population.

The issue of extending Federal protection to Negro voting also arose in other connections. There were many who strongly supported Federal guarantees on grounds of principle, that all citizens were entitled to the basic rights of citizenship, and as essential to giving the Negro a political base from which to achieve other civil rights. Republican politicians viewed the Negro vote as important in maintaining Republican control of the Federal Government. On the other hand, most of the Northern States did not themselves at this time extend the franchise to the Negro and the North was by no means fully committed to direct action on this issue.

The resolution of the problem was section 2, which was deemed the heart of the 14th amendment. Historians are in some disagreement as to whether the major purpose of this section was to reduce the power of the Southern States in the House or to secure, by the indirect method of reducing representation, the franchise to the Negro. Undoubtedly both considerations weighed heavily. In any event, it is entirely clear that section 2 was intended to establish, as a constitutional principle, that representation in the House should be based upon population reduced by the proportion of male citizens over 21 who were denied the franchise for reasons other than the narrow grounds specified.

The 14th amendment was ratified in 1868. Two years later, in 1870, the 15th amendment was adopted. Designed to protect the Negro's right of franchise directly, it provided that the right to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude."

Various questions as to the interpretion of section 2 have arisen, or would arise if effective implementation were attempted. The major ones will be noted briefly.

1. It has been contended that the 15th amendment, which directly prohibits a State from infringing the right to vote because of color or race, superseded and nullified the indirect penalties of reduced representation embodied in the 14th amendment.

Neither the language nor the legislative history of the later amendment supports this interpretation. The two provisions are entirely consistent, merely providing different sanctions for the same action on the part of the States. Indeed, the debate on the 14th amendment made clear that a direct prohibition would not necessarily solve the problem of indirect abridgment through property, literacy, or educational qualifications, which by their terms or by discriminatory administration effectively deny the franchise to the Negro. Subsequent history has fully vindicated the position of the framers of the 14th amendment.

2. The 19th amendment, prohibiting discrimination in voting on account of sex, has the effect of striking the word "male" from section 2 of the 14th.

3. The question of what constitutes a denial or abridgment of the right to vote is, in the main, free of ambiguity: The States may, without incurring any penalty, disqualify noncitizens, persons under 21 years of age, and persons engaged in rebellion or convicted of crime. The word "inhabitant" should probably be construed as including any bona fide resident of a State, regardless of the length of his residence. It can be argued, however, that a State residence requirement necessary for administrative purposes, say not over 6 months, ought not to be considered an abridgment of the right to vote.

All other disqualifications result in reduction of representation. These include disqualifications based upon race, color or national origin; property, literacy or educational tests; payment of poll taxes or other taxes; and the taking of loyalty oaths. They also include denial or abridgment through violence, intimidation, economic reprisal, or similar pressures.

Section 2 probably also requires a reduction in representation where the right to vote is abridged by serious malapportionment or gerrymandering of congressional election districts. This is a matter of considerable importance but involves complications we shall not attempt to unravel here.

4. Does section 2 apply where the infringement is not due to direct action of the State or State officials, but derives from the actions of private individuals or groups? This issue is of key importance. In many parts of the South the major reason for the lack of Negro voting is fear of reprisal. Indeed, it may be said that the whole system of racial discrimination in the South, especially since the Supreme Court's repudiation of the separate but equal doctrine, rests upon the use or threat of violence and economic pressure.

The argument that section 2 applies only where the right to vote is denied or abridged by direct State action is based mainly upon judicial interpretation of section 1 of the 14th amendment. The Supreme Court has consistently held that the protections of due process and equal protection in section 1 are available only as against action taken by the State. The same has been held of the 15th amendment. But this line of reasoning does not apply to section 2. In contradistinction to section 1 and the 15th amendment, section 2 is not expressly limited to State action. The fact that the other provisions are so worded, and section 2 is not, is persuasive that section 2 is intended to be applicable regardless of the source of the infringement. The whole purpose of section 2, as shown by its history, confirms this interpretation. Moreover, even if State action were required, a strong argument can be made that the State has an obligation which it cannot shirk to protect its citizens in the fundamental right to vote, and that failure to fulfill this obligation constitutes State action just as much as an affirmative abridgment by State officials.

5. Nothing in section 2 requires proof that the citizen has made an affirmative effort to register or vote. Statutory restrictions, discriminatory practices and intimidation constitute a denial or abridgement in and of themselves, whether or not any individual Negro has actually been refused the right upon demand.

6. The effect of section 2 is to reduce the representation of the State being penalized. It does not increase the number of Representatives to which other States are entitled.

7. Finally, the enforcement of section 2 results not only in reduction of representation in the House, but also in the number of Presidential electors to which the State is entitled. This follows from the fact that the Constitution grants to each State "a number of electors, equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress."

Thus the implications of enforcing section 2 are far reaching. Yet all efforts to do so have thus far been unavailing. What are the chances that, under present circumstances, section 2 can now be enforced?

The Constitution does not specify what agency of government is to determine the allocation of Representatives to the States or to enforce the constitutional requirements. The procedure is now governed by legislation originally enacted in 1929. In its present form, this statute provides that within 1 week of the opening session of the Congress following the decennial census, the President shall transmit to Congress a statement showing the whole number of persons in each State (excluding Indians not taxed) as ascertained by the census, and "the number of Representatives to which each State would be entitled under an apportionment of the then existing number of Representatives by the method known as the method of equal proportions." It is then made the duty of the Clerk of the House of Representatives, within 15 days after receipt of the President's statement, to send to the executive of each State "a certificate of the number of Representatives to which such State is entitled."

Both the language and the legislative history of the statute indicate that the President's role was intended to be strictly mechanical. His function seems limited to applying the mathematical formula of "equal proportions" to the total population. While the matter deserves further consideration, the chances of section 2 being enforced through Presidential initiative seem somewhat remote.

Clearly Congress has the power to determine the apportionment of seats in the House by statute. Prior to 1929, it did so after each decennial census. Since then the matter has been governed by the general statute. Congress also could establish machinery for determining the number of disfranchised citizens in each State.

Ideally, therefore, Congress should assume the obligation of enforcing section 2 of the 14th amendment. Continued flouting of current legislative and judicial efforts to assure the right to vote may lead it to do so. Certainly advocates of civil rights should mount a fullscale effort to force Congress to honor the constitutional mandate. Yet, realistically, the prospects of immediate response are not favorable.

A third alternative lies in resort to the courts—the traditional American method of securing redress for infringement of constitutional rights. Here a number of legal obstacles must be overcome. These are mainly technical problems for the lawyers, which cannot be considered in detail in this article. But the two major problems may be briefly outlined.

The first involves the form of the lawsuit. Who should institute the action, against what officials, in what court? Two methods

of procedure hold promise of success. One is a suit, brought in the Federal District Court for the District of Columbia, to enjoin the Clerk of the House from certifying the number of Representatives to the States on any basis which did not conform to section 2 and the 1872 statute. Agents of Congress have in the past been successfully subjected to legal action. Such a proceeding should preferably be brought by a voter from a State in which the election laws and practices impose no restrictions disallowed by section 2, or by such a State itself. States suitable for the purpose include Indiana, Iowa, Kansas, Michigan and Nevada.

An action of this sort would have to be brought shortly before or after the President transmitted his statement to Congress under the 1929 law, and before the Clerk had issued his certificate. It would be available, therefore, only to rectify the initial apportionment made after the census. For present purposes, the suit would have had to be prepared and ready to file early this month.

A second procedure would be an injunction proceeding in a Federal district court instituted by a disfranchised citizen against the election officials of his State to enjoin them from holding an election for Representatives by congressional districts. This would be premised on the theory the the State was not entitled to the full number of Representatives allocated by the Clerk and therefore Representatives must be elected at large, rather than by districts.

This second procedure has the advantage that it can be brought at any time after the census has been taken and Representatives apportioned. It has the disadvantage that it would settle the issue only for the particular State involved. Separate suits would be necessary in each State where reduction of representation was sought.

Hence, it would seem that the first attempt at litigation should be by a suit against the Clerk of the House, brought as soon as possible. This could be followed by the second type of action where necessary to secure conformity with section 2 between apportionments.

The other major problem arises out of the doctrine of political questions. The court would be faced with the argument that the method of apportioning Representatives is a political matter to be decided by the legislative branch of the Government and not by the courts. In a case brought in Virginia in 1943, the lower Federal courts dismissed the proceeding on this ground, and the Supreme Court declined to review. Moreover, the Supreme Court itself has several times invoked the doctrine (over vigorous dissent) as a reason for refusing to interfere with malapportionment of congressional districts within a State.

It is impossible to review here the various considerations underlying the doctrine of political questions. Suffice it to say that powerful arguments can be urged against its application to constitutional issues of interstate apportionment, which by their very nature are not readily susceptible to solution by the legislative process. The task of persuading a majority of the Supreme Court to this view is by no means insuperable.

All these questions, and others not mentioned, make the litigation approach hazardous. But the chances of success appear sufficiently great to warrant an all-out effort to bring a court test.

This brings us to the final and perhaps the most troublesome question. How does one ascertain the number of citizens in each State whose rights are being denied or abridged within the meaning of section 2?

This problem must be solved whether enforcement of section 2 be sought through presidential, congressional or judicial action. And, realistically, success in securing enforcement depends in large measure upon formulating a fair, practical and reasonably objective technique for determining the amount of reduction.

If a legislative solution proves feasible, special machinery could be established for making the determination. Thus Congress could authorize the Bureau of the Census to gather information, or establish a legislative investigating commission (as has been suggested by Senator MCNAMARA), or delegate power to the Civil Rights Commission. On the other hand, if reliance must be placed upon Presidential or judicial action, the issue would have to be decided upon the basis of information already available.

In any event, the securing of reliable data poses a difficult problem. We suggest that the best available method, at least for present purposes, is to base the calculation upon a State-by-State comparison of the proportion of persons actually voting in each State to the total number of citizens over 21 in that State. This ratio is readily available; the number of citizens over 21 is supplied by the census, the number voting by election statistics. In any State where that proportion is below the national average it is reasonable to conclude that the disparity is largely due to denials or abridgments within the meaning of section 2.

Upon analysis, this test appears surprisingly reliable. It must be remembered that section 2 requires reduction of representation for the denial or abridgment of the voting rights of any adult citizen for any cause other than participation in rebellion or commission of crime. The former disqualification is not now relevant; and the latter would occur in only an insignificant number of cases and be relatively constant as among the different States. Residence requirements involve no great difficulty. Most States have a residence requirement of 1 year, and therefore this factor also is relatively constant. To the extent that it is desired to reduce representation on the basis of such requirements, a reasonably accurate calculation could be made from census figures.

The major difficulty, therefore, arises in attempting to take account of certain other factors which result in nonvoting but which cannot be considered a denial or abridgment. These are primarily illness, absence from the voting district on election day, and various forms of apathy. Illness and absence from the district, insofar as not rectified by absentee voting, probably do not vary much among the States. In any event, the number of votes involved would not be large enough to make a difference in result.

We are left, then, with the factor of apathy. There are obvious difficulties in attempting to ascertain the influence of this factor in any State. A reasonable approximation is all that can be expected or required.

It is not unreasonable to assume that apathy, or at least apathy unrelated to denials and abridgments, is fairly constant in the American population generally. There are, however, several methods by which a margin of safety can be allowed for possible variation from State to State. Thus, much apathy arises out of a one-party system. But this manifests itself largely in failure to vote in final elections rather than primaries. It is possible, then, to compensate for this aspect of apathy by calculating the number of voters in each State on the basis of either the final or the primary election, whichever is larger. Again, it is possible to make an arbitrary allowance for possible variations in apathy, or to calculate the national average of nonvoting in a way which makes such an allowance.

Data might be assembled showing the effect upon exercising the right to vote of income, education, population distribution and isolation, the political structure of the State, and other factors which might produce or reflect apathy. Where a correlation appeared, these factors could be taken into account. Such studies should be made. But even in their absence, the formula suggested above would seem to yield sufficiently reliable conclusions to establish a prima facie case.

Let us now consider the actual results of applying the test. By way of illustration, we take the figures on the number of citizens over 21 in each State from the 1950 census, the latest fully completed and available. Figures on the number of voters in each State are those for the 1952 Presidential election. These are chosen partly because that election was the first after the census, and partly because Eisenhower's candidacy in the South tended to offset the effects of the one-party system there. Available primary statistics indicate that, in all but two Southern States, the number voting in this election exceeded the primary vote that year.

Using the above figures, the national average of the proportion of persons actually voting to citizens over 21 is slightly over 65 percent. The ratio in the different States varies substantially. It ranges from 87 percent in Utah, to 24 percent in Alabama and Mississippi. But certain patterns emerge. The 11 Southern States are all at the bottom of the list, well below the national average. Two border States—Kentucky (57 percent), and Maryland (60 percent)—come next. Only two other States are below the national average—Arizona (62 percent), and Maine (64 percent). The others range above the average in varying degrees, but a cluster of 17 States occupies a middle bracket from 71 to 75 percent.

It will be seen from the above that, by including all the States in a general national average, the figure is substantially biased in favor of the Southern States.

The final calculation is made by reducing the representation of each State by the percentage by which that State is below the average. This calculation can be done in several ways, depending on the margin of error we wish to allow for possible variations in the apathy factor:

1. We may reduce representation only to the extent that the percentage of nonvoting in any State is 10 percent below the general national average. Thus Alabama, with a ratio of 24 percent of voters to citizens over 21, is 41 percent below the general national average, but its representation would be reduced by only 31 percent.

2. We may reduce representation by the exact percentage that any State falls below the general national average. On this basis Alabama's representation would be reduced by 41 percent. Since the general national average, as we have seen, is biased in favor of the Southern States, this method still allows for a margin of error.

3. We may reduce representation by the percentage that any State falls below the average of the 17 States which form the middle cluster. The average of these modal States is 73 percent and by this method Alabama would lose 49 percent of its Representatives.

The results in those States which would incur a reduction are set forth in the accompanying table.

The difficulties in implementing section 2 through congressional or judicial action are serious but not insurmountable. The chance of success is probably better than that of obtaining a constitutional amendment. With a new apportionment based on the 1960 census imminent, the time is now ripe for a renewed effort to make the Constitution mean what it says.

States which would lose representation if 14th amendment were enforced

State	Present number of representatives	Reduction on the basis of—		
		10 percent below general national average	General national average	Average of 17 model States
Alabama	9	3	4	4
Arkansas	6	1	2	2
Florida	8	0	1	1
Georgia	10	3	3	4
Kentucky	8	0	1	1
Louisiana [1]	8	1	2	3
Maryland	7	0	0	1
Mississippi [1]	6	2	2	3
North Carolina	12	0	1	2
Pennsylvania	30	0	0	2
South Carolina	6	2	2	3
Tennessee	9	1	2	3
Texas	22	2	4	6
Virginia	10	2	3	4
Total reductions		17	27	39

[1] Because 1952 primary statistics are not entirely reliable, no allowance has been made for higher primary voting in Louisiana and Mississippi. At most, adjustment for this factor would result in a reduction of 1 less representative in each column for those 2 States.

NOTE.—A fraction of 0.5 or over is counted as a whole number.

The Challenge of Change

EXTENSION OF REMARKS
OF

HON. EUGENE J. McCARTHY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, May 1, 1961

Mr. McCARTHY. Mr. President, the senior Senator from Minnesota [Mr. HUMPHREY] has spoken frequently and effectively for the liberal position in politics.

He has recently summarized the liberal position in an article, "The Challenge of Change," which he wrote for the Midwest Quarterly, a journal of contemporary thought published by Kansas State College, of Pittsburg, Kans. I ask unanimous consent that this article, appearing in the April 1961 issue, be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CHALLENGE OF CHANGE

(By Hon. HUBERT H. HUMPHREY, of Minnesota)

Liberalism is not a doctrine, a dogma or a distinct philosophy. It is rather an attitude—and open approach to life and society characterized by flexibility and adaptability.

The American liberal cannot offer a precise definition of his political attitude. Indeed, he shuns the oversimplifications and catch phrases which are used so often to describe liberalism. He seeks to express his views clearly and eloquently, but he is at a disadvantage. He knows that any rigid statement on liberalism could be rendered obsolete in a short time by the fast sweep of world events.

The key word which may be applied to the liberal viewpoint is "change." The liberal understands that life is not static, that anything—from a plant to a government—must change, or it will die. He knows that a mind, or a nation, cannot endure as an active, productive instrument if it is guided by the status quo and allowed to slip into stagnation.

The liberal welcomes change. He seeks change not for its own sake, but as an inevitable force of life which must be captured and channeled toward the right direction. He is thus willing to experiment, to try the untested, to develop the new, to dare the impossible.

The liberal's willingness—yes, eagerness—for change is not just a restless yearning for activity. His goals are clear; his ideals are strong. He is not afraid to pursue them with all his energy.

The liberal American seeks a world of peace, dignity, security, and freedom for every individual. He pursues the goal of a world in which each human being enjoys full freedom to live and work as his conscience and talent direct him.

This full freedom means far more than the absence of political restraints. It means a democratic society and a minimum of control by government, of course. But full freedom is not just freedom from political or social interference in the lives of individuals.

Full freedom for an individual to pursue and achieve his potential means freedom from the basic and ancient enemies of mankind—hunger, poverty, disease, illiteracy, ignorance.

The liberal fully understands that a man is not really free if he is hungry. That man is a slave; his chains are as strong and confining as if they were made of steel. He cannot work, he cannot produce, he cannot create. His progress is checked, and he becomes the target of the agents of totalitarianism.

The same chains bind the man who is impoverished, or sick, or illiterate, or ignorant. In this modern world, this scientific age, tens of millions of men are so bound. Two-thirds of the world's peoples are undernourished today. Three-fourths of all human beings are illiterate.

The liberal does not ignore these facts. He looks beyond the comfort, security, and relative luxury of his own surroundings and is deeply concerned with the plight of his brothers.

This is one key element, I believe in the character of the American liberal. He does not detach himself from the basic problems of mankind, even though he is not directly affected by those problems. He is guided, I believe, by an instinct of humanitarianism and a sense of compassion. Other men who reject the label "liberal" may be humanitarian and compassionate. But the liberal's concern for others is deep, enduring, and personal.

The liberal does not examine the plight of masses of men elsewhere, throw up his hands in defeat, and say: "It's too big a problem. I and my country cannot solve the problems of hunger, poverty, and illiteracy everywhere." The liberal knows the problems of mankind are massive, but he is determined to seek solutions, to work for the progress of all men, and to sacrifice some of his own comforts to save the lives and minds of others. The liberal feels responsible.

He also has faith that no problem is too big or overwhelming. He sees the hunger of millions not as a problem, but as a challenge. And he sees the surplus of food in America not as a problem, but as an opportunity—an opportunity to utilize this Nation's agricultural abundance to feed the hungry of the world and move mankind a big step closer to full freedom.

The liberal is also a realist. He has faced the facts of human need and is well aware of the difficulties of meeting those needs. But he is determined to work toward his goals. He understands that a world of full freedom may not be secured in his lifetime, but he knows that unless he works for such a world, it will never become reality. The world, he says, cannot and will not stand still. If mankind does not progress toward its noblest goals, it will slide back further away from them.

A food for peace program, or any program developed by the United States, can and must stem from the hearts and the will of the American people. And, by necessity, it must be administered through their government. Every American shares a belief in representative government by law, but the conservative tends to believe that government should do as little as possible, that it should have little authority and responsibility.

The liberal believes that for a successful democracy, government initiative is fully as necessary as private enterprise—for a food for peace program or any other national effort. He believes that primarily through the vigorous use of the mechanics of government can we muster our resources with sufficient strength, speed, and purpose to survive as a free nation threatened by totalitarianism.

To many conservatives, "planning" becomes an unpleasant word when it is applied to any effort outside the household or corporation. But the liberal knows that purpose and planning are absolute essentials of public policy, as well as of private enterprise. He is convinced that if we are not willing to shape history ourselves, others will shape it for us.

The liberal believes that government is not in competition with any group in the Nation, that it is not just another special force within our society. He believes that our Government is the noble extension and voice of the whole American society. Thus, planning in our democracy is a creative act which must draw on the intelligence and skills of the Nation as a whole, and not simply on the bureaucracy of the Federal Government.

The liberal today is often criticized for advocating what conservatives label a "welfare state." I think it is useful to examine two quotations which help define the welfare state concept:

"The scheme of society for which we stand is the establishment and maintenance of a basic standard of life and labor below which a man or woman, however old or weak, shall not be allowed to fall. The food they receive, the prices they have to pay for basic necessities, the homes they live in, their employment must be the first care of the state, and must have priority over all other peacetime needs."

"I believe that the American people feel that our production is so great that we can afford to put a floor under the necessities of life—food, education, medical care, housing—so that every family may have available a minimum decent living."

The first quotation is from Winston Churchill. This second was spoken by the late Senator Robert A. Taft.

Planning—for a minimum decent living—does not mean dictation in a free society. It means cooperation and coordination. The liberal does not want big brother dictating what people must do. But the liberal argues that the challenges facing America can never be met without the vigorous participation of the Federal Government.

Today's liberal believes that conservative government cannot cope with the restless, endlessly changing world of the 20th century. In the field of foreign policy, the liberal accepts the fact that Government action dominates the international scene.

The liberal identifies with the need for leadership in a world of turmoil, conflict, and danger. He is willing to act as a leader, and to see his nation stand as the leader of the free world. He sees challenge and opportunity throughout the world, and moves to seize the initiative. The liberal has worked for and won progress in international organiza-

tions, more technical assistance, and more economic aid for the underdeveloped nations.

He does not rest on specific victory. He is forever seeking improvement and forever working for progress. He never takes his eye off the goal of a nation and world of prosperity, of peace, of brotherhood. Above all, the liberal recognizes that the means of achieving that goal must preserve the dignity, the freedom, and the self-respect of man, of the individual citizen.

Others who call themselves liberal may disagree with some of my comments, or place different emphasis on some elements of the liberal attitude. This is to be expected. President Franklin D. Roosevelt was asked once why liberals were so often divided, and conservatives generally united. He answered:

"There are many ways of going forward, but there is only one way of standing still."

Professors and Politics

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. DEROUNIAN. Mr. Speaker, those who read Mr. James Reston's article in the New York Times, will be especially interested in this practical editorial reply, which appeared recently in the New York Herald Tribune:

NO MORATORIUM, MR. RESTON

A moratorium on sniping at the professors might not be a bad idea, for if this brilliant young crowd falls, we might have to tolerate not only defeat but a spasm of anti-intellectualism as well.

This surprising suggestion was made by Mr. James Reston of the New York Times in concluding a column noting the sorrow of the Harvard hands who failed at their first great test as architects and engineers of foreign policy.

No one wishes to salt the wounds. None of us can escape sympathy for these "highly intelligent and sensitive men," as Mr. Reston calls them, who counseled the President on Cuba. This Nation has an obligation to understand the peril and support the President. Crisis has underscored the urgency of restraint and responsibility. We are all in this together.

But there is no need to impose on ourselves a holiday from public discussion and constructive public criticism of the conduct of government. While urging caution in the realm of national security, the President articulated an essential democratic truth at the publishers' convention:

"Without debate, without criticism, no administration can succeed—and no republic can survive."

Mr. Kennedy is surrounded by some highly intelligent scholars who, like the President himself, rode to power partly on the momentum of persistent criticism of past policies. We pray for their success, as does Mr. Reston. But we cannot see the logic of special immunities in an hour of error or misjudgment on the grounds that they are sensitive professors and not hardened practitioners of the art of politics. They are influential counselors of government, and should be treated as such.

If to hold them rigidly accountable (or "snipe" at them) would bring on a spasm of anti-intellectualism, then there must be something wrong with intellectualism in government. At best this would be a flimsy excuse to check debate.

Only by continuing the discussion, with maturity, balance and the public interest foremost, can we take out insurance against future tragedy.

There must be no moratorium (even if we accepted the curious argument about the spawning of anti-intellectualism), and we are amazed that an experienced newsman would put such an idea in print.

Pioneer California Defense Firm Celebrates 25th Anniversary

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, May 1, 1961

Mr. ENGLE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement calling attention to the record of achievement of a defense firm located in the State of California.

The story of the Garrett Corp., of Los Angeles, which is this week celebrating its silver anniversary after 25 years in business is of significance because it illustrates the kind of pioneering in the fields of aircraft, missiles, and space which has taken place in California and today explains why so much of our national defense production is being done in the State of California.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

Founded on May 21, 1936, with a handful of personnel headed by J. C. Garrett, who is still president, the organization today is composed of 8 divisions and 2 subsidiaries, employing 10,000 people in operations which span the world.

Originally formed to provide procurement and engineering services for the embryonic west coast aircraft industry, the company since then has become the leading developer and manufacturer of environmental control systems for aircraft, missiles, and space ships. Practically every American-built transport airplane and a preponderance of military planes now carry Garrett pressurization and air-conditioning equipment, plus numerous other components. The company's sales last year totaled $223,825,000 compared with $284,832 the year it started.

By very nature of its work in a business which had never existed before the company's establishment, it has made a long list of notable contributions to the science of aeronautics, and is currently well into a number of nuclear and solar space power projects. In addition, it has become an important economic asset both locally and nationally with highly substantial annual disbursements to about 3,500 to 4,000 small business and other firms from California to New England. It's payroll last year totaled $86,800,000.

The Garrett Corp. supplied the world's first successful environmental control system for a production aircraft when it pressurized and air-conditioned the historic Boeing B–29 bomber, without which its long over-water flights to raid Japan would have been impossible. The B–29 set a pattern for the Nation's postwar transports all of which henceforth were to be built for pressurization with Garrett the predominant supplier of equipment.

Garrett's capabilities in this field have continued to be recognized on up through the development of the jet transport and currently with its most advanced assignment, the air conditioning and pressurization of Project Mercury's earth-orbiting manned satellite.

In addition to its primary role in the area of environmental controls which are built by its two air research manufacturing divisions in Los Angeles and Phoenix, the Garrett Corp. also operates in several other directions.

Its air research industrial division is the leading manufacturer of power-boosting turbochargers for diesel engines. Its air cruisers division in Belmar, N.J., manufactures inflatable rubberized survival equipment including life rafts, aircraft escape slides, life preservers, and related products.

Garrett's air research aviation service division, at Los Angeles International Airport, is in the business of modification and maintenance of business and private aircraft. Three other divisions in the industrial and aircraft supply field include Garrett Supply, the original Garrett company; Airsupply-Aero Engineering Co., and Marwedel in San Francisco. Foreign operations are carried on by Garrett International, S.A., a subsidiary located in Geneva, Switzerland, and Garrett Manufacturing Ltd. in Toronto, Canada; and Garrett (Japan) Ltd. in Tokyo.

The company continues to expand its manufacturing facilities. It's air research division in Los Angeles this year opened a new 235,000-square-foot manufacturing facility in Torrance, Calif., on 66 acres. In Phoenix an additional 60,000-square-foot office-factory building was acquired on 24 acres adjacent to the air research division of Arizona. It was the second large plant acquisition at Phoenix in 2 years.

National Radio Month

EXTENSION OF REMARKS
OF
HON. CARLETON J. KING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. KING of New York. Mr. Speaker, the month of May has been designated National Radio Month, and I feel it is appropriate on this occasion to consider the significant place radio has in our daily lives. As an indication of the industry's tremendous success, in 1960 radio ownership in the United States reached the record figure of 146 million sets, or 3 per family, with an additional 10 million sets in public places.

The radio has played an important role in the educational, business, philanthropic, and entertainment lives of our people. It serves as an integral part of our national defense system; as a crusader for civic betterment, and as an informational media to practically all of our citizens. The thousands of men and women employed as managers, announcers, newsmen, writers, salesmen, and technicians have made a major contribution toward the growth of the radio industry as well as the Nation's economy.

To symbolize National Radio Month, the National Association of Broadcasters has chosen as its theme "Radio: The Best Sound Around." In my opinion, this brief motto modestly conveys the high

fidelity in which the radio industry has fulfilled its responsibilities toward a better informed nation.

I wish to extend my heartiest congratulations and best wishes to all those skilled and devoted people in the radio industry on this splendid occasion.

The Art of Gentle Robbery

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. MICHEL. Mr. Speaker, under leave granted, I wish to insert in the appendix of the RECORD the following editorial from a recent issue of the Chicago Tribune:

President Kennedy's tax message contains the same basic contradiction which has marked his program from the beginning: He wants to stimulate the business investment which is necessary to production and employment, but he wants to penalize those who provide this investment.

The repeal of the dividend credit and exemption would withdraw what small protection the investor now has against double taxation on the proceeds of his investment. They are taxed once as corporate profits, at the rate of 52 percent, and again when he receives them as dividends, at the rate which applies to his income bracket. It would be fairer, more effective in stimulating investment, and more in line with the practice in other industrial countries to extend this credit instead of seeking to eliminate it.

As for the proposal to slap a 20 percent withholding tax on all payments of dividends and interest, the only justifiable purpose is to smoke out tax evaders. But the withholding tax would apply to all payments, whether or not the recipient owed the tax. It is misleading of Mr. Kenendy to compare this to the withholding tax on wages and salaries, which, he says, has served us well. Nearly all wage earners file tax returns and pay taxes. The claiming of a refund is simply part of a job which has to be done anyway.

Dividends and interest payments, on the contrary, are received by millions of people who neither file tax returns nor owe any taxes. Among these are widows, pensioners, and small children. If a child earns $5 a year in interest on money saved through baby-sitting and odd jobs, $1 of it will be appropriated by the Government.

Don't worry, we are told, the child can apply for a refund. But who is going to perform the necessary paperwork to get back $1? Unless a substantial amount is involved, the money will be as good as stolen—and by the Government, at that.

Even if the recipient does apply for a refund, it will be slow in coming, and meanwhile he will be out the amount involved. The paperwork which this will cause will be enormous, and the amounts relatively small. Many potential investors will decide to put their money to other uses.

Congress would do well to think at least twice about the morality of a measure which, in effect, legalizes robbery on the part of the Government and teaches us that we are all considered guilty of cheating on our taxes unless we go to the trouble of proving ourselves innocent.

Kennedy Program Moves Toward Impoverished Agriculture

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to insert an address delivered by Louis A. Rozzoni, president of the California Farm Bureau Federation, before the Commonwealth Club of California on April 14, 1961.

It is, in my opinion, a most apt and timely discussion of the continuing problems in connection with the farm program, currently again under consideration.

The address follows:

[From the Commonwealth, Apr. 24, 1961]

CALIFORNIA FARM BUREAU PRESIDENT LOUIS A. ROZZONI SAYS KENNEDY PROGRAM MOVES TOWARD IMPOVERISHED AGRICULTURE

Our farm problem is caused by a technological revolution in high production which started during World War I, and still is under way. Today, through increased yields and reduced input of manpower, each farmer produces food and fiber for 25 people. Before World War I it was seven people.

Higher taxes, higher interest, higher labor and equipment costs, have lowered net farm income.

For over 30 years, Government has tried to control the so-called basic commodities, beginning with wheat, and to this day wheat is our most serious problem.

For years Government programs have failed to distinguish between the commercial farms—which produce 90 percent of total output, earn the major portion of net income, and hold most of the proprietary assets—and the noncommercial holdings, many of which are little more than farm-living units.

COMMODITIES IN TROUBLE ARE THE CONTROLLED

Failure to make this distinction is largely responsible for failure to correct surplus crop production.

The farm commodities in trouble are those under close government control and subsidy.

In 1959, the total number of farms was 3,900,000 compared to 5,382,000 in 1950. This 10-year decrease of 27 percent occurred exclusively in submarginal farms—those selling less than $2,500 worth of farm products per year.

This gradual reduction in number of submarginal farms, which started two centuries ago, has helped the net income of those who left agriculture and of those remaining.

Valued in constant dollars, assets per farm advanced 82 percent between 1940 and 1960. Assets per farmworker doubled during the 20 years. Valued in 1960 dollars, farm assets per farmworker in 1960 averaged $21,300, considerably more than the average investment of $15,900 per employee in manufacturing in the same year.

BRANNAN PLAN, POAGE BILL "WARMED OVER"

The proposed Agricultural Enabling Act of 1961 is a warmed-over version of the Brannan plan for compensatory payments, and the Poage bill of 1960, both overwhelmingly rejected by past Congresses. The President's message gives no cost estimate and offers no proposals for specific commodities.

His plan would transfer the initiative in formulating farm policy from Congress to the Secretary of Agriculture working with producer-elected committees. Executive decisions would be submitted to producers by referendum and would be subject to congressional veto.

Mr. Kennedy emphasized the need for a commodity-by-commodity approach. The four basic changes proposed are:

1. Expand use of marketing orders to any commodity on a national or broad regional basis.

2. Allow marketing quotas to be applied to any commodity (if voted by producers) in terms of pounds, bushels, etc. Such quotas to be imposed separately or in combination with acreage limitations set by the Government.

3. Permit plans to tailor production to domestic and international demand by land retirement payments, price-support loans, Government purchases, diversion programs, production incentive payments, production controls and quotas and allotments, and export subsidies.

4. Authorize national advisory committees for each commodity and provide expenses. Advisory committee farm plans, subject to Secretary of Agriculture approval, would go to farmer referendum and would be submitted to Congress 60 days before going into effect. If Congress takes no action in the 60-day period, the plans would go into effect. (Referendums would require approval by two-thirds of the producers voting.)

CAN'T APPLY MARKETING ORDERS BROADSIDE

Marketing orders are devices by law to enable an industry group to influence the flow, quantity, or quality of a particular commodity moving to market. They work with reasonable success when applied to crops of limited production in restricted areas.

However, this same principle cannot be successfully applied to widely produced crops in varying production areas. No common denominator is equitable in all circumstances.

The proposal to set up marketing quotas by pounds or bushels is more direct control over what is marketed than acreage controls. It moves in the direction of an impoverished agriculture.

Perhaps the third proposal, to provide the full gambit of Government controls over production and the old idea of direct payments for compliance, is the most controversial. This brings up once again the Brannan plan and last year's Poage bill, overwhelmingly rejected.

WOULD MAKE FARM PRODUCTS VULNERABLE

This proposal contemplates programs to fix farm prices and control production on a commodity-by-commodity basis. Under strict production controls:

(a) Farm products would become vulnerable to increased competition from synthetics and other substitutes.

(b) Exports would become completely dependent on Government assistance.

(c) Resources displaced by individual commodity programs would soon force extension of controls to additional commodities until all are covered.

(d) Any resulting improvement in farm prices would soon be capitalized into the prices for farmland or marketing certificates.

Many people suspect that the administration plans to use the Agricultural Stabilization Committee machinery to select commodity committee members so that the Secretary of Agriculture will control the committee recommendations.

The commodity-by-commodity approach (let the farmers decide) sounds good. Who knows more about the problem?

But a quick second look discovers the fatal flaw: Would the farmer be really deciding for his own commodity, or for 250 and more commercially grown commodities? Can one commodity be isolated?

WHY CAN'T LABOR, BUSINESS DO LIKEWISE?

And if a farmer can write his own program, why can't the labor unions get the Secretary of Labor to do the same? Why can't the Secretary of Commerce do the same for industries?

Each commodity program would be unrelated to the others. This approach has already been proved wrong. Farmers take land made idle by controlled crops and put it in crops free from controls—thus helping to get themselves in trouble.

Even more critical is the danger of farmers being more easily regimented.

The President's farm program asks Congress to abdicate its responsibility. If Congress can give away its ability to legislate, then the very structure of constitutional government is in danger.

NEED NOT REPEAT MISTAKES

We need not repeat the mistakes of the past. We need not accept the theories of production and marketing controls as a solution to the farm problem. Farmers do have other choices.

We who have followed futile efforts to regulate production through political means have concluded that economic relations must be left to the automatic self-adjustment—imperfect though it may be—of supply and demand.

We in Farm Bureau have studied the effects of past legislation for years. A bill has been introduced to get at the heart of the farm problem by seeking correction of the causes for surplus wheat and feed grains. This bill (S. 1246) provides for—

1. A voluntary acreage retirement program for producers of all crops.

2. Retirement of a percentage of a farmer's total cropland as a condition of eligibility for price support on wheat, corn, grain, sorghum, rye, oats, barley, soybeans, and flax.

3. Adjustment payments in cash or in kind.

4. A national support level for wheat and corn.

We strongly believe it is time to simplify and reduce Federal farm controls rather than further complicate the present confused and ineffective programs with their excessive costs.

A big sales pitch is going to be made to sell the program to the farmers and to Congress. Farmers should not act hastily in response to emotional appeals or to salesmanship of agricultural stabilization and conservation committees.

Congress must reduce rather than increase the exemption from competition if we are to keep independent energy alive.

We are faced with the spectacle of a nation sincerely seeking democracy and economic justice through means which it fails to recognize as destructive of both.

Answers to written questions from floor:

Question by Milton L. Levy. Why can't we give our surpluses away?

Answer. Programs handled this way have raised more problems than they have solved in U.S. foreign relationships.

Question. Is there any one Government farm program that has ever worked anywhere in the long run?

Answer. I have not seen one. We look on the Government as a cow—something to milk but not to feed.

Question by J. A. Halliday. Can you tell us some reasons for large difference in prices farmers receive and charges by retail stores?

Answer. Look at what people want. We want the right kind of commodity, processed and packaged in a certain way, and it all costs money.

Question by Bedford Boyes. How can Federal farm aid help the marginal farmers, or must they go out of business?

Answer. We certainly have to provide a place for them, either at a properly efficient level of agriculture or help them go into other lines. Where is today the harnessmaker? The buggymaker? They served society well, but society changed its wants.

Question by R. McKenzie. Are the Kennedy programs more dangerous than those proposed by Wallace?

Answer. The Kennedy programs are made with the best intentions, I hope, but the President knows nothing about agriculture.

Forty Years of Service to God

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. LANE. Mr. Speaker, I am pleased to include an editorial congratulating His Eminence, Richard Cardinal Cushing, on the occasion of his 40th anniversary of ordination to the holy priesthood. The editorial appeared in the Lawrence (Mass.) Sunday Sun on April 30, 1961:

FORTY YEARS OF SERVICE TO GOD

Congratulations to his Eminence, Richard Cardinal Cushing, who will celebrate his 40th anniversary of his ordination as a priest on Thursday, May 25.

Regardless of creed, people of Greater Lawrence greatly esteem and revere this great leader of the Catholic church in the archdiocese of Boston, for the innumerable works of charity and Christian brotherhood he has either led or been prominently and actively identified with in this State. As enduring monuments that will testify for generations to his marvelous accomplishments are new hospitals, new homes for the aged and infirm, new institutions for crippled and retarded children, better facilities for newborn babies and children; in fact there is not one age group that has been overlooked in his desire to provide the very best in medical, nursing, and professional care for all, and especially to provide for the poor and unfortunate brethren.

In Greater Lawrence we are all aware of his incomparable contribution in bringing about the construction of the Bon Secours Hospital, considered one of the finest in the country. Well known too is his aid to the great expansion of Merrimack College and St. Joseph's Church, his moral and financial support to Central Catholic High School, his participation in drives to build a new St. Mary's Convent, and his initiative in bringing new religious groups and orders to Methuen and Andover.

There isn't any large community in the archdiocese where his magic influence for new and improved hospitals, schools, and churches, and other institutions has not been felt.

His reputation for such marvelous accomplishments is known in Catholic circles all over the Nation, for his record is outstanding. The best wishes of the residents of Greater Lawrence are herewith extended to the Cardinal. May he be blessed by the Almighty with good health to carry on his Christian and charitable works for a long, long time.

James Fair, Jr., Case

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. GALLAGHER. Mr. Speaker, nearly 1 year ago, James Fair, Jr., a resident of my disritct was arrested, charged with murder, tried without jury or defense counsel, and sentenced to death in Blakely, Ga., within a period of 3 days. This matter was brought to the attention of the Jersey Journal, a daily newspaper published in Jersey City, N.J., by the Bayonne Branch of the National Association for the Advancement of Colored People. Mr. Eugene Farrell, editor of the Jersey Journal, immediately contacted me and urged that I intervene with Georgia authorities for the purpose of obtaining a full review of the speedy proceedings. I promptly went to Georgia where I conferred with Governor Vandiver, who thereupon caused a full review of the case and delayed execution.

The perceptive, honest, and completely objective reporting of the matter by the Jersey Journal focused public interest on the case. The Fair case was appealed to the Georgia Supreme Court which recently ordered a retrial.

This is an example of splendid and courageous public service by a very fine newspaper. I ask to have included in the RECORD the following article from the Jersey Journal which sets forth the part played not only by that newspaper but the others who sought a fair trial and full rights for Mr. Fair:

TWO LAWYERS ON CASE—RETRIAL FOR JAMES FAIR EXPECTED IN MID-JULY

(By Don Marshall)

James Fair, Jr., the 24-year-old Bayonne Negro whose death conviction was upset by the Georgia Supreme Court is not expected to get his new trial until mid-July, one of his lawyers said today.

The lawyer, C. B. King of Albany, Ga., explained that the Early County Superior Court, which is under the jurisdiction of the Pataula Judicial Circuit Court convenes twice each year under the terms of the circuit court.

The court regularly convenes starting on the third Monday in January and on the third Monday in July, King said.

"In the absence of legislation permitting a trial date to be set outside those two terms, it appears Fair will be tried in July," the Albany lawyer explained.

King added that it might be possible for the circuit court to convene in Early County for an "additional term" for the Fair trial if it considered the trial as a "recessed term" of the original or January term.

In a report Thursday, regarding the Georgia court's decision, it was erroneously reported that the series of Fair appeals in the courts were launched by the National Association for the Advancement of Colored People.

The legal fight for a new trial for Fair was headed by Attorney Nathan Pearlman of 921 Bergen Avenue, Jersey City, who engaged the two Georgia lawyers, Donald L. Hollowell of Atlanta, Ga., and C. B. King, of Albany, Ga., to handle the defense in that stage.

Funds for the court battle were not provided by the NAACP but through two local

rallies for the James Fair Defense Fund and by the "Big Joe's Happiness Exchange," a radio program.

Fair was arrested, indicted, tried, convicted, and sentenced within 2 days in the Early County court in Blakely, the small town where he was charged with the murder of an 8-year-old Negro girl.

Fair's mother, Mrs. Alice Fair of 17 East 49th Street, and his lawyers, claim Fair was forced by the late Sheriff Sid Howell into admitting the rape-slaying of the little girl.

The defense also claims there is no written record of Fair's confession.

The defense claim that Fair's constitutional rights were violated because he was tried without jury and without a lawyer was upheld by the Georgia Supreme Court, whose seven members last Thursday unanimously upset the lower court's verdict on constitutional grounds.

The high court's decision is "much more sweeping and comprehensive" than any decision it has ever made, King believes.

"It amplifies Georgia law regarding constitutional rights to embrace the position taken by the Federal courts in regard to the rights of counsel for an accused person even when he is arraigned," said King.

ELEVEN-MONTH FIGHT WON NEW TRIAL FOR FAIR

(By Don Marshall)

James Fair, Jr., who was sentenced to death in Georgia last May 17, would not be alive today if not for the Jersey Journal's interest in assuring a proper trial, his family and friends in Bayonne, as well as many others, agree today.

"It's wonderful—all that you did to save my son's life," said Mrs. Alice Fair.

"May God reward you for your fight against such an injustice. Without your help Jimmy would have died in the electric chair many months ago."

For this paper's leading role in the case, the Bayonne branch of the National Association for the Advancement of Colored People, expressed its gratitude to Eugene Farrell, editor of the Jersey Journal, this way:

"Once again we can feel proud of the American way of life. On behalf of the Bayonne branch of the National Association for the Advancement of Colored People, we wish to sincerely thank you for a job well done with your journalism on the James Fair, Jr., case," the unit said in a letter signed by R. St. Clair Jackson, president, and Mrs. Dorothy Adams, secretary.

"We are assured that your sense of fair play and justice for all in the way you wrote day by day of the Fairs and the proceedings in the case helped in no small measure in securing for this boy a new trial.

"We are especially grateful to Don Marshall for his understanding and excellent work.

"May God bless you."

It was on May 25, 1960, that the Jersey Journal first broke the story that James Fair, Jr., had been sentenced to death on May 17 in Blakely, Ga., after reportedly admitting the rape-murder of 8-year-old Yvonne Holmes, also a Negro.

The newspaper was told of Fair's plight by Jackson, the local National Association for the Advancement of Colored People head.

A quick check with Bayonne Police Chief Cornelius J. Carroll showed his department had not been informed of the arrest by Georgia and that Fair had no local police record.

Another check with Sheriff Sid Howell in Blakely confirmed the report. Fair was arrested on Sunday and on Tuesday was indicted, tried, without a jury or lawyer, convicted and sentenced to die on June 17.

Disturbed by the speedy court proceedings, and what appeared to be a violation of the Bayonne Negro's constitutional rights. The Jersey Journal immediately threw its full support for an impartial review.

At no time did this paper express any opinion as to Fair's innocence or guilt. At all times the papers' campaign emphasized that its sole interest was in the constitutional right of a fellow American to a trial by jury with his own lawyer to plead his case.

While the presses of the Jersey Journal were rolling out the story of the Fair case that first day, Editor Farrell was talking to Rep. CORNELIUS E. GALLAGHER who then interceded with Georgia's Governor Ernest Vandiver.

At Gallagher's request, Vandiver the next day ordered an inquiry into the circuumstances of the conviction.

On May 26, the Jersey Journal's first Fair editorial asked:

"How can Georgia execute a man in less time than it takes defense counsel to study a case in our State?"

In that same issue, the Jersey Journal started the James Fair Defense Fund to be administered by the Bayonne National Association of Advanced Colored People, to help correct the injustice "to a neighbor."

With this paper's support, the James Fair Defense Fund had already been pledged $1,300 4 days later.

In June, the Jersey Journal asked Marine Lt. John Russell of Jersey City, then stationed in Albany, Ga., near Blakely to talk to Fair at the Early County jail.

We ran Russell's report on June 13 in which he said Fair waived a jury trial and court-appointed lawyer because he was "scared and I didn't fully understand what it was going to mean."

As Fair's attorneys began the legal processes to defend their client, in June Representative GALLAGHER informed the Jersey Journal he had received a "last minute" telephone call the day before Fair's scheduled execution and was told that a 60-day stay had been granted by Governor Vandiver.

In June this reporter was one of the speakers who addressed a Bayonne National Association for the Advancement of Colored People rally to raise funds for the defense. He described the Jersey Journal's interest in the case and promised to help continue the fight for a new trial.

In the 11 months since Fair's arrest and conviction, the Jersey Journal did not let up in its fight for justice for the Bayonne Negro, a Navy veteran and former Golden Gloves contender.

Since the first story in May this paper has run 60 stories on the case up to Saturday.

In addition, 10 editorials were published, all of them urging an act with calmness and tolerance.

At no time was the accused's guilt or innocence discussed—only Fair's constitutional rights.

More than 100 long-distance telephone calls were made to Georgia and other points by this reporter in seeking information on the case.

By telephone, this reporter kept in constant touch with the defense lawyers, Donald L. Hollowell in Atlanta, C. B. King in Albany, as well as with Nat Pearlman in Jersey City.

A large majority of the stories on Fair reported here were exclusive reports from key persons in the case whose viewpoints were all objectively reported.

In September, after 5 weeks of exhaustive detective work in and around Newark, this reporter tracked down Early Gilbert, whom Fair's lawyers had been seeking as a witness.

Gilbert, who was in Blakely with Fair at the time of the arrest and trial, astounded readers by declaring the Bayonne man could not have raped and killed little Yvonne.

He said he'd go to hell and back to prove it if given the chance. Gilbert said the Blakely police needed a goat and picked on Fair because he was a Negro from the North, and apparently a homeless drifter.

That view was confirmed by a number of persons in Blakely, white and Negro, to whom this reporter spoke by long-distance telephone.

All agreed anti-Negro prejudice played a major part in Fair's arrest and conviction.

"That rascal ought to burn as quick as he can," asserted the editor of a Blakely paper to this reporter.

It was the same editor who blasted this reporter by name in his paper as "one of the world's worst liars," and calling Fair supporters here "scalawag whites."

On October 10 the Jersey Journal broke exclusively the story of the heart attack death of Sheriff Sid Howell, who never produced a written confession from Fair.

On October 19, this paper told how the clerk of the Early County Court expressed prejudicial sentiment by saying, "I've got nothing to say to any reporters from any northern paper. You're not all writing the truth."

This paper has reported both sides of the Fair case with consistent objectivity.

When Mrs. Fair praised the warden of the Reidsville State Prison where her son awaited the electric chair, for his kind treatment, it was reported here that way.

All this was the manner in which the Jersey Journal stood up for justice for a man it had never met, had never heard of before last May.

THE JAMES FAIR CASE—IMPORTANT PRECEDENT

It is nearly a year since the Jersey Journal first told the story of James Fair, the young Bayonne Negro who had been sentenced to death in Georgia. At that time Fair had less than 5 weeks to live. Now, thanks to the campaign inaugurated then by the newspaper (in which we were joined later by many others) Fair will have a new trial—actually his first trial.

James Fair was sentenced to death in a proceeding involving just four people: himself, the sheriff who convinced him to plead guilty to murder, the court clerk, and the judge who sentenced him to die. There was no lawyer for his defense; the record shows he waived counsel. There was no jury. It was all proper under Georgia's law.

This newspaper did not think it proper, however, nad raised a protest. It argued that James Fair at home would not have been allowed to waive counsel, or plead guilty to a capital crime, or be convicted of murder without a jury. It argued that in spite of the legality, the proceeding did not satisfy James Fair's neighbors that he had been proved guilty beyond a reasonable doubt. At no time in the 11 months since has anyone argued that James Fair should not be punished, if guilty; the argument has been for a trial in the sense generally understood.

What may seem startling in the North where it always seems so easy to assume that no one in the South takes such things into consideration, this argument found great sympathy in Georgia's Governor Vandiver, after a plea by Congressman GALLAGHER, gave Fair a stay to provide time for him to appeal. The judge who sentenced him cooperated by keeping the way clear for the appeal. The Georgia Supreme Court heard the case and decided that no man should be sent to death by a proceeding of that form.

So, the fight for a complete trial for James Fair has brought a decision which should mean that never again can an accused person be sent to death in Georgia merely on his own admission and with no further exploration of defense.

What gives the decision an extra quality is that it is Georgia's own, reached by Georgians after an appeal to their sense of

what is right. On several occasions, while the outcome of its campaign for Fair still was in doubt, the Jersey Journal commended the attitude of the Georgia authorities. In the celebration over the decision which gives Fair his trial, this other basic point should not be overlooked: Georgia has reflected great credit upon itself by its action.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Newsletter of April 29, 1961:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

APRIL 29, 1961.

The Inter-American Social and Economic Cooperation program and the Chilean reconstruction and rehabilitation program involved $600 million in foreign aid and passed 350 to 82. Three hundred ninety-four million dollars go to the recently established Inter-American Development Bank for the creation of a revolving loan fund; $6 million to the Economic and Social Council of the Organization of American States (OAS); $100 million to the International Cooperation Administration (ICA) for health and education grants; and $100 million to Chile for earthquake damage. Five hundred million dollars came under attack (all except Chile aid) for these reasons, as stated in the debate:

(1) The administration refused to justify the need for the money, although the Foreign Affairs Committee had stipulated the delienation of detailed projects must precede any appropriation; (2) it was even contended that the end justifies the means (help South American countries, though no description of how or why the money is given); (3) we have been too quick and too free in giving away the wealth of America, and the time has come for reevaluation and substantial reduction; (4) State Department bureaucrats in foreign aid are arrogant, uninformed about the program, and inclined to hold the American public and the Congress in contempt; (5) by backdoor spending in foreign aid in this bill (i.e. spending without specific control by Congress), control of foreign aid programs will be lost; (6) we are without facts as to what projects will be started and what the ultimate cost will be. If we should take too many exceptions of this type, we would destroy our very form of government; (7) we have already given South American nations $6 billion in the last 12 years; these, and others.

Every citizen should be appalled, it seems to me, that the administration is demanding that Congress give up its traditional scrutiny of appropriations of money. Further, these programs will subsidize nations not sympathetic to us, indeed, who, in a showdown, will be sympathetic to Castro.

The aid to depressed areas conference report brought to the House a clear-cut issue—Should House Members permit the Senate to stipulate that this new experimental program should be taken out from under House Appropriations Committee scrutiny, getting money without yearly appropriations? It came as a shock to many Members to learn that the Chief Executive had done an about-face demanding this new type financing in the Senate-House conference eliminating House Members from the traditional guarding of the purse strings. A spirited debate resulted in a close vote in which loose fiscal policy supported by the administration won.

Public Law 480, a bill to permit an additional $2 billion authorization for sale of agricultural commodities, brought some more shockers to view. India is to receive $2.2 billion of food in 1960 and 1961. Yugoslavia has received $597 million, Poland $518 million, United Arab Republic, $332 million. A program originally intended as a temporary surplus food disposal measure has become the reason for surplus foods in perpetuity, all the while subsidizing our enemies, failing to convert neutrals, and alienating our friends—sort of an international public assistance program. The fiction of payment is kept alive by payment in local currency, money which we can't have but which is then spent on projects within the specific country approved by their government.

Now, put all these together: (1) Cuba has fallen to the Communists; (2) we approve $500 million aid to South American nations, friendly or not, relinquishing congressional control at Mr. Kennedy's insistence; (3) we start a brand new nationwide Federal aid program to local communities, for business establishments, community facilities, and individuals with Mr. Kennedy insisting and succeeding in getting Congress to give up control of the spending; (4) we authorize $2 billion more food giveaway to other nations, friends and foe alike, making a temporary program permanent.

My beliefs, in summary, are these: (1) Blockade Cuba economically to prevent further Castro buildup; (2) stop aid to enemies and neutrals, extend aid only to pledged friends in a manner which permits them to retain their own self-respect and to understand the United States who gives in self interest, protecting herself, her form of government and freedom and justice in the world; (3) keep the spending firmly in the hands of Congress as the Constitution stipulates; (4) quickly but carefully plan our freeing of Cuba from communism while the blockade prevents their buildup; (5) serve notice to the world that we will tolerate no foolishness, mainly Russian subversion.

The River Spurs Industry

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kansas City Star for Thursday, April 27, 1961. The editorial is consistent with some previous material that I have inserted regarding divergencies of opinion on how the waters of the Missouri River shall be used, and where. As an advocate of the Pick-Sloan concept, I wish to call this editorial to the attention of my colleagues:

THE RIVER SPURS INDUSTRY

The recent proposal of the upstream power interests to preempt the water of the Missouri River has brought an extensive reply from Congressmen of Missouri, Iowa, Kansas, and Nebraska. In a plea to President Kennedy they set forth in clear language the importance of using the Missouri according to the original Pick-Sloan concept.

The upstream groups insist that the water must be held in the reservoirs in order to insure adequate power production. But as the Congressmen make clear in their letter. "Surely, the Missouri River is a great national asset; and should not be utilized for one group or area." They point out that the eventual hydroelectric capacity of upstream reservoirs will be three times the total originally contemplated.

In a separate comment, Senator SYMINGTON recently declared: "The same magic that has thansformed the Ohio Valley into the industrial Ruhr of the Nation will work on the Missouri."

To reduce the flow of the Missouri would cast a shadow over the industrial development of the entire river valley.

No Liberals Heard

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. DEROUNIAN. Mr. Speaker, David Lawrence's comments in the April 27 issue of the New York Herald Tribune, bring out an interesting contrast:

LIBERALS SILENCE IS NOTED ON PROBE OF ELECTRIC CASE

(By David Lawrence)

WASHINGTON, April 26.—Maybe it's unfortunate the executives of those electrical companies aren't Communist sympathizers or party members—for, if they were, they probably would have won the support of many of the so-called liberals and might not have been subjected to the current trial by publicity. There might even have been demonstrations in their behalf and a demand for the "abolition" of the subcommittee of the Senate Judiciary Committee which is at present conducting the hearings.

For, basically, it might have been argued the electrical executives exercised only their right of freedom of assembly or freedom of association or freedom of speech and merely got together to indulge in freedom of conversation.

It will be noted that the witnesses from the electrical business who have testified thus far before Senator KEFAUVER's committee didn't take refuge in the fifth amendment. Nor did they condemn the committee for engaging in exposure for exposure's sake.

Not long ago the American Civil Liberties Union issued a fervent statement, signed by 250 college professors, denouncing a congressional committee for trying to substitute its investigations for trials and law-enforcement proceedings. The statement said:

"Not only teachers, but all Americans, we insist, must be free from trial by publicity—from what Mr. Justice Black has called exposure, obloquy and public scorn. We would be the first to concede that teachers have no greater rights than other citizens—just as they have no lesser rights."

But, strangely enough, hardly a voice has since been lifted in support of the men in the electrical business who are being made the object of considerable publicity through the Senate committee's public investigations.

Unpleasant, however, through it may be to the electrical companies' executives who

are testifying about the meetings at which prices were allegedly fixed, it is in the public interest for Congress to get all the facts from every individual who has any knowledge of the price-fixing process. The purpose of this, of course, is to learn how to write corrective legislation for the future.

LAWS CALLED UNCLEAR

For, unhappily, the antitrust laws are by no means clear, nor are the decisions in the court cases that have been tried over a long period of years models of simplicity. Senators this week asked some of the witnesses, for instance, if they knew they were violating antitrust laws, and one of the executives replied: "It had been so common and had gone on for so many years that we lost sight of that."

But the public gets from this the impression that violations were always willful, when actually there is little doubt that the fuzziness of the whole antitrust question has resulted in all sorts of individual interpretations as to where legality begins or ends.

Thus, for example, Is any meeting between businessmen to discuss industrial costs, such as wage rates and uniform charges in the whole employment field, illegal? If so, many a conference of the managements of several competing companies—induced by industry-wide negotiations with national labor unions—might possibly be construed as part of a conspiracy to fix sales prices.

Incidentally, Attorney General Robert F. Kennedy has just made a speech to the American Management Association in which he is quoted as having said that the Department of Justice is concerned with collusion and conspiracy and not with prices as such. He added: "I can conceive of a number of different instances where you have identical pricing which wouldn't be illegal or improper."

The surrounding factors are proper subjects for examination by the Department of Justice in each case because, as Chief Justice Warren said in the Watkins case on June 17 ,1957, a congressional committee has certain limitations. He wrote in behalf of the majority of the Court: "Nor is the Congress a law enforcement or trial agency. These are functions of the executive and judicial departments of Government."

BASIC PURPOSE CITED

Unquestionably some individuals and companies will get some unfavorable publicity, but the underlying purpose of a congressional committee is to find out what happened so that new legislation or amendments to existing laws may be enacted. Painful as it may be to the persons who are pilloried in public, this is the best way Congress can learn what happens when ambiguously phrased laws and even more perplexing phrases of court decisions are proclaimed as the law of the land.

Only by thorough inquiry can the facts of antitrust and monopoly be fully exposed. The same holds true of laws affecting national security, subversion, or infiltration. Whatever mistakes the electrical companies' executives may have made, they didn't question the right of the committee to investigate, and they certainly didn't take the fifth amendment or the first amendment. Nor did they instigate college professors to demand the abolition of the committee. Nor did they encourage student demonstrations throughout the country. They just took it on the chin. And what they did may turn out to be in the interest of a clarification and perhaps strengthening of the antitrust laws, especially in the uncertain field of price fixing.

Responsible Young People Bring Credit to Themselves and Their Country

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. ROGERS of Florida. Mr. Speaker, all too often today we hear of the troubles teenagers and young adults get themselves into, without taking note of the many accomplishments being made by the vast majority of these citizens of tomorrow. Mr. Mike Morgan, writing in the Miami Herald, recently outlined the activities of two former students of Fort Lauderdale High School who illustrate the plus side of the ledger in a convincing manner.

Mr. Morgan tells of the college accomplishments of Les Bromwell, of Fort Lauderdale, Fla. Les is the son of Mr. and Mrs. Howard R. Bromwell, friends of my family for many years. By his achievements this young man has paid tribute to the early training and understanding given him by his parents, and has brought great credit to them as well as to himself.

Mr. Morgan recounts that Les graduated from MIT with honors, and was able to stay in the upper 10 percent of his class while working an average of 40 hours a week at an outside job. His wife, the former Joan Taylor from Fort Lauderdale, assisted her husband and also presented him with two sons to go with his two university degrees—civil and chemical engineering.

These young people have demonstrated once again what dedication to purpose can accomplish, and I wish to insert the Morgan article here in the RECORD so that their experiences may inspire others who are willing to make sacrifices to secure a college education and prepare themselves and our country for a bright future:

THE STUDENT TOOK A WIFE

(By Mike Morgan)

In 1957 a 17-year-old Fort Lauderdale youth, Leslie G. Bromwell, set out as a freshman to the Massachusetts Institute of Technology equipped with an abundant share of enthusiasm and ambition that is part of the luggage of most college-bound freshmen.

Leslie, a graduate of Fort Lauderdale High School, set out upon his college career with an additional accessory not standard for most 17-year-old MIT freshmen—a 16-year-old wife. His wife, the former Joan Taylor, was also a Fort Lauderdale High graduate.

The couple was featured in a Herald story about freshmen taking their wives to college. Certainly readers must have pondered upon just how well a lad of this age would fare in a tough college like MIT when confronted with both classroom and household matters.

WITH HONORS

He fared very well, graduating with honors. His wife recently visited here to see both sets of parents, the H. R. Bromwells and Fred E. Taylors.

Reports Joan:

"Leslie was the first freshman at MIT to be a father and we now have two fine boys."

Les has recently received his bachelor of science degree in chemical engineering (he also has a degree in civil engineering) completing a 4-year course in 3½ years.

"He has been in the upper 10 percent of his class even though carrying an overloaded school schedule, and working an average of 40 hours a week on a job in a laboratory during his sophomore, junior, and senior years."

WANTS TO STAY

Leslie has been initiated into two honorary fraternities. Currently he is the youngest student in MIT's graduate school working for a doctorate in science. Leslie also is a member of the teaching and research staff of the undergraduate college.

It is his goal to stay on at MIT in research and attain professional rank some day.

Nor, in any catalog of this young man's accomplishments, should we ignore the important fact that, according to his admiring frau, he is not unskilled in the engineering of diapers and the other nonacademic duties incumbent upon any father of two little boys.

So that's the story 4 years later of what happened to one freshman who took his wife to college.

Faith in the Soil

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks, I wish to insert an article by Mr. John McCormally, associate editor of the Hutchinson News of Hutchinson, Kans. Mr. McCormally is a close family man, and like myself, is a firm believer in the family-sized farm. We have not lost faith in the soil:

MEMO FROM MAC: BOY WHO LOST FARM THRILLED TO BE BACK

(By John McCormally)

I had a black Angus-looking calf out of a Jersey cow that brought $8. I remember that. And then, I remember riding, numb from the February cold, on my tall mare, Lucy, inside the gray circle of men.

The smoke, from their cold breaths and their tobacco, rose over them. They stamped their feet on the frozen ground and talked indistinctly and looked at me without pity. Then one of them bid $50 for Lucy not, I'm sure, because he needed another horse but because he was the only one among them in that hopeless winter of 1936, who could afford to keep a horse he didn't need.

I took her back into the old weather-grayed barn, with its floor of hardened ancient manure, and tied her for the last time in her stall, where the soft hides of horses had rubbed the manger boards smooth as porcelain.

I went out and stood alone, against the side of the machine shed, and listened to the cruel chant of the auctioneer.

Finally, my father came out of the barn with his last team of long-legged, black mules. The harness creaked in the cold on

their coarse winter coats and they snorted against the tight pull of the lines. He drove them briskly around the yard, his pipe clenched tightly in his teeth, and his denim jacket with its worn blanket lining, flopping open.

WHAT IS IT LIKE?

There weren't more than two or three bidders and the team went finally for less than what he had paid for one of them. The small, cold crowd broke up and the buyers began to take what they had bought to their wagons or cars.

I went into the barn where my father had taken the mules; but I thought I heard him crying softly; so I ran out and down through the corral to be alone by the river.

I knew, with a 13-year-old boy's wisdom, that the best part of my life had ended. And I wondered despairingly what it would be like to be a town boy.

It is a quarter of a century, and so the sale day, and much that led up to it and made it necessary, is not remembered well. But some scenes you keep in mind forever.

F.D.R. BEAT LANDON

It was only a quarter of a century ago, in the winter of the year Roosevelt would beat Landon and the New Deal would be confirmed as a permanent part of American life. But whatever great things were to be done for agriculture, and to save the family farm, came a little late for us.

There was no Government agency yet to refinance your mortgage; or extend emergency loans or declare you a disaster victim because the river had come out four times in 1935 while the corn burned on the uplands.

You stood alone and when you could stand no more you fell alone and a day came when that worst of all possible things befell you. You "lost the farm." Not that the Government ignored you completely. You could move to town and go on WPA. Which is what you did.

Some say that that is good for a man; it makes him strong and self-sufficient and more appreciative of being an American. It is much better for a man than being nursed along, through the droughts and floods and out of the emergencies. Some say that. But I've never heard anyone say it who'd actually done it.

PIECE OF TIME

A quarter of a century is a good piece of time. Certainly in this century it is. And a farm boy whose horse has been sold out from under him, goes a long, long way before he ever gets back to the land and the rippling back of a horse again. But he never forgets.

And so now, at the coffee breaks or in the business conferences, when they say to me: "How's things out on the farm?" and I say, "Just fine," they don't hear any answer fully.

Seventeen acres isn't much of a farm, my father would say, and where it lays on the low divide between the Arkansas and the Cow Creek valleys above the city, the soil is sandy and the blow dirt humps in ugly piles along the fence rows and in the hedges.

The brome and sand love and bluestem haven't sprouted yet in the pasture half of it; but the crop half lies freshly disced, waiting for the drill. The garden plot was ready when the April warmth finally came; the chicken pen is going up and there's a promise to be kept to five anxious boys that by summertime, the horses will be there.

It is far different now than it was in those bleak, scary days a quarter century ago. The banker talks in an unfrightened, friendly way about your land now, as if bankers finally had decided that the land will stay there forever and that there will be no more of it and so it can only grow more valuable.

And everywhere, you find people whose job it is to keep you on your farm. The county agent has ideas for you and pamphlets, and actual demonstrations. The conservationist walks over your land and rubs the dirt between his thumb and finger, and eyes the drainage of it. At the ASC office, they spread the big aerial photograph out on the counter and find your little piece of earth with a pencil point, and hands you the forms to fill out.

A LITTLE STRANGE

It still seems a little strange to my townbred family; they can't get used to Successful Farming on the table, along with Time and Harpers and Foreign Affairs. They look at me suspiciously sometimes, as if I'd joined some mysterious cult, or had some rare disease diagnosed. And, of course, they won't be farmers, not really, until the first cold morning there is a cow to milk.

I can excuse it as a hobby. After all, a desk-bound worker needs some outdoor activity; when I say I shot 72 holes last Sunday, I mean postholes, but the toning up of muscles and toning down of tensions was the same. And it is good for a man inclined to fret futilely about Laos and Cuba, to worry instead why the potatoes haven't come up.

But it is more than that. Each evening when I go back to Donnybrook, and turn off the highway, between the stone pillars and under the two tall cottonwoods and past the Russian olives, it is with the satisfaction of a quarter-century journey at an end.

(We named it Donnybrook, not just to distinguish it from Willowbrook which is nearby, but because donnybrook is an Irish word which means a hell of a fight. "And that," said Peggy, "is what we'll have paying for it.")

No, Donnybrook is no hobby. It's an accomplishment. Not long ago, at the ASC office when my A–2 grass seeding program was approved. The woman slid the printed form across the counter to me and pointed to the line at the bottom of the page. I signed, and read with pride the small print below the dotted line. It said, there below my name:

"Signature of farmer."

Law Day

EXTENSION OF REMARKS

OF

HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. MATHIAS. Mr. Speaker, Law Day is not merely a reaction to the high festival of a rival culture, but is an expression of dedication to the rule of law. This day is significant as a recognition of the value of the system that we have inherited from past ages and which we build anew each day.

It is the daily need for rebuilding that I wish to note. The rule of law is paradoxical in its stability and the fact that it also has an ephemeral character. While generations of men have sustained the concept of the law through the ages, it could collapse overnight if its support is withdrawn.

And this support must come from many hands. If we ever depend upon one man to sustain the law for us, then the rule of law will end and a tyranny, however benevolent, will commence. I pledge myself, therefore, to join with the millions throughout the world, lawyers and laymen, Americans and allies, who are now renewing their determination that our grandchildren shall live under the rule of law and know the benefit of freedom.

Just a Few Hard Facts for All Good Unionists

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1961

Mr. GEORGE P. MILLER. Mr. Speaker, organized labor in Alameda County, Calif., has a consciousness of its responsibility and the place that it holds in today's society.

Under the able, aggressive, and intelligent leadership of Russell Crowell, president, and Robert S. Ash, executive secretary, the Central Labor Council, AFL–CIO, of Alameda County, has worked for clean, strong unionism.

The central labor council has faced facts and after cool, deliberate analysis has thrown its weight into the fight for honest unions; unions with integrity which command respect in their community.

Paul Williams, the able editor of the East Bay Labor Journal, of Oakland, Calif., the official publication of the Central Labor Council of Alameda County, has published a splendid editorial on "Just a Few Hard Facts for All Good Unionists."

This editorial appeared in the issue of February 24, 1961, and all sincerely interested in the future of organized labor should read it.

Here is the editorial:

JUST A FEW HARD FACTS FOR ALL GOOD UNIONISTS

Every union member—from the guy who joins because the union contract says he must to the top dog B.A.—should be concerned with the problem of gangsterism in unions.

No union corruption is right. No business corruption is right.

But we feel, Russell Crowell, president of our central labor council, hit the proverbial nail on the head at last week's labor council meeting.

He said:

"We must differentiate between the union in which an isolated union officer goes bad, and one permeated by corruption."

Some head-in-the-sand characters in the labor movement would ignore the unsavory records of some locals and some internationals.

We feel the labor movement cannot gloss over the convincing evidence the McClellan committee has produced—of sweetheart contracts, gangster tie-ins, looting of treasuries, perversion of the legitimate ends and aims of unionism, denial of union democracy, and intimidation and violence.

Some of these internationals and locals are inside the AFL–CIO and some aren't.

But, whether they are or aren't, union racketeering, gangsterism, and corruption are of concern to every American citizen who carries a union card.

The black eye a small minority has given the labor movement affects all of us.

A case in point is a recent statement by Senator McCLELLAN.

The McClellan hearings built up steam for the Landrum-Griffith law. This law put the clamps on the officials of dishonest unions. But it also put the clamps on honest unions. Thus, it hurts you and me.

This month, Senator McCLELLAN demanded still more restrictive legislation. He claimed "stronger laws are needed in some areas to protect working people who are members of some unions."

Such may be the case. But we are sure antiunion employers and lawmakers will clap their hands in glee.

To paraphrase President Crowell's words, the Landrum-Griffin law does not differentiate between clean unions and corrupt ones.

We hope President Crowell is right in predicting that gangsterism in unions will decline in the next 2 years. However, we hope it doesn't take a new Landrum-Griffin law to do it.

Another remark by President Crowell is also worth repeating. Crowell predicted the recession will make more members turn out for union meetings. We agree that this is fine.

But, as Crowell pointed out, there are some unions whose leaders "have forgotten how to lead." And, in these unions, greater membership participation will cause trouble.

No union member or officer should forget that the union exists for the rank-and-file membership.

Both President Crowell and Executive Secretary Robert S. Ash stressed the importance of electing friends of labor. This applies to everything from the board of education to the President of the United States.

Alameda County's clean, vigorous labor movement has an outstanding record in this respect.

Many labor councils and federations give lip service to the fact that gains over the bargaining table can be lost through antilabor ordinances, laws, and court rulings.

In Alameda County, we do something about it.

As a result, most of the county's legislators are friends of labor. Governor Brown and President Kennedy carried Alameda County by big margins.

The Cuban Affair

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. DEROUNIAN. Mr. Speaker, here is a report on the Cuban fiasco, with the conclusions formed by Joseph Newman of the New York Herald Tribune. The article appeared in this morning's issue:

SEARCH FOR THE GUILTY IN THE CUBAN AFFAIR: THIS IS ONE VERDICT

(By Joseph Newman [1])

WASHINGTON, April 30.—President Kennedy's top foreign policy advisers, anxious to protect the United States from worldwide condemnation, watered down the battle plan for the invasion of Cuba to the point where it was virtually doomed to failure from the outset.

This is one of the major conclusions that emerge from questioning of American and Cuban participants in the abortive scheme to bring down the pro-Communist regime of Fidel Castro. They were interviewed in the three principal centers of the invasion operation—New York, Miami and Washington.

Secretary of State Dean Rusk is scheduled to appear tomorrow at a closed-door hearing of the Senate Foreign Relations Subcommittee on Latin America to testify about the administration's handling of the Cuban invasion.

The committee also plans to hear Allen W. Dulles, director of the Central Intelligence Agency. Mr. Dulles originally was scheduled to testify tomorrow, but when it became known that Mr. Rusk would appear, the testimony of Mr. Dulles was put off "until a later time," possibly Tuesday.

The special investigation, now being undertaken by Gen. Maxwell D. Taylor at President Kennedy's request, is almost certain to reach this final conclusion: The military support provided by Washington was enough to compromise the United States in the eyes of the world, but it was too little to give the invading Cuba force a fair chance of overthrowing Castro.

The blame must fall in the first instance on the military-intelligence side (the Joint Chiefs of Staff and the Central Intelligence Agency) as well as on the foreign policy advisers. These two groups entered into a compromise between military needs and international political considerations. The compromise resulted in failure.

President Kennedy, in the last analysis, acceded to the compromise, and he authorized the operation, in its crippled form, to proceed against heavy odds.

The plan to invade Cuba with a relatively insignificant force of 1,400 Cuban exiles was based on two broad assumptions: (1) control of the air to secure a beachhead, and (2) snowballing support from the Cuban people, once the invading force could demonstrate that its foothold was secure and that it was on the march.

These two prerequisites for success were severely impaired by restrictions insisted on by three of President Kennedy's chief foreign policy advisers—Secretary of State Dean Rusk, Under Secretary Chester Bowles, and Adlai E. Stevenson, American Ambassador to the United Nations.

Other key advisers—McGeorge Bundy, Walter W. Rostow, and Arthur Schlesinger, Jr.—apparently went along with these restrictions.

WHAT LACK OF AIR COVER MEANT

The circumstances are reliably reported to have been as follows:

The Cuban expeditionary force had a small fleet of cargo planes and B–26 bombers. It had no fighter protection for this fleet or for the beachhead, once established. President Kennedy refused to provide air cover, available from nearby Florida bases or from an American aircraft carrier which was cruising in the Caribbean.

In the absence of air cover, the only alternative on which the invasion plan could proceed was the total destruction of Castro's small air force. Intelligence services estimated the force consisted of 20 aircraft: 12 B–26 bombers, 5 British-built Sea Fury propeller-driven fighters, and 3 T–33 jet fighter-trainers.

The surprise dawn attack on Castro's principal airfields on April 15, just 2 days before the invasion force landed on the southern coast of Cuba, was intended to destroy the dictator's fighter-plane force. Rebel Cuban pilots who carried out the raids with their B–26 bombers reported after returning to their secret Caribbean bases that the operation had been completely successful. They took aerial photographs to support their contention.

But photographs are not always conclusive evidence and the strategic plan called for two more attacks on the Cuban airfields to provide absolute assurance that not a single one of Castro's fighter planes had survived to imperil the entire venture. These attacks by the B–26 bombers was to take place just before the dawn landings at Bahia de Cochinos (Bay of Pigs) on April 17.

They were vetoed by Rusk, Bowles, and Stevenson. The three men were alarmed by Castro's outcries following the first B–26 attack. Charges of aggression were leveled against the United States at a special meeting of the U.N. General Assembly only a few hours after the attack.

The three foreign policy advisers argued that additional attacks would make it impossible for them to uphold the official U.S. contention that this country was not a direct participant in the Cuban attack, and to answer charges that the United States was committing acts of aggression in violation of the United Nations Charter and provisions of the Organization of American States.

For the same reason the three vetoed two other important provisions of the original invasion plan. These called for a direct radio appeal to Cubans to rebel against Castro and the showering of the island republic with leaflets calling on the Cuban people to rise up in revolt.

The radio appeal was to be made by Jose Miro Cardona, head of the Cuban revolutionary council, and the leaflets were to be dropped by the rebel bombers.

By prior arrangement with the leaders of the anti-Castro underground, in Cuba, these were to serve as the twin signals for nationwide sabotage and the beginning of an uprising.

When these signals failed to appear, the underground leaders assumed that something had gone wrong and they were immobilized by uncertainty. Before they could even establish what had happened, Castro, by wholesale arrests in all the key population centers, was able to disarm them.

Forbidden by Washington to transmit the prerecorded revolutionary call by Dr. Miro Cardona, radio SWAN, situated on an island off Honduras and used by the rebels for propaganda warfare against the Castro regime, hastily substituted a message that said: "Alert! Alert! Look well at the rainbow. The first will rise very soon."

But this and the rest of the message proved meaningless to the underground leaders in Cuba. If anything, it meant that something had gone awry.

Much has been written about the failure of the Cuban people to revolt in support of the anti-Castro forces. The fact of the matter is that the landing operation never reached a point where the Cuban masses was put to a real choice between Castro and his enemies.

Contrary to widespread reports, the first part of the landing operation went off pretty much as planned, with the unloading only slightly slower than scheduled and the approach of Castro's ground forces and guns slightly faster than expected.

CASTRO PLANES APPEAR

What spread dismay and destruction was the appearance of a handful of fighter planes. The surprise bombings of April 15 had wiped out only two-thirds of Castro's air force. According to a rebel pilot who participated in the battle, five British-made Sea Furies and two American-made T–33 jet trainers survived. These were enough to decide the outcome of the contest and give Castro a smashing victory.

The fighters were able to prevent the rebel bombers from carrying out one of their principal missions: to destroy Castro's heavy Soviet tanks and artillery.

[1] The writer of this article—Joseph Newman—is the chief United Nations correspondent of the Herald Tribune, and was the author of this newspaper's recent series, "Cuba—S.S.R.?" which exposed the extent to which Castro has alined himself with the Communists. Newman was the Herald Tribune's roving Latin American correspondent for several years and before that was stationed in Moscow.

Having driven off the bombers the fighter planes secured control of the air and went about seeking two invasion ships with vital ammunition and radio communications equipment. Then they joined the heavy tanks in driving the invaders off the beachhead and into the surrounding swamps.

About 45 hours after the landing operation was initiated, Capt. Roberto San Roman, commander of the Cuban expeditionary force, sent an urgent appeal to Washington for air support. Unless this was forthcoming within a few hours, he reported, the entire operation would have to be abandoned. He spoke from a walkie-talkie to a ship which relayed his message.

Richard M. Bissell, Jr., Deputy Director of the CIA, alerted some of the key men in Washington. These advisers awoke President Kennedy at 2 a.m., April 19, and discussed the crisis for 2 hours. They argued in favor of fighter air support from the American aircraft carrier in the Caribbean in a last attempt to save the situation.

But it was too late. A naval communications snag developed and before anything could be done, even if there had been a disposition to do anything, it was all over. The invasion force was trapped in the swamps, and Castro had scored the greatest victory of his career.

Another desperate attempt to save the situation was made just before dawn of Thursday, April 20. Cargo planes and two B–26's tried to ferry fresh supplies to the beachhead, but were shot down.

The pilot who related part of this account was standing by at his base at 9 a.m. that day, ready to return to the beachhead. But before he could take off, word arrived that the last resistance had been snuffed out.

He survived to level this bitter attack against those responsible for the operation: "It was a crime to commit us to war in which we were denied the right to destroy the enemy fighter force and were denied fighters of our own so as to be able to defend ourselves."

Russian Flight Into Space: Triumph or Disgrace?

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit herewith a letter from my constituent which places the achievement of the Russians in putting a man in space in its proper perspective:

LOS ALTOS, CALIF., *April 19, 1961.*

DEAR MR. GUBSER: Enclosed is a newspaper editorial which very well describes the sacrifices which have been required of the Russian people in order for their country to be first in space. Before we embark on any crash program to catch the Russians in space we should well consider the points brought out in this editorial.

No doubt there will be many who will propose panic-type programs to catch the Soviets. As for myself I want to know how much any of these crash programs will cost me in additional taxes per month. And more important yet I want to know how much more of my American freedom I must sacrifice, for I am not willing to become a slave to the state so that I can "catch up to the Soviets."

Those who tire of being second should bear in mind that we lead the entire world in liberty and justice and the dignity of the individual. One Soviet citizen has experienced a ride around the earth in space, yet no Soviet citizen has experienced the blessings that the least U.S. citizen has inherited as his inalienable right; namely, freedom. Let them try to catch us in this respect.

In the meantime let us maintain and exploit our advantage.

Very truly yours,

W. ASHLEY CHAPMAN.

[From the San Francisco News-Call Bulletin, Apr. 17, 1961]

RUSSIAN FLIGHT INTO SPACE: TRIUMPH OR DISGRACE?

(By David Lawrence)

WASHINGTON.—Not by any means the greatest "feat" in world history, but in many respects the biggest disgrace—this is another way to look at the successful launching of a man into outer space by the Soviets.

Millions of human beings in Russia live six to a room in slums and in hovels, while millions of others work in slave-labor camps. Billions of dollars that should be expended to lift the living standards of a nation are spent instead for one of the most spectacular propaganda stunts of all times.

For what else is it? Is human life improved because a small vehicle travels in the sky at about the same distance from the earth as New York is from Wilmington or Baltimore? Was human life further advanced because in 1957 the first Sputnik sped around the earth in an hour and a half? Today the United States continues to have "sputniks" in orbit around the globe and the Russians have one. Has any human being felt any benefits from such stunts?

President Kennedy stated, in a nutshell, at his Wednesday press conference the simple truth about the Soviet's cruel disregard of human welfare as it concentrates on propaganda stunts. He said: "A dictatorship enjoys advantages in this kind of competition over a short period, by its ability to mobilize its resources for a specific purpose."

This is the real reason for the Soviet achievement in sending the first man into outer space. The United States could have done it even earlier if it had decided to take away from other necessary things the money to spend on space research. As it is, the people of the Soviet Union are deprived of the benefits of better living.

It is significant that one of the big rewards to the new "hero of the Soviet Union" is that he will be permitted to have a four-room apartment for himself, wife, and two children, instead of the two rooms he has heretofore been allotted.

In the not-far-distant future, the United States, too, will be sending a man around the world a couple hundred miles above ground. Someday also there'll be a flight to the moon and to other planets. But, as a practical matter, these stunts cost vast sums and the question is whether humanity can afford them.

The biggest achievement to look forward to is some way to talk to all the Russian people at one time and to persuade them to get rid of the dictatorship that terrifies the world and inflicts misery on human beings everywhere.

As for "discoveries," the biggest of all times is still that of Christopher Columbus, who found the land where freedom and liberty can flourish as it does today. Someday the Russian people, too, can enjoy the benefits of that same discovery.

To Those Who Are Afraid

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. HARVEY of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Muncie Star of March 28, 1961:

TO THOSE WHO ARE AFRAID

Following our recent defense of the House Un-American Activities Committee, we received a letter from a college student who says he is a loyal American, but is afraid of this House committee:

"I am an American and I am afraid," he writes. "I am afraid that a committee such as HUAC would twist my words around to prove, or should I say to show evidence, that I hold undemocratic ideas. * * * Would I be able to speak against some part of the Government, say HUAC, without being called a Communist or a Communist dupe? Would I be presumed to be innocent, or would I have to prove my innocence by denouncing my beliefs or opinions?"

Apparently this student is indeed afraid. He was afraid to sign his name. He says he believes himself to be only one of many young citizens who have such fears.

How about it? Are his fears groundless? Or are they realistic?

Our student didn't explain the beliefs he holds which he thinks might bring him before the Un-American Activities Committee. So we don't know whether he really has reason to be afraid, or not.

Does the committee twist the words of a witness to create a false impression that the witness is disloyal? There's no way to prove this, either way. Let's say that sometimes it may happen. But far more often the witness himself twists and contorts his own words in efforts to avoid questions he does not want to answer.

Witnesses before this committee most often come into the headlines—and into trouble with the courts, loss of jobs and loss of reputation—over two kinds of questions. In one kind the committee is trying to get from the witness a flat statement as to whether he is loyal, or has been involved in subersive activities or connections. The other kind includes questions aimed at any knowledge the witness may have of other persons involved in activities with which the committee is concerned.

If a person is loyal, why should he fear or resent being asked if he is? If he has not engaged in subversive activities, or has done so only innocently and unwittingly, why should he be afraid to talk about that? If he is himself loyal, but knows persons of activities that may be subversive, does not his own loyalty compel him to disclose what he knows? A person sure of his own loyalty has no need to fear the questions of the Un-American Activities Committee.

But if a person knows himself to be disloyal, has knowingly joined disloyal groups or activities, then he has every reason to be afraid of the committee. The only way out we have to suggest is to make a clean breast of it and then set out to salvage himself.

Can a witness speak against the Government, against the committee itself, without being called a Communist or a Communist dupe? Well, that depends. If what he has to say follows the Communist line, he should be prepared to defend it vigorously

with some good solid American-type reasons. There are plenty of people who manage to criticize the Government, even the committee, without getting called Communist or Communist dupes.

We return to the student's letter.

"Would I even be allowed to say nothing," he asks, "without it being cause for a presumption of guilt?"

No. The Constitution guarantees your right to say nothing, where self-incrimination is involved. But all of the Constitution and all the world's moving essays on freedom of thought and all the eloquence of a master of courtroom defense cannot prevent other people from concluding that silence implies assent to the charges that have been made.

"I'd like to feel secure," he goes on, "in the knowledge that I can question and vote as I please, without fear of condemnation for my words."

He asks for a kind of security which is beyond human reach. You can have the first part. In America you can be secure in the right to question and to vote as you please. But you cannot escape the opinions of your fellows.

If you want to espouse and express views for which others will condemn you, then you simply must have the courage of your convictions with which to face their condemnation. The alternative is to keep your views to yourself, in which case neither the House committee nor anyone else is likely to question you about them.

If you choose to enter associations or activities which you feel must be secret, then you should prepare yourself to face the possibility of exposure, and its consequences. It is those who make this choice, in an area involving disloyalty to the United States, who have reason to fear the House Un-American Activities Committee. The rest of us have no need to be afraid.

Youth Fitness Week

EXTENSION OF REMARKS

OF

HON. JOHN S. MONAGAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. MONAGAN. Mr. Speaker, President Kennedy and the Governors of several States including Gov. John Dempsey, of my own State of Connecticut, have proclaimed the period May 1–6 to be "Youth Fitness Week." Some pretty shocking reports have come from surveys of health conditions among our youth, and I am concerned at the apparent decline in the prowess of our athletes in sporting events including the failure of American participants to reach the heights of success to which we have been accustomed in the past at the Olympic games.

I think that Youth Fitness Week offers an opportunity to all of us to give consideration to the opportunities at our command to take steps immediately to improve the physical fitness of our youth for the advantages to be gained in the athletic and military endeavors and the general pursuits of health and life.

Under leave to extend my remarks in the RECORD, I wish to call to the attention of my colleagues an editorial on this subject published recently in the Newtown, Conn., Bee:

FITNESS FOR LIVING

The week of May 1–6 has been proclaimed "Youth Fitness Week." Official statements have been issued to that effect by the President of the United States and the Governors of many States, including Connecticut.

Governor Dempsey, in his statement, points to the fact that a welcome development of recent years is the increased attention which is being paid in this Nation to physical fitness." It seems to us, however, that in the case of very many people, the increased attention is coming in too little amount and much too late. President Kennedy stresses the need to combat the forces in our way of life which are making for the soft American.

The World Health Organization has defined health as a state of complete physical, mental and social well-being and not merely the absence of disease or infirmity." This definition applies almost equally well to fitness. To be fit means that the individual is able to bring to situations and decisions in his life the very best of which he is capable in body, mind and spirit. He should be mentally, emotionally, socially, spiritually and physically prepared to meet the stress of living.

And yet today's society is filled with maladjusted individuals, both adults and children, who among their other difficulties, are at great disadvantage because they are physically unfit. A study of Connecticut youth was made by the Connecticut Association for Health, Physical Education and Recreation in 1957–59, with appalling results.

Four out of ten of the children in the sample studied were overweight; two out of ten were underweight. More than half had dental defects. A quarter had abnormalities of vision. Thirty percent of the fifth-grade boys could not pull themselves up to a chinning bar even a single time. The scores of girls on some of the tests were also extremely low. When girls cannot sit up a single time from a horizontal position or throw a ball more than 25 feet something is lacking.

Physical fitness tests given for some time in the Newtown schools show the benefits which comes from the work being done locally in physical education. Perhaps some of our adults would not score as well if they were subjected to similar tests.

But whether in Newtown or any other community across the Nation, physical fitness is far more important to the individual than is generally realized. We should all understand that fitness for living is not a gift that we can buy for ourselves or anyone else. To acquire it requires that we work at it—and play at it too. Fortunate, indeed, are those who do so with eagerness.

The Truth Must Out

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. DEROUNIAN. Mr. Speaker, tomorrow the Senate begins its investigation into the dreadful Cuban fiasco and Ted Lewis, of the New York Daily News, has some interesting comments on this in today's edition:

CAPITAL CIRCUS

(By Ted Lewis)

WASHINGTON, April 30.—Due to pressures being applied by the Kennedy administration, the Senate inquiry which starts tomorrow into the Cuban invasion fiasco will probably be an abbreviated affair, held entirely behind closed doors.

This investigation by the Foreign Relations Subcommittee on Latin American Affairs is one that President Kennedy knew could not be avoided. It had been hoped that it would be delayed. Every effort of the White House is now being bent toward restoring confidence in the administration's handling of foreign affairs in view of the Lao crisis.

The timing of the probe by Subcommittee Chairman WAYNE MORSE (Democrat, Oregon) is considered particularly unfortunate and Secretary of State Rusk, who will be the leadoff witness, is expected to make that clear when he appears tomorrow.

Any kind of an investigation undertaken by the Senate is significant. Seldom do Senate leaders give their blessing to an inquiry into affairs of an administration which is headed by a member of their own party. In the present case, however, MORSE received a firm go ahead, not only from Democratic Leader MIKE MANSFIELD, Montana, but from Senator J. W. FULBRIGHT, Arkansas, chairman of the full Foreign Relations Committee.

The reason for the green light: most Senate Democrats were hopping mad that neither they nor their Republican colleagues were given a fill-in in advance of the Cuban invasion. Their advice was certainly not sought ahead of time, although Chairman FULBRIGHT, once tipped off as to what was in the wind, did register a personal protest—to no avail.

CRISIS DELAYS FULL-DRESS INQUIRY

Although they have cooled off since the Cuban event, neither FULBRIGHT, MORSE, nor MANSFIELD have any intention of calling off a full-fledged probe to determine what went wrong and the principal areas of responsibility for the fiasco. They have, however, agreed that such a thorough investigation should be delayed in view of the critical foreign situation. For this reason the present inquiry will be held in secret and will be pretty perfunctory.

An all-out Senate investigation is desired if for no other reason than to get to the bottom of the buckpassing, a fiasco in itself which seldom has been surpassed within the executive branch of Government.

While President Kennedy has accepted full responsibility, the furtive effort to pin the rap for the Cuban error somewhere else has been going on within the White House itself.

It cannot be denied that some of the President's own aids have been blaming other aids. The so-called Irish Mafia in the White House entourage consists of those advisers who were with the President when he was a Senator and carried the brunt of his political campaigns. They are inclined to put the finger for the Cuban mess on bad advice from some of the White House newcomers. Privately, they name foreign policy adviser McGeorge Bundy and such other Johnny-come-latelies as Arthur Schlesinger, Jr., and Walt Rostow.

POINTED AT DULLES AND THE CIA

One of the President's top advisers, who did not figure in this effort to split White House ranks, did, however, hold a background briefing in the immediate aftermath of the Cuban fiasco. He put his finger on Allen Dulles and his Central Intelligence Agency.

Why he thought Dulles was to blame was spelled out in considerable detail.

At some point in a thorough Senate probe it would be pertinent to have the testimony of these White House officials, who so far have been careful to talk only off the record and even then in very slippery fashion.

It would also be in the public interest to have Dulles speak his own piece. He has

seen to it that on a not-for-attribution basis plenty of background has been supplied in the interest of proving that the CIA actually did a whale of a job in Cuba and whatever went wrong was most certainly not because of bad intelligence or the fact that the CIA played ball only with a pet group of Cuban exiles.

SOME TRY TO BLAME THE PENTAGON

While Dulles has thus unqualifiedly defended the CIA operation, we are not breaking any confidence to report that exactly the opposite line has been taken by some of his subordinates.

These admit that there were certain CIA errors. They have made snide efforts to blame certain intelligence experts within their own ranks. Their favorite whipping boy has been Richard M. Bissell, Deputy CIA Director for plans. And there have been veiled cracks also at Robert A. Amory, Jr., Deputy Director for Intelligence.

As for the State Department, various officials have daintily tried to put part of the blame on the Pentagon, suggesting that our military should have known better than to believe the invasion operation could succeed in view of the few planes and ships that were available.

A wide-open Senate investigation would do a lot to clean the air of all these bitter instances of buckpassing. It would, of course, be too much to hope that the entire truth concerning the deplorable debacle can be brought out. But it would be interesting to know exactly what those from whom the President sought advice told him.

Kennedy knows, but it still is not clear whether Secretary of State Rusk interposed any objections—and if he did, were they emphatic or simply qualified?

And yet to be clarified is the stand, if any, that Under Secretary of State Chester Bowles took. An open Senate hearing with Dulles, Bowles, and Rusk speaking their pieces for public consumption would dispel the smog.

Our Orbiting Telescope

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. BROOKS of Louisiana. Mr. Speaker, on Friday, April 28, the United States fired into orbit the world's first astronomical satellite—a space telescope, designed to unlock the mysteries of cosmic radiation. Scientists believe these rays may be the keys to information about the elements which make up the universe. So much emphasis is being given these days to the man-in-space program that our country's great scientific achievements are in danger of being overlooked, and the importance of this latest accomplishment may likewise go unnoticed. This importance is pointed out in an editorial in the Sunday Star of April 30 and I commend it to the attention of my colleagues. The editorial follows:

OUR ORBITING TELESCOPE

Although our latest space shot was less spectacular than orbiting a man around the earth, the scientific data which Explorer XI is expected to produce may prove to be invaluable in preparing future human explorers of space to cope with cosmic rays and other dangers outside the earth's atmosphere.

The tumbling telescope in the sky is designed to peer far into space without the hampering effects of the atmospheric curtain that blocks most of the cosmic particles hurled toward us by galacitic storms. The bombardment of gamma-ray particles—which resemble X-rays—could be a serious hazard for astronauts venturing toward the planets. The more we can learn about these mysterious rays and their orgin the better the chances of safeguarding man from them.

This new "eye in the sky" is not a telescope of the conventional type. It is a complex electronic device for detecting, measuring, and reporting on gamma and other radiations which may threaten man in his attempts to probe far out into space. The findings will be recorded at several earth stations as the satellite whirls around the globe at distances ranging from 300 to 750 miles outward.

Astronomers will watch the findings with special interest, since they may give some clues to the origin of the universe. Space radiation is associated with the birth of our own galaxy and with that of the other galaxies about which little now is known. Free of atmospheric interference, the electronic telescope should be able to see millions of miles into the spatial void.

Thus, far from being a stunt to capture world headlines, Explorer XI is a serious scientific undertaking of possibly vast importance to all nations, and especially to men who will be the pioneers in interplanetary travel.

Safe for Ideas

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. GEORGE P. MILLER. Mr. Speaker, in a free society, we have no room for those who would stifle the free flow of speech and interchange of ideas. Voltaire summed up the arguments for this premise when he said:

I would disapprove of what you say, but I will defend to the death your right to say it.

Not too long ago, the State of California was faced with a controversy generated by a group trying to prevent a man from speaking on the Berkeley campus of the University of California because of his background.

This was an unfortunate issue, because on university campuses throughout the land, we are nurturing the minds of those who will be responsible for preserving our freedoms. I believe that Gov. Pat Brown, of California, and President Clark Kerr, of the University of California, eloquently replied to critics of the policy which did allow the controversial speaker to have a public campus platform. A comment on their remarks appeared as an editorial in the April 24, 1961, issue of the Washington Post and I am inserting it for the interest of the Members of this honorable body:

SAFE FOR IDEAS

The president of the University of California and the Governor of the Golden State have given what seem to us model statements of the importance of exposing students to controversy. A furor had arisen because a man convicted of contempt of Congress for refusal to answer questions about communism was invited to speak on the campus of Berkeley. Asked to intervene, Gov. Pat Brown, of California, refused, commenting: "Let the people say anything they want to. If they do anything criminal while they're speaking or after they're speaking, then they can be prosecuted." To this the university president, Dr. Clark Kerr, added: "The university is not engaged in making ideas safe for students; it is engaged in making students safe for ideas." This is an attitude which ought to hearten more timorous administrators, for it goes to the heart of a main purpose of education. If university training can't teach a student to be discreet and discriminating in his selection of ideas, artificial shielding won't help him.

Official Ridicules Civil Defense Alert

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mrs. GREEN of Oregon. Mr. Speaker, during the recent civil defense exercises, a news story from my home city of Portland, Oreg., was called to my attention. It described the reaction of City Commissioner Stanley Earl, of Portland, to the exercise, and posed some questions which the commissioner raised as to the value of these aspects of the civil defense program. I ask unanimous consent that this news story, appearing in the Portland Oregonian for April 25, be printed at the end of these remarks, so that these questions may be brought to the attention of other Members of the House:

OFFICIAL RIDICULES CD ALERT

City Commissioner Stanley W. Earl has flatly refused to take part in OPAL 1961, the nationwide civil defense alert scheduled for Thursday. The exercise, he said, is "based on the bow and arrow."

In a letter filed Tuesday with City Auditor Ray Smith, Earl said this exercise was a "complete waste of time, money, and manpower."

"It is not based on the realities of 1961, and can only serve to lull the people into a false sense of security," Earl said.

He objected to the claim that there would be 48 hours, warning of an impending attack.

FIREPOWER NOTED

"This is simply not true. Polaris missiles have a range of 1,500 miles with about 3 minutes delivery time. An ICBM fired from the Soviet Union would require a little over 20 minutes to be on target, and yet here we are claiming we have 48 hours."

The first superbomb exploded by the United States in 1954, Earl said, was 1,000 times more powerful than the one dropped on Hiroshima. The 1954 bomb would smash a city flat over an area of 20 square miles and set fire to buildings over an area of 50 to 75 square miles.

Earl said this would create a fire storm so great that all oxygen would be used up in 4 hours. The radioactive fallout within an hour or two would contaminate up to 10,000 square miles with 20 times the radiation necessary to cause death.

"What I have described is a 1954 bomb," he said. "There are far more powerful ones in 1961, available to both the United States and to the Soviets."

Local civil defense officials, he pointed out, are on duty only from 8 a.m. to 5 p.m., Monday through Friday. Civil defense headquarters is closed from 5 p.m. to 8 a.m. and on Saturdays, Sundays and holidays.

"I am not a defeatist, but a realist," he said. "I do believe the people should be told exactly what they face and that realistic discussions should be engaged in by competent authorities beginning at the national level."

Commissioner Ormond R. Bean said Earl's statement was a fair one and wasn't so sure it represented a minority view. However, he said, "I don't feel that I am in a position to say the mayor isn't right (in supporting the local civil defense effort)."

PRESIDENT CALLS ALERT

Commissioner Mark A. Grayson, who is presiding over the city council in the absence of Mayor Terry D. Schrunk said that under the circumstances he would participate in the exercise. Schrunk is in Honolulu.

As a veteran of two wars, Grayson said, "I feel that any precautions at this time are better than none at all. The President has called this alert and we have been notified by the Governor. It behooves us to do something about it."

The President's Decision on Cuba

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. DEROUNIAN. Mr. Speaker, as we stand behind our President and await his leadership in the Cuban situation, Gould Lincoln writes an interesting article, which appeared in the Washington Star on April 27:

CURE FOR CASTROISM STILL ELUSIVE

(By Gould Lincoln)

The search for a scapegoat in the failure of the Cuban anti-Castro invasion may be interesting, and even valuable, but it is not going to settle the problem which a Communist Cuba presents. Eventually the United States, either with or without the support of the rest of the American Republics, will have to act to get rid of Fidel Castro and his government or resign itself to seeing world communism—with Soviet Russia in its forefront—move in a big way into the Western Hemisphere. Since the days of President Monroe the United States has been firm in its determination to prevent the encroachment of any European country upon the soil of the Western Hemisphere. Spain's grip on South and Central America was broken by the efforts of the peoples of these Latin American countries. And in 1898 the United States went to war with Spain and set Cuba free. It would be tragic, and probably fatal to our own freedom, to allow Russia to move in and take the dictatorial position which Spain once occupied in this Western Hemisphere.

How long can the United States—and the other American Republics—afford to wait before acting? The Monroe Doctrine, enunciated by the United States so long ago, and the Caracas agreement entered into by the American Republics in 1954, both pledging to prevent foreign advances into the Western Hemisphere, are solid grounds for action. President Kennedy has sought the support of the principal political leaders of this country, Republican and Democratic, in this crisis. These leaders, including former President Eisenhower, former Vice President Nixon, and Gov. Nelson A. Rockefeller of New York, all Republicans, have said the President must be supported. What steps the President will decide upon are still to be revealed.

STOPS PARTISAN POLITICS

President Kennedy has assumed full responsibility for not preventing the ill-fated Cuban invasion by anti-Castro forces, trained and armed here in the United States and in other not-too-distant places. He has not sought to place the blame for U.S. policy in this respect on former President Eisenhower and his administration. He stepped promptly on his Secretary of the Interior, former Representative Udall, of Arizona, when Mr. Udall in a television broadcast commented that the plans for the invasion had been made in one administration (the Eisenhower administration) and then turned over to the Kennedy administration to be carried out. This was seized upon by several Republican spokesmen as a partisan political move on the part of a Kennedy Cabinet member. This is no time for partisan politics.

One reason for the failure of the anti-Castro Cuban invasion lay in the fact that there was no second line either of attack or defense. If there was one, it appears to have been abandoned. President Kennedy's error was his statement, made when Castro began screaming "invasion," that this country would not send military forces to intervene in Cuba. Senator HUMPHREY, of Minnesota, Democratic whip of the Senate, following a breakfast of the Democratic congressional leaders with the President on Tuesday, is reported to have reiterated there will be no U.S. invasion of Cuba. Why should such assertions be made? Especially when it may turn out invasion is the only way in which to deal with this Communist menace in Cuba. Why give Castro and his Russian backers this assurance and so encourage them to strengthen the hold of Communist dictatorship in Cuba, militarily and otherwise?

PROPOSALS FOR ACTION

Meanwhile, various proposals of what to do about Cuba have been advanced. One is to cut off all trade between this country and Cuba—already almost entirely curtailed. A second is an economic blockade. A third, suggested by a Republican member of the Foreign Relations Committee, Senator HICKENLOOPER, of Iowa, is for an immediate meeting of the Latin American heads of government, in conjunction with representatives of this country, perhaps in Venezuela, to discuss the Cuban issue and to arrive at an agreement on what should be done. A fourth proposal came from Senator DODD, Democrat of Connecticut, who told the Senate there should be an immediate blockade of arms shipments from Soviet Russia to Castro's Cuba, and a stern warning that Soviet military aircraft will not be tolerated over Caribbean waters.

The Connecticut Senator said that if this country had given the Cuban Freedom Fighters the proper air support, their invasion of Cuba last week would have succeeded. He added: "I say we should have done so, and that we should be prepared to do so. We can no longer tolerate a situation in which a Quisling totalitarian regime, directed at the subversion of the entire Western Hemisphere, is able to maintain its hold over the Cuban people because of massive quantities of arms placed in its hands by the Kremlin."

Castro and the Communists in Cuba are, at the present, much more of a threat to the Latin American republics in the Caribbean and South America than they are to the United States—which Castro has not the force to attack. He might, indeed, be able by subversion and force of arms to overthrow some of those other governments and make possible Communist regimes, unless he is effectively checked. Eight of these Latin American countries have no diplomatic relations with the Castro government, six have broken such relations, two not having had such relations. The six which have broken off relations with Castro are the Dominican Republic, Guatemala, El Salvador, Nicaragua, Peru and Honduras. Haiti and Paraguay have not had such relations.

I Am the American Flag

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. AUCHINCLOSS. Mr. Speaker, recently I had the privilege of participating in the dedication ceremony of a branch post office in the Monmouth Shopping Center, Eatontown, Monmouth County, N.J.

On this occasion a brief speech was read by a young man named Edmund Labuda, Jr., who attends the Red Bank Catholic High School, Red Bank, N.J., being a member of the freshman class. Young Labuda's father is a member of the post office staff at Eatontown, N.J. He read his address in an impressive and dignified manner, and I am glad to have permission to have it printed in the CONGRESSIONAL RECORD:

I AM THE AMERICAN FLAG

Since the time of my birth many stories have been told about me. Now I feel it is my duty to tell you what I am and for what I stand.

Born during the Nation's infancy, I have grown with it, my stars increasing number as the country has grown in size. The domain over which I wave is now expanded until the sun on my flying now never sets.

I am not only an emblem showing the authority of the United States, indicating supremacy when flying over land, possession when flying over Government buildings, power when displayed by troops—I mean much more than that. I represent the ideals and traditions, the principles and institutions, the hopes and aspirations which constitute what is to mankind the greatest nation in the world, the American Nation.

Stirring are the stories of my stars and stripes. My 13 red and white stripes recall the history of that long, bitter 8-year struggle in which the Thirteen Colonies fought and stood side by side for freedom, exemplifying the principle that "In union there is strength."

Each of my stars tells the story of a great and sovereign State which has entered the Union.

Filled with significance are my colors of red, white, and blue into which have been woven the courage and strength of Americans.

The red in my stripes proclaims the courage that inspires men to face danger and to do what is right. The strength and courage of American manhood from the conquest of the wilderness by the pioneer through the Revolutionary War, the Civil War, Spanish-American War, World War I, World War II, and in the Korean conflict has done more

than anything else to make the Nation over which I fly the greatest and most wonderful in the world.

My white stripes mark me as the emblem of the land of the free, the country in which the oppressed of the world may enjoy equality and liberty.

The blue in my field of stars stands for loyalty. It is the true blue. It tells the story of thousands of men and women who have been loyal to their country through suffering and hardships.

I signify the law of the land.

I stand for the Constitution of the United States.

I represent the Declaration of Independence, the birth certificate of the American Nation.

I stand for peace and goodwill among the nations of the world.

I control the strong, protect the weak, relieve suffering, and do all I can for the betterment of mankind.

I stand for tolerance toward men of all creeds and races.

I reflect the wealth and grandeur of this great land of opportunity.

I tell the story of the achievements and progress of the American people in art and science, culture and literature, inventions and commerce, transportation and industry.

I am the badge of the Nation's greatness and the emblem of its destiny.

I am whatever you make me, nothing more. I am your belief in yourself, your dream of what a people may become. I am fear and song, struggle and hope.

I am no more than what you believe me to be, and I am all you hope that I can be. I am the American flag.

Unanswered Question

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. MICHEL. Mr. Speaker, I wish to call attention to the following editorial appearing in the March 13, 1961, issue of the Chicago Tribune:

Mr. Kennedy announced at his latest news conference that the Government intended to put an extra $660 million into the purchase of quipment and supplies before the end of the fiscal year on June 30. This was represented as evidence of Washington's intention to pep up the economy and provide jobs.

The announcement prompted a reporter to inquire what had become of the sonorous statement in Mr. Kennedy's inauguration address, "Ask not what your country can do for you—ask what you can do for your country."

The questioner remarked that there had been considerable comment that the Kennedy program up to now has been designed to show what the Government can try to do for the people. He asked when the reverse might be expected to set in.

Mr. Kennedy's reply was not very responsive, but seemed to suggest that before the horse can support some of the extra weight to be assigned by the Government in the future, it must be fed up and returned to form.

Well, we think both the question and the answer avoided the real effects of the Kennedy administration program. It isn't so much what the Government can do for the people, or the people for the Government, as what the administration can do for the administration. This particular $660 million is being spent by the Government on itself. It will procure goods and services for the bureaucracy and will build up the sinews of big government. If there is primary benefit, it is to the political managers who run the operation.

So the phrasing, more appropriately, might have been: "Ask not what you can do for the Kennedy administration, for you aren't going to be consulted anyway."

The Will To Win

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. DEROUNIAN. Mr. Speaker, here is an interesting article on Laos, as written by Marguerite Higgins for the May 1 issue of the New York Herald Tribune:

WHO WON'T FIGHT?

(By Marguerite Higgins)

WASHINGTON.

"The Chinese won't fight."

It's hard, isn't it, to wrench the mind back to the pre-Korean, dust-settling days of China when the successive defeats sending Chiang Kai-shek to exile were explained away with such reasons as "the Chinese (meaning the non-Communist Chiang Kai-shek Chinese) won't fight"? Then came the day when the reasons for partitioning Vietnam included the charge that "the Vietnamese (those on our side, of course) won't fight." And now we are told that "the Lao won't fight."

But is it really true? And how does it come about that the only Asians that won't fight are the Asians on our side?

It's an important question, this issue of what Asian will or won't fight. The fighting capabilities of the Royal Lao Army, or rather the alleged lack of fighting capabilities, are being used by those who favor letting Laos go down the drain even if this inescapably does let every nation know that we shall not, after all, "pay any price, bear any burden, meet any hardship, support any friend, oppose any foe, to assure the survival and success of liberty * * *", as President Kennedy put it 101 days ago.

And let every American know that if the bell tolls for Laos the bell will indeed be tolling for him in that it can well mean the beginning of the end of the West in Asia.

For, thanks to Laos (and contrary to popular myth), time has been our friend in southeast Asia. It has been the high mountains of Laos and its tangled jungles that have provided the buffer between Communist Red China and Communist-controlled North Vietnam and the crucial countries of the area and insured their geographical separation from direct military pressure and subversion.

Look at a map and one glance will show how the existence of a non-Communist Laos brought time—the vital time Malaya had to have in its own fight against Communist guerrillas; time for Burma to bring its own Communist Party into line; time for Thailand to build its army and resistance to the so-called free Thai movement being nurtured by Peiping-recruited exiles on Red Chinese soil; time for Cambodia to embark on a policy of neutralism and the geographical immunity that permitted Prince Sihanouk to practice it; and time for South Vietnam to pursue its gallant fight against the relentless Communist infiltration from the north and time through free elections to restore its good name in a world where the West is far more preoccupied with rapping those on its side than in considering what Communists do to the little people in places like North Vietnam and Red China.

Now, back to the fighting fronts. In Laos today a lot of towns are falling and victories being claimed in the name of Lao. The Communists would have us believe that the Buddha-loving Lao on our side let Buddha get in the way of fighting, but that the Buddha-loving Lao on the Communist side are military heroes.

Some Lao do, of course, fight and fight well (even those on our side) as this correspondent can attest after experiencing frontline combat conditions in Indochina with Lao and having also a basis of comparison in frontline combat conditions with Koreans and Chinese.

But no Lao, even be he a Communist, is going to change from an irregular guerrilla without anything bigger than burp gun into a skilled artilleryman (and the barrage against Muong Sai was a very model of destructive accuracy) in the short months since the Soviet December airlift first began providing these weapons in great numbers. The United States has been so busy tearing down the admitted exaggerations of the Royal Lao about Communist Vietminh battalions that it has failed to make clear to the world (or to itself?) the critical importance of the fact—and it is a fact—that Communist Vietminh officers counseled by Soviet advisers and aided by Vietminh and Soviet technicians have been firing the artillery and directing the Lao units in battle. There are about 1,000 non-Lao officers in active combat on the Red side.

And why, speaking of will to win, has the United States stood idly by and counted Soviet airlift airplanes instead of letting the Royal Lao army shoot them down? If a precedent is needed the Communists have shot down our planes in Laos.

Said a Lao official: "You belittle our courage. Yet every time we want to do something like shoot down a Soviet plane you say that this escalates the war.

When the Communists increase their artillery, when they openly show their Vietminh officers, then belatedly our side is permitted to take steps along the same line, only usually less. You Americans admit now they have 1,000 foreign soldiers fighting with them. But—because of world opinion—you refused until the 11th hour to even put the American advisers in uniform. World opinion inhibits you. It doesn't inhibit them. How could anybody win under these conditions?"

Is the John Birch Society a Menace?

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. UTT. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I wish to include an editorial written by Mr. William K. Shearer, publisher of the Oceanside-Carlsbad Banner in Oceanside, Calif. The editorial is entitled "Is the John Birch Society a Menace?" and is, I believe, the best exposé of the massive propaganda campaign launched against the John

Birch Society and its patriotic goals and objectives:

IS THE JOHN BIRCH SOCIETY A MENACE?

One thing the American people must remember is that communism and its advocates are diabolically clever enemies.

The Communists also know what is known by every person knowledgeable in elemental strategy, that the best defensive is a good offensive.

It is also a fact that, during the past year, the American people have become very much more alert to the menace of communism than they have been in recent times. There has been a unity among our people in opposition to communism which has been highly dangerous to the subversives and traitors in our midst.

To the Communists, a new offensive was necessary. It was imperative to their continued success that the American people be divided along a line other than the line of communism versus Americanism. A division along the latter line had left the Communists and their sympathizers and apologists in too small a minority for comfort.

For some time, the Communists and their dupes concentrated on attacking J. Edgar Hoover, the House Committee on Un-American Activities, and the other governmental agencies exposing communism. Such attacks by the leftists went over with the American public like a lead balloon. The American people had become too well informed to accept subversive propaganda against the Un-American Activities Committee. The American people, so reasoned their enemies, must be divided for and against another group, a group not well known among the people, a group against whom unfounded suspicions could be stirred.

Such tactics are not new. Almost every religious group, for instance, has from time to time endured persecutions based on a misunderstanding by the public of the religious group's beliefs and practices. This applies equally to Protestants, Catholics, and Jews.

The Communists chose to divide Americans on the John Birch Society, a recently formed group dedicated to battling communism, and a group which, because it was little known, could be easily misrepresented to the public.

For weeks, now, the Communists and their apologists in the press, on the radio and television, and throughout society as a whole, have devoted countless amounts of space, time, and conversation to dividing America on the question of the John Birch Society. They have brought into camp with them a lot of good, respectable people whose Americanism goes about as deep as "I'm for me first."

The attacks on the society have centered around some intemperate language purportedly used by its founder in describing some past President; the society's opposition to the Supreme Court; and the group's restrictive membership. But regardless of the issues in the attack, regardless of the attack's object, the drive against the John Birch Society has done the job. It has divided Americans along a line contrary to the real issue. That real issue is communism versus American liberty. This new Communist-promoted division has taken our eyes off the ball.

Let us examine, briefly, the attacks on the John Birch Society.

First, there is the argument that the group's founder, Robert Welch, used intemperate language in describing three former Presidents of the United States. Such an argument cannot be very moving to any person familiar with American politics. Nothing worse is ever said about a President than what is said about him by the opposite party during a political campaign. Abraham Lincoln dismissed the attacks on him with the comment, "If I took time out of my busy schedule to answer every unkind thing that was ever said about me, my office would be closed for any other business."

Instead of passing off unjust criticism with the grace display by Lincoln, many modern officeholders have adopted the attitude that all officeholders are above criticism. Such a philosophy is ridiculous. The "divine right of kings" myth was exploded long ago.

To attack an organization because its leader intemperately described three successful politicians is absurd.

Second, the John Birch Society has been attacked because it has a restrictive membership. You may join only by invitation. To attack a group on this basis is equally absurd. How many other groups have memberships based on invitation only? To the best of this paper's knowledge, that is the criterion for membership in most service clubs, lodges, fraternal orders, and many other groups. Most churches require certain prerequisites of belief from persons before they are admitted to membership. In this regard, the Communist attack could have as easily been directed at the Rotary Club as at the John Birch Society.

Third, the John Birch Soicety has been attacked because it opposes our present Supreme Court. The cold hard fact of life is that the Supreme Court has done more to uplift communism, destroy our anti-Communist statutes, and cause racial disturbance and unrest than any other organ in our history. Opposition to the members of that court is a minimum requirement of any American in his demonstration of practical good sense on the subject of saving our Nation from communism.

Fourth, the John Birch Society has been attacked because of its methods. What are these methods? The principal method used by the society is letterwriting to Members of Congress, urging legislators to vote in the interest of their own country. Frankly, the intensity of the Communist assault on the society has given the banner an eyeopener as to the effectiveness of such letterwriting.

Now, if you still think the John Birch Society is the great menace, and that we should choose up sides as a Nation along this line, this paper must ask again, "What is the real menace to America?" Think for a moment.

Has the John Birch Society, through subversion and infiltration, taken over two-thirds of the world?

Has the John Birch Society enslaved millions of people anywhere on earth?

Has the John Birch Society starved multitudes to death in the Ukraine or elsewhere?

Has the John Birch Society taken away anybody's freedom anywhere in the world?

Has the John Birch Society seized a single government by violence and revolution?

Is the John Birch Society about to run us out of Cuba?

Is the John Birch Society about to involve us in a war in Laos?

Is the John Birch Society responsible for the civil war in the Congo?

Is the John Birch Society prepared to annihilate America in a nuclear war?

The answer to all these questions is "No." The John Birch Society is not responsible for these iniquities, but communism is. Now you tell the Banner where the real menace lies. You tell this paper along what line we ought to divide. It is along the line of Americanism versus communism, not along the line of some Americans for and some Americans against the John Birch Society.

The John Birch Society is hated by some because it has told the American people the truth about communism, and has provided an effective opposition group against America's real enemy. Its leaders are being persecuted because, like the prophets of old, they have spoken a truth too real for many people to accept.

The Banner is not very much moved by the so-called respectability of some of the opposition to the John Birch Society. Benedict Arnold was considered highly respectable and socially acceptable when he betrayed America during the Revolutionary War. It was Herod, not John the Baptist, who was socially respectable when the degenerate king beheaded the prophet 2,000 years ago.

As Americans, let us not be fooled by the Communists and the apologist press. Let us choose sides on the real issue, and divide along the real line.

A political cartoon once depicted a great black vulture saying, "Never mind the corruption; let's talk about foreign policy." This is the exact philosophy recommended by the Communists when they tell Americans to choose up sides on the question of the John Birch Society.

The Mexican Labor Program

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mrs. GREEN. Mr. Speaker, the House will soon be asked, once again, to extend the Mexican labor program under Public Law 78, for a period of 2 years. This program originally began at a time of extreme labor shortages in the agricultural labor field, but it has continued in spite of the very ample supply—in fact, oversupply—of domestic labor. There is every evidence that the availability of Mexican labor has had the effect of depressing labor standards among domestic workers, not only in the States where the braceros actually are employed, but in other States, such as my own State of Oregon, where the program has the secondary effect of substantially enlarging the surplus labor pool.

Farm workers in America, Mr. Speaker, are at the bottom of the economic ladder. I agree, not only with the present Secretary of Labor, but with his predecessor in President Eisenhower's Cabinet, that the Public Law 78 program should not be allowed to create further hardships for American labor. We have heard a good deal, from the opponents of minimum wage laws, about the bad effects of foreign competition upon our employment picture. Here is a case in which the immediate effect of the importation, not of foreign products, but of foreign workers themselves, could be halted, through the adoption of the administration's proposed amendments to Public Law 78.

The New York Times recently carried a story about Secretary Goldberg's fine statement in support of the bill which our able and distinguished colleague, the gentleman from Iowa [Mr. COAD] has introduced, and which I, for one, would like to see adopted when Public Law 78 extension is before the House. The New York Times article says:

GOLDBERG FOR CUT IN MIGRANT LABOR—BACK MOVE TO RESTRICT USE OF MEXICAN FARM HANDS

WASHINGTON, April 23.—Secretary of Labor Arthur J. Goldberg declared today that

the law permitting Mexican farm laborers to come into the United States should be allowed to die unless it was changed to protect American workers from unfair competition.

He issued a statement in support of a bill by Representative MERWIN COAD, Democrat, of Iowa, providing changes in the law.

The arrangement between Mexico and the United States under which about 1 million Mexican farmworkers come into this country each year on a temporary basis will expire December 31, unless Congress extends it.

CITES DOMESTIC SLUMP

"It is my view and the view of the administration," Mr. Goldberg said today, "that the power and authority of the Government should not be used in a manner which tends to perpetuate or lower the already depressed economic condition of U.S. farmworkers.

"Evidence accumulated by the Department of Labor proves beyond doubt that the mass importation of Mexican labor has had, and is having, an adverse effect on the wages, working conditions and employment opportunities of U.S. farmworkers.

"At a time when unemployment is a major problem in the United States there can be no justification for continuing such a program unless action is taken to protect the interests of U.S. farm warkers."

In addition to protecting U.S. workers, Mr. Goldberg asserted, Mr. COAD's proposal would enable the Labor Department to administer the law "in a manner which is fair to all parties involved."

He suggested that with the changes the law should be extended for 2 years to December 31, 1963.

PROVISIONS FAVORED

Provisions favored by Mr. Goldberg included the following:

Before being eligible to employ Mexican workers growers would have to offer U.S. workers wages at least equivalent to average farm wages in the State.

Eligibility to employ Mexican workers would be restricted to employers who make reasonable efforts to attract U.S. workers by offering and actually providing conditions of employment equal to those required by law for Mexican workers.

Mexican workers would be confined to employment in seasonal and temporary jobs and to employment not involving the operation of or work on machinery, except in specific cases found necessary by the Secretary of Labor to avoid hardship.

Mr. Goldberg urged also that the Secretary of Labor be authorized to limit the number of foreign workers who may be employed by any employer to the extent necessary to assure active competition among growers for the services of the U.S. farmworkers.

Take a Lesson From Experience

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. DEROUNIAN. Mr. Speaker, David Lawrence gives his views in an understanding article which appeared today in the New York Herald Tribune:

FIRMNESS CALLED ANTIDOTE FOR MESS IN WASHINGTON

(By David Lawrence)

WASHINGTON, April 30.—On the surface, it does look like there's another mess in Washington. But there's nothing really wrong here that wouldn't be cured by some consistency and firmness, plus a little more experience by President Kennedy.

Tens of thousands of words are poured out in Presidential messages. Task forces galore—composed of earnest-minded but often naive intellectuals—are running around here trying to spell out reforms in well-written phrases that read like the promise-all planks of the political platforms.

After 100 days in the White House, Mr. Kennedy himself, a well-meaning, conscientious young man, is finding out the hard way that National Government isn't so simple after all. He perhaps wishes he had not been so critical of the Eisenhower administration a few months ago and probably regrets the demagogery he put into those campaign speeches.

A TOUGH JOB

Nobody will deny that Mr. Kennedy has an almost superhuman job on his hands and needs every bit of sympathy and help that he can get. But he will not win cooperation by alibis attempting to shift responsibility to the press, nor by spending so much of his time at partisan political dinners or in conferences with political bosses while international crises in Laos, South Vietnam, and Cuba worry the American people.

The President's speech in New York last week urging the press to be cooperative was well intentioned, but it has very little to do with the mess that arose in the handling of the Cuban invasion. For the press, after all, has been indoctrinated during most of the last 8 years by congressional committee studies and hearings to believe that freedom of information is paramount and that everything must be made available to the public.

CONGRESSMEN LEAK NEWS

Members of Congress themselves have often given out military information they thought was important to the American people even though at the same time potential enemies of this country were unwittingly furnished some valuable data.

What is the remedy for this continuing deprecation of the United States? The first restraint will have to be imposed by Members of Congress and the politicians upon themselves. They had a field day a year ago over the U–2 incident, and the Senate Foreign Relations Committee's partisans even went so far as to publish a detailed report on the U–2 affair—an obviously secret operation in the cold war. The formal report made joyful reading in Moscow.

The press, of course, will print what is visible or audible to people generally. Democratic Senators and Representatives who made speeches about our missile gap could not expect the press to refrain from publishing them—in fact, they sought such publicity even though it undermined the prestige of the United States at home and abroad.

PRESS RARELY AT FAULT

Rarely has any individual newspaper come up on its own with what might strictly be called military information that wasn't generally known.

Anyone who takes into account the large size of the Cuban exile group and the open operations of some of its leaders in Miami must realize that semipublic activities of this kind will be fully covered in the press and will be widely broadcast.

The Central Intelligence Agency is supposed to collect intelligence information, and it rarely makes anything available to the press. Whether it really knows what is going on abroad sometimes is difficult to establish, but nobody can quarrel with its desire for secrecy.

There is one important question to which the Kremlin wants the answer: Is the United States going to stand up for its rights and fight if necessary? To put it another way, is the real viewpoint of this Government expressed by the appeasers in our midst who go around telling the world we are licked on the issue of Red China's admission to the U.N., and might as well surrender? Defeatism of this kind does more harm than news stories of a dozen Cuban invasions. All that Moscow wants to know today is whether the United States is bluffing on Berlin or Laos or Cuba.

There was no doubt left by President Eisenhower that America would defend Formosa. It was made clear that we would defend Quemoy and Matsu under certain circumstances. Mr. Kennedy during the campaign last year did not help the cause by expressing opposition to a defense of Quemoy and Matsu. It was unwise then to broadcast such information to the Kremlin, because there was the possibility that, as President, Mr. Kennedy might face a decision on that very point. The press was not to blame for this dilemma, created to gain votes in a political campaign.

WHERE PRESS CAN'T HELP

All in all, the press can help the cause of the United States by voluntarily suppressing news of weapons or gadgets or the mobilization of ships or airplanes or armies unless such movements have been officially announced. But the press can't help much in suppressing news about the administration when so many spokesmen are available from day to day to hint at changes in foreign policy that amount to a weakening of the U.S. position.

Nor does it seem to make much sense for the State Department to hold—as it did last week—2 days of secret conferences with 250 American newspaper editors, including an off-the-record talk by President Kennedy himself, while a Communist newspaper man was present and took notes which doubtless were being read in the Kremlin within 24 hours.

PRESIDENT TOLD

The episode is explained as a mechanical error in making up the invitation list, and the President was advised about it before he began speaking, but it was then too late to do anything without creating an international incident.

Sooner or later the mess in Washington will have to be cleaned up. It will be done when the number of cooks now making the broth is reduced considerably and some firm decisions are made by the President himself that are consistently maintained by deeds as well as words.

New Life for Cologne

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. GROSS. Mr. Speaker, from the Sudeten Bulletin comes this word picture of the new life that has come from the shambles that only a few years ago was Cologne, Germany.

It is another tribute to the great industry and dedication of the German people and I am pleased to insert the article in the CONGRESSIONAL RECORD, as follows:

NEW LIFE FROM THE RUINS—COLOGNE

(By Erhard Krischke)

In 1950 Kempten, then Ansbach, Stuttgart, Frankfurt, Munich, and Nuremberg in turn played host to the Sudeten Germans at

their annual rally during the season of Pentecost. In 1961 the Rhine metropolis of Cologne will open its doors to the Sudetens convening for the 12th annual year, this time under the motto "Unity, Justice and Freedom."

A bustling cosmopolitan center with 775,000 inhabitants, Cologne today along with Hamburg and Munich, ranks third largest city in the West German Federal Republic; numerically it compares with San Francisco, Calif. Seventy-two percent destroyed during World War II, with the inner city reduced to a mere shambles, Cologne's population totaled but 40,000 souls in 1945. A sorely tried people found strength and encouragement, however, in the fact that the city's famous landmark, its cathedral, withstood the ravages of war. The Rhine River, city's main artery, was still pulsating. Conscious of their centuries-old tradition and filled with a zeal to rebuild their historic city, the burghers of Köln reshaped the city within a nation recovering its general health, to lend old dignity to its new contours.

Cologne was founded in A.D. 50, when the Roman Emperor Claudius, at the behest of his wife Agrippina, raised the settlement of the Germanic tribe of the Ubii to a veteran colony known as Colonia Claudia Ara Agrippinensis (CCAA). In the fifth century, there developed along with added strategic, economic, and cultural significance, the name "Colonia." The Roman tower, remnants of the original city wall, numerous excavations and above all the multiformed glasses in the Römisch-Germanische Museum in Cologne's old armory, remind one of the city's golden age that drew to a close with the coming of the Franks in A.D. 450.

In A.D. 313, when Christianity definitely asserted itself, Cologne was already recognized as a bishopric. When its geographically favorable location as point of intersection for European north-south and west-east lines of communication led to its choice as a temporary residence of the Franconian kings, Charlemagne raised the city to an archbishopric in the year 795. It is part of the tragic history of the city that it underwent a second period of destruction, this time by the Normans; in 881.

New life again sprang from the ruins, however, with circumspect and ambitious archbishops helping Cologne to rise to new heights in the Middle Ages, for ever since 953 they were not only spiritual dignitaries but secular lords of the town. Many of them became advisers to the German emperors and several became chancellors of the Reich. One of them worthy of note was Rainald von Dassel, whose meritorious acts include the transfer in 1164, during the reign of Emperor Barbarossa, of the remains of the Holy Three Kings from Milan to Cologne, causing Cologne to become second only to Rome as Europe's most frequented shrine. It attracted pilgrims and tradespeople and had a beneficial effect on the spiritual and mercantile life of the town. Still today the crowns of the three Magi, patron saints of the city, can be seen on Cologne's coat-of-arms.

With the rise in trade and prosperity the town grew in size and splendor. Religious gratitude coupled with worldly competition between the princes of the church and the townspeople for status plus visible power, led at this time to the building of numerous places of worship. Cologne became a city of churches, a "Rome of the North."

Cologne's proud public spirit during that era is reflected in the stand against its archbishop whose secular rule they called into question, and whose army they defeated near Worringen in 1288, so that the archbishops transferred residence to Bonn and Bruhl until the end of the 18th century. From there they still exercised a measure of influence on Cologne's fat, while the city itself was ruled by a patrician corporate body.

Cologne's membership in the Hanseatic League gave an unprecedented boost to its economic life, finally placing the city in the lead, as she expanded her trade relations from Sicily via Spain, Flanders, England as far as Novgorod in Russia. This mighty upswing was mirrored in secular structures: the majestic town hall tower (1407–14) and the festival hall known as Gürzenich (1437–44). In 1475 Emperor Frederick III raised Cologne to the status of free city of the Reich.

Intellectual life also flourished. In 1388 the University of Cologne was founded with its chairs of learning filled by the mystic Master Ekkehard, the learned Scottish monk Duns Scotus, St. Albertus Magnus, whose pupil was Thomas Aquinas.

Yet the powerful unfolding of art and learning was to come to a halt due to external circumstance. The discovery of America shifted trade to the Atlantic, weakening the importance of the Hanseatic League. The 30 Years' War, too, caused a break in trade relations between Cologne and England, a powerful economic relapse, despite the fact that Köln remained a free town of the Reich until the end of the 18th century. Finally the period of occupation by the French, lasting from 1794 to 1814, led to the closing of the university. It remained dormant until 1919 when, under its former Lord Mayor, Dr. Konrad Adenauer, present Chancellor, it was reinstituted.

In 1815 Cologne became Prussian. From then on, to the beginning of the 19th century, the city benefited by its growing industrialization. The development of the Rhine navigation and the building of West European railroad lines blessed it with greater favors. The central location of Cologne as an intersection point for commerce soon induced the establishment of important industries which, in turn, animated the capital market and raised the city to the leading bank and insurance center of West Germany. This trend was nourished and heightened after the First World War. Cologne's former prominence as a trade city was reflected in the Cologne Fair. These prewar conditions were likewise the natural prerequisites and points of contact for the rebuilding and rejuvenation of the city. Despite the destruction of 1945, the subterranean canal system and electric, gas and telephone networks remained by and large intact, facilitating the decision to begin anew.

It soon became evident that the resolve to start in again was a sound one. The proximity of raw materials industries and the Rhine River facilitated the manufacture of items such as machines, railroad cars, motor vehicles as well as the chemical and perfume industries (Eau de Cologne), foods and luxury items, large-scale trade, banking, and last but not least the insurance branch, so that one can truly speak of a continuation of old traditions.

In the reconstruction of the ravaged city courageous and original paths are being followed. It was a matter of course that old cultural monuments were restored, too. Contradiction in style were bound to occur, due to the proximity of old and new and it has given rise to ample criticism. Undisputed, however, are the beauty and technical practicability of Cologne's modern bridges. Five bridges connect the two shores of the Rhine, causing Cologne to be known as the city of bridges. Churches have likewise been restored since the Second War and today 50 new houses of worship in modern style bear witness to the town's spiritual tradition. The pretentious focal point of Cologne's cultural life is the recently constructed Grosse Haus, the opera. Last year the Photokina, a photographic and cinema fair of international proportion, celebrated its 10th anniversary in Cologne.

As tempting as it is to speak of Cologne in superlatives, an even more gracious intercessor for the city is King Carneval, where Rhenish zeal for living and Cologne's spirit of gaiety find expression, today as ever before, in wild merriment and revelry. That, too, has enticed tourists to its doors, and now not only the English can covet the honors for having discovered Cologne as a travelers' paradise, for the majority of its guests from abroad hail from the United States of America. In 1960 they were no less than 60,000. If signs do not receive, Cologne will continue in the years to come to beckon visitors from the four corners of the globe.

Mention the Boss

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. DEROUNIAN. Mr. Speaker, Madison Avenue as been outdone at its own game. An incredible situation has come to light, as indicated in the following article by Victor Wilson, which appeared in the New York Herald Tribune on April 27, and in the editorial which appeared the following day in Long Island's Newsday:

[From the New York Herald Tribune, Apr. 27, 1961]

DON'T FORGET TO MENTION THE BOSS

(By Victor Wilson)

WASHINGTON, April 26.—Word has gone to all 10 Cabinet officers and their top assistants that when making speeches or announcing projects, to mention President Kennedy's name early and often, it was confirmed today.

This applies from the No. 1 Cabinet member, Secretary of State Dean Rusk, right down to the Commissioner of Patents, the Census Bureau Director, and the Director of the Weather Bureau.

The idea is to create a national image of Mr. Kennedy as a man of "compassion," whose interest extends from a chap who lost his job on an auto assembly line, to the major domestic and foreign problems confronting the Nation.

Orders to build up President Kennedy were first revealed today by "Battle Line," a publication of the Republican National Committee.

It printed a copy of a memo on how to do so from Herbert W. Klotz, Special Assistant Secretary to Secretary of Commerce Luther H. Hodges. The memo went to all top brass in the Department.

Questioned by the Herald Tribune, Mr. Klotz not only confirmed that he had signed and distributed the memo, but revealed that his counterparts in the other nine executive departments have passed or will pass the word along to the top people in their own departments.

Mr. Klotz defended the move as completely legitimate, but denounced the Republican National Committee for disclosing it.

"The Republicans must have damn little to write about," he commented. "News must be awfully scarce over there."

Here is the text of Mr. Klotz' memo to top officials in the Commerce Department:

At a White House meeting of Cabinet assistants, we have been advised again that speeches of Cabinet and sub-Cabinet officers do not contain sufficient reference to the President, and his personal interest in, and compassion with, the problems which face

the Nation. Liberal quotations from his speeches, past or present, should be used.

"The above was not deemed to be a reflection on the speeches delievered by Commerce Department officials, but was in the nature of a general comment on all executive departments.

"It is also to be kept in mind that, in making announcements of local projects, the President should be given a credit line in the lead paragraph.

"Attached are copies for offices and bureaus under your jurisdiction. Should you desire copies for others, please let us know."

Copies were attached to the memo for the acting commissioner of the Century 21 Exposition, to be held at Seattle, Wash., next year; the Director of the Department's field services; the Director of Personnel; the Maritime Administrator; the Weather Bureau Director; the Director of the Bureau of Foreign Commerce; the Director of the Office of International Trade; the Acting Administrator of the Business and Defense Services Administration; the Census Bureau Director; the Commissioner of Patents; and the Director of the National Bureau of Standards.

It could not be learned how Mr. Klotz' counterparts in the other nine departments are handling this problem—whether by memo, personal suggestion, or instruction. Mr. Klotz' contribution was dated April 12.

In talking about it today, Mr. Klotz said the idea came up at a periodic meeting of Cabinet officers' assistants at the White House sometime prior to that date. He couldn't remember who had the idea, but added that those present, representing all 10 departments, thought "it was a good idea."

"We are all proud of the President," he explained, "and feel that the people ought to know of the interest he takes in everybody, not just important people. We at Commerce feel that if a Commerce Department man is making a speech, say, in Cleveland, then he should find out first what the President had done for Cleveland, and mention it."

Mr. Kennedy, he went on, is an avid newspaper reader, and when he comes across an item about a person he can help, he picks up the telephone, and tries to get some action. He cited the case of Mr. Kennedy's reading that former President Eisenhower was not provided with sufficient office space and stationery after he left office. Mr. Kennedy called the General Services Administration, and that same day, Mr. Koltz said. General Eisenhower had more space than he could use.

Mr. Klotz also recalled that President Kennedy, reading that Ford Motor Co. had closed an assembly plant at Chester, Pa., urged the Commerce Department to try to create positions for those left jobless. This was done, at least in part, Mr. Klotz said, by inducing the Reynolds Metals Co. to take over the plant.

[From Newsday, Apr. 28, 1961]

IMAGE, SCHMIDMAGE

All our ribald comments about the Madison Avenue techniques of the Eisenhower administration, we now submit, were premature. The Kennedy administration has out-Madison-Avenued them all.

This revelation comes from a meeting of cabinet assistants, where Frederick G. Dutton, secretary to the Cabinet, told the hired hands that their bosses were not mentioning the President often enough in speeches, or underlining "his personal interest in, and compassion with, the problems that face the Nation."

The Kennedy administration is not too shy, as it is, but when the cult of the leader becomes an official policy, that's too much. It will be by acts rather than by speeches that President Kennedy develops an image—the word now heavily in use down Washington way. If he's compassionate, it won't remain a secret. If he's interested, the citizens will get the idea without heavy underlining.

Exactly how this bit of huckerstering was leaked to the Republican Party, which hastened it into print, is not very clear. The Republicans reprinted a memo circulated by Herbert W. Klotz, special assistant to the Secretary of Commerce. Probably we will have to wait a day or two until Special Assistant Klotz is plain Mr. Klotz once more.

Cardinal Scores Payoffs in Public Life

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks, I wish to include therein an excerpt from a recent pastoral letter issued by Richard Cardinal Cushing, archbishop of Boston, charging that American moral life is in dangerous decline, and strongly condemning moral abuses in such areas of community life as politics, medicine, law, and the economy.

The letter was distributed to all parishes in the Boston diocese and is a tremendously valuable contribution to contemporary thought concerning the questions with which it so aptly deals.

The letter covers wide ground and is quite lengthy. The excerpt I am including in the RECORD deals with politics and for that reason is pertinent and timely for those of us engaged in government as well as all those who are interested in raising the levels of integrity, competency, and public spirit in the government and in the Nation.

Cardinal Cushing concluded his penetrating letter urging prayers for our country and its people, for our leaders and their decisions, that over every action will rest the protection of God's hand and in every heart the consciousness of his prayers.

I was so deeply impressed with this message that I felt that our membership and people generally throughout the Nation would be vitally interested in reading it and having the benefit of the views of a great American spiritual leader.

The message follows:

CARDINAL SCORES PAYOFFS IN PUBLIC LIFE

Man, called as we have seen to a truly supernatural life, must live and act always in the world in which he finds himself. Bearing a wounded human nature—despoiled by the sin of Adam—each one of us strives toward goodness only in the reliance on God's help. The divine assistance is never lacking, there is always "grace abounding," but our willingness to work with it is often less than it should be.

It is never enough for us merely to write our names large in favor of the high ideals of the Christian life unless at the same time we are prepared to put them to work in the marketplace of our everyday living. The Golden Rule has to be made to shine in dark places, and the Sermon on the Mount must be heard in the valleys of commotion.

For us there is no division between a human life and a Christian life, there is only one life in Christ. His word and His way must guide every action of ours whether we are at study or at prayer, at home or abroad, in leisure or at labor; there is simply no part of our lives from which He can be excluded.

With these truths to guide us let me emphasize some of the difficult areas in which the committed Christian at this moment faces serious challenges to his moral life. It is possible only to touch upon these topics, but my remarks may point in directions which will encourage individual reflection and promote fruitful self-analysis.

POLITICS

As we attempt to analyze the complex situation in which we carry on our individual and social activities, our attention must be turned first of all to the functions of government, where society finds its necessary structure and expression. In a democratic society government represents not merely the will of the people, but their ideals and their philosophy of life. When government loses its concern for the public good, and serves the selfish interests of individuals or groups rather than the needs of society as they are indicated in the deepest longings of the human soul, democracy itself is doomed to destruction.

To make democracy work, government must be everybody's business. We cannot expect to provide a wholesome social environment unless each of us assumes some responsibility for the right ordering of our government on every level, from the lowest to the highest.

When we are looking for a place to begin, I suggest that we think first of all our responsibilities as voting citizens. Political democracy recognizes in the members of society the right to take part in the procedure by which the officials of government are chosen. The weaknesses of political democracy are only too evident. Some serious students even present them as proofs of the insufficiency of the democratic system itself.

One cynical political philosopher has in fact expressed his disdain for democracy by observing that in an absolute monarchy only one person in the country can be dishonest and he keeps himself in power by compelling every one else to be honest. In a democracy, the philosopher continues, the thirst for power tempts large numbers of people to make use of dishonest means in its pursuit, with the result that the entire community is exposed to moral decay.

We probably react with indignation to this crudely realistic evaluation of the moral character of our people. Perhaps this will stir us to action. We should be aroused to the pressing need of purifying our democratic processes in their actual operation, and of submitting the exercise of our rights to the control of the principles of Christian morality. The right to vote entails the obligation to vote for those who are best fitted to serve the community, not for those from whom we hope to gain some selfish and purely personal advantage.

The private lives and personal qualifications of our public officials should reflect the serious concern of the people to have as leaders those who look to the welfare of the whole Nation. We demonstrate by our choice of public servants our consistent determination to be ruled by reason and morality rather than by power and intrigue.

When public officials are dishonest, they are false to the oath of office which an enduring Christian tradition requires them to pronounce. When public officials who have proved themselves to be dishonest are returned to office again and again, the voter emblazons before the world his own in-

difference to the moral law. This is a matter of gravest scandal. It is plain that the voting citizen in such a situation encourages the spread of corruption and is himself a kind of partner in crime.

CHARGES BASED ON SORDID REALITY

I cannot find language strong enough to bear the burden of moral judgment that must fall upon those individuals who poison politics with dishonesty and corruption. These are genuine subversies who turn to wickedness the good order of society. When we hear murmurs of graft, and bribery, of payoffs and grabs, we know that these charges are not the products of the imaginations of fanciful people; they take their source in a sordid reality which a decent society cannot afford to tolerate.

Whenever those who call themselves Christian are party to such dealings, they turn their back upon their name and heritage and scandalize those for whom they should especially give good example. There is no double standard possible here. One may not claim a blameless personal life, be a member of a truly Christian family, and at the same time tolerate or take part in those deals which misappropriate public funds or favor special interests for private gain. God does not allow us to keep a double bookkeeping; there will be one accounting and a just God will be our judge.

It is appalling to discover after each election that a large percentage of our population neglects to vote. It is more amazing and truly discouraging to discover that the reason for not voting is a lack of any sense of responsibility for the functioning of government. We would do well to be alarmed at the widespread apathy and indifference of those who do not vote in any election, but perhaps, we should be more alarmed by the selfish motivated preferences of many of those who do vote.

INDIFFERENT GOVERNMENTS

It must be insisted that governments which are indifferent to the ideals of moral rectitude do not serve the public good. When we speak of the public good, it should be remembered, we do not imply that the rights of the state prevail always over those of its individual members. Governments must acknowledge their subjection to the moral law. Civil law and civic action must be coordinated with the demands of decency and justice.

Unless both the leader in public life and the voter who places him there have a solid commitment to the demands of the moral law, the public good will degenerate into the private gain of gangsters who seek public power as thieves rather than as servants of their fellow men. I am sorry to say that our American scene has provided us with evidence to support this woeful declaration.

Any discussion of government must include consideration of political parties as they have developed in the history of our country. The American Constitution we know, makes no provision for political parties; yet the fact that they have been in existence from the very beginning indicates that they fill an indispensable part in the operation of our Government as the Constitution provides for it. In his farewell address, George Washington warned against the evils of factions; yet he agreed that it is only through the clash of opposing parties that the spirit of liberty can be vigorously preserved.

The basic problem of American political life in this connection is to identify the programs of political parties with the good of the total community. The evils that have developed in political affairs do no more than reflect, in great measure, the moral corruption of the people as a whole. The vast sums of money which must support our elections often comes from the people who hope to benefit by their outcome.

It is always to be feared, as it is sometimes demonstrated, that political parties have sold out to those who have helped to finance their success. Nor has it been possible up to the present to control the financial operations of political parties by effective legislation.

Until we recognize the moral deficiency which this situation implies, and the moral laxity which it encourages, our indignation at the presence of corruption in public life will be hypocritical. We shall be guilty before God of that self-deceit which does not destroy sin, but merely encourages it within the boundaries of manmade laws.

Ultimately a healthy political life under the American system depends on an intelligent and morally upright electorate. Unless the great majority of the people study political issues and candidates seriously and vote with discrimination, political parties will manage to conduct their campaigns without regard for the truth and to buy power with patronage without regard for the public good.

FAMILY

Truly sincere and patriotic Americans cannot fail to become alarmed at the rising scandal of family breakdown in our society since we know that the destruction of family life is the clearest sign of community decay. America is no longer an integrated society, especially in regard to sex and marriage behavior, as we could have claimed a century ago.

At that time all Americans held roughly the same set of basic values, defined marriage ideals in the same way, and consequently organized their political, economic, social and religious institutions in such a way as to support, or at least not to hinder, the achievement of these ideals.

Such a consensus is badly needed today. We must have a society which clearly defines the norms of conduct on the practical level, with respect shown to those who live according to such norms, with child rearing practices established in terms of a definite sexual code, and couples entering marriage knowing what is expected of them as partners and parents. Within such a society personal development is meaningful defined and the pursuit of happiness then achieves significance.

EXPLOITATION OF SEX ENCOURAGED

Blatant and vulgar exploitation of sex is encouraged in the press, entertainment, advertising, and much of our contemporary literature. The process by which one set of standards and patterns of conduct is strongly advocated in theory, and yet a contradictory set is tolerated and promoted in practice, gives rise to serious personal contradictions and tensions.

Consequently sex has come to preoccupy men's minds excessively, and has assumed an extravagant position in stable social life. A society which strongly emphasizes only the physical aspects of sex produces men and women who seek nothing more than personal gratification even in marriage, regarding one another as sexual objects rather than as persons.

The mutual development and fulfillment which should be one of the major personal rewards of marriage is in fact too seldom achieved. This failure has serious consequences, especially on our modern, isolated, domestic, conjugal family, which usually tends to place very great emphasis on companionship and the development of mutual affection.

While Americans in large numbers still believe that marriage should be monogamous and for life, our legal system renders only slight judicial support to family stability. It is no secret that divorce can be obtained by mutual consent, with uncontested divorces granted routinely.

Teaching youth that marriage is for life, when they see an open travesty of judicial procedure in contracts of marriage being easily dissolved, and the participants in collusion suffering no loss of prestige and status, creates serious scandal.

Another area of confusion pertaining to marriage is related to the definitions of goals of life. Modern American society offers no meaningful standards by which to judge success in life. Only material symbols are offered as guarantees of success. Men and women become so preoccupied with trying to keep up with or surpass others in material advantage that they completely overlook the possibilities for happiness in their immediate family relationships. Marrriage thus becomes little more than the conventional "base of operation" in an enduring competitive struggle.

The family has suffered devaluation because of our concentration on an even higher standard of living and because material symbols of success have blinded us to human values and personal development. This age must learn again that the pursuit of happiness becomes meaningless and indeed self-destrictuve unless it takes place in the framework of values based on the integral nature of man. We cannot accept man's claim to define his own relationship to his Creator. This is fundamentally opposed to the traditional belief that God rules creation through the natures of things and consequently that the divine plan can be discovered by studying these natures in their normal operations.

CONCLUSION

I have written at considerable length but it is clear that we have managed only to touch the surface of a vast and important subject. Certainly the small catalog we have made of those areas where lapses in public morality are prevalent is not intended to be exclusive; our attempt has been merely to supply examples that might suggest some of the perils that afflict our present American society.

To summarize what has been written: Christianity, once the center of gravity of our civilization, is today a peripheral activity. At work, in leisure, in political, social, sexual, educational, professional, and family interests, the mass of the modern community is almost without trace of Christian values. Christianity is external in our community; it is remote, detached, unrealized. The church has great institutions and good organizations but these represent partly an inheritance from the past and partly the energies of a minority within a minority. Christ's members are on the defensive in most places, on the decline in some, on the upgrade in only a few.

The problem is to renew the apostolic spirit. We, the church, must repenetrate the modern community from which we have been largely isolated. The community will not come to us. We must go to it, as Paul went and Xavier and Francis of Assisi. It is upon her well-educated children that she must depend for her mission in an age so enamored of ideas.

KNOWLEDGE HAS TO BE WON

This is the necessity which has produced the growing numbers of priests and laymen who no longer have confidence in the outmoded machinery of human organization within the church, are no longer content with the snug security that too often shuts Christians off from real knowledge of the forces at work in the communities of which they are members, but to which they seem alien. That knowledge has to be won in shops, offices, factories, forums, and marketplaces.

Therefore, the modern popes have called for a lay apostolate to serve in the factories, in the workrooms, theaters, newspaper offices, kitchens, camps, colleges, forums, and marketplaces of the world, to learn there and to teach there. This apostolate must be

for the most part the job of the laity. It must express itself much less in words than in Christian life, logically and loyally lived out.

Thus can the seed be planted anew within the present mass of humanity which has succeeded the ancient societies of Christendom. The Christian community must be reborn and regrown within the world community. Desocialized, the mass is straining toward some shape, some order. It must and will find organizations, good or evil. Its struggle toward coherence is part of the agony of our times. It accounts for our obsession with politics, with statism, with communism. For Christians the task is to bring to the struggling mass the Christian spirit which, informing it, may restore it in Christian order.

We have much dead timber in our organizations and much mere formalism in our habits of mind, especially in the habit which regards our chief task as being merly to conserve. The church is a dynamic, not a static institution. It is constantly losing ground or gaining. It cannot be frozen in set forms.

There are essentials of its life which the popes group under the phrase "the traditional rules of the church's public law." But beyond these there must always be innovation, invention, enterprise, new vision. The talent of which the Gospel speaks must always be traded and never buried in safe little places. It must be traded in the human world about us, in the places where we are and work, not merely in those where we meditate and pray. No Christian can escape the responsibility for influence on his generation. There can be no retreat from it, no ivory tower.

Even those who go to the higher life of prayer and contemplation still have this social responsibility. They praise God and pray for their generation. Those who stay in the world pray, too, but they also have the task of renewing in the world the Christian community.

It may be that some will draw the conclusion from the reading of these words that our times are so desolate, our problems so overwhelming, that even the stouthearted must become despondent. Such a mood is certainly an un-Christian one and allows to enter by the back door the very despair our Christian hope should dispell. I call upon our people to lift up their heads and hearts with this virtue of Christian hope which never ceases to recall how the providence of God hovers "over the bent world."

IMMENSE RESERVOIR AT HAND

We have at hand the immense reservoir of grace which is Christ's church from which we can draw a new vigor for the wavering spirit of man. God has not left us without resources in our struggle against our own inclinations to evil and the threats of the powers of darkness; the world on which we stand in judgment has itself already been judged as the Lord Himself reminded us. "Have confidence," He said, "for I have overcome the World." (John 17: 33.)

Just as our fathers spoke of "the promises of Christ" so we too repeat our prayers to be made worthy of the legacy left us by the Redeemer that we may use it in this life to His glory and for our salavation. The only fear we can allow ourselves is that "fear of the Lord" which the Scripture declares to be "the beginning of wisdom."

Not all the anxieties of a bewildered world, not all the machinations of evil men, not all the carelessness of those who are confused and wondering can ever separate us from the constant confidence that our faith places in the power of God to do good through man. To be fitting instruments of His divine purpose we must, however, put on Christ so that His divine light shines through us in this darkened world.

No one can predict for us what the years ahead will bring but we do not require much more than commonsense to realize that they will continue to be critical ones. I am not, however, pessimistic and I feel strongly that no true Christian has room for such a disposition.

The faith has done much more than survive the slings and arrows of earlier contests, it has in fact transformed both men and movements; its finest days have been those when wickedness seemed destined to triumph and goodness be dispersed. But in adversity God sends new vigor to His people and in the heat of contest, like steel, are our wills tempered. Let us be strong then in the faith and in the love of God and let us be full of the virtue of hope, so much neglected in our times and among our people. Let all men see in us the confidence that, when we make our ways God's way, His truth will prevail.

During this sacred season of Lent, a time of retreat and regeneration for the Church and its members, I urge your prayers for our country and its people, for our leaders and their decisions, that over every action will rest the protection of God's hand and in every heart the consciousness of His presence. We pray, too, that all may come to the full knowledge of His Son, the door of salvation for humankind. In Him we must find strength to lead us through the dark places and endurance for the long way.

Turn with me to Him and let us confess together our common infirmities, as at the same time we profess His dominion over us. We ask His blessing upon all men and nations and upon the Church through which He has called them to an eternal life with Him. We beg, too, for the intercession of the Mother of God and of all those heroes of holiness who rejoice in the presence of God that in our days we may take profit from their example and one day enjoy their reward. May God, Father, Son and Holy Spirit, bless and be with us always.

Example by De Gaulle

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following editorial in the New York Daily News expresses the feeling of many of us about the example of General de Gaulle. It is heartening to see a patriot and a man of courage prove once again to the world that the great fundamental virtues can still win through to victory.

We salute and are thankful for France, and for her great son, Charles de Gaulle, for showing us an example of strength and brilliance in a world choked with apathy and mediocrity:

EXAMPLE BY DE GAULLE

French President Charles de Gaulle gave the free Western World a lift by cracking down the 4-day revolt of his Algerian Army, with hardly a shot fired. The insurrection leader, Gen. Maurice Challe, now faces a possible death sentence.

We'd say that France's grand old general, in addition to handling his own crisis properly and swiftly, offered his allies a striking example of how to win a bloodless victory.

Last Sunday, De Gaulle took his determined stand. He swore to use all means to safeguard the unity of his country. He obviously meant it, and the sudden silence from Algeria indicated that the mutineering generals there got the message.

Our congratulations to President de Gaulle on his handling of a tough situation, and we hope that official United States takes notice.

Party of Special Interests and the People

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. DEROUNIAN. Mr. Speaker, this is an unusual background story, written by Robert Allen and Paul Scott for the Long Island Press on April 26, regarding the party that calls itself "The Party of the People":

DEMS SOLICIT OIL INTERESTS

(By Robert S. Allen and Paul Scott)

WASHINGTON.—Interior Secretary Stewart Udall is going to surprising lengths to get contributions for the Democratic National Committee.

A well-known Washington representative of a leading oil company is telling colleagues in that field that Udall, as a long-standing friend, asked him to solicit them to buy $100-a-plate tickets for the national committee's May 27 dinner, to help pay off some $3 million in debts still remaining from the 1960 campaign.

Principal speaker at this fundraising affair will be President Kennedy.

Other notables slated to attend include Vice President JOHNSON, members of the Cabinet, among them Udall, Speaker SAM RAYBURN, and other congressional leaders.

John K. Evans, Washington representative of Asiatic Petroleum Co., a subsidiary of Shell Oil Corp., is spearheading Udall's unusual efforts to find $100-a-plate customers in that industry.

Three major agencies of the Interior Department are the Office of Oil and Gas, the Oil Import Administration that determines quotas, and the Office of Minerals Exploration, which conducts most of the Government's petroleum exploration research and development.

Selected by Udall as overall head of these agencies is Assistant Secretary John Kelly, former president of a New Mexico oil company.

Evans is soliciting these Democratic contributions in a form letter to around 60 of his oil colleagues. Copies of this letter are in the hands of startled members of the House, where Udall served several terms before being named to the Cabinet.

Among the Washington oil representatives who received Evans' letters are Kermit Roosevelt, Gulf Oil; Frank Rogers, Western Oil & Gas Association; John E. Cain, American Petroleum Institute; R. W. Crary, Standard Oil of California; H. D. Cole, Sun Oil; James V. Brown, National Petroleum Council; Harold L. Kennedy, A. C. F. Industries; J. T. Dickerson, Mid-Continental Oil & Gas Association.

Other oil firms represented on this list are Signal Oil, Texaco, American Oil, Phillips Petroleum, Independent Petroleum Association, Mobil Oil, Standard of New Jersey.

Full text of Evans' letter, with a notation that a copy was sent to Udall, is as follows:

"Secretary Udall, who happens to be a friend of long standing, has asked me as a personal favor to him to solicit the oil and gas industry in Washington in an effort to

help the Secretary dispose of his 'very sizable quota of tickets for the Jefferson-Jackson Day dinner.'

"The dinner will be held on President Kennedy's birthday on May 27. Tickets are $100 per plate or $1,000 for a table of 10. It is being held at the National Guard Armory in Washington, D.C.

"The procedure that the Secretary has asked me to follow is to have all checks made payable to the Democratic National Committee, and if for some personal reason you do not wish to follow this suggestion, please contact me.

"Send your check to me together with a note indicating to whom and where you wish the tickets mailed. Thanks for your cooperation."

Senator WILLIAM PROXMIRE, militant Wisconsin liberal Democrat, vigorously opposed Assistant Secretary Kelly's confirmation on the ground "the oil industry is getting too strong a foothold inside the administration." But this opposition was unvailing and Kelly was overwhelmingly approved.

Since then, in letters to Wisconsin constituents, PROXMIRE has continued to assail Kelly's appointment and to charge the oil industry has undue control in the administration.

Do the Schools Need U.S. Government Aid?

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. MICHEL. Mr. Speaker, the issue of Federal aid to education is everyman's problem and the following editorial by Harry T. Everingham from the Indianapolis News gets right to the facts of this matter:

Dr. A. C. G. writes:

"Are our public schools in such shape that the only solution is Federal aid? Is there a classroom shortage? Is there a teacher shortage? Have teachers' salaries lagged seriously behind? Has public spending on schools been niggardly? Who stands to benefit by Federal aid to education? Who is responsible for it?"

"Dear Dr. G.: Many of the facts you seek have just been uncovered by the citizens public expenditures survey, as follows:

"A classroom shortage? No, since the end of World War II we, the people, have built in all States, without Federal handouts, 680,000 classrooms. These are more than half of all in use today.

"A teacher shortage? Hardly, there are 47.6 percent more teachers now than in the 1949–50 period. The number of pupils also increased, but to a lesser degree—44.9 percent.

"Have teachers' salaries lagged? In the last 11 years teachers' salaries have increased by 99.8 percent—almost doubled—while the cost of living has increased only 23.6 percent, according to U.S. Consumer Price Index.

"Has public spending on schools been niggardly? It doesn't look so. Such spending increased from $5,800 million in 1949–50 to $15,500 million in 1959–60. This is a jump of 167.9 percent. In 1949 we spent $260.37 per pupil—now we spend $481.48.

"Who would stand to gain by Federal aid to teachers' salaries? The National Education Association has been the strongest lobby in Washington for Federal aid for schools. They know that with Federal aid will come Federal controls, placing them, as the main pressure group, in the driver's seat. Why do they want more power? The hierarchy of the NEA has gone on record as favoring socialism. Their executive head, Willard E. Givens, who retired January 1, 1952, is quoted in their published proceedings of the 72d annual meeting in Washington, D.C. (June 30, 1934) as saying:

"'A dying laissez-faire (free enterprise) must be completely destroyed and all of us, including the "owners," must be subjected to a large degree of social control. The credit agencies, the basic industries and utilities cannot be centrally planned and operated under private ownership. Hence [we] will support President Roosevelt in taking these over and operating them at full capacity as a unified national system in the interest of all the people.'

"Along with Federal aid to schools comes Federal dictation of our children's education under the Department of Health, Education, and Welfare. Herbert Philbrick (former agent for the FBI who spent 9 years in the Communist Party) says that this Department of Health, Education, and Welfare employs fully one-third of the top echelon of Communist conspirators in this country. Another authority on communism, Dr. R. P. Oliver, University of Illinois, estimates that 75 to 80 percent of the responsible officers in this HEW Department are Communist conspirators. These are the people who will have control over our children's minds if the NEA manages to force Congress to allow Federal control of education through Federal aid to schools.

"No State is in great need of Federal aid. In fact, our Federal debt is already many times as high as the debts of all 50 States combined. So why should we allow Federal aid for schools and place our children's education under the control of the most extreme radicals in our Government?

"Who will be responsible for Federal aid to schools? You will—if you don't do something about it now. Call your friends and neighbors and ask them to call others to write Congress at once to block the passage of the bill for Federal aid for teachers' salaries."

Automation Outlook

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks, I am including an editorial by Mr. Roger W. Bolz, publisher and editorial director of Automation magazine, which appeared in the April 1961 issue of Automation:

AUTOMATION OUTLOOK
(By Roger W. Bolz)

Much ado is being made in Government circles concerning unemployment and the possibility that automation could be a contributing factor. Eventually we must all face the fact that automation, like any economizing measure, is another means for keeping manufacturing costs in line. Every business must take in more money than it spends or it is finis.

The problem could be likened to the gas turbine cycle. Unless there is more horsepower developed at the power turbine wheel than is consumed by the compressor section, there is no usable output at the shaft. Such a design is a failure and the designer is a "flop." It is no different with a business. As the overhead costs of carrying on the business rise, efficiency overall must increase to maintain the same income-to-expense ratio in the face of competitive pressure on prices. Even though many highly successful businesses require expenditures almost as high as income, there is a margin and this is what counts.

Continually increasing taxes and wages create a heavy pressure to raise efficiency, and automation has become a must as a result. While making ominous sounds in the direction of automation activity in business, the Kennedy administration is creating a mammoth paradox by simultaneously advancing vast programs that will increase taxes and wages still more. As taxes and wages consume an increasing portion of manufacturing overhead, operating costs must be reduced or prices inflated. Strong competition today dictates the former, and an imperative advance into more automation.

There is no question that automation technology will eventually make possible the support of an advanced standard of living for everyone, but to avoid damaging upheavals there must be time to permit a gradual evolution.

It is unrealistic to harbor the idea that financial assistance in depressed areas and unemployment benefits alone will solve the complex problem of full employment in the years to come. There is need to revive the frontier spirit of early America among working people—the inquisitive, practical, restless, energetic, and inventive pioneering spirit. Opportunities are great and are increasing but seldom are they presented on a silver platter.

It is imperative that the American workman adjust to mobility, that he be inspired to initiative, and that he adapt and grow with technological change. He must become a vital and knowledgeable part of the industrial scene, not a bystander. No matter how attached the workman of old was to his job of trimming wicks, he himself helped mightily in ringing down the curtain on oil lamps. So it is today in the same degree. The standard of living is raised through technological advance—we cannot expect to enjoy its blessings and yet condemn it.

Let's hope we can approach these evolutionary industrial problems on a sound and rational basis. Surely in the face of evidently conflicting activities, it behooves every lawmaker to take a careful second look before any unnecessary additional problems are created.

Programs that result in higher taxes and wages may be like the sure cure for a transitory illness—operation successful but the patient died.

Bellamy Award Presentation Address

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. LANKFORD. Mr. Speaker, each year, one of the Nation's high schools is selected to receive the Bellamy Flag Award and represent its State in the Bellamy Flag Award family for a 50-year period. This significant award honors Francis Bellamy, who wrote the original "Pledge of Allegiance" to the flag of the United States of America in 1892.

The State of Maryland was selected to receive this award in 1953, and Annapolis High School holds it for our State. Last year, the honor went to the

State of Maine, and Cony High School in Augusta.

Representing Maryland at the award presentation was George Kramer, president of the student council of Annapolis High School. George is one of the school's most outstanding students. He is chairman of the Hi-Y social committee, a member of the junior classical league and the junior civitans. He spent 2 months last summer in Denmark, under the exchange program of the American Field Service.

Under unanimous consent I wish to include George Kramer's address delivered at the award presentation ceremonies last year in the RECORD at this point:

ADDRESS BY GEORGE KRAMER

Annapolis is often referred to as historic Annapolis. This name is apt, as much colonial history was made there. We are proud, justly, so I belive, of this history. There, in the old wooden statehouse, most of which is still in use today, George Washington resigned his commission as Commander in Chief of the American Army; there the Continental Congress held some of its meetings, and there our present State government meets annually to pass legislation of a more modern nature.

Today a visitor to Annapolis can still see many of the old colonial buildings, and it is practically impossible to traverse a main street in downtown Annapolis without passing several examples of colonial architecture. The homes of Francis Scott Key and Samuel Chase—one of Maryland's four signers of the Declaration of Independence—as well as many other houses are open to visitors at different times throughout the year.

Annapolis is the home of St. John's College, begun in 1696, and probably the third oldest college in the Nation. St. John's is known now for its nonelective liberal arts program inaugurated in 1937. Across King George Street from St. John's is the U.S. Naval Academy, an institution whose name has become synonymous with the name of the city Annapolis. Behind the great white wall which surrounds the Academy is to be found the crypt of John Paul Jones, our great naval hero, and Bancroft Hall, already the largest dormitory in the United States, to which is presently being added two additional wings.

Near the edge of Annapolis proper and overlooking much of the city is Annapolis High School. I shall try to tell you about the shining lights among the school's more recent accomplisments. Last year an Annapolis High School student held the post of president of the Southern Maryland Regional Association of Student Councils, and this year one of our students is vice president of that organization.

Last year also we participated for the first time in the American Field Service. As many of you may know, this is a program for the exchange of high school students who have completed their junior year. Foreign students live with American families and attend American schools for a year, and Americans live with their families abroad either during the summer months or during the school year. Last year a boy from Germany spent the schoolyear in Annapolis, and this year we have a boy from Argentina. Our students raise a good share of the money which makes the program possible.

Other progress made at Annapolis High School last year was the formation of an interclub council, an all-day exchange with student council representatives from area schools to study different high school governments, the formation of the position of school chaplain, and a general growth in the development and use of student council committees.

On behalf of Annapolis High School and the State of Maryland, I should like to congratulate Cony High School on receiving the Bellamy Award this year and present for your school library a copy of our yearbook, the Wake.

Park Commemorating Samuel Prescott Suggested to Concord Men's Group

EXTENSION OF REMARKS
OF
HON. F. BRADFORD MORSE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. MORSE. Mr. Speaker, the Fifth District of Massachusetts is steeped in history. The first musket fired for freedom was sounded here. Mr. Howard W. Kent, of Concord, has done a tremendous amount of research on Revolutionary War activity in our district, and has come up with a fascinating account of the role played by Samuel Prescott in the famous midnight ride. Dr. Prescott is the forgotten man of this heroic episode, and it is with pleasure that I share with my colleagues the following article in the Concord Free Press:

PARK COMMEMORATING SAMUEL PRESCOTT SUGGESTED TO CONCORD MEN'S GROUP

CONCORD.—A proposal for a memorial park honoring Dr. Samuel Prescott, the young High Son of Liberty who warned the town of Concord that British troops were approaching on April 19, 1775, was aired before a Concord audience on April 7. Stating that we should raise this young hero of Concord into a position wherein he would join the other immortals of his time, Howard W. Kent suggested the park to a meeting of the Men's Club of the Trinitarian Congregational Church.

After recounting the incidents of April 18 and 19, 1775, and the part Sam Prescott played in them, Mr. Kent said, "It grieves me that there is not one commemoration here showing that the services of Dr. Prescott were appreciated or even recognized. All of the great and distinguished men of the Revolution have already been recognized. Through neglect, Dr. Samuel Prescott presents a splendid opportunity to do something that is appropriate."

SITE OFFERED

Dr. Prescott was born in the central portion of the much enlarged home at 67 Lexington Road, now owned by Dr. John J. Fallon. "Across the street," Mr. Kent said, "there is a vacant lot of about 10 acres, bounded by Lexington Road, Hawthorne Lane, the Mill Brook, and private property. This lot offers a splendid space for a memorial park in honor of this great young man of Concord."

Such a location, Mr. Kent went on, provides room for parking cars and buses; for a grove of evergreen trees, shrubbery, green grass and flowers. "Visitors—some 150,000 to 200,000 of them a year—would see something that they would always remember, something that we could all be proud of. In time, such a memorial would overcome the erroneous and tragic history of Longfellow."

SUPPLIES AT CONCORD

Mr. Kent opened his talk by recalling that in December 1774, the First Provincial Congress voted that military supplies be collected and deposited at Concord and Worcester for an army of 15,000 men. Mr. Kent than read a true copy of the order given Lt. Col. Francis Smith, 10th Regiment, on April 18, 1775, as taken from Gen. Thomas Gage's manuscripts, in which Colonel Smith was ordered to destroy these stores. Although Colonel Smith was instructed by General Gage not to plunder the inhabitants or hurt private property, he was ordered to destroy the guns, dump the supplies of gun powder and flour into the river, burn the tents, destroy any pork or beef and scatter the lead balls, throwing them by degrees into ponds, ditches, etc., but no quantity together, so that they may be recovered afterwards.

General Gage also ordered that the two bridges be secured.

Samuel Prescott overtook Paul Revere and William Dawes on the evening of April 18, 1775, when they were on the road between Lexington and Concord. The three reached an outpost of British soldiers at the location now in Lincoln of the Buttrick Ice Cream Stand where Revere and Dawes were captured.

"Escaping capture," Mr. Kent went on, "Samuel Prescott spurred his horse, jumped a stone wall, and made his way to the farmhouse of Sgt. Samuel Hartwell. Leaving Hartwell to alarm Lincoln, Prescott continued to Concord and at the courthouse he met Amos Melvin who rang the alarm bell about 2 a.m. Seeing that Concord was properly alarmed, Dr. Sam Prescott continued his mission farther into the countryside."

FIVE CRUCIAL HOURS

"The result of Prescott's getting to Concord at 2 o'clock in the morning, gave five very important and crucial hours for the men and women here to hide the supplies stored in the town," Mr. Kent continued. Quoting Lemuel Shattuck, "They were five big hours in the destinies of men and nations."

"I am convinced that Dr. Samuel Prescott was the most important man here in the affairs of April 19, 1775." Mr. Kent told his Concord audience. "I would like to recite a few hypothetical cases to substantiate my stand. Let us asume that Col. James Barrett was incapacitated on April 19. Does anyone think it would have made any difference in hiding the supplies? It certainly would not. And then again, let us asume that Maj. John Buttrick was incapacitated. He was a very important man; he led his men to the bridge and ordered them to return the fire of the British. Would it have made any difference at the bridge, if he had not served? Definitely not. There were others equally as competent and willing to lead the men to the bridge, and would have ordered the shooting in self defense."

Returning to the capture of Paul Revere in Lincoln, Mr. Kent called Samuel Prescott the "indispensable man." If he had been captured or killed, Mr. Kent went on, General Gage would have executed his intended surprise in Concord at 7 o'clock in the morning, and the supplies for the Provincial Army would have been destroyed.

Concluding his talk, Mr. Kent said, "We should raise this young hero from almost total confinement in obscurity. Dr. Samuel Prescott earned the right to immortality along with the other men of the day."

The Lampasas Story

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. FISHER. Mr. Speaker, we all know that the American system of competitive free enterprise is under attack today. Those whose policies would de-

stroy this system include the radical-liberals, the socialists, the free spenders, and the big government advocates.

The ultimate outcome of this struggle can depend upon the thinking of our young people. Among them are the leaders of tomorrow. Properly directed and aroused, the young people in our public schools today can make the difference between success and failure in this struggle.

With that thought in mind, in 1951 the school superintendents of Lampasas and Burnet, Tex., instituted a historic program, called Hill Country Project in Economic Understanding. Spearheaded by Mr. Harvey C. Ballew, superintendent of the Lampasas Schools, this project has caught on. It has attracted widespread attention. It is a success. It has been acclaimed far and wide.

Mr. Ballew, a dedicated believer in progress that moves within the framework of the competitive free enterprise system, is doing a magnificent job, and one which can well be emulated by others throughout the Nation.

Under leave to extend my remarks, I include an article from the May 1, 1961 issue of the Dan Smoot Report, which follows:

THE LAMPASAS STORY

Lampasas is a picturesque town of about 5,000 people, in the beautiful hill country of central Texas. It is the county seat of Lampasas County where livestock, agriculture, and forestry are the principal industries. Burnet—county seat of adjoining Burnet County—is about the same kind of place.

In 1951, the school superintendents of these two central Texas counties started an Americanism program in their school systems. They called it the Hill County Project in Economic Understanding. They got the idea at a workshop which they had attended for 3 weeks at Austin.

They added to their regular curriculum a course for high school seniors called contemporary problems and issues, and they prescribed additional emphasis on Americanism in all social studies classes for juniors and seniors. But Mr. Harvey C. Ballew, superintendent of the Lampasas schools, was not satisfied with this approach. He felt it was too slow, limited, and general. Under Mr. Ballew's leadership, the name of the Americanism effort was changed to Cen-Tex Project.

Considerable study was directed toward finding a means of presenting concrete, meaningful Americanism instruction, not just to juniors and seniors in high schools, but to all public school students, in both primary and secondary schools, beginning with the first grade.

Teachers and school officials were encouraged to participate in study and planning sessions until they had decided upon eight basic Americanism principles, which they called the foundations of freedom. Superintendent Ballew says these eight basic principles are considered the undergirding or the very roots of the American way of life. They have become the handbook for teaching the Americanism freedom program in the Lampasas schools. They are emphasized in all classes for all public school students throughout the year.

Here are the eight basic principles:

1. We believe and trust in God, as we understand Him. Our forefathers left their home country that they might have freedoms in a new world. Freedom to place their trust in God was one of their primary purposes.

2. Importance of the individual. We teach that what each individual makes of himself determines what the world of tomorrow will be like. If the separate individual does not amount to much, little can be expected of the group, for nought plus nought will never equal anything but nought, however many million ciphers are added.

3. Freedom of the individual. The progress in America can be traced to the individual initiative, creativeness, and energy released through freedom of individual Americans. Freedom is the best climate for growth and perfection of the human personality. It is a law of nature that an individual develops in proportion to his efforts at solving his own problems. Freedom of the individual person to make his own choices and manage his own affairs (except where the freedom of other individuals is jeopardized) has been so fundamental in the growth of our Nation that many people believe that it is the great secret ingredient of the American success formula.

4. Dignity of work. This foundation principle has its origin in our Christian beliefs. From it come not only our material abundance, but also the rich individual satisfaction of doing difficult tasks well—mental as well as physical. The only way man has of satisfying his needs is through work; that is, applying energy to God-given resources.

5. Private ownership of property. From the Bill of Rights we get protection of our fifth, as well as our second and third, principles. In America, even before the drafting of the Constitution, there was the conviction that individuals are entitled to rewards commensurate with their contributions to society. Implicit in this proposition is the implication that they may retain their rewards or dispose of them as they choose. Private rewards (property) retained through thrift have created a vast reserve of private capital which has been used to expand and create job opportunities, improve and develop products, services, and processes, and to provide an ever rising standard of living. Property and freedom are inseparably connected; economic leveling is not economic progress.

If the ancient institution of private property is destroyed, liberty must go with it. Independence of action, freedom of criticism, and representative government are all possible only in a society founded upon private ownership. Conservatives value property for its own sake, of course, but they value it even more because without it all men are at the mercy of an omnipotent state—in short, they are slaves.

6. The profit motive. The profit motive is the inner drive which causes an individual to strive, to initiate, create, improve, produce, and serve in his own interest and that of his fellows. The profit motive is synonymous with hope of rewards. The hope of rewards is the stimulus of freemen, whereas compulsion and force motivate the slave.

7. Free competition. In a nation of free men, one finds in his search for rewards that others are seeking the same rewards. A man finds himself in competition with one or more of his fellows in seeking a job, in holding it, in being promoted, in making and selling a better product, in employing efficient workers, in getting the greatest rewards from savings, and in almost every phase of economic life. The element of competition causes us to work harder, to think more, to produce more, to improve, to invent, to expand; in short, to serve better and thus to progress as individuals and as a Nation.

8. Government as a protector, not a provider. The supreme law of the land, our Constitution with its Bill of Rights, grew out of the determination of the early builders to protect and bind together the primary foundations of our Republic, the dignity of the individual and his inalienable right to life, liberty, and pursuit of happiness. Our Government was built to the specifications of this law which consigned it to the role of servant, not master; protector, not provider. The Government does not give us our freedom; it protects us in our freedom. It does not owe us a living, but rather protects us in our freedom to earn a living.

A large, framed copy of these eight principles—the "Foundations of Freedom"—hangs in a conspicuous place in every Lampasas classroom.

During the school year, each grade selects a different "great man, great idea, and great document" for intensive study. One year, first-grade students studied George Washington as their great man; "Always tell the truth," as their great idea; and The Lord's Prayer as their great document. Benjamin Franklin, "Don't expect something for nothing," and "Poor Richard's Almanac" were the greats of another grade.

Superintendent Ballew says the Lampasas schools also study and teach, "the diametric differences between these American foundation principles and the tents of Marx, which were put down in the Communist Manifest in 1848, and now constitute the programs of socialization that are sweeping much of the world."

The annual climax of the Americanism program in the Lampasas schools comes each spring, during Texas Public School Week, when the mayor of Lampasas proclaims Freedom Foundation Week for his city. During this week, the whole community is intensively and enthusiastically involved in programs of celebrating, discussing, and paying homage to the great principles of freedom which built America.

The Americanism program of the Lampasas schools has received national recognition for its excellence. For example, in February 1960, the American Farm Bureau Federation (national headquarters in Chicago), after an extensive investigation, characterized the Lampasas program as, "an excellent example of how one area of our country has responded regarding the need of our public schools to establish a curricula which will help students to acquire a true concept of the basic principles and philosophy of the American system of self-government and the competitive system.

"It is the type of program that can be put in operation in every school in the Nation. It has already made great progress in the State of Texas."

Superintendent Ballew says that the teachers are due primary credit for the success of the Lampasas Americanism program. He feels that the dedication of the teachers results, in part, from the fact that the teachers themselves were involved in selecting the eight great principles which serve as the foundation stones of the entire program. Mr. Ballew says: "The teachers had to decide how to fit the teaching of these principles into their classwork.

"A series of three or four meetings per year are held, and outstanding people are brought in to talk to the teachers on some one of the basic principles or some threat to our way of life."

Though proud of the local, State, and National recognition which his Americanism program has earned, Mr. Ballew sums up what he regards as the real results of the program in these words: "But what's more important than all of these outward signs, is the intangible evidence of results in terms of students' and teachers' relations, as reflected in wonderful discipline, interest, enthusiasm, and practical applications of these principles. The teachers manage to weave the philosophy of these principles into whatever lesson they happen to be teaching, or relate them to the student's experience in or out of school. The students also seem to adhere to the principles, almost by second nature, in things they write or make."

Americanism in the Lampasas schools has also had a notable effect in the surrounding community. American Farm Bureau Federation representatives interviewed people throughout Lampasas County. They found that 17 out of every 20 persons interviewed were not only thoroughly familiar with the Americanism program in the schools, but unusually enthusiastic about it. For example, the interviewers quoted one variety store owner as saying: "I am a great sports fan—I love baseball, football, and basketball—I never miss a game; but if we had to do away with anything in the school, then I would do away with all of those before I would hamper the American heritage program."

American Farm Bureau Federation officials concluded that, "the fundamentals taught in the school were reflected in the philosophy of the total community."

A significant consequence of the Lampasas schools program is the inspiration it has given to officials of school systems in other areas. During the 1960–61 school year, a total of six Texas counties were involved in the Cen-Tex project, and a seventh was considering participation. But the idea had traveled beyond the limits of central Texas.

An Abiding Frontier

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. ALGER. Mr. Speaker, at this time when freedom is being challenged on many fronts, it would be well for us to think again about our basic American concepts. We, who think so highly of freedom should be prepared, as were our forefathers, to defend it with "our lives, our property, and our sacred honor," without fear and without reservation. In the face of the Communist threat to the freedom of all mankind, we need a new birth of patriotism and adherence to those principles upon which this Nation was founded and through which we became great and powerful.

These truths are ably stated by the Honorable Dr. Stanley K. Hornbeck in an address before the midwinter assembly of the Holland Society of New York in February of this year. Besides his notable service as envoy to Holland, Dr. Hornbeck held high office under eight Secretaries of State. He was formerly Director of the State Department's Far Eastern Division. Widely traveled as diplomat and teacher, he has, since retirement, continuously studied and written on Eastern Asia and United States foreign policy. Dr. Hornbeck's address follows:

AN ABIDING FRONTIER — NATION'S HISTORIC COMMITMENT TO FREEDOM SEEN BASIS FOR OPPOSITION TOWARD COMMUNIST IMPERIALISM AND AGGRESSION

(By Dr. Stanley K. Hornbeck, U.S. Ambassador to the Netherlands, 1944–47)

To have a new frontier you must first have an old frontier, a base; and to have any frontier there must be a "this side" and a "that side." What is there on our side, of no matter what frontier, that is basic?

To understand U.S. policy in regard to any foreign country or region or to any particular situation abroad, one needs to be aware of and take into account certain foundamentals in the political history of the United States, in the feeling and believing and thinking of most of our people, and in the relationship in our system between those phenomena and official performance.

We, the people of the United States, are descended—most of us—from European stocks. We are heritors of ways of thinking and of living that evolved first in and among peoples long established in Western Europe. Our religious beliefs and many other of our concepts are rooted in the cultures that had developed "over there." Our ancestors, leaving there and coming here for one or other of many reasons, brought with them ideas which, in a climate of opportunity, have thrived luxuriantly. Here there has developed, more rapidly than there, emphasis on some of those ideas, plus variants.

Here there evolved the concepts of freedom and of independence that were first nationally formalized in the Declaration of Independence. Here our forebears broke with Europe politically and established a new state with a new allocation of sovereignty and a new pattern of political organization and functioning. But they did not shake off or lose their conceptual inheritance. They simply had developed it, and their descendants have kept on developing it, with gradually achieved modifications, alterations, changes.

A nation cannot escape its past, does not suddenly abandon its long-established and experienced ways of believing, of reasoning, and of acting. Some changes, yes. Reforms, yes. Revolutions, yes. Improvement or even deterioration, yes. But sudden and wholesale throwing off or taking on, no.

The United States is a republic. Its political way of life has become that of a democracy. Its Government is in structure and in operation an expression of the will of its people. Its officials are from and of the people, are given their authority by the people, and are imbued with and responsive to the Nation's concepts. Generally speaking, its people have believed and do believe in the existence of a divine authority, are guided religiously by what they take to be God-given ordinances, and are fully committed to the principles of personal freedom, national independence, and, for and among men and nations, law, equal rights, peaceful processes, justice, and security. Its policymakers function within that political framework and in that climate of belief and opinion.

In the realm of international relations, the first and most abiding concern of the people and Government of this country has been and is with problems of freedom, independence, and security. Our thought has been "live and let live." Our national attitude was given clear expression long ago in President Monroe's famous message. In that message the essence was a declaration of opposition on our part to international aggression. The reasoning was that aggression against our independent neighbors would be a menace to us; therefore, toward safeguarding our own "peace and safety" we should act toward safeguarding that of the said neighbors.

Expressly, then, in the event of such aggression, we would offer resistance thereto, and, objecting to aggression, we would abstain therefrom. On behalf of independence and security, our posture was that of defense and self-denial.

That concern, that thought, that reasoning, those purposes and that posture persist. There is, though, a difference: the threat now is greater; there now is no barrier such as there was then between it and us; and we have now much more to defend than we had then.

The facts of our national commitment to the principles of freedom and independence have in many instances produced for us dilemmas. Meaning, as they must, aversion on our part to procedures of conquest and to various of the practices inherent in "colonialism" and "imperialism," they have caused us to be torn between sympathy with the countries from which we variously came and sympathy with defenders of or aspirants to freedom and independence.

Overall and constantly, though, we have frowned upon what we have thought—rightly or wrongly—to be or to smack of denials of freedom or assaults on independence. And when it has come to showdowns, we have taken our stand on the side of opposition and resistance to what we have believed to be aggression. Basically this accounts for the positions we have taken in many matters initially and primarily of European and/or of Asian and/or of Latin American concern.

In the Far East, we have opposed practices of aggression when directed against China, when directed against Japan, later when manifested in relations between Japan and China, and most recently when manifested in Korea, in China, and in Indochina. In the World Wars and in Korea, our participation came of German, of Japanese and of Russian imperialism, manifested in aggression, and our opposition thereto. The discordance now between on the one hand the United States and on the other hand the Soviet Union and Communist China comes of Communist imperialism and our opposition to aggression.

Today, with would-be conquerors making war globally upon free men and free nations and freedom itself, we still are intent on the problems of independence and security. Our thought, nationally, still is "live and let live." Our reasoning still is that aggression by others against others is a menace to us. We offer opposition and we support resistance, but we still do not attack. Our posture is still defensive.

Now, though, and one cannot say it too often, the situation in world affairs is vastly more complicated, the attack upon freedom is more intense and more extensive, the danger to us and our frontiers is greater, and the problem of security is more critical and more difficult than ever before.

The essence of our concern with and in the conflict which the Communist world has forced upon the free world is: the Communist purpose and effort to conquer, manifested in resort to procedures of aggression in many forms and in many places, endangers us. And we, solicitous for our own independence and security and for that of other peoples, are opposing aggression and supporting resistance to it.

All the time, however, we are functioning as would be a boxer who performed with due respect for the Queensbury rules while his opponent, out to kill, uses fists, elbows, and feet, brass knuckles and loaded shoes, every weapon, every blow, and every trick conceivable. We are handicapped by our own principles, rules, and devices. We actually give aid to our opponents by giving aid to their affiliates, granting time out whenever they ask for it, and always giving them and their professions the benefit of the obvious doubts.

The latest official enunciation of our national solicitude and purpose is that which was uttered by President Kennedy in his inaugural address on January 20. In that address this new President gave expression to principles which have long prevailed in the formulation of our foreign policies. Three passages in particular are eloquently expressive:

"Let every nation know, whether it wishes us well or ill, that we shall pay any price, bear any burden, meet any hardship, support any friend, oppose any foe to assure the survival and success of liberty.

"To those new states whom we welcome to the ranks of the free, we pledge our word

that one form of colonial control shall not have passed away merely to be replaced by a far more iron tyranny.

"And let every other power know that this hemisphere intends to remain the master of its own house."

Ten days later, reporting on what we have and what we have not, this same new President warned that we must be alert to the menacing purposes of communism's leaders and must adequately oppose and resist aggression. He said: "Our greatest challenge is still the world that lies beyond the cold war—but the first great obstacle is still our relations with the Soviet Union and Communist China. We must never be lulled into believing that either power has yielded its ambition for world domination—ambitions which they forcefully restated only a short time ago. On the contrary, our task is to convince them that aggression and subversion will not be profitable routes to pursue to those ends."

Almost by instinct, we react with favor to evidence of commitment by others to those principles, and with disfavor to what seems to us to be disregard of them. Individually and collectively, we sympathize with and tend to side with those who seem to us to be struggling, even as did we, for freedom.

With these facts in mind, one has in hand, I believe, a key to the how and why of almost every approach that has been made by the United States to questions of substantial or critical import in the field of our foreign relations.

Try this key on the what and the why—all along the way—of our China policy. Try it in reference to the Philippines, and in reference to Indonesia. Try it reference to nonrecognition and to our opposition to admission of Red China to the United Nations. Try it in reference to Berlin and to Formosa and to Quemoy and Matsu.

Today, we are in the midst of, and we have become a major party in, a global conflict. In it, there are worldwide tensions and there is warfare. Of it, there could come a major war.

The choice for the United States is not between a course involving risk and a course not involving risk. Risk is already a constant; it resides in and flows from the fact that communism's rulers are intent on courses which involve aggression and that we are opposed to aggression in general and to their purposes and methods in particular.

What may be the Communist world's next moves can only be conjectured. And what, in the event of new developments, the President of the United States may decide to be appropriate, can be judged only in the light of what has been thought, said, and done in the past, especially during the year since World War II. In 1947, President Truman declared: "I believe that it must be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or outside pressures."

The Truman administration failed initially to apply that prescription in relations with and regarding China, but later lived up to it in opposition to Communist aggression in Korea—and in China. The Eisenhower administration carried on with it. Throughout the years since 1950, it has been our policy to oppose and to support resistance to Communist aggressions.

They who think that there should be or will be sudden changes in the attitude, the strategy and the tactics that have developed as those of the United States in relation to questions such as, for instance, those of keeping Berlin and Formosa out of Communist hands, may well be asked to look at the record, scan the frontier, and make careful note of the significant fact that thus far in their courses of conquest Communisms strategists seem to have chosen not to attack at points where there are present both substantial defensive strength and obviously firm purpose to resist.

There has been, over the years, on the part of some of our many sets, expression of objection to the import of the concluding part of Stephen Decatur's famous toast, the pledge, "Our country, right or wrong"; but there can be no doubt or differing about the expression of hope, "Our country, in her intercourse with foreign nations may she always be right!"

May I supplement that magnificent expression of a high hope with this: Our country. May we, her people, especially those of us upon whom we, by our democratic processes, confer authority,—may we keep her strong, may we always be well informed, be wise, be resolute and bold, in tenure, in defense and in propagation of the principles and practices of freedom, independence, and security.

Seventy New Judges

EXTENSION OF REMARKS
OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. DEROUNIAN. Mr. Speaker, we will be watching to see how well Robert Kennedy carries out his responsibility, as Attorney General, in choosing able men for the long-needed Federal judgeships. This article on the matter appears, April 30, in the Long Island Press:

BOB KENNEDY MUST FULFILL PROMISE ON BENCH APPOINTEES

(By Ruth Montgomery)

WASHINGTON.—Attorney General Robert Kennedy will soon be on the spot, as few of his predecessors have been, to make good on a solemn pledge.

The President's 35-year-old brother has promised to "pick the best possible person in terms of integrity, honesty, independence and skill" for the Federal bench.

Since such remarkable talents are fairly evenly divided between the two political parties, Bobby will have an enviable opportunity to prove his own veracity by making good on his pledge.

The matter is of acute importance, because President Kennedy is about to have the rare privilege of appointing close to a hundred new Federal judges. The Attorney General is historically the man who makes the selections for the President, and since Bobby was Jack's campaign manager, the eyes of the Nation will be watching to see that he does not dole them out as patronage plums.

A country boiled with indignation a generation ago, when President Franklin D. Roosevelt attempted to ram through his Court packing plan for the Supreme Court.

Some of his own top supporters in Congress broke with him over the scheme, which would have overbalanced the Court with Democratic Justices who agreed with Roosevelt's New Deal political philosophy. The plan was defeated, and F.D.R.'s subsequent attempts to purge his critics inflamed the Democratic Party for a decade.

Oddly enough, no similar public outcry is now being raised against the incredible maneuverings of the congressional Democrats to create some 70 new Federal judgeships. Those, together with normal vacancies will give the administration approximately 100 opportunities to rise above partisan politics this year.

The congressional behavior on the subject of Federal judgeships is one of the most blatant political operations of recent times.

For several years, President Eisenhower earnestly beseeched the Democratic-controlled Congress to vote 35 additional Federal judgeships. The need was obvious, but although the Senate Judiciary Committee favorably reported out the bill last year, Majority Leader LYNDON B. JOHNSON partisanly refused to let the Senate take it up.

Because court calendars were so jammed, Ike even agreed to appoint half Democrats to the bench, if Congress would act, but nothing was done. JOHNSON was obviously playing politics with the judicial branch.

This year, with Kennedy in the White House and JOHNSON presiding over the Senate, the Democratic Congress suddenly rushed through a bill creating, not 35 but 70 to 73 new judgeships.

This was partisanship and vote swapping at its ugliest. Breaking tradition, the Democrats refused even to hold hearings on the need for 70 new judges. They simply rammed the bill through the Judiciary Committee on a straight party line vote.

Senator KENNETH KEATING, a high ranking Republican member of the committee, said of the stunt: "A crash program of judicial reform has been long overdue, but a crash program of political patronage is something Americans can do without."

Chairman EMANUEL CELLER of the House Judiciary Committee, who had helped to block action on Ike's bill last year, shamelessly told the House recently that he wants "the greater number of these judges, shall I say, to go as prizes to honest and good and faithful Democrats."

He was speaking, believe it or not, of a third and coequal branch of our Government. Keating and his New York colleague, Senator Jacob Javits, are meanwhile trying to take Bobby Kennedy at his promised word.

They have sent telegrams to all New York bar associations, requesting their veiws on the most qualified people, regardless of political bent, for the nine new judgeships in the New York area.

As soon as their recommendations are in, Keating and Javits will forward them to Robert and John F. Kennedy. The brothers must take it from there.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

Appendix

The First Accusations That the United States Had Encouraged the Revolt of the French Generals in Algeria Were Printed in Soviet Newspapers and Broadcast by the Moscow Radio

EXTENSION OF REMARKS
OF

HON. HARRIS B. McDOWELL, JR.
OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1961

Mr. McDOWELL. Mr. Speaker, the first accusations that the United States had encouraged the revolt of the French generals in Algeria were printed in Soviet newspapers and broadcast by the Moscow radio.

The New York Times reports this morning that—

Allen W. Dulles, Director of the Central Intelligence Agency, checked with his subordinates and gave an unqualified guarantee that none of his agents had given any encouragement to the rebels in France, Spain, Algeria, or elsewhere.

After consulting Mr. Dulles, Secretary of State Dean Rusk assured the French Ambassador, Herve Alphand, last week that no U.S. representatives had been involved in any way with the rebels.

When the rumors persisted, he repeated this assurance yesterday to the Ambassador.

Today Mr. Dulles departed from his custom and issued a personal denial of reports that some of his officials had been involved.

We, and the world, were assured by Mr. Dulles that—

The reports in Pravda, Izvestia, and the French press are all without basis in fact.

In view of the continuing rumors it is my belief that the Congress must take steps to end them once and for all, and to give assurances to everyone concerned that the United States was not involved, nor were any of its agents involved, in the revolt of the French generals which fortunately collapsed.

I am convinced that the Congress can no longer shirk its responsibility to inform itself fully on intelligence matters.

On April 27 Senator EUGENE MCCARTHY introduced for himself and Senators ANDERSON, MORSE, CLARK, METCALF, BURDICK, BARTLETT, and MCNAMARA, and perhaps others, Senate Joint Resolution 77 to establish a Joint Committee on Foreign Information and Intelligence. In introducing the measure Senator MCCARTHY told his colleagues that—

The joint resolution is not, directly or indirectly, meant to express any criticism of this administration or of any past administration, but basically, to reflect what I consider to be a proper responsibility on the part of the Members of the U.S. Congress to accept responsibility in this field, to be informed, and to be involved when major policy decisions are called for.

And Senator MCCARTHY added the following incontrovertible point—

Under the Constitution, Congress is called upon to participate in a declaration of war. In modern times, war is not declared. Congress, therefore, has a continuing and very substantial responsibility for policy decisions with regard to the cold war or conducting foreign policy by any other means.

The measure introduced by Senator MCCARTHY is similar in purpose and substance to my own House Joint Resolution 250. I am in complete agreement with Senator MCCARTHY when he says that—

It is my hope the joint resolution will be considered and, in some form, adopted, so that the machinery and procedures which are the constitutional responsibility of Congress may be exercised.

I include here, as part of my remarks, two articles from the New York Times of May 2, 1961:

PARIS RUMORS ON CENTRAL INTELLIGENCE AGENCY—DESPITE FIRM U.S. DENIALS, SPECULATION PERSISTS AGENCY AIDED ALGIERS REVOLT

(By Thomas F. Brady)

PARIS, May 1.—Now that the French mutiny of the generals may be a thing of the past, the question whether the United States helped save the day for President de Gaulle is perhaps less important than what is believed in France, in North Africa and elsewhere about the U.S. role in the events. Former Gen. Maurice Challe, leader of the mutiny, hoped for U.S. support and said so publicly, but President Kennedy quickly sent a message pledging full support to President de Gaulle.

Immediately after the collapse of the mutiny, President Kennedy publicly expressed his satisfaction and congratulated President de Gaulle. The position of the U.S. Government was never in doubt.

RUMORS WIDLY CIRCULATED

These facts have not, however, prevented the wide circulation, and at least partial acceptance here and in North Africa, of rumors that General Challe and his fellow mutineers had received specific encouragement from U.S. intelligence agents.

Emphatic official denials from U.S. authorities have not put a stop to the rumors.

No French official has denied them. French comment has been decidedly equivocal. At a news conference Saturday night in Algiers, Louis Joxe, French Minister for Algeria, said—

"I do not know whether foreign agents encouraged the insurrectional movement or whether those responsible for the coup profited from foreign subsidies. This sad affair among Frenchmen is enough, for the moment, to keep me busy. I have no reason to try to find out whether the insurgents received foreign aid."

SOURCE IS UNCERTAIN

The source of the rumors is difficult to determine. Some observers attribute them to Communists, others to the highest French authorities.

A dispatch to the Observer in London said yesterday that one reaction after the collapse, "at least in President de Gaulle's own entourage and perhaps inspired by him, is to blame the Americans. Repeated American denials that any American military or civilian officials encouraged General Challe's rebellion have not succeeded in preventing French official spokesmen from telling journalists there must have been some unofficial American backing."

The rumors, which include at least one written report circulating here, repeated speculation in the French press, a dispatch from Washington to the Tunisian weekly Afrique-Action and widespread speculation in leftwing circles, boil down to this:

President Kennedy is said to have reacted as he did because he had learned of encouragement to the mutineers by the Central Intelligence Agency, which is said to have become a reactionary state-within-a-state in the United States.

U.S. agents are said to have encouraged the mutiny either because they feared communism in the ranks of the Algerian Rebel National Liberation Front, with which President de Gaulle is expected to negotiate Algerian independence, or because they hoped to precipitate the downfall of President de Gaulle and thus eliminate, his opposition to integration of the forces of the North Atlantic Treaty Organization.

MEETINGS WITH AGENTS ALLEGED

U.S. sympathy for the movement is said to have begun as early as last December, when Jacques Soustelle, a former Governor General of Algeria and a foe of President de Gaulle's policies, was reported to have had lunch with Richard M. Bissell, Jr., a CIA official.

At a meeting in Madrid on April 12 or 13, a U.S. agent is said to have told Gen. Raoul Salan, one of the mutineers, that the United States would recognize a new government in France within 48 hours after its successful establishment if there were no attack on Tunisia or Morocco.

The speculation does not take cognizance of the fact that former General Challe spent nearly a year as a North Atlantic Treaty Organization commander at the Fontainebleau headquarters near here. He undoubtedly heard frequent and bitter criticism of President de Gaulle by allied officers who disagreed with his policies on NATO.

The possibility is cited that M. Challe was guilty of wishful thinking and believed the attitudes of the military leaders reflected the political thinking of the allied governments.

No matter what the source of the rumors may be, no matter how false they may be, their existence is a fact. The credence they have gained, despite U.S. denials, is considered a serious threat to French-United States relations and to the prestige of the United States among the Algerian nationalists and in north Africa, in general.

The equivocation with which French officials have treated the rumors has been regarded as a major factor in their propagation.

UNITED STATES IS CONCERNED BY PARIS RUMORS

(By Wallace Carroll)

WASHINGTON, May 1.—The U.S. Government is becoming concerned over the persistence of newspaper reports and rumors in France that someone from this country encouraged the April 24 meeting of French generals in Algeria.

The resulting suspicion and resentment among the French, it is feared here, may

damage French-United States relations at a crucial period and create an unfavorable atmosphere for the visit that President Kennedy is scheduled to make to Paris on May 30.

Mixed with concern is some irritation among high officials. This is caused by a belief that some French officials, far from discouraging the rumors of U.S. involvement in the revolt, have been fanning French suspicions.

SUPPORT OF DE GAULLE STRESSED

Officials at the White House, the State Department, the Defense Department, and the Central Intelligence Agency were emphatic today in stating that no officer, official, or agent of the United States had anything to do with the revolt.

If there has been one consistent line of policy in the Eisenhower and Kennedy administrations, it was noted, it has been support for President de Gaulle in his efforts to settle the Algerian problem.

The news of the revolt, these officials recalled, was received with consternation in all departments and agencies in Washington.

The first accusations that the United States had encouraged the rebels were printed in Soviet newspapers and broadcast by the Moscow radio immediately after the outbreak of the revolt.

Then French newspapers, including the highly respected Le Monde, gave currency to rumors that U.S. agents had been in touch with the rebels and had promised them support.

In view of this, the White House and the State Department made inquiries of all departments and agencies that had officers or employees in France and north Africa.

Allen W. Dulles, Director of the Central Intelligence Agency, checked with his subordinates and gave an unqualified guarantee that none of his agents had given any encouragement to the rebels in France, Spain, Algeria, or elsewhere.

After consulting Mr. Dulles, Secretary of State Dean Rusk assured the French Ambassador, Hervé Alphand, last week that no U.S. representatives had been involved in any way with the rebels.

When the rumors persisted, he repeated this assurance yesterday to the Ambassador.

DULLES ISSUES DENIAL

Today Mr. Dulles departed from his custom and issued a personal denial of reports that some of his officials had been involved.

"Any reports or allegations that the Central Intelligence Agency or any of its personnel had anything to do with the generals' revolt were completely false," he said.

"The reports in Pravda, Izvestia, and the French press are all without basis in fact."

Bits of fact have been used to buttress the reports in the French press. For example, it has been noted that officials of the Central Intelligence Agency had a luncheon meeting in Washington with Jacques Soustelle, a former member of the de Gaulle Government who is bitterly opposed to President de Gaulle's policy in Algeria.

U.S. officials said today that such a luncheon had been held, but on April 4, 1960, more than a year before the revolt. Moreover, they added, the lunch was arranged by an official of the French Embassy at the request of M. Soustelle. The Embassy official, they said, was present throughout the meeting. Thus, they declared there could have been no dark conspiracy.

Some officials believe that the rebel generals and their confederates started spreading the word well before the revolt that the United States favored their aims.

Reports to this effect reached the U.S. Government as long ago as last fall.

In November, French delegates at the meeting of the Sixth Pugwash Conference on Political and Scientific Affairs were reported to have asked American delegates about such a possibility.

According to these French delegates, certain anti-Gaullist generals were putting out the story that they were warmer supporters of the North Atlantic Treaty Organization than General de Gaulle. For this reason, these generals suggested, the United States was on their side.

Pierre Salinger, White House press secretary, left for Paris tonight to make preparations for news coverage of President Kennedy's visit.

He is aware of the efforts by the administration to assure the French that the accusations of U.S. meddling are without foundation. He may therefore talk with French officials about the persistence of the rumors.

House Resolution 211—Special Committee on Captive Nations

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1961

Mr. FLOOD. Mr. Speaker, on March 8, 1961, I introduced a measure calling for the establishment of a Special Committee on Captive Nations in the House of Representatives. This measure is now House Resolution 211. There are not sufficient words to express my profound gratitude and personal delight to the more than 20 Members of the House who joined with me in that most stimulating and very enlightening discussion which took place then on the subject of the captive nations—CONGRESSIONAL RECORD, March 8, 1961, "Russian Colonialism and the Necessity of a Special Captive Nations Committee," pages 3286–3311.

The popular response to House Resolution 211 has been so enthusiastic and impressive that I feel dutybound to disclose the thoughts and feelings of many Americans who have taken the time to write me on this subject. These citizens are cognizant of the basic reasons underlying the necessity of the proposed committee. They understand clearly the vital contribution that such a committee could make to our national security interests. In many cases, they know that no public or private body is in existence today which is devoted to the task of studying continuously, systematically, and objectively all of the captive nations, those in Eastern Europe and Asia, including the numerous captive nations in the Soviet Union itself.

Because their thoughts and sentiments are expressive and valuable, I request that the following responses of our citizens to House Resolution 211 be printed in the Appendix of the RECORD:

UPPER DARBY, PA., *April 11, 1961.*

Hon. DANIEL J. FLOOD,
Congressman from Pennsylvania,
House of Representatives,
Washington, D.C.

DEAR SIR: You have indeed earned the deep respect and esteem of people, not only in our own State, but from all over our country, by your forthright courage in submitting a resolution (H. Res. 211) establishing a Special Committee on the Captive Nations.

You can be assured of our wholehearted support and the support of all we can reach to inform them of your resolution and urge them to write to their Representatives to get behind this important step to expose the real tragedy of the captive nations.

With prayers and fervent good wishes for the success of your resolution, we are,

Sincerely,

WALTER AND MARY FRIEDRICH.

UKRAINIAN CONGRESS
COMMITTEE OF AMERICA,
Minneapolis, Minn., March 27, 1961.

Hon. DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: We read your resolution in the CONGRESSIONAL RECORD with great satisfaction and were pleased to see that you received fine support from your colleagues in the House of Representatives on March 8, 1961. Therefore, we congratulate you, sir, for your vigilance and the initiative you have taken in creating the Committee for the Captive Nations.

We sincere hope that you will be successful in obtaining very good results. We are behind you, sir, 100 percent.

Very truly yours,

WILLIAM DOMBROWSKY,
President.
ANDREW F. AMERSLAV,
Public Relations Officer.

ALBANY, N.Y., *April 16, 1961.*

DEAR REPRESENTATIVE FLOOD: It was heartening to learn that you have introduced in the House a resolution calling for the creation of a permanent committee to deal with the captive nations enslaved by Soviet Russia, with the thought of ultimately restoring them to freedom and independence. I am fully in accord with this resolution and will write to my own Congressman, Representative LEO W. O'BRIEN, to ask his support of the measure.

Very truly yours,

EDWARD MARGOSIAN.

PETZOLD MOTOR SALES CO.,
Detroit, Mich., April 14, 1961.

Hon. DANIEL FLOOD,
House of Representatives,
Washington, D.C.

DEAR SIR: My attention has been called to House Resolution 211 submitted by you on March 8, 1961.

May I compliment you most earnestly for the clear exposition you have made of a subject that should never be allowed to grow dormant as long as freemen shall live.

The insidious treachery of the communistic movement is deceit. Plain, bald, naked and outright deceit is their method of approach in their efforts to enslave the entire world.

It is my firm hope that Congress will adopt your resolution and establish the Special Committee on Captive Nations to keep alive the struggle for freedom of these unfortunate peoples.

Very truly yours,

THOMAS T. PETZOLD.

APRIL 15, 1961.

DEAR MR. FLOOD: With reference to House Resolution 211 to establish a Special Committee on the Captive Nations, I believe this to be an unchallengeable method in combating Moscow in the cold war. It would expose to the people of the world the hidden and undesirable aspects of Soviet domination over these nations.

A Captive Nations Committee should be able to reveal the various internal problems the U.S.S.R. is fighting against to retain her "unity," and thereby place the increasing missile gap in second place behind the more important and practical economic gap.

As an American citizen I feel that the establishment of such a committee is actually a necessity. The recent Soviet man-in-space achievement will be blown up to fantastic proportions, not only to establish a false sense of security among these subjected peoples, but also to place democracy a far second in the race for world recognition.

Yours truly,

JOSEPH E. LINK.

CHICAGO, ILL., *April 18, 1961.*

Mr. DANIEL J. FLOOD,
House of Representatives,
U.S. Congress, Washington, D.C.

DEAR MR. FLOOD: Only today I have learned of your House Resolution 211 whereby you ask for the establishment of a committee which shall be known as the Special Committee on Captive Nations.

My whole family would like to express to you our most sincere gratitude for doing something which has to be done for the benefit of the people all over the world. And at the same time we offer our full assistance in realizing your resolution.

My son, who is getting the Ph.D. in Washington, D.C., my wife and myself are ready to participate fully in your very noble attempt to establish the Special Committee on Captive Nations.

With warmest regards,

Yours

MITAR PEJOVICH-PAIGE.

THE UKRAINIAN QUARTERLY,
New York, N.Y., April 13, 1961.

Hon. DANIEL J. FLOOD,
U.S. Congressman, House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: As editor of the Ukrainian Bulletin and managing editor of the Ukrainian Quarterly, I should like to extend my warmest congratulations for the long-needed resolution you introduced in the House on March 8, 1961. Both the Quarterly and, in particular, the Bulletin have long fought for Western recognition of the plight of the captive nations. As the free voice of Ukraine, these publications are now heavily in your debt.

It was not too long ago that the Soviet prison of nations was regarded as a paradise. Before the last war the man in the street had never heard of the many nations that were the earlier victims of Soviet imperialism. Even today the terms "Russian" and "Soviet" are carelessly used interchangeably, thereby abetting the Soviet Union in its desperate need to be viewed as a monolith, and to conceal the fate of its imperialistic victims. It is our deepest conviction that had the West possessed knowledge and understanding of Eastern Europe at the time of the First World War, the Soviet menace would never have materialized.

Your farsighted resolution is a tremendous step in the right direction. To retain her own freedom, America must get to know the true nature of the enemy. A permanent committee which would train its sights on the Soviet Union and its hapless, imprisoned inmates cannot but dispel the longstanding, costly ignorance and misconceptions that have been of incalculable propagandistic aid to the Russians. The work of such a committee will sharpen the focus of our foreign policy, on the one hand; and, on the other, it will serve to boost the morale of the captive nations, the Soviet Achilles' heel, and our potential allies.

Attacks will doubtless be leveled against you and your supporting colleagues for "warmongering." But there cannot be danger for us in the truth that will be unearthed by the committee. The Soviet pose of "liberator" and "champion of the colonial peoples" will be exposed as the rankest sort of deceit it is for all to see. Thus it is not too much to say that the committee will advance the cause of freedom and peace in Africa, the Far East and South America.

Please be assured of our complete support in your efforts to realize this reservoir of truth on the problem of Soviet Russian colonialism and imperialism. The committee will serve not only the best interests of America, but of mankind everywhere.

Sincerely,

WALTER DUSHNYCK.

BAYSIDE, N.Y.

DEAR MR. FLOOD: In the past year I have become very interested in the attempt to establish the Captive Nations Committee in the House of Representatives. I want to congratulate you for your tireless effort in this respect and encourage you to continue your vigor for this worthwhile cause.

The number of subjugated nations is constantly increasing. Cuba may only be the first act of a long tragedy taking place in Latin America. The Congo, Laos, and other troubled areas are threatened by the same menace. The flame of their independent spirit must not be extinguished.

Furthermore, the countries which lost their freedom decades ago must not be forgotten. Their national spirit, and our recognition of that spirit, must be kept alive. For example, how many of us are aware of the 30 million Moslems behind the Iron Curtain? Certainly their minds have not surrendered to communism.

Finally, I believe it is entirely within the sphere of Congress to undertake such a study. There is a definite need for it. No one else is doing anything about it. It is not only the right, but the duty of the representatives of the American people to further the cause of freedom in the world by establishing the special Committee on the Captive Nations.

Sincerely,

ROBERT KIRK ADIKES.

BRONXVILLE, N.Y., *April 13, 1961.*

Hon. DANIEL FLOOD,
House of Representatives,
Washington, D.C.

DEAR MR. FLOOD: I have just received a copy of House Resolution 211 and was very happy to see that you had the vision and initiative to create the leadership in submitting it. I am behind this resolution all the way and sincerely hope that positive action will be taken to pass it.

I saw what transpired in 1959 with the captive nations resolution, and this will surely strengthen the present bill. Insight into the captive nations, especially in the U.S.S.R., is very important in these days of constant expectation. There is surely a need for an agency to study the captive nations, and your proposal for a Special Committee on the Captive Nations will lead to new recommendations and constructive action.

I would again like to congratulate you on your proposal and hope that other people will feel the same way as I do about the passage of the bill.

Sincerely yours,

WILLIAM W. RENNER, JR.

ELMHURST, N.Y., *April 10, 1961.*

Hon. DANIEL FLOOD,
House of Representatives,
Washington, D.C.

DEAR MR. FLOOD: It's due time that the American people were informed more deeply concerning the activities of Russia and the nations it dominates. It seems that the Russians know all about the problems in the United States (e.g., segregation, etc.), but we as Americans know nothing about the problems of the same nature existing in Russia or the satellite nations.

I believe that the Committee on Captive Nations, which you are planning to establish in House Resolution 211, will inform the American people of the existing problems in Russia today. It will also be an excellent means of propaganda for the United States.

I am, therefore, in earnest that this resolution will go into effect. Thank you very much.

Very truly yours,

MEYER GOLDMAN.

Tryon Palace Restoration, New Bern, N.C.

EXTENSION OF REMARKS
OF
HON. DAVID N. HENDERSON
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1961

Mr. HENDERSON. Mr. Speaker, on April 8, I was privileged to attend the dedication of the Maude Moore Latham Memorial Gardens at the Tryon Palace restoration in New Bern, N.C. Tryon Palace, the colonial capitol and the first State capitol of North Carolina was built 1767–70 and the restoration of this outstanding colonial edifice was brought about through the untiring efforts and munificence of Mrs. James Edwin Latham who was born in this eastern Carolina town and who later moved to Greensboro. I am justly proud that this significant restoration is located in the Third District of North Carolina which I have the honor to represent and I hope that the Members of this House will have the opportunity to visit Tryon Palace which is a living memorial to our great heritage which we are here to protect and develop. At the dedication the following tribute was paid to Mrs. Latham whose generosity was recognized by the Honorable Terry Sanford, Governor of the State of North Carolina:

TRIBUTE TO MRS. JAMES EDWIN LATHAM

The extensive restoration of Tryon Palace, the colonial capitol and the first State capitol of North Carolina, built 1767–70 at New Bern, was made possible by the generosity of an outstanding patriot and civic leader—the late Mrs. Maude Moore Latham, of Greensboro, wife of the late James Edwin Latham, prominent in diversified business and financial affairs.

A native of New Bern, Mrs. Latham dreamed during her childhood that perhaps someday she might see the historic building rise nobly again on its foundations. In her later work with hereditary and cultural societies and garden clubs, she frequently expressed her great pride in North Carolina's rich historical heritage and her deep desire that Tryon Palace be reconstructed.

This was the main theme of the book she helped prepare and finance in 1939 for the Garden Club of North Carolina: "Old Homes and Gardens of North Carolina."

On January 26, 1944, Mrs. Latham established the Maude Moore Latham Trust Fund of $100,000 for the palace restoration.

Promising to restore the beautiful structure, if the State would purchase the necessary land, she, together with Miss Gertrude Carraway, of New Bern, and others, succeeded in persuading the general assembly in 1945 to appropriate $150,000 and to authorize the gubernatorial appointment of a Tryon Palace Commission to supervise the erection and maintenance of the palace.

The State appropriated $77,000 additional for the property after Mrs. Latham had set up on April 26, 1949, a second trust fund of $150,000.

A handsome collection of antique furnishings, valued at $125,000, was given by Mrs. Latham on January 1, 1950, to the State of North Carolina for the restored palace.

So great was her interest in the project that following her death on April 8, 1951, it was learned that, in addition to her gifts of the two trusts and the collection of antiques, she had bequeathed the residue of her estate, then valued at over $1,250,000, to the Tryon Palace Commission to assure the complete restoration.

Through the able direction of her son-in-law, Mr. John A. Kellenberger, of Greensboro, finance officer and treasurer of the Tryon Palace Commission, the valuation of the trusts and bequest substantially increased not only to pay for the reconstruction of the famed capitol, its furnishings, the landscaping of the grounds, and the development of magnificent 18th century gardens, but also to purchase much more than twice as much property as that bought by the State, so that the restoration might include almost the entire original site.

The palace stands today, a living memorial to a woman of philanthropic spirit and broad vision—Maude Moore Latham.

Mrs. Latham often expressed her wish to restore the palace as a memorial to her son, Edward, who died at Fort Thomas, Ky., in 1918 during World War I in the service of his country.

All who visit the restoration owe an eternal debt of gratitude to Mrs. Latham; to her husband, through whose interest and financial encouragement she was enabled to carry out her plans; and to her daughter, Mrs. John A. Kellenberger, who, as chairman of the Tryon Palace Commission, is ably carrying on in the family tradition of dedicated zeal and public service.

Railroad Merger

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1961

Mr. OSTERTAG. Mr. Speaker, more and more, persons in the areas served by the New York Central System are becoming alarmed at the proposal whereby the Chesapeake & Ohio Railway Co. would take over the Baltimore & Ohio Railroad Co. This has grave financial implications for the New York Central and for the passengers whose transportation to and from work depends upon the Central. It has grave implications for the tens of thousands of workers who earn their livelihoods as employees of the Central. It concerns the transportation system of the entire eastern section of the Nation.

Ten newspapers in New York State have carried an editorial which raises serious questions regarding this takeover. Under leave to extend my remarks, I would like to call the text of the editorial to the attention of my colleagues:

OUR STAKE IN A RAIL MERGER

The national economy is something many prate knowingly about in bright generalities but rarely come to grips with until it enters their own front door.

It is a many-sided condition. It embraces exports and imports, gross national production and unemployment rates, bull and bear markets and the price of wheat in Kansas.

It is automation, handicrafts, labor and management, transportation, job stability, and moonlighting, short workweek and overtime, tangibles and intangibles, ponderables and imponderables.

And it is the proposal on which the Interstate Commerce Commission will open hearings June 19, the question of a merger of the financially imperiled Baltimore & Ohio Railroad and Chesapeake & Ohio system.

Intervening in this case is the New York Central Railroad, which serves us in Westchester, as well as being an irreplaceable contributor to commerce, business and industry in a vast segment of the Nation.

The railroad, as a prime mover of freight and heavy equipment, feeds our ports, links factories with raw materials and distributors. But, undercut by subsidized airlines, truck transport on the public highways, heavy taxes and burdensome operating costs, it is, in effect, bleeding to death. And it is in the light of this awesome circumstance that the merger proposal before the Interstate Commerce Commission concerns all of us.

The New York Central, which has opposed the combination of B. & O. and C. & O., wants to become a part of the merger, and gives a logical argument for it.

The days of robber barons are gone. Railroads are public utilities and must not be mere pawns in financial maneuvering. Mergers must be in the interest of the public, not merely a few greedy stock speculators, if the Nation's basic transit system is to survive with any real health and usefulness.

If the Central is frozen out of this merger, it will be set up as a prize to be plundered by the new organization, its freight pirated away, its joint tenancies destroyed and its prime sources of revenue ruined.

Not only that, but the port of New York, upon whose business the entire metropolitan area depends and which the Central vitally serves, can only deteriorate if its rail freight is spirited away to southern ports, which the C. & O.-B. & O. merger only too obviously would favor.

Westchester would suffer along with the rest of the port area, to say nothing of the crippling of our own economy if it were forced to rely on the service of a bankrupt railroad.

On the other hand, if the merger can be made a three-way move, more than $125 millions of savings for the three can be foreseen in economies permitted from merely an elimination of duplicating functions, New York Central experts declare.

The Central now has 61 connections and 98 common points with the B. & O. and 45 connections and 67 common points with the C. & O.

The B. & O. and C. & O. have 17 connections and 23 common points.

The New York Central envisages a regional rail system out of a three-way merger. From it could come operating savings, revenue increases, better and more realistic service to industry and the public, and a strengthening of the general economy.

But from a two-way merger, the isolated Central would be prey for such a raid on its revenues as could only be expected to drive it to bankruptcy—from which the speculators would rescue it at the expense of its present shareholders and employees.

In its consideration, the Interstate Commerce Commission must recognize the need for wide planning in the service and survival of our railroads—and if the Interstate Commerce Commission doesn't elect to do so, it seems to us the Congress and the administration should step into the situation.

The New York State newspapers which carried the editorial are: Herald Statesman, Yonkers; Daily Argus, Mount Vernon; Daily News, Tarrytown; Daily Times, Mamaroneck; Citizen Register, Ossining; Daily Item, Port Chester; Standard-Star, New Rochelle; Reporter Dispatch, White Plains; Evening Star, Peekskill; Journal News, Nyack.

How Cambridge Flunked the First Test

EXTENSION OF REMARKS

OF

HON. WILLIAM L. SPRINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1961

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following three articles: A very thoughtful article by Mr. James Reston, editor of the Washington bureau of the New York Times, titled "How Cambridge Flunked the First Test." Second, an editorial from the Saturday, April 29, issue of the New York Herald Tribune, titled "No Moratorium, Mr. Reston." Third, an editorial from the Washington Post of Friday, April 28, titled "Laos Down the Drain?"

HOW CAMBRIDGE FLUNKED THE FIRST TEST

(By James Reston)

WASHINGTON, April 27.—The saddest men in Washington these days are the intellectuals on the White House staff who helped deal with the Cuban issue: McGeorge Bundy, former dean of the faculty at Harvard; Walt Whitman Rostow of Massachusetts Institute of Technology, and Arthur Schlesinger, Jr., the Harvard historian.

These highly intelligent and sensitive men do not, of course, tell the President of the United States what to do, but Bundy and Rostow in particular were influential in the planning stage, and are now even more controversial here than when they first arrived.

Oddly, part of the policy miscalculation was due to a lack of precisely those qualities which the intellectuals were expected to bring to bear on major policy decisions.

The theory was that these men, above everything else, would be extremely thorough in their staff work and bring to the highest counsels of the Executive a sense of history. Yet they have left the impression that the Cuban decision was reached without adequate staff preparation, and without that larger perspective of history which places specific decisions in proper relation to the commitments and objectives of the Nation.

For example, even after the adventure had failed, another White House staff officer said that the possibilities and consequences of failure had never even been considered. Secretary of State Rusk did not bring his own Department's intelligence unit into the staff work. The State Department's policy planning staff was not consulted, nor was Adlai E. Stevenson until the very end, when Bundy went to New York and filled him in.

The President himself, of course, was responsible for establishing the system whereby the Cuban decision was reached in a series of informal meetings at the White House. Most of the Cabinet members of the National Security Council met in these meetings from time to time, but apparently there was very little independent evaluation of the data presented in these meetings and little effort made to bring into the discussions top officials who were known to be opposed to the whole exercise.

Charles Evans Hughes, former Chief Justice of the United States and former Secretary of State, once remarked to Mr. Justice Felix Frankfurter that he would never venture an opinion to a Secretary of State about what should be done on an important question of policy without first studying all the relevant documents over the preceding 6 months.

This is the point of all this. In the Cuban case a great many opinions were given freely by comparatively inexperienced and often tired men who had not read the documents or consulted with the officials who had—all this at a time when they were meeting a great many other responsibilities, and trying to play social lion in the evenings as well.

Accordingly, the intellectuals who arrived here as critics are now the objects of criticism themselves, and this was probably inevitable. Congress has always been skeptical of powerful officials in the White House, especially if they have brains. The State Department has been vaguely suspicious of another center of foreign policy power close to the President. And the President's political aids, who were with him on Capitol Hill before Harvard moved to Washington, have always been a little skeptical of the articulate new members of the official family.

Cuba has stirred all this up sooner than was expected. Despite all the efforts by the President to produce unity, there is a lot of muttering about "Bundy and Company" supporting their former Massachusetts Institute of Technology colleague, Richard M. Bissell, Jr., who made the CIA's intelligence estimate to the President, and tipping the balance of power that way.

Much of this is nonsense, for while Bundy favored the Cuban policy, Schlesinger had serious misgivings and expressed them. That, however, is the way it is in this city when things go wrong, especially when the men involved are themselves such articulate critics of the mistakes of past administrations.

One result of all this is that the political side of the White House staff will probably be strengthened in the future, with Theodore Sorensen, the President's closest associate before the election, taking a more important role in foreign policy discussions. Also, when Allen Dulles leaves the CIA, probably in the summer, the President may very well bring Attorney General Robert Kennedy into that post and if this happens, the balance of power in foreign policy discussions will certainly change.

Meanwhile a moratorium on sniping at the professors might not be a bad idea, for if this brilliant young crowd fails, we might have to tolerate not only defeat but a spasm of anti-intellectualism as well.

NO MORATORIUM, MR. RESTON

"A moratorium on sniping at the professors might not be a bad idea, for if this brilliant young crowd fails, we might have to tolerate not only defeat but a spasm of antiintellectualism as well."

This surprising suggestion was made by Mr. James Reston of the New York Times in concluding a column noting the sorrow of the Harvard hands who failed at their first great test as architects and engineers of foreign policy.

No one wishes to salt the wounds. None of us can escape sympathy for these highly intelligent and sensitive men, as Mr. Reston calls them, who counseled the President on Cuba. This Nation has an obligation to understand the peril and support the President. Crisis has underscored the urgency of restraint and responsibility. We are all in this together.

But there is no need to impose on ourselves a holiday from public discussion and constructive public criticism of the conduct of Government. While urging caution in the realm of national security, the President articulated an essential democratic truth at the publishers' convention:

"Without debate, without criticism, no administration can succeed—and no republic can survive."

Mr. Kennedy is surrounded by some highly intelligent scholars who, like the President himself, rode to power partly on the momentum of persistent criticism of past policies. We pray for their success, as does Mr. Reston. But we cannot see the logic of special immunities in an hour of error or misjudgment on the grounds that they are sensitive professors and not hardened practitioners of the art of politics. They are influential counselors of Government, and should be treated as such.

If to hold them rigidly accountable (or snipe at them) would bring on a spasm of anti-intellectualism, then there must be something wrong with intellectualism in Government. At best this would be a flimsy excuse to check debate.

Only by continuing the discussion, with maturity, balance, and the public interest foremost, can we take out insurance against future tragedy.

There must be no moratorium (even if we accepted the curious argument about the spawning of anti-intellectualism), and we are amazed that an experienced newsman would put such an idea in print.

LAOS DOWN THE DRAIN?

With the embarrassment of the United States over Cuba, it was to be expected that the Communists would be bolder than ever in their approach to Laos. The impossible demands voiced by Communist China are indicative of the technique. The stalling over the cease-fire has enabled the Pathet Lao, with Soviet help, virtually to engulf the country. And the United States and its allies face a crisis of the first magnitude.

In Laos the question now is whether military intervention would be too late to bring a stabilization. Policy mistakes and inadequacies have contributed to the problem, but it is further complicated by the blandness of the Royal Lao Army. It is difficult to save a country whose leaders and people are unprepared philosophically to defend themselves. Still, a prompt action, if there were allied agreement, might preserve the Mekong Valley.

For the larger threat to southeast Asia is the really ominous aspect to what is happening. Vietnam appears to be the real Communist objective, for which Laos is a funnel; and there the army and the populace are fighting desperately against the marauding Communist guerrillas. After Vietnam there are Cambodia, Thailand and even Malaya. How long can the absorption be permitted to go on?

Some very grim decisions impend. Southeast Asia may indeed be on the periphery of free world power. But unless the Communist push is halted—by social, economic and political as well as military strength—sooner or later the free world will be left with nothing but a heartland to defend.

Israel's Independence Day

EXTENSION OF REMARKS
OF
HON. CORNELIUS E. GALLAGHER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. GALLAGHER. Mr. Speaker, 13 years ago a new nation was born and has taken its place among the nations of the world. The nation is Israel which was formed as the result of United Nations action with the strong support of the United States.

The citizens of Israel are mostly Jewish immigrants from lands where that minority had been suppressed. Principally, of course, the people of Israel were survivors of the Nazi atrocities against the Jews all over Europe, atrocities in which millions perished and hundreds of thousands were left homeless at the end of World War II.

The civilized nations of the world took cognizance of this deplorable state of affairs and granted to this segment of the Jewish people, through United Nations recognition of Israel, the right to return to the land of their ancestors.

I find myself in the position where I can happily announce that Israel through the efforts of its hard-working people is developing into a model as a new state dedicated to reaffirming for its people the value of human dignity and the rewards of hard work and dedication to the ideals of freedom and democracy. With the formation of the Israeli State the United States has gained a friend in that all-important part of the world.

We salute Israel on the anniversary of its independence and we wish it the best of success in the fulfillments of its inspirations.

A Closer Look Needed?

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. MEADER. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Jackson (Mich.) Citizen Patriot of April 26, 1961:

A CLOSER LOOK NEEDED?

One of Washington's more aggressive battlers against secrecy in the Federal Government's executive branch, Representative GEORGE MEADER, has served the administration notice that President Kennedy's no-secrecy-in-Government pledge will be invoked whenever Federal officials try to withhold pertinent information from Congress.

His efforts may be sorely needed just now.

MEADER said it was on instructions from the President that a State Department order forbidding International Cooperation Administration officials from testifying before a House Foreign Operations Subcommittee was rescinded.

The President's order, the Congressman declared, was in keeping with a pledge Mr. Kennedy made to Congress in his state of the Union message.

Commending the President for his "vigorous and forthright action," MEADER urged that the President's order be regarded by all Federal officials as governing their conduct in future instances. Representative JOHN E. MOSS, California Democrat, who is chairman of a House Subcommittee on Freedom of Information, praised MEADER for his role in combating secrecy and said his subcommittee will try to ensure that the President's pledge is, "in fact, the policy of this administration."

But information suppression troubles persist in Washington. Last week the American Society of Newspaper Editors' Freedom of Information Committee reported that despite newsmen's freer access to the White House itself they are finding it increasingly difficult to break through an Administration-imposed news ban. The committee's criticism was directed at the State and Defense Departments particularly.

Noting that the President, before and after his election, "was on record in writing as believing in freedom of information and in his duty to see that the people are informed," the editors declared:

"To date, neither he nor his administration has lived up to his promise."

The report also advised that Pierre Salinger, Kennedy's news secretary, has failed to answer nine questions put to him 2 months ago concerning specific instances of withholding news.

One correspondent who has covered Washington for almost 30 years said the news curtain at the Pentagon is the most impenetrable in his experience.

Newsmen say censorship has been extended to eliminate backgrounding sessions which are designed as a means of keeping reporters informed.

In March, Chairman Moss said to the President:

"During your campaign and since taking office you have spelled out a highly commendable access to information policy and I hope the subcommittee can help you put it into effect."

The editors' critical report may prompt the Moss committee to take another—perhaps a more penetrating—look at the administration's information program.

Hon. Edward J. Hart

SPEECH
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. KEOGH. Mr. Speaker, I have lost a treasured friend with the passing of our distinguished former colleague, the Honorable Edward J. Hart. The sadness I felt when Ed Hart retired voluntarily from this body in 1954 now is compounded manifold.

He had a public career of the highest order of fidelity and service. His New Jersey colleagues have reviewed it today with deserved regard and admiration. Let me add only a few words in testimony of the sense of privilege I felt in serving with Ed Hart in the House, and, particularly, on the Committee on Merchant Marine and Fisheries under his distinguished chairmanship. He was lavish with his friends in the sharing of the gifts with which he had been endowed—perception in the public interest, intellectual courage, commonsense, respect for his fellow man—and, I am sure, he regarded every colleague here as a friend.

During his tenure, he held rank as one of the great orators of the House, but it was not a vocal talent alone that commanded our attention. Ed Hart was a painstaking lawyer, and he applied his conscientious legal approach to every legislative problem with which he was confronted. When his judgment told him what was right, he took his stand and bolstered his natural powers of persuasion with sound logic as he sought approval, in committee and on the floor, of the legislative approaches he deemed most effective.

When Ed Hart retired from the House, we hoped that it would not mean his withdrawal from public life, the life of service to which he was so fully dedicated. We were delighted, therefore, when he agreed to contribute further of his wisdom as member, and later chairman, of the New Jersey Public Utilities Commission.

At this sad time, our particular sympathy goes out to Mrs. Hart, the devoted wife who shared the trials and satisfaction of our friend's varied and eminently useful career.

The Proposed Violation of States Rights

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. MASON. Mr. Speaker, habits, customs, obligations are much more effective than any civil rights program implemented by Federal laws. Custom is much more effective than any law because it polices itself. Laws are not particularly efficient. A law has little chance of being enforced if it does not have the approval and support of the majority of the people affected.

Any attempt to enforce a civil rights law upon 50 States that have different conditions, different customs, different social standards, and people with different personal consciences is simply an effort to indict, to arraign, to try a whole nation, a whole section, a whole State. It just cannot be done in a democracy; it can only be done under a dictator. Must we surrender our precious guaranteed States rights in order to establish a program of civil rights?

When the Federal Constitution was before the States for ratification, four of the States demanded guarantees that freedom of the press, of speech, and of religion would be a part of the Constitution. Nine of the States insisted that States rights be guaranteed. Thus the 10th amendment was made a part of the Bill of Rights so that the Federal Government would be restrained from ever interfering with the rights of the States under the Constitution.

The first nine amendments in the Bill of Rights deal with the rights of the people, God-given rights; the 10th amendment deals with the powers of the Federal Government. It limits those powers. It says, in effect, to the President, to the Supreme Court, and to the Congress: "You may do what the Constitution specifically says you may do, but you may do no more. Those powers that are not given you are either reserved to the States or they belong to the people."

That is what the 10th amendment spells out, and we must not forget it in our desire to establish civil rights.

Mr. Speaker, today the new administration has decided to interfere in Virginia and force upon one county in Virginia public school integration of races in spite of the 10th amendment to the Constitution.

David Lawrence in his U.S. News & World Report of May 8, 1961, discusses this proposed action quite thoroughly and convincingly. I am in full accord with the attitude of David Lawrence and, therefore, include his editorial, "Conformity by Coercion," in these remarks:

CONFORMITY BY COERCION
(By David Lawrence)

The Kennedy administration has let it be known that it doesn't need at this time any additional legislation to secure civil rights, and that the desired results can be achieved through executive orders and court decrees.

Without the specific sanction of a single law of Congress or a single provision of the Constitution, the administration took a significant step on April 26 when it intervened directly in a Federal court proceeding and demanded that the State of Virginia compel one county to open its public schools. If it failed to do so, then State funds were to be ordered withheld from all the public schools in the 97 other counties and 32 autonomous cities throughout the State.

This is a legalistic kind of blackmail.

The startling edict is that States must abandon any local-option system, and that counties and cities must give up their independence.

If this principle can be applied to schools, it can be made effective with respect to all other variations in law as between the counties in a given State.

Thus, in many States, some counties are urban and some are rural. Some select a board of supervisors which appoints an executive manager with broad powers, and some counties prefer that the Board itself exercise all administrative authority. If the theory that the Federal Government may dictate how State shall operate their subdivisions of government is valid, then the way is open to abolish the governments of cities or counties at will, or else to require them to obey not merely the wishes of the State legislature but the dictates of a Federal bureau in Washington.

There is nothing in the 14th amendment that says that all counties must have the same laws or the same systems of administration, and that a State may not make laws to suit local conditions.

But the Department of Justice, by the motion filed in Federal court, evidently reflects the President's desire, which is that a State must conform to the pattern laid down by the Federal Government.

What becomes, then, of the right of the people to run their own local governments—State, county, and city?

What becomes of the provision in the 10th amendment to the Constitution which says that all powers not delegated to the Federal Government by the Constitution itself, or prohibited by it to the States, are "reserved to the States respectively, or to the people"?

There is not a single word in the Constitution giving any right to the Federal Government to control the educational systems of the States. Nor is there a single provision that gives the Federal Government any power to compel the State legislatures to vote funds for a particular purpose.

We are being told, moreover, that Congress should aid the States with huge expenditures to construct more schoolbuildings, to pay higer salaries for teachers, and to make various grants for specific educational courses needed to assist our national defense program. Will this not enable the Federal Government to complete its usurpation of the whole educational process?

It has been vehemently denied by the sponsors of Federal aid to education that any such dictatorship will ever be exercised. Such denials, however, have a hollow sound now as we read that the Department of Justice, with the full approval of President Kennedy, has threatened a State legislature with reprisals in the form of court injunctions against 97 counties unless Virginia conforms to an edict of the Federal Government and forces one county to open its public schools.

The courts, to be sure, have the right to intervene whenever any Federal or State law is being violated. But, in this case, is any Federal or State statute being broken? The State of Virginia supplies State funds to the cities and counties. One county—acting under State law—has closed its public schools and gives aid to students directly to help cover tuition charges at private schools, whether segregated or integrated. This is the same system that the Congress has applied in the GI bill of rights and in other legislation. It provides freedom of choice for the parents.

But now the Department of Justice assumes the right to tell a State that, unless it coerces a county to conform to a Federal decree, all other counties in the State must be deprived of State school funds.

This is a form of retaliation which has no place in the American system of government. It savors of dictatorship and totalitarianism. The end never justifies the means when we are dealing with a written Constitution, especially since there is a method specifically prescribed therein whereby the people can amend that same Constitution.

The Kennedy administration may be commended for seeking to accomplish a worthy objective—to secure "civil rights" for all citizens—but it must be condemned for selecting, as a means of attaining such ends, a device that would take away from the States and counties the basic right to govern themselves.

A Tribute to Dr. Charles Munch

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. CONTE. Mr. Speaker, it is with true sorrow and wonderful memories that I bring to the attention of the House the coming retirement of one of the greatest artists of the musical world. Dr. Charles Munch has been the conductor of the Boston Symphony Orchestra—one of the finest orchestras in existence—for 12 years. With the end of the 1962 season, at the age of 70, he will leave Boston. It will be the end of an era, for conductors of the quality of Dr. Munch are individuals who bring their interpretations to music, just as literature produces genius of approach to a theme. The Boston Symphony is known for conductors of this quality; they are essential to its greatness.

To rehearse the history of his career at this point would be total understatement, but it is appropriate to mention the honors he has achieved in Boston. Since he joined the Boston Symphony in 1950, it has won five New York Critics Circle Awards for new music introduced, nine Grand Prix du Disques, and the Medal of the Vienna Mozartgemeinde. He instituted the orchestra's open rehearsals and took it twice to Europe and once to Russia. It has toured in the Far East and Australia as well.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include Boston's feelings about Dr. Munch as reflected in the following editorial from the Boston Globe of Saturday, April 22, 1961:

DR. MUNCH'S RETIREMENT

Has it been 13 years since Dr. Charles Munch came among us? Surely the perfect choice to succeed Serge Koussevitzky, he proved it by assuming his role as if he had been there forever. Yet he completely changed the sound of the Boston Symphony Orchestra, giving it a French sonority as strong in character has he.

Now it is announced he will retire at the end of the 1961–62 season still in command of his considerable powers. The city can look forward to future guest appearances.

Boston has much to thank him for, besides giving his all, he kept the orchestra at the top of form. The changeover to his successor is characteristic of the orderly methods of the orchestra's trustees. Viennese-born Erich Leinsdorf will bring a change again in style to the Nation's most magnificent instrument which continues fortunate in its conductors.

Tool Bank

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. KOWALSKI. Mr. Speaker, in the New York Herald Tribune there appeared on April 30 an article under the byline of Allen M. Smythe bearing the caption "Navy To Aid South American Yards."

The article says in part:

Navy plans to improve and modernize 16 shipyards in South America are in their final stage.

The shipyards will receive surplus machine tools, equipment, and machinery, much of which has been held in storage since World War II.

The equipment will be repaired, rehabilitated, and shipped to South America, using funds of the mutual aid program for those countries.

I have no quarrel, Mr. Speaker, with the basic aim of the Navy in this respect, but I do question whether the ultimate interests of the United States are best served by permitting the Navy on its own initiative to allocate surplus tools and machines in this manner. This is only a partial approach.

Rather, I would think that a study be made of all the available surpluses and a national integrated program be initiated.

It is with such a study in mind that I am preparing to introduce a bill establishing a tool bank to attain the greatest good for the greatest number.

I urge my colleagues to read the article which follows:

NAVY TO AID SOUTH AMERICAN YARDS
(By Allen M. Smythe)

Navy plans to improve and modernize 16 shipyards in South America are in their final stage. The shipyards will receive surplus machine tools, equipment and machinery, much of which has been held in storage since World War II. The equipment will be repaired, rehabilitated and shipped to South America using funds of the mutual aid program for those countries.

The original cost of the equipment plus the 10 to 15 percent additional cost for repair and shipping is about one-third the retail cost of new items for these shipyards, according to high Navy officials.

To check requirements and give technical advice, the Navy sent two shipyard equipment experts, Capt. William Seith and A. J. Weisbecker, to visit and study ports in South America. Federal officials state that shipyards there are used almost exclusively to repair small naval vessels, fishing and other commercial ships.

BRAZIL TO BENEFIT MOST

Brazil, with its long coastline, will be the chief beneficiary. Three shipyards in Rio de Janiero are scheduled to receive valuable machine tools. Equipment will also go to shipyards in Belem, Salvador, Natal, and Racife.

Chile has shipyards in Talcahuano and Punta Arenas that are due for considerable modernization. Bahia Blanca in Argentina will be reequipped.

Puerto Cabello in Venezuela, Calao, in Peru, Cartegena in Colombia, and Montevideo in Uruguay each have one shipyard that will receive aid in the program.

A modest number of surplus machine tools already have been shipped to Near and Far East countries for use in their shipyards. Greece and Turkey have been the largest recipients receiving several million dollars worth of Navy machine tools. Iran, Ethiopia, Vietnam, Korea, and the Philippines which have small navies also have received equipment under the military assistance program.

DISPOSAL PROGRAM

Recently the Secretary of the Navy determined the cost of maintaining and storing equipment was too costly and ordered a disposal program. Many of the Nation's allies need the equipment either because they are "dollar poor" or because their industrial potential has never been improved.

Rather than "dump" this equipment on the commercial market and realize only a small fraction of its value from surplus sales, it was reasoned that it would aid the United States if the shipbuilding capability and industrial ability of participants in the mutual security program were strengthened.

Naval officials point out that surplus equipment consists of many large machine tools that are no longer useful for our modern Navy. They are ideal for repair work for the small ships that ply South American waters.

Pentagon budgetary officials expect the new administrator to approve in next year's budget the authorization of $200 million to $250 million for the purchase of new equipment for naval shipyards. Much of this amount will be earmarked for special equipment and new processes to fabricate high tensile alloy steels for our nuclear-powered warships and deep-diving submarines.

Address by Hon. Frank J. Becker at Dedication of Army National Guard Armory, Freeport, Long Island, April 30, 1961

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. DEROUNIAN. Mr. Speaker, I am pleased to place in the RECORD the speech of my colleague and congressional neighbor, Hon. FRANK J. BECKER, delivered April 30, 1961, at Freeport, N.Y. It contains a message which should be read by all:

REMARKS OF THE HONORABLE FRANK J. BECKER, REPUBLICAN, THIRD DISTRICT, NEW YORK, DEDICATION OF ARMY NATIONAL GUARD ARMORY, FREEPORT, LONG ISLAND, APRIL 30, 1961

We are here today to dedicate an Army National Guard Armory—a symbol of our country's willingness to prepare itself to guard its life, its principles and its heritage.

But today I want to ask you to do more than help dedicate this building—to do more, even, than dedicate yourselves. The fact that you are active participants in this Guard unit is proof of your awareness of certain harsh but obvious facts of life. I want to ask you to listen carefully to what I have to say—and then join me in a very important mission—a drive to save our way of life.

It is no secret to any of us that world situations and tensions are grave. Every day the headlines scream of a new crisis—of a new outrage against humanity—of a new powder keg situation in the infant countries of Africa and Asia.

World situations have been grave before. In 1914, it was the Balkans, now Laos. In 1938, it was Czechoslovakia, now the Congo. But unlike 1914, unlike 1938, we cannot, even for a short while, withdraw behind the false security of an ocean barrier and say "It's the other fellow's problem—not ours."

Because it is our problem—unless we want to see our cherished ideals of democracy and freedom washed down the drain—unless we want to live as slaves in an atheistic, cruel tyranny of Communist control.

My friends, I am not asking you to prepare for war.

I am telling you we are at war now.

We are now—today—April 30, 1961—engaged in the greatest war civilization has ever known. It is a life and death struggle for survival. We fight more than men and machines. We fight a philosophy—insidious, evil, grasping, selfish, cruel, merciless—dedicated to the complete and total destruction of everything in which we believe.

Every day, a battle is fought somewhere. In the United Nations. In negotiations in Geneva. In Washington. In Moscow. This is war. We have an enemy more determined to destroy western civilization than all enemies since the beginning of time—put together.

We couldn't see the signs 20 years ago. We waited until American men had been slaughtered at Pearl Harbor before we mobilized the great American productivity into a fighting machine that triumphed for our beliefs.

But just because we waited 20 years ago doesn't mean we have to wait now. In fact, we cannot—we dare not—wait.

But I say to you today: We must make a choice. We as a country must decide: we want to preserve our system. We must make this strong desire for survival known to our leaders.

We must decide now to build up our resources—our armed might, our physical might, our moral might. We must win the battle for survival, for men's minds, for the peace of the world.

But such a program takes time, dedication—and money.

Cuba has proven one thing to us. We are up against a formidable enemy.

Why should the people of this country think that the leaders of our Government can expend money, effort, and thinking for welfare state programs and, at the same time, devote effort, thinking, and money to win the fight for survival.

We must decide which is more important to us—an increase in social security—or an all-out effort so assure national security.

We must decide which is more vital to us and our children—Federal aid to education or assurances that our children will continue to be educated in a free world.

We must decide whether we would rather have vast depressed areas aid—or the continued right to live in freedom.

Because I am convinced that we cannot equitably engage in both efforts without weakening ourselves.

No government, no matter how great it may be, can divide its efforts in such a manner as to keep the "business as usual" sign out and, at the same time, spend the money necessary to assure that we will have business as usual 50 years from now.

Today we spend more than 50 percent of our national revenue on defense. If more is necessary, let us spend more.

The Bible said it best. "For what doth it profiteth a man if he gaineth the world but suffereth the loss of his soul?"

What will it profit our country to spend vast amounts of money on a welfare state—if we lose the battle for survival.

First things must come first, and the first thing is survival of our country. Once that has been accomplished, only then can we turn to a realistic appraisal of all these Federal projects. Only then will we be sure that our people will live to enjoy any benefits.

I say to you that we must make this decision. I fear it is not being made for us by our leaders. We must convince them that we are aware of the dangers facing us. We must tell them that we are willing to sacrifice for the survival of our system.

It is true that there are votes in all welfare state programs, but such political expediency cannot and must not be permitted to interfere with our all-out efforts in the life and death struggle in which we are presently engaged.

And what good are votes if we lose the battle for our very lives? We must preserve our system if we are to enjoy it.

We must take our Federal budget and reappraise it. We must remain solvent. To do this, we must reduce expenditures in nonnecessary domestic fields.

We are in the fight now. In World War II we gladly sacrificed to build our defense and war effort. Why cannot we do the same now? If we do not do this, it may be too late.

The situation is more serious now than it was then. We must wake up to this fact. We must let it be known that we will not sacrifice our country, our way of life, for political expediency.

No coddled country can or will survive. The Roman Empire offered its citizens bread and circuses—that resulted in total destruction at the hands of the barbarians.

We did not start our country by being given massive handouts by a paternalistic Federal Government.

We did not start our country by preferring comfort to work—and we won't be able to keep our country if we think that way.

We started our country and built it because we cared more for the future of our children and their children than we did for our own material comfort. And the only way to keep our country and its principles is to go back to that group effort for survival.

Why can't we have both the welfare state and an all-out mobilization for survival? For two reasons: First, commonsense. It takes money to win a war. We cannot bankrupt our economy by huge spending in both fields, or we will have no economy left. The second reason: It takes individual determination and responsibility to arm philosophically, physically, and morally to beat communism. Welfare state programs tend to kill individual responsibility by putting all decision making and implementing in the hands of an impersonal bureaucratic Federal Government.

I am sure it will take us only a few seconds to decide which is more important. So, again I ask you to join with me in this determination to put first things first. To be more concerned with the survival of our cherished ideals than with temporary Federal benefits. To help convince our country's leaders that we will not be taken in. That we recognize political expediency when we see it, and that we prefer survival. This must be a bipartisan effort, my friends, and we must begin today.

Official Statement of Gov. John Dempsey

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. MONAGAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the official statement of the Governor of Connecticut, Hon. John Dempsey, with respect to Connecticut Fitness Week.

The statement, which acutely states and strongly supports President Kennedy's program, follows:

CONNECTICUT FITNESS WEEK—MAY 1-6, 1961

A welcome development of recent years is the increased attention which is being paid in this Nation to physical fitness.

President Kennedy has stated that the physical vigor of our citizens is one of our most precious resources, and that this resource plays an important role in our ability to meet the great and vital challenges confronting us.

The President also has taken notice of disturbing reports comparing the physical fitness of American youth with that of youths in other lands, and has said that we want our children to be participants in the vigorous life rather than a generation of spectators.

The broad importance of this subject is seen also in a statement of the American Medical Association that a true concept of fitness includes the mental, the moral, the social, and the emotional, as well as the physical.

The work of the Governor's committee on youth fitness, established in January 1960, recreation programs in many communities, and the physical education activity of our schools and many private organizations afford the young people of Connecticut many

opportunities to acquire and retain that degree of fitness needed for the full enjoyment of life.

To call attention to these programs and to urge that they be fully supported, the period from May 1 to 6 is being observed as Connecticut Fitness Week.

Connecticut is embarked on a broad program of growth for the future. Just as this program is important to the economy of our State, a program of fitness is important for every individual who will participate in and enjoy the benefits of Connecticut's future growth.

Let us make Connecticut Fitness Week an occasion to resolve that we will make our own fitness a matter of personal concern and support efforts to improve the fitness of all.

Big Lag Is Found in Farm Research

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. ELLSWORTH. Mr. Speaker, Dr. Glenn Beck, the distinguished dean of agriculture at Kansas State University, in Manhattan, Kans., was in my office this morning, and we discussed the farm research lag. Dr. Beck pointed out that less than three-tenths of 1 percent of the gross agricultural income of Kansas is being spent for agriculture-oriented research, while the comparable figure in the industrial field is nearly 5 percent. In a field as important to the State as beef cattle—which account of nearly half the State's agricultural income—only six one-hundredths of the gross income is going into research. This includes not only research in production problems, but also marketing problems clear on down to the grocery store shelf. This is a problem that necessarily concerns not only beef growers and farmers generally, Mr. Speaker, but also taxpayers and consumers all over the Nation.

Speaking of the problems associated with some of our agricultural surplus, Dr. Beck said to me this morning:

We've researched our way into this problem—now let us research our way out of it.

Mr. Speaker, in connection with this overall situation, I want to draw the attention of my colleagues to a story that appeared in the New York Times on Sunday last:

BIG LAG IS FOUND IN FARM RESEARCH—LESS THAN 1 PERCENT OF INCOME IS SPENT FOR AGRICULTURE

WASHINGTON, April 29.—Agricultural research continues to move along at a horse-and-buggy pace in an age of automotive speed.

Less than 1 percent of agriculture's annual gross income is spent on research compared with more than 5 percent in the industrial field.

Some advocates of stronger farm research programs see a connection between the lag, accumulation of farm surpluses, and declining farm income.

Agriculture is being researched out of its markets, they say, citing synthetic fibers, plastics, detergents, and other new products that are being produced from nonagricultural raw materials.

At the present time, farm research is carried on almost wholly in publicly supported institutions such as the Agriculture Department's research service and cooperative State experiment stations. Officials estimate expenditures for such research do not exceed $500 million a year. This compares with more than $5 billion for business and industry.

This discrepancy is much greater in finding new uses for agricultural raw materials. Less than $20 million a year is spent on this. It is estimated that industry spends $3 billion a year looking for new uses and products for its raw materials.

Lagging farm research was the subject of a study made by a Presidential commission in a broadened program calling for 1957. It strongly recommended expenditure of at least $50 million a year in seeking new industrial uses for agriculture's surpluses.

At present, spending on agricultural research totals $158 million a year. It includes research in forestry, home economics, and veterinary medicine. It also covers research on the production of farm and forest products; the processing, distributing, and marketing of these products; the provision of materials, facilities, credit, and other requisites for these activities, and research relating to services to farm families, rural communities, missions of other public agencies, and to the general public.

Recently, an Agriculture Department committee made an evaluation of Government farm research. It concluded that the present program was too limited.

It found that facilities of the Department—mainly a research center at nearby Beltsville, Md.—and the State experiment stations were crowded and need modernizing.

"Inadequacy of facilities is a serious impediment to present research programs," it said in a report. "The situation must be corrected."

"Agricultural research requires personnel with skills in the same sciences that nonagricultural research needs. There is brisk competition for the best. Capable students must be inspired to pursue studies in the agriculture-related sciences and careers in agricultural research must be made rewarding enough to attract them," the report asserted.

A Court-Packing Measure

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. MEADER. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Adrian (Mich.) Daily Telegram of April 28, 1961:

A COURT-PACKING MEASURE

The House has now followed the lead of the Senate in authorizing more new Federal judgeships than are needed. The Senate's bill, passed a few weeks ago, calls for 73 new Federal judges; the House measure, passed last Thursday, calls for 70. The Kennedy administration had called for 59 and so had the American Bar Association.

There is no question that more judges are needed to cope with the backlog of cases building up in the Federal courts across the country. President Eisenhower tried unsuccessfully for 2 years to get more, but the Democratic Congress blocked him. It preferred to wait until a Democratic President could make the lifetime appointments.

Congressional leaders insisted on raising the ante, and their insistence not only gives weight to the Republican charge that the measure will dilute and cheapen the Federal judiciary but it does more. It supplies final and devastating proof that the Democratic leaders look on the judgeships as nothing but rewards for party electioneering.

Counting vacancies by death and retirement, the Kennedy administration will have an estimated 100 court vacancies to fill this year. It so happens that the Federal judiciary at present is about equally divided between Democrats and Republicans. Last year, in an effort to obtain the needed judgeships, the Eisenhower administration offered to divide the new appointments evenly between qualified Democrats and Republicans.

No such offer is coming from the Democratic camp now, and obviously no such even distribution is contemplated. Thus the new measure, when the slight House and Senate differences have been compromised as they surely will be, becomes an opportunity for court packing on a grand scale.

In all the circumstances, President Kennedy has a grave obligation to seek out the very best appointees available, even if some of them happen to be Republicans.

New York State Banking Department Disapproves Bank Holding Company Application

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. MULTER. Mr. Speaker, on April 26, 1961, I entered my remarks in the RECORD expressing my concern over the setting up of phantom or intermediary banks as a means of obtaining control of the assets of existing banks by a bank holding company.

In that statement I referred to the proposed plan of the Bankers Trust Co. and the County Trust Co. of White Plains to form just such phantom banks. The New York State Banking Department has disapproved this plan, and I commend to the attention of our colleagues the following press release of that department dated April 13, 1961. New York State Superintendent of Banks G. Russell Clark is to be highly commended for his action:

BANKING BOARD DISAPPROVES BANKERS TRUST-COUNTY TRUST BANK HOLDING COMPANY APPLICATION

G. Russell Clark, New York State superintendent of banks and chairman of the banking board, announced that the banking board had disapproved the Bankers Trust-County Trust Bank holding company application.

Mr. Clark indicated that this decision was based on the board's view that the proposed formation would result in a bank holding company with a concentration of assets beyond limits consistent with effective competition within Westchester County; that it may result in a lessening of competition injurious to the interests of the public, and in a tendency toward monopoly in Westchester County. He pointed out that while

some added convenience to the public might result from approval of the application, its anticompetitive implications and the consequent adverse impact on the public interest weighed the balance toward disapproval.

Superintendent Clark stated that the basis for the banking board's action was the dominant position within Westchester which the proposed holding company would occupy (with 40–50 percent of Westchester's commercial banking services), in combination with the economic power and competitive advantages of a $3 billion New York City bank; that although County Trust now controls a similar propotion of Westchester's commercial banking business, the banking law, which is concerned with regulating the expansion of holding companies, refers to the size and asset concentration of a proposed holding company system, and not of any individual bank which is to be part thereof; that the proposed affiliation would largely cut off banks other than Bankers Trust from actual and potential correspondent relationships with County Trust, amounting to almost one-half of such commercial bank opportunities originating within Westchester; and that approval of the proposed application would result in a tendency toward monopoly over wholesale banking services within Westchester.

The superintendent of banks also noted that the influence that approval of this application would exercise on the future course of asset and market concentration in New York State banking could not be ignored; that if this proposal and a contemplated merger between a large New York City bank and the second largest Westechester bank were consummated, two major New York City banks would control between them about 75 percent of commercial banking assets and deposits and two-thirds of commercial bank branches in Westchester, and that the power to monopolize the Westchester banking market would be inherent in such a situation.

Attached is a copy of the recommendations made by the superintendent of banks to the banking board in accordance with the New York banking law, and which were accepted by the banking board.

NEW YORK STATE BANKING DEPARTMENT—RECOMMENDATIONS OF THE SUPERINTENDENT OF BANKS TO THE BANKING BOARD (BANKING LAW, SEC. 142(1))

(Application of New York Holding Corp., pursuant to sec. 142(1)(a) and (f) of the banking law (a) to acquire all of the capital stock of Wall Street Trust Co., and of Main Street Trust Co.; and (b) to vote the stock of Wall Street Trust Co., in favor of the proposed merger of Bankers Trust Co. into Wall Street Trust Co.; and (c) to vote the stock of Main Street Trust Co. in favor of the proposed merger of the County Trust Co. into Main Street Trust Co.)

INTRODUCTION

New York Holding Corp. (a corporation organized under the laws of Delaware) has filed in this department (and concurrently with the Board of Governors of the Federal Reserve System) applications for prior approval of certain actions intended ultimately to result in the acquisition by the applicant of all the capital stock (except directors' qualifying shares) of the respective successors of Bankers Trust Co. and the County Trust Co. If these and certain other approvals are obtained, and appropriate corporate actions are taken, applicant would become a bank holding company under Article III-A of the New York Banking Law, and under the Federal Bank Holding Company Act of 1956.

Footnotes at end of speech.

The applicant requests prior approval of the banking board (1) to take action to become a bank holding company having two banking subsidiaries, each located in a banking district different from that in which the other is located (banking law, sec. 142(1)(a), and (2) to vote the stock of each such banking subsidiary in favor of merging into it another banking institution (banking law, sec. 142(1)(f).

As to action (1) above, the applicant proposes to acquire all the capital stock (except directors' qualifying shares) of Wall Street Trust Co., 16 Wall Street, New York City, and of Main Street Trust Co., 235 Main Street, White Plains, N.Y. These trust companies are not presently in existence. Organization certificates have been filed, however, for the approval of the superintendent and the banking board pursuant to banking law section 24. Action upon such certificates has been deferred pending banking board action on the present application.

As to the second action, the applicant proposes to vote the stock of Wall Street Trust Co. (if this board approves applicant's acquisition thereof) in favor of a merger of Bankers Trust Co. into Wall Street Trust Co., under the name Bankers Trust Co., the receiving institution to be a trust company with its principal office in the second banking district; and the applicant proposes to vote the stock of Main Street Trust Co. (if this board approves applicant's acquisition thereof) in favor of a merger of the County Trust Co. into Main Street Trust Co., under the name the County Trust Co., the receiving institution to be a trust company with its principal office in the third banking district.

Under the proposed plans of merger, those stockholders of Bankers Trust Co. and the County Trust Co.[2] voting in favor of the respective plans would receive the stock of the applicant (New York Holding Corp.) in exchange for their stock in Bankers Trust and County Trust. Dissenting stockholders would be entitled to cash for their bank stock, either by agreement or under judicial appraisal procedure, as provided by law (banking law, sec. 604).

Also incident to the overall plan, therefore, would be further applications to this Department, following appropriate corporate action, for approval of the mergers necessary to consummate the plan, and for approval of the banking offices to be maintained by the respective receiving institutions.

Some division in jurisdiction as between the superintendent and the banking board is involved in the series of applications under the plan. This circumstance creates no particular difficulty. Central to the plan is the intention of New York Holding Corp. ultimately to acquire and hold all the stock (except directors' qualifying shares) of the successors to Bankers Trust and County Trust, and therefore to become a bank holding company. Primary jurisdiction to approve or disapprove certain of the actions leading to such result rests in the banking board under banking law section 142(1)(a) and (f). The superintendent is required under the statute to submit the application together with his recommendations in regard thereto to the banking board.

This statement embodies such recommendations, and is submitted to the board together with the application and all papers, correspondence, and other information in my possession relating thereto.

STATUTORY CRITERIA

Article III–A of the banking law, as enacted by chapter 237 of the laws of 1960 (the Omnibus Banking Act), and reenacted by chapter 146 of the laws of 1961,[3] embodies a comprehensive statutory plan for this State's regulation and supervision of bank holding companies, their formation, and their expansion. Action which results in formation or expansion of a bank holding company is unlawful, except when such action is taken with the prior approval of the banking board; and in determining whether or not to grant its prior approval, the board is required to take into consideration the factors specified in the statute (banking law, sec. 142(1). The factors to be considered are:

(i) The declaration of policy contained in section 10 of the banking law, to the effect that the business of all banking organizations shall be supervised and regulated through the banking department in such manner—

(a) As to insure the safe and sound conduct of such business;

(b) To conserve their assets;

(c) To prevent hoarding of money;

(d) To eliminate unsound and destructive competition among such banking organizations;

(e) To maintain public confidence in such business; and

(f) To protect the public interest and the interests of depositors, creditors, shareholders and stockholders.

(ii) Whether the effect of the action for which approval is sought shall—

(a) Result in the formation of a bank holding company of a size or extent beyond limits consistent with adequate or sound banking and the preservation thereof; or

(b) Result in a concentration of assets beyond limits consistent with effective competition.

(iii) Whether such formation or acquisition may result in such a lessening of competition—

(a) As to be injurious to the interest of the public; or

(b) Tend toward monopoly.

(iv) Primarily, the public interest and the needs and convenience thereof.

Finally, the legislature in enacting chapter 237 of the Laws of 1960, and in reenacting its provisions (ch. 146 of the Laws of 1961) further declared this State's policy in respect of the structure of banking in New York:

"SECTION 1. Declaration of policy: The enactment of Federal law to regulate bank holding companies (Bank Holding Company Act of 1956) has made it necessary for the State of New York to review the structure of banking organizations operating in New York State. After full consideration of the complex issues involved it is hereby declared to be the policy of the State of New York that appropriate restrictions be imposed to prevent statewide control of banking by a few giant institutions; that no law or the administration of any such law should work a discrimination in favor of federally chartered banking institutions or against State chartered institutions; that the dual banking system be preserved; that competitive as well as banking factors be applied by supervisory authorities in approving or disapproving bank mergers, the operations of bank holding companies, acquisitions thereby or mergers or consolidations thereof; that no existing bank holding company be granted a statutory monopoly; that healthy and nondestructive competition be fostered among all types of banking organizations within natural economic and trade areas; that statutory home office protection for small unit banking organizations be preserved and extended; and that there be State supervision over the activities of bank holding companies and banking organizations for the purpose of assuring that the activities of such companies and organizations conform to the declared policy of the State in respect of banking."

Preliminary to discussion of the competitive and public interest criteria, it may be well to dispose of the section 10 factors incorporated by reference in section 142.

Banking factors

Section 10, declarative of this State's policy in the supervision and regulation of the business of banking organizations, enunciates several tests which are of doubtful significance here. Conservation of banking assets, prevention of hoarding, and maintenance of public confidence in the banking business do not present problems warranting discussion in the context of the proposal before the board. Nor would the interests of creditors of the two banking institutions be affected in any substantial way, whatever disposition may be made of the application.

The interests of stockholders of Bankers Trust and County Trust should, in the first instance, be determined by themselves. That opportunity they will have (should the board approve the present application) in voting as stockholders upon the proposed mergers of their respective institutions with the banks to be organized for that purpose (Wall Street Trust Co. and Main Street Trust Co.). Dissenting stockholders, as previously noted, would have the right to be paid for their stock and to resort to the courts for a determination of its value (banking law, sec. 604). The section 10 declaration that State supervision of banking is directed (among other objectives) toward protecting the interests of stockholders seems, therefore, mainly intended to promote the safe and sound general conduct of a bank's business. It is not intended primarily as a guide in acting upon specific applications, such as this, where the individual's own investment judgment is the primary index to his interest, and where other effective safeguards are afforded him. Thus, although the statute requires the board to take the stockholders' interests into account, I read this requirement as precluding approval only where the proposed action is so patently prejudicial to the interests of stockholders that it would be futile to submit it to their vote. I am satisfied that such is not the case here, and conclude that this application would have no such effect upon the stockholders' interests as would warrant this board's depriving them, under this factor, of the opportunity to decide for themselves where their interests lie.

Remaining for discussion are the other factors enumerated in section 10, namely, (1) "to insure the safe and sound conduct of such [banking] business," (2) "to eliminate unsound and destructive competition among such banking organizations," (3) to protect the "public interest," and (4) to protect "the interests of depositors."

1. Insuring the Safe and Sound Conduct of the Banking Business

The data submitted in support of the application, and this Department's familiarity with the affairs of Bankers Trust and County Trust, indicate that their business has been conducted safely and soundly, and that their prospects for continued safe and sound operations are excellent.

The applicant, the proposed bank holding company, has assets of $1,000, representing the proceeds of sale for organizational purposes of 1,000 shares of its authorized capital stock now outstanding. The plan contemplates that additional resources of substantial amount would be made available at a later date. The management and board of directors of applicant are drawn substantially from the present management and directors of Bankers Trust and County Trust, respectively. The records of these institutions amply reflect safe and sound management policies and a high degree of operational skill. It is reasonable to expect that their affairs, and those of the proposed bank holding company, would continue to be so conducted.

This factor is, in my opinion, not inconsistent with approval of the application.

2. Elimination of Unsound and Destructive Competition

Vigorous competition among banking institutions now exists in New York City and Westchester County. There is no evidence, however, that in New York City or in Westchester County, or in any combined New York City-Westchester market, unsound or destructive competition among commercial banks exists. Neither Bankers Trust nor County Trust appears to be suffering from competition of such an undesirable character as to bear upon the merits of the present application. Accordingly, this factor does not militate in favor of the application. The case might be otherwise where an institution suffered from destructive competition to such an extent that its financial soundness or stability were jeopardized, or its capacity to offer adequate banking services to the public materially reduced.

3. Protection of the Public Interest

Discussion of the public interest factor may be deferred until the final factor specified in section 142 is reached, requiring this board to consider "primarily, the public interest and the needs and convenience thereof."

4. Protection of the Interests of Depositors

Depositors in Bankers Trust and County Trust, in their capacity as such, should be little affected by the plan. Deposit services would be maintained by both banks as heretofore, and presumably expanded and improved; no branches are proposed to be closed by reason of the holding company affiliation; and service charges would remain substantially unchanged.

This factor appears to be of minor significance in reviewing the application.

5. Preventing Expansion of a Bank Holding Company to a Size or Extent Inconsistent With Adequate or Sound Banking[4]

As will appear from the subsequent discussion, the bank holding company which would result from approval of this application would be a large organization. Nevertheless, there is no substantial reason to believe that it would be too large to function in an adequate and sound manner insofar as its own operations are concerned. There are a number of banking organizations operating efficiently and soundly under centralized management which are as large or larger than New York Holding Corp. would be. There is also a bank holding company in this State which is nearly as large in terms of assets, and larger in number of banking offices, and which is soundly operated.

Accordingly, this factor is not inconsistent with approval of the application.

Competitive factors

This department has not had occasion heretofore to measure against the express language of section 142 any proposal of the magnitude of the present one. A brief review of recent legislative history may serve to illuminate such language.

In passing upon two important New York City bank merger applications in 1959, the superintendent applied to them, under the public interest factor of section 10, certain tests deriving essentially from antitrust law. Indeed, it was to codify all the considerations (including competitive) reviewed in connection with these mergers that this department recommended to the State legislature precisely the language now found in section 142(1).[5]

The foregoing is not intended to imply that the statutory tests and judicially promulgated doctrines of antitrust law are to be applied by the banking department in reviewing this or any other proposed bank holding company action, bank merger, or asset acquisition. This department is not the proper forum for adjudication of issues under the Federal antitrust laws. That responsibility lies elsewhere. In 1959 I had occasion to discuss antitrust doctrines as they relate to banking, in the following terms:

"At the threshold, it must be recognized that the impact of antitrust laws and policy upon the regulated banking industry differs materially (although no specific exemption from antitrust statutes is granted to banking) from their effect on business free of control by supervisory agencies. Indeed, much of the uncertainty that has characterized commentary in this area results from the seeming dichotomy created by the policy of free competition in open markets as fostered by the antitrust laws on the one hand and on the other hand by the conservatory practices imposed upon banks by regulatory legislation. There are those who would condition approvals of bank mergers upon a strict application of existing antitrust laws whether or not presently applicable to bank mergers. Such would be to ignore factors unique to banking which might warrant approval of a proposed merger under the previously enumerated [section 10] criteria. * * *

"Further, the public interest and the needs and convenience thereof must be considered, since the demands that our economy and international trade and finance impose upon commercial banking in certain areas of this State may not be adequately served by normal growth. This is not to say that in New York City the burdens placed upon commercial banks cannot be met at the present time by normal growth. In some areas of the State, however, a virtual monopoly may be the only economically feasible method of insuring to the public adequate access to banking services to which it has a right. On the other hand, the prevention of an undue concentration of banking assets in a few banks in certain areas of this State is necessary. In this connection the incidence of absorptions, mergers, and consolidations, with resultant increase in banking concentration within the past decade, nationally and in New York, must be noted."[6]

I read the standards enunciated in section 142 as a mandate to balance and apply both the so-called competitive factors and the so-called banking factors, in the light of an overriding concern with the interest, needs, and convenience of the public.

Some consideration should be given as well to the declaration of policy in chapter 237 of the laws of 1960.[7] The legislature's review of this State's banking policy was necessitated by enactment of the Federal Bank Holding Company Act of 1956. The State's policy, insofar as relevant to the present application, is—

(a) To prevent statewide control of banking by a few giant institutions;

(b) To require supervisory authorities to apply competitive as well as banking factors in approving or disapproving acquisitions by bank holding companies;

(c) To foster healthy and nondestructive competition among all types of banking organizations within natural economic and trade areas; and

(d) To assure conformance, through State supervision, to the banking policy so declared.

In pursuance of such policy, certain changes in the State's banking structure were authorized. The freeze on formation and expansion of bank holding companies was terminated, subject to State supervision and regulation of such activities. Branching and merger privileges of banking organizations were extended. More specifically, implicit in the statute is the recognition given to movements of population and business from cities to suburban areas, and the consequent need in such areas for expanded banking services, and for the vigorous competition in banking that is concomitant to economic growth.

Footnotes at end of speech.

The proposed formation of a new bank holding company to acquire Bankers Trust and County Trust requires assessment of the effects thereof upon competition.

Will such action result in a concentration of assets beyond limits consistent with effective competition?

May such action result in such a lessening of competition as to be injurious to the interest of the public?

May such action bring about a tendency toward monopoly?

To answer these questions requires analysis of the specific banking services performed by the two banks; the relevant market areas for each such service; and the effects upon competition inherent in the proposal. Ultimately, the board is to reach a judgment (balancing the competitive effects of the proposal against the public's need for banking services) as to whether approval or disapproval would best serve the interest, needs, and convenience of the public. In short, would the anticompetitive effects of the plan (if any) outweigh its benefits (if any) to the public?

THE BANKS INVOLVED

The County Trust Co. of White Plains, N.Y., is the largest bank in Westchester County. Its one-half billion dollars in resources constitute over 49 percent of all commercial bank assets in Westchester. It holds 49 percent of all individual, partnership and corporation demand deposits in the county, and carries on its books 40 percent of all business loans extended by commercial banks in Westchester, as well as 46 percent of all commercial bank consumer installment loans. The 40 offices of County Trust comprise 41 percent of all commercial bank offices in Westchester.

County Trust is basically a suburban retail bank. Its primary services are to residents of Westchester County and to businesses located in Westchester. It has engaged heavily in real-estate lending and servicing, primarily out of State, but it does not, on any substantial scale, serve national or international enterprises. The bulk of County Trust's deposits derives from Westchester residents and business firms. A substantial portion of such deposits is in savings accounts of individuals, nearly all of whom live in Westchester. Of total demand deposits held by County Trust, the bulk is those of individuals, partnerships, and corporations. In those instances where large firms of national or international stature maintain deposit accounts with County Trust, such accounts largely reflect the local activity of these firms in Westchester County.

Bankers Trust Co. is the sixth largest commercial bank in New York City. It holds some $3 billion in resources, constituting 8.1 percent of all commercial bank assets in New York City. Its 47 offices constitute 7.5 percent of all commercial bank offices in the city. It holds 8.9 percent of all individual, partnership and corporation demand deposits in the city, 9.8 percent of commercial bank business loans, and 6.6 percent of commercial bank consumer installment loans.

Bankers Trust is, in the main, a wholesale bank, serving large commercial, industrial, and financial firms, many of them of national and international standing. In recent years it has also been transacting a substantial volume of banking business which may be characterized as retail in character.

RELEVANT MARKET AREAS

It may be argued (and the applicant so asserts) that New York City and Westchester County together constitute an integrated economic area, or part of a larger banking market comprising New York City and its adjacent and nearby suburban counties. Some 40 percent of Westchester residents commute regularly to New York City, and some noncommuters (or their wives) may consider New York City banks as conveniently available. About 70 percent of Westchester residents live within 10 miles of New York City, and important business relationships exist involving the movement of goods and services between New York City and Westchester. Indeed, it may be further argued that the Omnibus Banking Act implies legislative recognition of a degree of economic integration as between New York City and Westchester County. The declaration of policy of the act speaks of fostering healthy and nondestructive banking competition within natural economic and trade areas. Such declaration is followed by provisions granting to certain banking organizations new branching and merger privileges across the New York City-Westchester County line. From this it may be inferred that the legislature regarded New York City and Westchester as part of natural economic and trade area.

Actually, however, for purposes of this application, a much more limited inference should reasonably be drawn from the action of the legislature in authorizing New York City banking institutions to branch into Westchester, and Westchester institutions into New York City. The legislature recognized, not that the two areas comprise an integrated market for bank services, but merely that many individuals, such as commuters, need banking services in both areas, which services can best be afforded through branching across the county line. The legislature might also have considered it advisable to stimulate competition in a largely suburban area, where the opportunity for growth of independent institutions may be relatively limited, by permitting branching from and to a large commercial city nearby, even though not in the same market area. Thus, while it is true that branching throughout an integrated market area is generally permitted, branching is not necessarily limited to such areas but may be permitted outside an integrated market area where special circumstances exist. Certainly, it cannot be inferred from the present branching provisions of the banking law that New York City and Westchester are within one market area for all purposes which are relevant to the present application.

With respect to certain important categories of banking services, Westchester is in fact a separate and distinct market area. Since over half of Westchester residents both work and live in Westchester,[8] and few of these would be likely to regard New York City banks as conveniently available alternatives for the banking services rendered by Westchester banks—Westchester County should be viewed as a banking market separate and distinct from New York City.

The banking department's analysis of relevant geographic market areas, by banking services, further reveals the existence of certain service lines for which the market is primarily local (i.e., countywide or even more closely restricted to a particular municipality and its environs, or to a neighborhood or section of a city or village). Such services, which County Trust renders to its depositors and customers at its 40 branches throughout Westchester County, include:

1. Business loans to small local enterprises.

2. Consumer installment loans. (The relevant market here should perhaps be even more circumscribed, i.e., to banks within convenient distances from the homes or places of business of potential borrowers.)

3. Savings deposits. (The comments in (2) above are applicable with respect to this service as well.)

4. Special checking accounts.

5. Regular checking accounts (individual and small business).

6. Small personal trusts.

Insofar as Westchester is a separate market area, it is clear that no substantial amount of competition for its local banking services exists as between Bankers Trust and County Trust. Accordingly, none would be eliminated by their affiliation. Certain other competitive implications relating to such local banking services must be carefully examined, however.

THE EFFECTS UPON BANKING COMPETITION OF THE SIZE, EXTENT, AND ASSET CONCENTRATION OF THE PROPOSED BANK HOLDING COMPANY

The statute (banking law, sec. 142(1)) cautions lest the formation of a bank holding company result in a concentration of assets beyond limits consistent with effective competition; the statute further directs consideration as to whether such action may result in such a lessening of competition as to be injurious to the interest of the public or tend toward monopoly; and finally the statute enjoins this board that its primary consideration be the interest and the needs and convenience of the public.

The size and extent of, and the assets to be held by the proposed bank holding company system would, in the first instance, reflect the combined size and extent and assets of Bankers Trust and County Trust, respectively. These have been briefly outlined in a preceding portion of this statement. The application and the banking department's own analysis mark out in considerable detail the magnitude and scope of the resources and operations of the two banks.

As a bank holding company the applicant would be, in terms of total resources, the largest such company in the State, with combined banking assets of over $3.5 billion. Marine Midland Corp., the second largest such company in New York, holds some $2.4 billion in banking assets. In terms of its 87 banking offices, the applicant would be second to Marine Midland Corp., whose subsidiary banks maintain 174 offices throughout New York State.

In the combined New York City-Westchester County area, the holding company's share (over $3.5 billion) of all commercial banking assets would constitute 9.1 percent of the total. Its share of commercial banking offices in such area would be 12 percent.

The figures relating to the New York City-Westchester area lose their significance, however, when it is considered that New York City's total commercial banking assets are nearly 40 times the size of Westchester's, and that there are 628 commercial bank offices in New York City, and only 96 in Westchester. Thus, even the acquisition by the applicant of Bankers Trust and all Westchester County commercial banks would have a relatively minor effect upon commercial bank asset and branch concentration in such combined area.

Much more significant is the effect of the proposal before the Board upon banking concentration within Westchester.

To the preeminent position already occupied by County Trust in Westchester commercial banking, the proposal would bring the added economic power and competitive advantages of affiliation with a New York City bank whose $3.1 billion in resources dwarfs the less than one-half billion dollars held by all nine remaining commercial banks in Westchester.

The strategic position of County Trust in Westchester is illustrated by the degree of its branch concentration in certain Westchester communities (commercial bank branches only):

White Plains: County Trust, six offices; others, three offices.

Footnotes at end of speech.

Mount Vernon: County Trust, four offices; others, two offices.

Larchmont: County Trust, two offices; others, one office.

Mamaroneck: County Trust, two offices; others, one office.

Port Chester: County Trust, two offices; others, one office.

North Tarrytown and Tarrytown, Irvington, Dobbs Ferry, Ardsley, Hastings-on-Hudson area: County Trust, one in each (total 5 offices); others, three offices.

In the specified communities, County Trust operates a total of 21 offices, its commercial bank competitors a total of 11.

To some extent, the conclusions to be reached here reflect the nature and mode of operation of bank holding companies. These organizations, as the applicant and other authorities[1] have pointed out, bring important advantages and render significant services to their affiliated banks. Bank holding companies provide to their subsidiaries the benefits of (1) additional capital funds, (2) centralized management, (3) technical assistance in bank operations, such as specialized lending services, purchasing, auditing, appraising, advertising, tax counseling, credit information, and underwriting of government and municipal securities. Moreover, the present applicant has drawn substantially all of its executive officers and directors from the present management and Boards of the banks it seeks to acquire. Thus, while not technically a merger, the formation or expansion of a bank holding company may have, as here, many of the practical implications of such transactions.

The aspects of bank holding company operation above mentioned, as well as others, are designed to lend financial strength, stability, and operational skills to institutions which, on their own, might lack the capacity to secure such advantages for themselves, to the detriment of the public they serve.

In the context of the present application, however, there is no evidence that either of the banks involved is in that position. Each is adequately capitalized, well-managed, and renders or has the capacity to render a full scale of needed banking services in the markets it now serves. The banking department recognizes that bringing additional banking services and additional banking competition into many areas of the State is highly desirable, is in the public interest, and is consistent with legislative intent and policy as enunciated through the omnibus banking act and in banking legislation which preceded such enactment. Such growth and extension of competition should be achieved in measured steps, however.

While it is conceded that some additional convenience and benefit may accrue to the public in Westchester were the proposal consummated, I do not regard this circumstance as sufficient to overcome the adverse competitive impact inherent in a consolidation of the resources of the largest commercial bank in Westchester—a bank roughly twice the size of its nearest competitor in that county—with the resources of a bank some six times the size, in assets, of all remaining Westchester commercial banks.

The only remotely comparable transaction in Westchester which may presently be envisioned is the proposed merger of the second largest commercial bank in Westchester with the second largest New York City bank.[2] This department, of course, has no jurisdiction over such proposed merger. I must take note, however, that were both the present proposal and the contemplated merger approved and consummated, some 75 percent of commercial banking assets, and two-thirds of commercial bank branches in Westchester would be held by but two institutions. It is not too much to say that the power to monopolize—to exclude actual or potential competition from a defined market—would be inherent in the combinations here referred to. Moreover, this department may not ignore the influence which its decision on the present application may exert upon the future course of asset and market concentration in the banking industry.

It could be argued that the two largest Westchester banks (County Trust and the National Bank of Westchester) presently control, between them, a similar proportion of Westchester assets, branches, and lines of commerce, and, therefore, no change in this respect would result from approval of both transactions. However, it should be pointed out that in referring to size (i.e., to size or extent and to concentration of assets) the banking law refers to the size of the proposed holding company system, not to the size of any individual bank which is to be a part thereof. Accordingly, it is the anticompetitive implications of the formation or expansion of a bank holding company which must be scrutinized. In this case, such action would result in an accretion of resources and facilities inconsistent with effective competition in the market area being reviewed, namely, Westchester County, and in many of the local communities therein.

One further comment is relevant here. Affiliation of County Trust with Bankers Trust would tend, to a substantial degree, if not completely, to cut off other banks in New York City and elsewhere from present and potential correspondent relationships with County Trust—ergo, from some one-half of such commercial banking opportunities originating in Westchester County. The presence in Westchester of branches of New York City banks would not be likely to offset appreciably such a result in the foreseeable future. The application indicates that Bankers Trust intends to provide to the Westchester customers of County Trust all of those specialized banking services for which, actually or potentially, other large commercial banks compete with Bankers Trust. It is reasonable to conclude, therefore, that affiliation between County Trust and Bankers Trust would result in at least a tendency toward monopoly in Westchester over wholesale banking services, foreign banking services, and the numerous other specialized banking skills of Bankers Trust which are described in the application.

THE PUBLIC INTEREST AND THE NEEDS AND CONVENIENCE THEREOF

In the final analysis, the public interest is the overriding factor to be considered. The public is entitled to banking services sufficient in quantity and quality to meet the demands of current and future economic growth. Where banking institutions are not providing such services, the banking department might regard such a circumstance as impelling approval of an action which, under different conditions, would warrant disapproval.

For example, where banking services by local banks in a particular market area are demonstrably inadequate, or incapable of satisfying or stimulating needed economic growth in the area, this department would look favorably upon the entry of a bank holding company, through acquisition of one of the local institutions, even though as a result of such action some decisive competitive advantages might accrue to the local bank being acquired, and to the holding company.

The present application describes in detail numerous additional services to be made available (in the event of affiliation of County Trust and Bankers Trust) to the residents of and business firms in Westchester. These include a broader range of personal and corporate trust services, research facilities, foreign department facilities, specialized lending and credit services, and other services not presently available at County Trust, or available on a limited basis or through correspondent relationships only.

It is difficult to appraise the significance of these services for the residents and business firms of Westchester. No information has been furnished as to the extent of the demand that may there exist for such services, or to what extent the demand that does exist is (or is not) being adequately served directly by Westchester banks, or through their correspondent relationships with other institutions. It is reasonable, nevertheless, to conclude that the affiliation would contribute to some extent to the convenience of residents of Westchester County. Granting this to be the case, the adverse competitive effects which may reasonably be anticipated from the proposed action outweigh the somewhat conjectural benefits thereof.

SUMMARY AND RECOMMENDATIONS

My recommendation to the banking board is that the application be disapproved. Such recommendation is based upon the following conclusions:

1. The section 10 banking factors incorporated by reference in section 142(1) and the single banking factor of section 142(1) are either consistent with approval, or inapposite to this application. Such factors do not provide substantial affirmative support for approval. These factors are:

(a) Insuring the safe and sound conduct of the banking business.

(b) Elimination of unsound and destructive competition.

(c) Protection of the interests of depositors.

(d) Preventing expansion of a bank holding company to a size or extent inconsistent with adequate or sound banking.

2. The competitive factors of section 142 (1) are inconsistent with approval:

(a) The formation of the proposed bank holding company would result in a concentration of assets beyond limits consistent with effective competition (in Westchester County).

(b) Such formation may result in such a lessening of competition (in Westchester County) as to be injurious to the interests of the public.

(c) Such action may result in a tendency toward monopoly (in Westchester County).

3. Finally, the primary statutory factor for the board's consideration, the public interest and the needs and convenience thereof is, on balance, inconsistent with approval. While some added convenience to the public might result, in the event of approval, the anticompetitive implications of the proposed actions and the consequent adverse impact thereof on the public interest, weigh heavily toward disapproval.

Accordingly, I recommend to the banking board that the application of New York Holding Corp., to become a bank holding company under article III-A of the banking law, be disapproved.

Footnotes at end of speech.

[1] While the banking organizations directly involved in this application are organized, or are proposed to be organized, as trust companies under art. III of the banking law, for convenience they will frequently be referred to herein as banks or institutions.

[2] Hereinafter sometimes called Bankers Trust and County Trust, respectively.

[3] Ch. 237 of the Laws of 1960 was declared void by the New York Supreme Court, New York County, in a decision filed on Mar. 14, 1961, for certain technical procedural defects in its passage. Ch. 146 of the Laws of 1961, which became law on Mar. 17, 1961, reenacted the provisions of the earlier act, including art. III-A, and validated all actions taken pursuant to the provisions of

such earlier statute (ch. 146 of the Laws of 1961, sec. 16).

[4] The other banking factors discussed above are made relevant by the incorporation of sec. 10 into sec. 142(1). This banking factor (marked (5)) derives directly from factor (ii) of sec 142(1).

[5] Identical language, specifying the factors to be considered by the superintendent in passing on proposed bank mergers and asset acquisitions, was embodied in sec. 601(b).

[6] Memorandum of the superintendent, Chemical New York Trust Co. merger (1959).

[7] As reenacted by ch. 146 of the Laws of 1961.

[8] It is estimated that by 1985 the number and proportion of those who both live and work in Westchester will be further substantially increased (Regional Plan Association).

Response on Behalf of Recipients of Partner in 4–H Award

EXTENSION OF REMARKS
OF

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1961

Mr. BROOMFIELD. Mr. Speaker, on far too few occasions, we take a moment to pay tribute to those who have dedicated themselves to encouraging and assisting our youth in meeting the problems of tomorrow.

It has come to my attention that one of my constituents, and a good friend, recently was presented with a citation for his outstanding service to youth. He is Mr. Merritt D. Hill, vice president of Ford Motor Co. and that firm's general manager in the Tractor and Implement Division in Birmingham, Mich.

In the presentation of this award as a partner in 4–H, Mr. Hill was praised for his continuous and dedicated assistance to 4–H and other youth programs; for his encouragement of business associates to give of themselves as well as their means in supporting youth work; for his assistance to rural young people in career exploration and for his share in his firm's sponsorship of the National 4–H Achievement Award program for many years.

I think that Mr. Hill's statements in acceptance of this award are important to all of us in our understanding of the aims and goals of the young people of our Nation.

His words follow:

RESPONSE ON BEHALF OF RECIPIENTS OF PARTNER IN 4–H AWARD

(By Merritt D. Hill, vice president, Ford Motor Co., and general manager, Tractor and Implement Division, Birmingham, Mich.)

Thank you, Administrator York, Mr. Secretary, fellow partners in 4–H, distinguished guests, friends of 4–H, and 4–H'ers. This is a tremendous experience for me, as I know it is for the other recipients of this award. Many is the time I have presented awards to 4–H'ers, and suddenly I know exactly how they feel.

I read yesterday in our local Birmingham, Mich., newspaper what the most important combinations of words are for strengthening our relationships with others.

The five most important words are: "We are proud of you." The four most important are: "What is your opinion?" The three most important: "If you please." The two most important: "Thank you." The one least important is: "I."

Today, the seven of us know just how meaningful those five words "We are proud of you" are.

And, for our part, we say with utmost sincerity and humility, the two most important words: "Thank you."

While we are thinking about meaningful words, it seems timely to mention the appropriateness of the name you have given to the award we have received—Partner in 4–H.

The closest relationship which exists in business organizations is a partnership. Because what I do commits my partner, and what he does commits me, a partnership demands the highest degree of respect for others and responsibility to them. Proper function of a partnership requires constant application of the Golden Rule.

Examining the word "partnership" still further, we find that a partnership cannot exist unless both parties make some kind of special contribution to it. It serves no purpose unless it is mutually beneficial to both parties.

For a moment, then, on behalf of the people whom you 4–H'ers have today named as partners, I'd like to suggest what some of the things are that each party is bringing to this partnership.

We, on this platform, have the responsibility to contribute to this partnership, at the very least, the benefit of our experience with business affairs, and with educational matters. You have a right to expect from us far more than this, however.

As I see it, we have the obligation to help instill in every one of you a sense of your great worth as individuals. You 4–H'ers are 2,300,000 strong, and your influence is already being felt around the world. Everything you are and do counts. "No man," Hemingway wrote, "is an island unto himself." The most disturbing thing I believe I have ever seen in print is the creed of an organization which says that "I, as an individual, am nothing." The greatest responsibility the senior members of your partnership have to you is to convince each of you that your personal character and integrity and ability are more important to the world's future than anything else.

Another thing we can do for this partnership is to offer you challenges, and no challenge was ever more clearly stated than your own 4–H motto—"Make the best, better!" It is our purpose to create within you a dissatisfaction with things as they are, and then help you learn how to do something about that dissatisfaction, not tell you what to do about it.

We owe to you also the responsibility of bringing to you an awareness of the problems and the opportunities which will face you as you reach adulthood. The underlying purpose of 4–H is to prepare you to meet life, and not accept it on its terms but change it. This will take courage and steadfastness of purpose. Already all of you in 4–H know the meaning of these words from your own experiences, but the strength of your resolve will be tested over and over again. We must show you by our example that right principles must never be compromised.

Now, what does this partnership with us require of you?

You have a duty to alert us to our responsibilities. 4–H would not exist if young people could not profit from a degree of guidance. It is a sad thing to see bunches of young people eager to have new experiences, motivated by the desire to prove their own personal worth to themselves and to each other, but channeling their energies into nonconstructive adventures. You need to open the communication avenues between yourselves and adults.

You must bring to this partnership your idealism and enthusiasm. You must believe, wholeheartedly, that it is within your power to make the best, better. And you must convey to us this belief. Apathy is a weapon much stronger than hostility. At least, when you express hostility to an idea you have in mind some other approach. If your attitude is "I don't care," this becomes contagious within your group.

Another obligation you owe to our partnership is a sense of appreciation for it. Whatever 4–H means to you, it can mean to others with whom you come in contact. Verbally expressing this appreciation, of course, is important, but living it is even more important—4–H has continuity because the older 4–H'ers convey to the younger ones their excitement and their knowledge. I am repeatedly impressed with the attitude of service to the organization which you older members show, and I can think of no finer way of showing appreciation. I include, even, the tangible expression of appreciation which today's ceremonies represent.

There is another responsibility you have to those who have gone into partnership with you. You owe it to us to help us keep our sense of values. In our competitive society, attainment of success measured by material possessions appears on the surface to be of supreme importance. It might be said that in your striving for blue ribbons in your 4–H projects you are succumbing to this same materialism. But when we examine the 4–H award system closely, we find in nearly every case that the award is not an end in itself, it merely opens up new vistas to the winners.

And as we talk to those who are runners-up, we find that the moment they got over their immediate disappointment, they knew that they had learned much of value from their experience. In requiring us, as adults, to understand this, you help us keep a much more realistic perspective toward our attainments and our disappointments.

While seven of us were singled out this morning to represent the partnership of adults and young people in 4–H, we know, and you should too, that the 4–H movement, itself, is a unique kind of partnership, with young men and women banding themselves together with educators, government people, business and industry representatives, and adult leaders. The relationships which develop through this partnership are of immense benefit to everyone who participates in your movement.

Through the catalytic action of you young people, we adults obtain better understanding of each other, heightened respect for the contributions all segments of our society make to the whole, and friendships which we will prize throughout our lives.

It is with deep humility that I accept this award on behalf of every adult who values so highly the opportunity you young people give us to be of service to you.

Thank you.

FRIENDS OF 4–H GENERAL ASSEMBLY, 31ST NATIONAL 4–H CONFERENCE, U.S. DEPARTMENT OF AGRICULTURE, APRIL 28, 1961

PROGRAM

Music, U.S. Marine Band.

Presiding, Jacqueline Richardson, West Virginia.

Thought for the day, 4–H delegates.

Pledge to American flag, Gary Wilson, Indiana.

Four-H Club pledge, Richard Alexander, Oklahoma.

Forward in 4–H, Hon. Orville L. Freeman, Secretary of Agriculture.

Presentation of citations, Dr. E. T. York, Jr., Administrator, Federal Extension Service.

Citations read by G. H. Huffman, Federal Extension Service; W. W. Bauer, American Medical Association; Howard A. Dawson, National Education Association; Robert O. Glover, Atlantic Rural Exposition; Merritt D. Hill, Ford Motor Co.; N. C. McGowen, United Gas Corp.; Lucille Rea, Simplicity Pattern Co.; Edgar T. Savidge, American Bankers Association.

Response, Merritt D. Hill.

Presentation of original poster paintings, J. W. Shaver, Coats & Clark, Inc.

Music, U.S. Marine Band.

Panel, "New Understandings of Citizenship," Edward V. Pope and 4–H delegates.

Partners in 4-H

Dr. W. W. Bauer: For preparing extensive educational information and training materials to enrich health studies; for pioneering health education of the public by radio and television; for significant guidance in shifting the focus of 4–H health programs from "the best exhibit idea" to progress of individual boys and girls and to community service; and for valued counseling to many youth-serving groups, including the National 4–H Service Committee of which he was a member for many years.

Dr. Howard A. Dawson: For sustained effort in interpreting, championing, and guiding rural educational progress, including 4–H Club work, both in his native Arkansas and in the Nation; for strengthening school and community relationships in significant ways; for perserverance in helping underprivileged boys and girls receive the knowledge, skills, and attitudes that equip them for full citizenship; and particularly for many services to 4–F in his rural leadership field with the National Education Association.

Adm. Robert O. Glover: For personal attention and encouragement to 4–H youth who participate annually in the Atlantic rural exposition, of which he is executive vice president and operational head; for major assistance to youth of 22 States competing in the eastern U.S. 4–H tractor operators' contest at the exposition each year; and for valued aid to 4-H members of 8 States who take part in the exposition's annual poultry, livestock, and dairy judging.

Merritt D. Hill: For continuous and dedicated assistance to 4–H and other youth programs; for encouraging business associates to give of themselves as well as their means in supporting youth work; for assisting rural young people in career exploration; for serving as a trustee of the Michigan 4–H Foundation, and as a member of the National 4–H Service Committee; and for sharing enthusiastically in his company's sponsorship of the national 4–H achievement awards program for many years.

N. C. McGowen: For sustained support of 4–H Club work in Southern States, and a significant role in leadership development; for encouraging and promoting junior leadership activities particularly in Texas, Louisiana, and Mississippi; for arranging financing of more than 500 trips a year for 4–H members to attend State and national events emphasizing leadership; for unusual interest and helpfulness in junior fairs and livestock sales; and for contributing greatly to the progress and growth of the 4–H program in general.

Lucille Rea: For outstanding success in helping develop high standards of clothing work with women and girls; for keen understanding and appreciation of extension's objectives and policies in conducting youth programs; and for her personal efforts in furthering expansion of her company's services—including preparation of valuable teaching aids—to extension agents, 4–H Club members, and volunteer 4–H leaders.

Edgar T. Savidge: For zeal and skill in marshaling the forces of the agricultural committee of his organization—the American Bankers Association—to help young people through 4–H; for notable success in furthering both State and national participation of banks and bankers in 4–H program support; for advancing 4-H Club work through the National 4–H Foundation; and for longtime dedication to the ideals of youth and assistance to youth-serving agencies.

Commuter Railroads

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1961

Mr. DOOLEY. Mr. Speaker, for several years now the commuter railroads serving our large metropolitan areas have found it increasingly difficult to render the kind of service our expanding population wants and is entitled to have. The causes of the decline of the commuter railroads are many and complex—high taxes, losses of revenue to Government subsidized highway and air carriers, to name but two. And the solutions to the problems of the commuter lines have been equally varied, ranging all the way from Government ownership to complete discontinuance of this important service.

There have been a number of sound plans proposed. But none of these has been implemented. Instead we have stood idly by, watched our commuter railroad service decline, and have failed to offer a helping hand. Though the number of people flowing in and out of our metropolitan areas each day has increased tremendously since World War II, total annual rail commutation dropped 124 million from 1947 to 1957. Nowhere has this decline been more painfully evident than in the New York City area. Here the New York Central Railroad, one of the Nation's most important carriers, has alone lost 47.6 percent of its passengers since 1949.

At this time of crisis in our Nation's commuter railroads, a new threat to the continued operations of the New York Central has appeared in the form of the Chesapeake & Ohio Railroad's proposal for control of the Baltimore & Ohio railroads.

The New York Central has pointed out that this control, if approved by the Interstate Commerce Commission, would give the combined C. & O.–B. & O. Railroad a total of 185 points served in common with the New York Central. Not only is this kind of duplication wasteful, but it gives the combined system the ability to take freight traffic away from the New York Central and other railroads serving the area.

The New York Central notes:

The freight traffic most susceptible to raiding by the C. & O.–B. & O. provides the backbone of Central's revenues. These revenues make it possible to provide essential freight and passenger service over the entire New York Central system as well as the New York area commuter and terminal freight services. If these services are to be maintained, the New York Central must have the revenues to make them possible.

The New York Central today handles 60 percent of all southbound commuter traffic coming into New York City. This is a $14 million operation involving 3,500 employees who work on commuter traffic exclusively. A blow to this phase of the Central's operations would have serious economic consequences not only to the railroad itself, but to the 40,000 people per day who are provided with efficient, reasonably priced transportation in and out of the city.

There is a workable alternative to this potentially dangerous and harmful C. & O.–B. & O. merger scheme—

The Central has pointed out.

The logic of creating a strong, balanced, competitive two-system railroad service in the East is so obvious that B. & O. was publicly committed to the approach outlined here.

Detailed studies of the plan were well underway. Though far from completion, these studies indicated beyond a doubt that savings would result which would be of unprecedented benefit to the railroads concerned, their investors, their customers, their users, and to the public at large.

Then, abandoning the studies in the face of their promising outlook for all concerned, B. & O. entered on-again-off-again negotiations with C. & O. which resulted in the present situation.

In the light of the facts at hand, however, New York Central intends to pursue the objective of helping to create a healthy two-system eastern railroad structure in the public interest.

The Interstate Commerce Commission will commence its deliberations on the proposed C. & O.–B. & O. merger on June 18. Obviously, the Interstate Commerce Commission will not force the New York Central to further curtail its commuter operations by giving undue competitive advantages to the lines that wish to merge.

However, there is a more profound consideration to this proposed merger than profit and loss. That is, will it serve the long-range public interest?

For the past 40 years Congress has advocated a carefully planned, balanced and competitive railway system. We must ask ourselves which of the two alternatives will help the commuter—the two-way B. & O.–C. & O. merger, or the three-way New York Central–B. & O.–C. & O. merger. Which will serve not only the best interest of the stockholders, but the interests of all the traveling public?

No More Organizations Needed

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Monday, May 1, 1961

Mr. MICHEL. Mr. Speaker, my good friend, Paul Harvey, is a very practical fellow. At times he is very blunt, but he never skirts an issue. He gets di-

rectly to the point. Recently, he had something to say about the joining of organizations, and he treated the subject as I have done so many times with my constituents. Under unanimous consent, Mr. Speaker, I include the editorial at this point in the RECORD:

NO MORE ORGANIZATIONS NEEDED

(By Paul Harvey)

The John Birch Society is presently on the pan. Senator GOLDWATER doubts that there will be a thorough investigation of this organization, because "too many Members of Congress are members of it, and many who are not have prominent constituents who are."

I know nothing about the organization or its founder. The row, however, points up again the degrees of patriotism which have splintered our forces.

Whenever I hear from some aroused well-meaning somebody demanding to know, "What can I do?" I have always replied, "Influence those near you."

It seems to me we do not need more letterheads, more organizations, more contemporary prophets to do our thinking for us.

We need, desperately, to reinfiltrate the organizations which are in influential position, but whose influence has been diluted because its members are ignorant, apathetic, uninterested—or because they fail to be participant.

"Influence those near you." This is the technique which has won a hundred million new disciples to communism every year since the big war. They don't bother to create new organizations, societies. They infiltrate existing ones.

Genuinely patriotic Americans should be militant enough to be willing to do it the hard way. The uphill way. Not by running off and creating some new club of their own, but by recapturing the old ones.

The American Legion is a splendid example of an organization which has the experience, know-how, and ability to exercise tremendous influence over our national affairs and our international relations. But the American Legion is no more vigorous than its membership. The Legion is only as effective as its post-level participants.

The PTA, according to FBI Director Hoover, has been and is a top target for Red infiltration and contamination. Let's recapture that.

Unions, especially in the key industries, afford an important forum for any American who is willing to to stand up and be counted.

We don't need more organizations. I think, perhaps, we have too many organizations.

What we need is more participation by decent, dedicated, on-the-ball Americans in already established institutions.

A letter to the editor is construed as "unimportant" by most busy Americans. It's axiomatic that "the right people don't write."

The left does, and wields much influence by virtue of this tireless tirade.

Whatever the merits or demerits of the society presently under discussion, it is sad and somewhat frightening that Americans seek so desperately for leadership that they will flock to a lamb's horn, by whomever blown.

Yet if the established organization to which we belong does something not to our liking, we walk out and create a new one, further dissipating our energies and diluting our effectiveness.

Join a political organization or club in your community. Give copies of the Paul Harvey article to your friends and associates and get them into your political organization. Before long, your group will be determining its policies and endorsements.

A Sound Tax Purpose: To Boost the Economy

EXTENSION OF REMARKS

OF

HON. ROBERT F. ELLSWORTH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kansas City Star, which speaks quite well for itself. The major point of criticism contained in the editorial about the President's tax proposals is the major point of criticism showing up in my mail—the cancellation of the $50 exemption and 4-percent credit on dividend taxes. I call this to the attention of my colleagues hoping that they, as I, will see inequity in this scheme, and will work to eliminate it:

A SOUND TAX PURPOSE: TO BOOST THE ECONOMY

President Kennedy has handed Congress quite a package of tax proposals. The goal—to stimulate the economy and create more jobs—is certainly desirable. But perhaps the most significant item lies in the suggestion of long-range tax reform with a 1962 target date. There is, here, the apparent recognition that income taxes at a confiscatory level have been a heavy drag on the whole economy. The Secretary of the Treasury has been directed to prepare a comprehensive tax reform program.

Secretary Dillon's ultimate recommendations and their fate in Congress will be of immense importance to the future of the Nation. But that is for next year, not this. We can imagine that yesterday's proposals were enough to overwhelm many lawmakers. Tax legislation is perhaps the most complicated field in which Congress does business. And the one most subject to political pressures.

Indeed, there was a measure of the politics and ideologies involved in one of Mr. Kennedy's suggestions. We refer to the plan to cancel the $50 exemption and 4-percent credit on dividend taxes. This was obviously a political gesture to appease those who, as throwbacks to the New Deal era, still regard taxation as a social equalizer.

We see no basis in equity for this particular change. Mr. Kennedy referred to the original purpose of the dividend credit as a partial offset to so-called double taxation. Partial, at best. Now he suggests that every dollar of dividends should be taxed twice. It is an unfair proposal that hardly jibes with the overall purpose of providing incentives for the economy.

In his other suggestions, the President appeared to be on more solid ground. We can see the merit in tightening up on expense account loopholes. The tax incentive for business to modernize and expand should, indeed, create jobs. It has become increasingly obvious that oversea investments, particularly in the industrial countries, have been costly to the Treasury. They have also contributed to the balance-of-payments deficit. Mr. Kennedy may be killing two birds with one stone here: Providing more revenue and easing the dollar imbalance.

But it is scarcely necessary to remind you that the details of all these proposals will be spelled out only when specific legislation is considered by Congress. Particularly in tax bills, the fine print is highly important. We can assume that when the fine print is seen, there will be cries of anguish from many quarters.

So the job checks to Congress, for the present, to determine what is fair and what is in the national interest. For the future, Secretary Dillon has the essential assignment of bringing some order and fairness out of a chaotic and confiscatory tax structure that has seriously retarded the Nation's growth. We hope next year will be a year of genuine reform on the tax front.

Fair Play for Cuba Committee, but Not for Freedom

EXTENSION OF REMARKS

OF

HON. ALFRED E. SANTANGELO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1961

Mr. SANTANGELO. Mr. Speaker, the invasion of Cuba by Cubans has brought adverse publicity upon the United States. It seems incredible that if the United States attempted to invade Cuba that we could not succeed in view of our military might. Fidel Castro is using his success as a propaganda weapon against the United States when he knows deep in his heart that the United States did not participate in the invasion. It seems that the failure of the invasion by a valiant group of Cubans was due to misinformation on two accounts—the desire of the Cuban people to revolt and the lack of arms of Castro to defend the Cuban invaders miscalculated and met with disastrous defeat to regroup their forces. Organizations in America are screaming for fair play for Cuba. We believe in the attitude of Stephen Decatur when he said, "Our country right or wrong, but our country."

A great mass of Americans still believe in his philosophy. One of them, who is not mislead by propaganda and is well-informed, sent a letter to the editor of the New York Times. I believe that his statement sets forth the perfidy of the Castro regime and the insincerity of Castro's propaganda statements.

The statement follows:

To the EDITOR OF THE NEW YORK TIMES:

I presume that the members of the Fair Play for Cuba Committee are not completely informed when they castigate the U.S. Government and claim that it is intervening in the affairs of Cuba. Perhaps these few facts might enlighten them:

The members of the invading force were all Cubans. There were no Americans, as far as we know, fighting with them. On the other hand these Cuban patriots were met by Czechoslovakian flyers, who were in services of the Castro regime.

The Communist Government of Czechoslovakia and other Soviet satellites supplied Castro with some 30,000 tons of various arms and military equipment at an estimate cost of about $50 million. This is enough to arm 1 Cuban in every 30. Besides, Czechoslovak and Chinese technicians can be found all over Cuba.

If the committee wants to be fair, why does it not ask the United Nations to investigate the role Czechoslovakia and other Communist states are playing in the internal affairs of Cuba? And then it can judge whose ac-

tivities are illegal and immoral and which nations should stand condemned before the world tribunal.

ANDREW J. VALUCEK,
President, Czechoslovak National Council of America.

A Parliamentary Association for the American Nations

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. ANFUSO. Mr. Speaker, I have reintroduced a joint resolution, House Joint Resolution 389, expressing the sense of Congress that a Pan-American Parliamentary Association—PAPA—be established and authorizing the creation of such an association. This resolution has also been introduced in the Senate by the Senator from Florida, the Honorable GEORGE A. SMATHERS.

I feel that the establishment of such an organization is of paramount importance for the good relations within this hemisphere, which we all recognize to be in dire need of strengthening in these critical times.

All of us are well aware of the need to establish the greatest possible measure of understanding, harmony, and cooperation between the nations of the Western Hemisphere. Despite our good neighbor policy of the past quarter century, we know that much resentment and dissatisfaction with U.S. policy persists in Latin America. Demonstrations against the United States have occurred in the past in several of the capitals of our neighbors to the south; they are continuing to occur with a persistency which gives us food for thought that certain forces are stirring up these anti-U.S. demonstrations with a specific purpose in mind.

The administration has taken cognizance of the situation in Latin America, and has proposed a new good neighbor policy streamlined to meet the needs of the 1960's. This new program is a big step in the right direction. It has been universally acclaimed, both at home and abroad, as a logical move.

It is only a first step, however. There is no need to discuss in great detail the reasons for increasing and improving our relations with the Latin American nations. They are our closest neighbors. It is a well-known fact that we have taken them for granted for too long. It is regrettable that it took a Communist dictatorship only 90 miles from our own shores to awaken us to this fact.

The truth of the matter is that the Latin Americans desperately need our help in their efforts to attain a decent standard of living; in the exploration and exploitation of their natural resources; in their economic growth; in expanding their industry and improving their agriculture; and, most importantly, in giving them a feeling of national dignity and importance.

After first suggesting the creation of a Pan-American Parliamentary Association during the 85th Congress, I was privileged to visit several Latin American countries in late 1958. A full report of my visit there, as well as my views and findings, appeared in the CONGRESSIONAL RECORD of January 12, 1959, pages A61–A64. The principle of my proposal was enthusiastically received by the leaders of many of our Latin American neighbors and by our own Department of State.

Briefly, the resolution being offered by Senator SMATHERS and myself calls for a 12-point program of mutual help and understanding to be furthered through the creation of PAPA. This program would accomplish the following:

First. Create better understanding and foster closer personal contact among the elected legislators of the American nations.

Second. Stimulate greater public knowledge of, and make more effective, the Organization of American States—OAS—and other agencies designed to promote the best interests of the American nations.

Third. Expand the educational and scientific exchange programs.

Fourth. Develop closer cultural relations throughout the hemisphere.

Fifth. Improve trade relations and reduce the barriers to trade between countries in the Western Hemisphere.

Sixth. Encourage large-scale tourism between the Americas.

Seventh. Help to provide relief in times of disaster and other emergencies.

Eighth. Seek means to dispose of surplus commodities of all sorts in the various countries in order to help their economies.

Ninth. Help to raise the standard of living throughout Latin America.

Tenth. Aid in the development of plans for the sound economic expansion of the Latin American countries, including U.S. public and private investment in their economic development.

Eleventh. Assist them in the modernization of their agricultural methods.

Twelfth. Seek solutions to other problems of common interest and concern to the countries of the Western Hemisphere.

Thus, the resolution would establish a Pan-American Parliamentary Association to help protect freedom in the Western Hemisphere, to create better understanding between the United States and Latin America, to encourage greater economic development, and to promote closer cultural relations.

The Parliamentarians would seek through public debate to find legislative means to bring economic stability to the member States. They would encourage and support democratic governments in giving free expression to the people and would utilize all efforts to expose Communist influences seeking to establish satellites within the Western Hemisphere.

This association would help strengthen the Organization of American States just as the NATO Parliamentary Conference is helping to strengthen the NATO organization. It would be another bulwark of freedom on this side of the Atlantic.

At a time when President Kennedy has enunciated a strong statement of U.S. policy in regard to the Cuban situation, the Parliamentary organization would seek to extend this declaration to all of the American states who are determined to remain free from communism.

The creation of such an inter-American body comprised of the elected representatives of the people would help to develop a positive and direct people-to-people approach in our relationship, treatment, and dealings with our neighbors of the Western Hemisphere.

The resolution proposes the creation of a parliamentary association, the membership of which is to be composed of elected representatives of the various member governments. PAPA would, therefore, necessarily bar the bemership of Castro's Cuba which has not had an election during the time in which that Communist dictator has been in power. I am convinced that if popularly elected representatives of the free nations of the Western Hemisphere could meet in person to discuss problems of mutual interest, much could be achieved in the way of better understanding and more harmonious relationships.

The joint resolution provides for U.S. participation in the proposed parliamentary organization and the appointment of 18 Members of Congress, from both parties, to represent the United States at conferences to be held annually or more often in the different hemispheric capitals.

We must stop taking Latin America for granted. Experience has demonstrated, within the past 2 years alone, that if we are to maintain the traditional friendship and solidarity between the nations of our hemisphere, we are going to have to foster these friendships by mutual understanding.

Mr. Speaker, I sincerely believe that the joint resolution which I am proposing is the key to such understanding. Past experience should by now have made clear to us that we can no longer afford to put off until tomorrow what must be done today. I hope and trust that the idea of a Pan-American Parliamentary Association, as proposed in House Joint Resolution 389, will soon become a reality.

Archbishop Basaluga Benjamin—A Testimonial on the Occasion of the Dedication of a New Russian Orthodox Church in Monessen, Pa.

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. DENT. Mr. Speaker, Members of Congress, on May 7 of this year a new Russian Orthodox Church will be dedicated in Monessen, Pa., which has just been completed under the capable lead-

ership of Father Govrusik. This new church is a beautiful edifice and, while adding to the spiritual well-being of the community, it also enhances its cultural and esthetic values. Father Govrusik has been a civic as well as a spiritual leader in this community and, in his usual manner of self-effacement, he has turned this day of dedication and jubilation into a commendation ceremony in honor of His Eminence Archbishop Basaluga Benjamin. The principal speaker at this testimonial for Archbishop Benjamin will be the Metropolitan Leonte Turkovitch, supreme head of the Russian Orthodox Church of North America, South America, Hawaiian Islands, and Japan.

This testimonial is tendered to Archbishop Benjamin in consequence of his militant opposition to communism which was only matched by his zeal for his church and its members. This church has several million members in the United States with about 300,000 of them residing in our western Pennsylvania area. The archbishop was born in Oliphant, Pa., on January 11, 1887; he attended Russian Orthodox Theological Seminary in Minneapolis, Minn., and, after being ordained as a missionary priest in 1911, did missionary work in a number of States in the United States. He was consecrated bishop of the Pittsburgh diocese in 1933 and thereafter became vice chairman of the Metropolitan Council of Russian Orthodox Church. Archbishop Benjamin is the author of "The Liturgy of St. John Chrysostom." At the request of the U.S. Government he was made head of the Orthodox Church in Japan from 1946 to 1953. Since 1953 he has been the archbishop of western Pennsylvania and West Virginia.

This church has a long and eventful history in this hemisphere beginning with the Russian missionaries in Alaska, the establishment of an organized church there in 1794, and the successive stages of development on this continent until the consolidation of a more and more independent existence of the Russian Orthodox Church in America.

From its earliest days this church has been blessed with dedicated men of the character of Archbishop Benjamin. During the war, Archbishop Benjamin, with only 2 days' notice, left for Japan in 1946 and remained there until August 1953. Although Russian by ancestry, he has been internationally known for his work as an anti-Communist. The Saturday Evening Post of March 29, 1952, carried a very timely article upon this aspect of Russians fighting against Communists, and I quote this article:

SOME RUSSIANS ARE ON OUR SIDE: FIGHTING COMMUNISM IN JAPAN

Because of our preoccupation with communism we tend to regard Russian interest in the affairs of other countries as a wholly undesirable phenomenon. Nevertheless, paradoxical as it may seem, in at least one area we are encouraging Russian penetration as a means of checking the spread of communism.

At the close of the war with Japan, General MacArthur urged the American hierarchy of the Russian Orthodox Church in America, which is now headed by Metropolitan Leonty, to send a bishop to Japan as promptly as possible. His reason was that a bishop from the Moscow Communist-dominated branch of the Orthodox church—accompanied by 28 secretaries—was already clamoring for admission to Japan to take jurisdiction over the 33,000 Japanese communicants in the Russian church. The Japanese Orthodox Christians in alarm had pleaded with the occupation authorities that an American mission be sent. The American branch of the Russian Orthodox Church, with the assistance of the Federated Russian Orthodox clubs, a young people's group which has participated in Voice of America broadcasts to Russia, sent Bishop Benjamin, who still presides over the spiritual affairs of the Japanese faithful, except for a few parishes.

The Russian Orthodox mission has been active in Japan for more than 90 years, including those of the Russo-Japanese War, during which Orthodox priests and functionaries were permitted to carry on their work without molestation. At the outbreak of that conflict, Bishop Nicolai, who had established the first Japanese Orthodox mission, made it clear to the Japanese members that they should remain loyal to their own country, and he encouraged them to pray for a Japanese victory, although, of course, the bishop made it plain that he could not join them. He was severely criticized in Russia for this stand, but when the war was over, his church promoted him to an archbishopric as a reward for his tactful stand. Whatever may be the application of this to the concept of a God of Battles, it is possible that Archbishop Nicolai demonstrated even the greater power of a God above battles, who has regard for all men regardless of their conflicts and divisions.

In any event, the influence of the Orthodox church in Japan is still sufficiently important to make it the center of an interesting contest between East and West. The effort of the Moscow hierarchy to gain control of the Japanese churches is part of a global struggle. Moscow has already ordered home the Russian priests who formerly presided over the holy places in Palestine and replaced them with new clerics from Moscow. Similarly in the United States the exarch from Moscow regards Metropolitan Leonty's church, which refused to be taken over by Stalin, as a fraud.

The American orthodox group is accused by One Church, the exarch's house organ, of having deposed the Japanese head of the church, replacing him by an American-born bishop, who "still sits on the episcopal throne he usurped." Actually it was the Japanese who did the pushing.

The fact that this religious conflict, with political overtones, is raging among Russians in so many places underscores the stupidity of regarding all Russians as Communist aggressors and the suicidal folly of failing to capitalize to the full this and other deviations. It can hardly be emphasized enough that, unless we find allies inside the Iron Curtain, the odds in this global conflict are heavily against us.

Although my duties will keep me from attending this affair Sunday I will in spirit join with the thousands of citizens in my district who are joining together in this testimonial to a fine priest, a good citizen, a man of dignity and inspiration, a leader of his people, a champion of liberty, and a fighter against oppression.

And so, to Archbishop Benjamin, this Congress could well say this day, "Godspeed and well done, good and faithful servant."

More and More African Students Are Learning Our College Ways

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. BRADEMAS. Mr. Speaker, unless the new African nations succeed in building cadres of able administrators, technicians, teachers, and other professionals, it is most unlikely they will achieve genuine and enduring independence. The experience of African students in the United States, therefore, can have a decisive influence on relations between the African nations and the United States. I wish, therefore, to call to the attention of the Members an excellent report on African students in this country written by George W. Oakes and published in the Washington Star on Sunday, March 19, 1961.

In this article Mr. Oakes observes that while great numbers of students in Africa are favorably disposed toward the United States and are eager to study here, they first encounter many problems of selection and transportation. Once here, they must then acclimate themselves if they are to profit fully from residence here and be able to make maximum contributions to the development of their countries on their return.

The article follows:

MORE AND MORE AFRICAN STUDENTS ARE LEARNING OUR COLLEGE WAYS

(By George W. Oakes)

The driving urge for higher education has caused recently a rapidly increasing number of African students—particularly those from the many new independent nations—to seek places in American universities.

As a result, Government officials and university educators are developing new methods and exploring new ideas so that these students will get the most value from their educational experience in this country.

Some 1,500 African students from countries south of the Sahara are now attending colleges and universities in the United States. Most are from English-speaking lands although the number coming from areas dominated by French culture is rising. The great preponderance of all these students come under private auspices, although many others receive financial aid from either their own or our Government.

Though there are probably still about four times as many African students in Great Britain, the swing is now in our direction.

Kenya with about 570 students has the largest group, followed by Nigeria with 480.

As the growth in the number of African students has almost kept pace with the ardent enthusiasm of many Americans in and out of Government to bring more over here, two interesting programs now under way reveal different approaches to the question of how the problem should be handled.

ON DEVELOPING STABILITY

The major consideration in bringing the Africans must be to help them prepare themselves to fill a useful and constructive role in the development and stability of their own countries.

The east African airlift, now in its second year, is an example of a forced-draft opera-

tion, given great stimulus and publicity by the energetic 30-year-old Kenya student and labor leader, Tom Mboya, also a member of the legislative council. The first group of 82 east Africans, whose average age is 23, is currently taking undergraduate courses mostly for 4 years in 52 large and small colleges in this country. Though meagerly financed, they have managed to get by in part due to aid from the African-American Institute.

The powerful urge of east African students for an American college education is summed up by a popular description to which they all aspire—a "been to." That is, each student wants to have it said that he has "been to" the United States. Not satisfied with the method followed in large part by the Kenya Government of providing college training for a small elite, Mboya has whipped up the popular desire for an American education. Consequently, last fall the second airlift brought 289 east African students to 145 American colleges.

To raise funds Mboya resorted to such devices as going out to the tribal reserves and arranging for livestock—cattle, chickens, goats and sheep—contributed by the natives, to be sold at public auction.

The pressure for information about American colleges was so great that prospective students, unable to obtain guidance, used college reference material in the U.S. Information Service Library. They then wrote directly to the colleges seeking admission. Some were helped to obtain scholarship offers through the African-American Institute. But many arrived without adequate means of support. Applicants for the airlift were selected not so much on the basis of qualifications as on the theory that those who had the least need should receive the most funds because they probably had worked hardest for the opportunity.

THE AIRLIFT RESOURCEFULNESS

Although it may be argued that these hit-or-miss procedures are not likely to locate the right student in the right college, the initiative, resourcefulness and drive which the students showed in getting here on the airlift are the very qualities that not only help to keep them afloat while in the United States but also will be those needed to cope with problems in their native countries on their return.

Nevertheless, critics of the airlift point out that this rather indiscriminate method of selection of both student and college runs the risk that many students will not be properly placed. Quite a few colleges, they point out, admit foreign students who are either not adequately qualified for, nor will find their needs fulfilled by, many courses of study. In addition, there is the danger that too many African students coming to American universities will seriously reduce the number of quality students needed for the development of local universities.

Another and more careful selection process aimed at bringing quality African students to this country has been established through the cooperation of the Nigerian Government and a group of leading American universities under the direction of Harvard Director of Admissions David D. Henry. Under this pilot program 23 Nigerian students, chosen in the field by a joint committee of Nigerian educators and American university representatives, are now studying here on 4-year undergraduate scholarships provided by such institutions as Harvard, Yale, Princeton, University of Minnesota, Stanford, as well as women's colleges like Bryn Mawr and Smith, on the basis of one student per college.

This approach of trying to place the right student in the college and curriculum best suited to his requirements is now being expanded to enable up to 200 men and women from a large number of both English- and possibly French-speaking African countries to enter next fall and in the 3 succeeding years 85 American universities including a few Negro colleges like Howard University. Students will come from Nigeria, Kenya, Tanganyika, Nyasaland, Southern and possibly Northern Rhodesia, Ghana, the Congo, and former French areas. The universities are offering free scholarships while the International Cooperation Administration will provide maintenance funds. The African-American Institute will administer the program in the field through a $100,000 grant from the Carnegie Corp.

The universities, operating on the principle that outstanding students taking a carefully selected course of study in our better institutions of higher learning will make the most useful contribution to the growth of their own countries, are sending out American admissions officers to sit in with African educators as selection committees.

The State Department through its educational exchange program, and to a greater extent the International Cooperation Administration also have been actively engaged in bringing such Sahara African students to this country.

FUNDAMENTAL ROLE

The ICA, which has the most funds for this purpose, gears its choice of grantees to its various developmental projects in which education as well as technical training plays a fundamental role.

During the current cademic year the ICA has brought over about 100 students in a rapidly expanding operation which began 8 years ago. The Sudanese illustrate the type of program most of these students follow during a 2-year stay. All are enrolled as undergraduates in institutions such as Massachusetts State Teachers College, Williamsport (Pa.) Technical Institute, and Stout State College in Wisconsin. The students have been chosen by Sudan officials working with ICA representatives in the field. After completing their education here, they will return to instruct teachers in education, vocational, and technical training in the Sudan.

Last month the first group of 23 Congo students arived for at least 18 months university study in economics, education, and engineering to prepare them to asusme responsible posts at home as teachers or government officials. In order to benefit from our college courses, these students have been taking an intensive English-language course at Georgetown University. Also they are being taught to use library facilities and even take lecture notes because many have only had a high-school education.

CONSTRUCTIVE SUGGESTIONS

Those who have worked closely with African students here as well as in the countries from which the students come and who are particularly interested that the students should have a profitable experience in this country offer the following suggestions:

1. Concentrate on quality of students but also keep increasing the numbers. Encourage most of them to take the four-year undergraduate course to have time to absorb the American experience.

2. Provide better sources of information and more competent personnel in each of the countries to direct students to the college best suited to his needs. For example, education attaches might be established in each African country. It's not so important for Africans to attend the best universities as those that meet individual requirements. President Nkrumah, who attended Lincoln University, might not have benefitted more from Harvard even if he could have been admitted in the opinion of one experienced worker with African students. Many less prominent colleges offer satisfactory training.

3. Establish a clearing-house where colleges can check credentials of students who apply independently.

4. Keeping in mind the fact that colleges will be under mounting pressure for entrance by American students and therefore there will be more competition for scholarships supply increased amounts of U.S. Government aid for Africans.

5. In this country co-ordinate the government student operation in State Department and ICA. In Africa work more closely with governments of the countries because most students will probably become government employees on their return.

6. Improve arrangements in this country for reception and treatment of African students, perhaps through Government aid to universities to increase, upgrade and expand the rule of the foreign student adviser.

7. Finally, put less stress on indoctrinating the Africans with the American point of view and trying to turn them into good American students and instead make every effort to train them properly to assume important posts in their own countries.

The President's Executive Order on Identical Bids

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1961

Mr. PATMAN. Mr. Speaker, on April 25, 1961, President Kennedy issued Executive Order No. 10936 requiring that Federal agencies report to the Attorney General all instances of identical bidding. This is an extremely important action and once again demonstrates this administration's determination to create an environment encouraging competitive behavior in American business.

In an effort to insure that this procedure will become permanent public policy, I introduced H.R. 4570. On April 25, 1961, I testified before the Government Operations Committee in behalf of this bill.

I would like to attempt briefly to clarify one point in connection with the likely impact of publicizing identical bids. There seems to be a question on the part of some persons genuinely interested in encouraging competition as to whether the mere act of publicizing identical bids will be of any help in eliminating conspiracy. Is it not likely, some ask, that would-be conspirators will simply use other techniques to avoid competition? True, the point could be made that to expose identical bidding would merely drive some conspirators to other devices such as submitting a range of bids and rotating the low bidder. However, this expectation misses an all-important point. If firms use other more sophisticated techniques, they have to engage in overt actions to develop and implement them. More sophisticated methods are also more complicated methods. The chief reason conspirators so frequently use the identical bid method of implementing conspiracy is its great simplicity. When it is used, authorities may suspect collusion but they have difficulty finding evidence of it. And under our judicial process proof of collusion is needed, not just suspicion.

However, to carry on a conspiracy to rotate bids in a seemingly random fashion requires more or less continuous meetings, correspondence, or other direct communication. This is the stuff out of which proof is made. The electrical machinery case provides abundant evidence on this score. In other words, if more complicated methods of conspiracy are employed, detection will be easier for both the law enforcement agencies and the top corporate executives who really wish to keep their corporate houses free of conspiracy.

For the information of my colleagues, I have requested permission to extend my remarks to include Executive Order No. 10936, and my prepared testimony on H.R. 4570:

[From the Federal Register, Apr. 26, 1961]

EXECUTIVE ORDER 10936—REPORTS OF IDENTICAL BIDS

Whereas it is in the interest of the United States to obtain truly competitive bids in connection with its procurement and sale of property and services pursuant to public invitations for bids and the prevalence of identical bidding is harmful to the effective functioning of a system of competitive bids;

Whereas identical bidding may constitute evidence of the existence of conspiracies to monopolize or restrain trade or commerce; and

Whereas the collection and dissemination of information with regard to identical bids submitted to the Federal Government will discourage future submissions of such bids, aid in the enforcement of the antitrust laws and the maintenance of a competitive economy and serve to reduce the costs of the Government.

Now, therefore, by virtue of the authority vested in my by the Constitution and statutes, and as President of the United States, I hereby order and direct:

1. Whenever, in connection with a procurement of property or services exceeding $10,000 in total amount and made pursuant to an advertisement or other public invitation for bids, a department, agency, or instrumentality of the Government shall hereafter receive two or more bids (a) which are identical as to unit price or total amount, or (b) which, after giving effect to discounts and all other relevant factors, the department, agency, or instrumentality shall consider to be identical as to unit price or total amount, then such department, agency, or instrumentality shall make a report of the bid proceedings to the Attorney General not later than 20 days following the award. Whenever two or more bids of the nature described in clauses (a) and (b) hereof are received in bid proceedings which result for any reason in the rejection of all bids and the total value of the property or services bid upon is estimated by the department, agency, or instrumentality to be in excess of $10,000, it shall make a report of such proceedings to the Attorney General not later than 20 days following the rejection. Notwithstanding the preceding provisions of this section, a report shall not be made of bid proceedings in which only foreign sources have participated and in connection with which delivery and performance is to take place outside the United States.

2. The reports required by section 1 shall be in a form prescribed by the Attorney General and shall include the following information or such other information as he may prescribe:

(a) The name and location of the particular component of the department, agency, or instrumentality which advertised for the bids;

(b) the amount and a description of the property or services for which bids were solicited, and the proposed date of delivery or performance;

(c) the date of opening of the bids; and

(d) the names and addresses of all bidders and as to the bid of each:

(1) the unit price and terms of discount, if any, together with a notation of the point of origin specified by the bidder and a statement whether freight and any other costs of transportation to the point of delivery are included or excluded; and

(2) in the case of an accepted bid identical, or considered to be identical, as to unit price or total amount with another, the method by which selected.

3. Whenever, in connection with a sale of property for more than $10,000 in total amount pursuant to an advertisement or other public invitation for bids, a department, agency, or instrumentality of the Government shall receive two or more bids, (a) which are identical as to unit price or total amount, or (b) which, after giving effect to all relevant factors, the department, agency, or instrumentality shall consider to be identical as to unit price or total amount, then such department, agency, or instrumentality shall make a report of the bid proceedings to the Attorney General not later than 20 days following the award to the purchaser. Whenever two or more bids of the nature described in clauses (a) and (b) hereof are received in bid proceedings which result for any reason in the rejection of all bids and the total sales value of the offered property is estimated by the department, agency, or instrumentality to be in excess of $10,000, it shall make a report of such proceedings to the Attorney General not later than 20 days following the rejection. The reports required by this section shall be in the form prescribed by the Attorney General and shall include information similar to that prescribed by section 2. Notwithstanding the preceding provisions of this section, a report shall not be made of bid proceedings in which only foreign sources have participated and in connection with which delivery and performance is to take place outside the United States.

4. The Attorney General is granted authority to establish reasonable exemptions and variations from the requirements of section 1 or of section 3 from time to time based upon his experience in connection with this order, including authority to take the following actions: (a) Exclude any category of property or services from the reporting requirements of section 1 or of section 3; and (b) increase or decrease the $10,000 limit prescribed in section 1 or in section 3.

5. The Attorney General shall consult with the Secretary of Defense, the Administrator of General Services and the heads of such other departments, agencies, and instrumentalities of the Government as he may deem advisable for the purpose of obtaining information in a feasible manner with regard to identical bidding in publicly advertised procurement and sale proceedings completed by these departments, agencies, and instrumentalities during periods prior to the date of execution of this order. The Secretary of Defense, the Administrator of General Services, and the other heads of departments, agencies, or instrumentalities consulted by the Attorney General shall cause the submission of reports to him in respect to such categories of these proceedings and for such periods as may be agreed upon. The reports shall conform to the requirements of section 2.

6. The Attorney General shall formulate and put into effect procedures whereby State and local governments are invited to transmit reports to him of identical bids received by such governments similar to the reports required by sections 1, 3, and 5.

7. From time to time, as he shall find suitable, the Attorney General shall make a report to the President consolidating the information he has received pursuant to this order, and he shall transmit copies thereof to the President of the Senate and the Speaker of the House of Representatives. However, there shall be excluded from such report any information submited by a department, agency, or instrumentality of the Government which it has requested to be withheld for reasons of national security.

8. The principal purpose of this order is to make more effective the enforcement of the antitrust laws by insuring that the Attorney General has at his disposal all information which may tend to establish the presence of a conspiracy in restraint of trade and which may warrant further investigation with a view to preferring civil or criminal charges. In exercising the discretionary authority granted under the provisions of this order, the Attorney General shall be mindful of this purpose and shall exercise such authority in a manner which insures that programs of reporting and analysis hereunder shall not by their magnitude interfere with his enforcement of those laws but instead shall contribute thereto. The heads of the departments, agencies, and instrumentalities of the Government shall cooperate with and aid the Attorney General in analyzing the data reported to him and shall make available to him to the fullest extent possible any facilities they may have which would expedite that work. In particular, they should bring to his attention any further information which, in their judgment, may constitute additional evidence of collusion among Government contractors.

9. The heads of the departments, agencies, and instrumentalities of the Government are directed to give particular attention to compliance with the provisions of 41 U.S.C. section 252(d) and 10 U.S.C. section 2305(d) requiring referral to the Attorney General of bids received in an advertised procurement proceeding which appear to them to evidence a violation of the antitrust laws. It is to be noted that the bids which must be referred to the Attorney General under those statutes as evidencing collusion include, although they are not limited to, identical bids. Nothing in this order shall be construed to mean that a report submitted hereunder to the Attorney General in connection with identical bids evidencing collusion in a procurement proceeding shall constitute a referral satisfying the requirements of those statutes or of the regulations issued pursuant thereto. Similarly, nothing in this order shall be construed to mean that a report submitted hereunder in connection with identical bids evidencing collusion in a sale proceeding shall satisfy the requirements of 40 U.S.C. section 488 in certain cases, or of the regulations issued pursuant to that statute, that specified information be supplied to the Attorney General for his use in considering the applicability of the antitrust laws to the sale.

JOHN F. KENNEDY.

THE WHITE HOUSE, *April 24, 1961.*

STATEMENT OF REPRESENTATIVE WRIGHT PATMAN, OF TEXAS, BEFORE COMMITTEE ON GOVERNMENT OPERATIONS, U.S. HOUSE OF REPRESENTATIVES, IN BEHALF OF H.R. 4570, APRIL 25, 1961

Mr. Chairman, I appreciate this opportunity to appear before this committee in behalf of H.R. 4570 which I introduced on February 20, 1961.

It is a fundamental premise of a competitive economy that business units make pricing decisions independently of one another. To tolerate collective action and collusion is to encourage the cartelization of American industry. I am sure that few Americans want such an economy. It not only extorts consumers but eliminates the competitive stick which encourages firms to operate efficiently and in the public interest.

GOVERNMENT PURCHASES ARE BIG BUSINESS

I introduced H.R. 4570 in an effort to protect the public interest in governmental purchases. The various units of Federal, State, and local government purchase vast amounts of goods and services. Last year the Federal Government purchased goods and services amounting to about $53 billion; State and local governments purchased goods and services amounting to $14.8 billion and $32.5 billion, respectively. In many industries Government procurement represents a large share of total purchases. The economic indicators gotten out by the Joint Economic Committee with the help of the Council of Economic Advisers in the White House discloses every month the magnitude of Government purchases. I think you will see that from 20 to 22 percent of the gross national product is represented in the Federal, State, and local governments.

Many of these goods and services are purchased through the competitive bid procedure. This is as it should be because it offers all sellers an equal opportunity to compete for governmental purchases and it prevents discriminatory procedures by procurement agents.

Information made available under H.R. 4570 would prove helpful in the enforcement of existing consent decrees and orders, as well as provide valuable indications of additional areas of possible violation of the law.

LOCAL GOVERNMENTS POWERLESS

Local governments are especially powerless to handle the problem of conspiracy leading to identical bidding. Mr. Ralph S. Locker, Cleveland's director of law, discussed this problem in the December 1960 issue of the Journal of the Cleveland Bar Association. As he put it, "Collusive bidding practices are a real and ever-present problem facing local, State, and Federal governments. On the Federal or State levels, the governmental units have at their disposal a large body of comparative figures that focus attention on instances when collusion among the bidders is likely to be present. Local governmental subdivisions usually lack the necessary investigative staff to make them aware of collusion among bidders."

I recommend the reading of this entire article and I submit a copy for the committee's interest.

IDENTICAL BIDS WOULD BE REPORTED

H.R. 4570 is designed to get at the sorts of problems I have mentioned. The bill would amend section 302 of the Federal Property and Administrative Services Act of 1949 to provide for public information and publicity concerning instances where competitors submit identical bids to public agencies for the sale or purchase of supplies, equipment, or services. The bill in no way changes the present antitrust laws. Specific requirements of the bill are as follows:

First. It requires the Federal agencies to report to the Attorney General all instances of identical bidding—not just those instances where the head of the agency or his subordinate thinks the antitrust laws may have been violated.

Second. The bill would require the Attorney General to institute a procedure whereby it is made known to the State and local governments that they are invited to make similar reports to the Attorney General.

Third. The bill would require the Attorney General to make a consolidated report of all of these instances of identical bidding, and to submit such report quarterly to the President of the Senate of the United States and to the Speaker of the House of Representatives.

The bill specifies the items of information to be reported.

It should be noted that when a public agency receives a batch of bids in which two or more of the bids are identical, it will then make a report giving the pertinent information for all the bids, not just those which are identical. It is well known that in some industries various firms submit bids to public agencies which are habitually and so inevitably identical in all details that the public agencies have set up lottery systems, such as putting the bidders' names in a rotary barrel, or into a hat, and drawing one at random. On the other hand, the competitors in the electric equipment manufacturers' case followed the not unusual practice of rotating the privilege of being low bidder on a particular bid, while the others all submitted identical bids.

Information which is to be reported includes, among other things, the names of the companies submitting the bids, the kind of equipment or supply for which the bid is submitted, the bid prices, and so on. The bill does not specify any date or any elapsed time within which the agencies must make their reports to the Attorney General. It is expected, of course, that these reports would be made promptly; and should some of the agencies become unreasonably laggard in submitting their reports, this fact will soon be revealed by the public report made by the Attorney General. Among the items to be reported are the date when the bids were opened and the name of the agency or bureau opening the bids.

The bill does not specify the form in which the Attorney General is to present his quarterly report. Rather, it leaves it up to the Attorney General to adopt a form which will present the information in a most orderly and useful way. I would imagine that the information would be arranged in such a way that all of the bids pertaining to a particular industry, or to a particular kind of commodity, would appear together in one section of the report. Further, I would hope that the report would be indexed to contain the names of all of the companies involved in the competitive bidding so that the reader can find from the index each and all of the instances in which a particular company has been involved in an identical bid situation.

Let me emphasize again that the bill does not amend any of the other antitrust laws. It does not provide any penalty for identical bids or make any presumption that such bids are illegal. It merely provides the public with information about the conduct of public business. In fact, the bill will require making public certain details about identical bidding which the public actually has a right to have in the case of all bids submitted to public agencies in pursuit of public business.

Since 1949 the Federal Property and Administrative Services Act has required the various Federal agencies to make a report to the Attorney General, giving the details of bids received under the advertised competitive bid procedure where in the opinion of the head of the agency there may have been a violation of the Federal antitrust laws. The Armed Forces Procurement Act of 1947 places a similar requirement on the heads of the defense agencies. But, of course, in practice purchases and contracts to purchase made by the defense agencies are made largely on the basis of negotiation, rather than on the basis of advertised competitive bidding.

Leaving the question of reporting or not reporting up to the various agencies, depending upon whether the department head thinks the antitrust laws may have been violated, naturally produces a law with some deficiencies. We may assume, I imagine, that only a fraction of the identical bids being received by the Federal agencies are ever reported to the Attorney General. In fact, I am told that in the first months after the law was passed, the various Federal departments flooded the Department of Justice with reports of identical bids. But as time went on and very little resulted, the departments largely quit making the reports.

IDENTICAL BIDDING WIDESPREAD

Even so, according to a study made by a university professor who is a noted expert in this field, the Department of Justice had received, by mid-1959, a total of no less than 10,000 reports on instances of identical bidding. This information comes from a paper by Prof. Vernon A. Mund, of the University of Washington, published in the Journal of Political Economy in April of 1960. I will insert Professor Mund's article at the end of my remarks, because it is most enlightening in several respects.

First, it contains a table, No. 1, which provides illustrations of identical bids received by the Federal departments. Second, and what is perhaps more useful, Professor Mund has also provided a table, No. 2, which gives similar information on competitive bids which are not identical.

So much has been said in recent times in defense of identical bidding that some of us may have overlooked the point that many busines competitors still manage to submit different bids in pursuit of a given piece of business, and give the public agencies an opportunity to purchase needed supplies and equipment at a low cost to the taxpayers.

Finally, Professor Mund's article should prove useful to the public procurement and antitrust enforcement agencies, as well as to the Federal courts. It provides some enlightened guidance on how to tell the difference between prices in a competitive market and prices which are artificially fixed or rigged.

CONGRESSIONAL ACTION NEEDED

The executive branch of government recently has taken firm steps toward striking down conspiracy and price rigging. The electrical equipment case, of course, is only the most dramatic example.

Recently some leading American businessmen also have expressed similar concern over illegal and immoral business conduct. Mr. Henry Ford, II, chairman of the board, Ford Motor Co., last week articulated this viewpoint when he said: "It would indeed be a said thing if the good will and confidence that business has laboriously built up over the years should now be washed away at this very critical juncture in our history." He said further: "No doubt there are those who will say that it is neither necessary nor wise for us to wash our business linen in public, that by talking about these things we will draw attention to them and, by so doing, foster the impression that things are much worse than they actually are. I don't agree."

The executive branch of government has acted to prevent undesirable business conduct. Responsible business leaders also are suggesting that steps be taken to put its house in order. I think the Congress should, whenever possible, also provide the tools with which to work on this problem. I offer H.R. 4570 as one tool which I think will be useful for this purpose. It will supplement the enforcement of our antitrust laws. It will help Federal, State, and local governments develop and follow more informed procurement policies. Finally, it will focus public attention on this critical matter. An alert, informed public may well be one of the strongest deterrents to this abuse.

The New Frontier: Government by Press Agent

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit the following statements taken from the April 26 and May 1, 1961, issues of Battle Line:

THE NEW FRONTIER: GOVERNMENT BY PRESS AGENT

At White House orders, the entire Federal Government and all of its officials are being turned into a big personal publicity machine for President Kennedy—financed by the taxpayers, of course.

The President is to be given personal credit for everything the Government does, and a Kennedy compassion mill is to be established.

While the curtains of secrecy fall in front of newsmen at the Pentagon, State Department, and elsewhere, a special White House meeting on how to promote the name of John F. Kennedy was called earlier this month.

All Cabinet departments were there, and they first were scolded for not doing more to get the President's name in the papers.

Then they were lectured on how to do it, and these instructions are now being circulated throughout the Government as official orders.

Here is the Commerce Department's version, reproduced in its entirety:

"APRIL 12, 1961.

"Memorandum for: Under Secretary Gudeman, Under Secretary Martin, Assistant Secretary Burnstan, Assistant Secretary Price, General Counsel Giles, Executive Assistant Johnston, Special Assistant Ruder, Assistant to Under Secretary—John Stillman, Special Assistant Bookbinder, Special Assistant McClellan, Special Assistant Black.

"From: Herbert W. Klotz, special assistant to the Secretary.

"At a White House meeting of Cabinet assistants, we have been advised again that speeches of Cabinet and sub-Cabinet officers do not contain sufficient reference to the President and his personal interest in, and compassion with, the problems which face the Nation. Liberal quotations from his speeches, past or present, should be used.

"The above was not deemed to be a reflection on the speeches delivered by Commerce Department officials, but was in the nature of a general comment on all executive departments.

"It is also to be kept in mind that, in making announcements of local projects, the President should be given a credit line in the lead paragraph.

"Attached are copies for offices and bureaus under your jurisdiction. Should you desire copies for others, please let us know.

"cc: Acting Commissioner, Century 21 Exposition; Director of Field Services; Director of Personnel; Maritime Administrator; Director, Weather Bureau; Director, BFC; Director, OITF; Acting Administrator, BDSA; Director of Bureau of the Census; Commissioner of Patents; Director, National Bureau of Standards."

It is understandable that the administration should seek to divert attention from the recent disasters in foreign policy, and the glaring lack of public support for the Kennedy domestic program, but putting the entire Government to work creating a puffed-up publicity image of one man is unprecedented in American history.

Robert Kennedy is well established as "Little Brother" and this White House propaganda order seems designed to make the President a "Big Brother," as in George Orwell's novel, "1984."

One can imagine how press releases are going to sound from here on in:

"Because of his unbounding compassion, President John F. Kennedy—who said at New York on October 12 that 'America must move forward'—has approved release of $19.67 to finance the U.S. share of a refund of a toll highway overcharge, Secretary of Commerce Luther Hodges, named to the Cabinet by a compassionate John F. Kennedy on November 25, 1960, announced today. Hodges praised the action as illustrative of the great compassion President John F. Kennedy has for those who must pay toll charges."

ANOTHER SECRET ORDER FOR J.F.K.'S PUBLICITY MACHINE

Another secret can now be released—President Kennedy wants to take full credit for all the public works done in the country.

Last week, Battle Line rent the veil of official censorship to reveal, through a confidential Commerce Department memo, that orders were out from the White House Government-wide to glorify the President in every lead paragraph of every official announcement.

Pierre Salinger, the White House press secretary, flatly denied this, saying it was "incorrect."

Now, Secretary of the Interior Udall, who never lets his mouth know what his left foot is doing, proves Salinger was 100 percent careless with the truth.

Complaining that credit for award of a contract on Yellowtail Dam, for which Congress appropriated funds, was almost lost, a memo from Udall's office states that the White House can make "considerable mileage" if it has 48 hours advance notice of "news developments within the Department of Interior."

This memo not only demonstrates how Salinger misleads the public and the press. It shows that, while tightly censoring legitimate news, a concerted attempt is being made to feed out propaganda to glorify President Kennedy.

The full text of this new "praise Kennedy" memo, signed by Udall's personal assistant, reads as follows:

THE SECRETARY OF THE INTERIOR,
Washington, D.C., April 24, 1961.

To All Members of the Secretariat, and Mr. Floyd E. Dominy, Mr. Conrad L. Wirth, Mr. Karl S. Landstrom:

Occurrences in the past few days have made it quite clear that we are not following through satisfactorily on providing advance notice to the White House on news developments within the Department of Interior, particularly important contract awards.

The Yellowtail Dam contract award of $39 million got away through no fault of ours, but in view of what happened on the Florida contract indicates that we might have slipped up on Yellowtail as well, if someone else hadn't done it.

It is mandatory that we give the White House 48 hours' notice before we announce contracts of this sort. It is not enough to send a draft press release to Pierre Salinger's office. We must also notify Lawrence O'Brien. On the Florida matter, for example, a press release went to the White House Friday, but O'Brien's office was not notified, when considerable mileage could have been made by giving the White House a chance before the weekend of notifying interested Members of Congress.

Please, without fail, give this office an extra copy of any proposed news release covering announcements of this type at least 48 hours in advance, and we will see that they are delivered to Mr. O'Brien.

The Secretary has asked me to follow through on this.

ORREN BEATY,
Assistant to the Secretary.

Right Way To Intervene

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. RHODES of Pennsylvania. Mr. Speaker, the passage by the House of Representatives of the administration's mutual security bill for Latin American aid has won the approval of one of the leading Pennsylvania newspapers.

Under leave to extend my remarks, Mr. Speaker, I include herewith an editorial from Monday's issue of the Harrisburg Patriot:

RIGHT WAY TO INTERVENE

Now that the House of Representatives has approved the $600 million requested by President Kennedy for a long-term aid program for Latin America, the Senate should take similar action with little delay.

This is part of the President's alliance for progress, designed to erase communism and violent revolution from the hemisphere by offering Latin America practical proof that democracy can do the job better than dictatorship.

The program isn't new. It was initiated last year by President Eisenhower. Its need was eloquently stated in 1958 by President Kubitschek of Brazil, one of the chief architects of the comprehensive inter-American social and economic plan envisaged in Operation Pan American.

The alliance for progress is spurred by the crisis in Cuba. The $600 million measure has been termed the "Castro bill."

Certainly the explosion in Cuba and the accompanying threat of Communist infiltration throughout Latin America dramatically illustrates the urgent need to get down to brass tacks and do something about our deteriorating southern neighborhood. When as determined an opponent of foreign aid as Representative PASSMAN, of Louisiana, concedes the necessity for the bill, the sands really must be running out.

Nevertheless it would be foolish to look upon this program merely as a move to spite and frustrate Castro and the Kremlin.

Latin America not only is our neighbor, it is among our best markets. It could become a showplace of democracy and a living proof that the cry of Yankee exploitation in Latin America is fraudulent.

A program of long-term assistance and cooperation would be necessary and right even if no Communist threat existed. While the Communists use unrest and upheaval to advance their cause, they didn't invent or create the conditions that have driven Latin Americans to the edge of despair.

Illiteracy averages 43 percent throughout Latin America. In parts it is as high as 90 percent. Life expectancy is 46 years. The average per capita income is $280 a year. In Guatemala, two-tenths of 1 percent of landowners own 40 percent of the farmland. Infant mortality is 110 per 1,000 live births.

Some 80 percent of the people live in substandard dwellings.

The United States, of course, has poured a great deal of aid into Latin America in the past. But, as Representative WALTER JUDD has pointed out:

"Some of it has not been too productive because some of those countries have not seen the necessity of making certain essential changes in their own laws, in their tax structures, in land tenure and in legal procedure without which, significant improvement is not possible."

President Kennedy has stressed the self-help theme in the alliance for progress. He has made clear that U.S. aid must be matched by Latin American efforts to ensure that the assistance benefits all the people instead of making the rich richer.

The United States, the President has said, does not oppose revolutions. It welcomes them. The long-term aid program for Latin America could channel the revolutions to the south of us along peaceful and constructive courses.

This is the only kind of intervention that can defeat despotism of the right and the left in our hemisphere decisively and lastingly.

Views of a Latin American Statesman

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1961

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD a very timely address by a distinguished Latin American statesman, Dr. Ezequiel Padilla, who was Minister of Foreign Affairs of Mexico during World War II. Dr. Padilla delivered this address in commemoration of the Day of the Americas before the Pan American Society of the United States on April 14, 1961, at the Waldorf Astoria Hotel in New York City.

In view of current developments and discussions in regard to Latin America and U.S. policy and plans concerning the Western Hemisphere, I believe that the views of a capable and experienced Latin American statesman should be of great value at this time. I commend Dr. Padilla's address to the attention of my colleagues:

ADDRESS OF DR. EZEQUIEL PADILLA

In 1942 I had the honor of addressing this same assembly, at that time deeply moved by the gravest news of the war. It was the romantic era of continental solidarity. I am now directing this message to an America, torn by disunion, gazing with alarm through fissures opened by conspiracy and discord, as the enemies of the loftiest aspirations of our continent penetrate like wolves in the night.

We must never forget that America belongs to Western Christian civilization. More than 150 years ago each one of our nations conquered through blood and fire its independence in order to dedicate it to liberty and to the preservation of the inalienable rights of man.

How different this tradition is from that of the Eastern nations. By a strange coincidence there appeared during the sixth century before Christ, Buddha, Confucius, and Lao-tse in the East, at the same time as the Ionic philosophers and the fraternity of Pythagoras in the West. In this bifurcation of destinies the Orient remained sterile in its millenial slavery without knowing how to grasp from the inspired pages of their teachers neither rules for the progress of its multitudes, nor the divine spark for the human soul. Terror darkened the history of Asia. Its uninterrupted current of historical events so full of cruelty, hunger, and tyranny explains why China, the oldest civilization of the world—notwithstanding that it had already conquered its independence—so easily surrendered to the communistic imperialism without God, without liberty and without spirit.

Western civilization, on the other hand, signifies an ascent toward dignity, toward law, toward God. In defiance of all storms, falling and rising again, it has safeguarded the heritages of Greece, Rome, the Renaissance, and the great revolutions of Europe and America. And today, during this great conflict in which definite responsibilities have been placed upon us, the triumph of the free world will represent the consecration of the highest values, not only of the Western soul, but of all mankind.

Many outstanding minds allow themselves to be deceived by the material progress of Russia and of China. They do not detect the true reality of our times. In Mexico City, in the depths of Africa; in the Nile or in Tokyo, modern technology is constructing marvelous buildings. Neither China nor Russia build anything as a whole which is superior to that being constructed by the United States, Canada, Japan, England, Italy, France, or Germany.

Material progress is not the exclusive patrimony of a system; it is the product of a new science; of the magic power which man has won over nature.

In the ideological conflict which we are now undergoing, the enigma is not who possesses the power to construct. Science has that power, and science is within the reach of all. The enigma to which man must reply is this: Who should be responsible for the handling of these constructive forces? The people or the tyrants? Democracy or dictatorship? Castro Ruz or the people of Cuba? The dignity of the spirit or the terror of bureaucracies?

It is said that Latin America is undermined by communism. And it is true. But among the Latin American peoples there is no communism; what we find is hunger, tyranny, and corruption. If each time these people rise to claim their rights they are going to be accused of communism, then we are getting off the road. It is evident that hunger, corruption, and tyranny are fertile fields in which to unleash chaos. For that reason we must speed up the march.

President Kennedy has launched a new pan-American economic policy and makes an appeal for the assistance of Latin America. Of course, the first contribution will be the acknowledgment that many errors have been committed.

After long neglecting Latin America, whose behavior during the last war was exemplary, the United States has been pouring substantial contributions upon the Latin American governments, contributions which were frequently ill used, were not dedicated to the salvation of their peoples, but to consolidate dictatorships and to create fantastic fortunes for leaders and privileged groups.

It is therefore urgent that the new economic policy be the direct ally of the new youth which each year emerges in increasingly alarming proportions, without opportunities for employment or available capital, anxious to create for itself independent and livable homes. Translated into action this means agrarian development, the construction of popular homes, the extension of credits to prepared youth; incentives for national and foreign investment of private capital, stimulus to inter-American trade, in order to achieve cordial economic interdependence, implemented with the resources of powerful international organizations.

Upon extending its cooperation, the United States would improve its moral position by not demanding selfish advantages, or strengthening monopolies repudiated by Latin America. There is one demand which the United States has the indisputable right to make and that is a cordial solidarity in the common defense of the continent. We ought to respect our international agreements. A straightforward alliance, free from duplicity, should be established.

We must awaken to the fact that the privations and the sufferings of the Latin American masses are not the products of a sick imagination. They represent dire realities. Their economic insecurity, their everyday heart-rendering misery demonstrated by mountains of sombre evidences, ask not for political opportunism, rather, for the deepest sincerity.

Latin America, divided within itself, thrashed by poverty, without capital, without technical assistance, has no other alternative but to fall a victim of Communist infiltration—as Cuba has fallen—in disorder, violence, chaos, and desolation; or the development of a surging, potent economy, of a just distribution of wealth through the cordial cooperation not only with the United States, but also with the inclusion of the wonderful nation of Canada.

Nothing obstructs our way if we are careful to avoid falling in the enemy's trap. There is a truth that no maneuver may tarnish.

In this crucial hour of humanity, the United States, as leader of the free world, defends at the tremendous cost of lives and wealth, the same cause of liberty and rights that our nations have defended in the course of our independent history. To live in dignity, to pray without fear at our own altars, to fight justice without surrendering to tyranny the treasure of our high spiritual values; this is the cause of our united democracies. It is the cause by which all our American peoples have fought and died. For this reason, for our Latin American nations in this hour of grave dangers, neutrality is not neutrality, it is an alliance with the enemy. The formidable Russian feat launching the first human traveler into space, which all the world applauds heartily, dramatizes even more the urgency to keep our continent united.

Surely, liberty is worth nothing without justice. We are at the beginning of a crusade which our countries have been dreaming of for centuries. But this crusade needs not only capital and science. It requires the decision of our countries to create, in a climate of liberty and righteousness, the fundamental conditions of material success in our economic policy. It is imperative that our nations carry out through their own efforts an improvement of institutional life toward a distributive justice and democratic rights. Some of our nations—and I would point to Mexico as a pioneer—are fighting resolutely for the achievement of social justice. But throughout great areas, our peoples are still living within an economy of landed gentry exploiting the workers with the pay of slaves. In some of our nations, large estates still exist as survivals of a feudal system.

In others industrialization is being developed not under the rules of the capitalism of the people, but with privileges which illustrate the unfair distribution of wealth. Usury as a rule smothers out the finest inspiration and best efforts of youth.

There exists only one economic system for obtaining social justice and creating abundance, and that is the increase of productivity. If this productivity is to depend upon private enterprise, then it must have an atmosphere of stimulation and safety; if private initiative is treated with arrogance and hostility, it cannot flourish. Neither will it be able to develop unless administrative corruption is rooted out.

Free enterprise is a guarantee of demo-

cratic liberties and of stimulus toward success in business. However, when private enterprise cannot or will not fulfill its economic mission, then the state must take over. And this is how democratic states sometimes assume a mixed system of economic action; but always under democratic control. The Communist system that destroys all the high values of life, has two guarantees against corruption: the suppression of private property, which hinders the accumulation of personal wealth, and the most severe punishment for incompetence. For these reasons, its material progress is great.

The only guarantee of the nations of the free world consists of the real freedom of the people to control the administrative life of the State. Where there are no liberties, as it occurs in some of our Latin American countries, state enterprise turns out to be irresponsible, and corruption, absolute. Daily the state acquires more power; the people, therefore, feel a daily need for additional strength.

For this reason, President Kennedy's economic plan of aid to other countries has revived hopes which are increasing in a rising tide of optimism. This plan rests on the principle of bringing the people out of poverty and on a rising conquest of democratic liberties—two profound desires of man and particularly of the Latin American nations. The President of Mexico said recently: "To be able to achieve the goals of social justice based on abundance and prosperity within a democratic society is a primary end of the people and of the state."

This collective action of the continent should be fulfilled with the magnitude in which the Marshall plan was carried out. In a decade, Europe emerged from a rubbish heap to attain economic grandeur. America cannot miss this example if united it resolves to construct a continent of well-being and liberties. A half-performed action will be a disillusion and a failure because then discontent and conspiracy shall win the race.

A real mystic of authentic American brotherhood must be created. We have to answer to the powerful world propaganda of communism, with deeds that win the minds and hearts of America. With a spirit disposed toward fraternity, since in spite of discrepancies we are a family of nations; with open arms extended to all our peoples, this policy shall rest on the self-determination and the sovereignty of each country. It is a movement of persuasion directed to the hearts of the peoples and to the responsibility of the statesmen. He who does not wish to unite his efforts and his enthusiasm in this luminous adventure shall withdraw without having anyone upbraid him, save his own conscience.

There will be disagreements; but this should not stop the move for liberation. Western civilization has advanced in this manner, by achieving goals. This crusade will be carried out by those nations which have faith in the free destiny of man, secure in the knowledge, as I stated 18 years ago in Rio de Janeiro, that "The constellations are formed with the march of the night."

Defense Before Politics

EXTENSION OF REMARKS
OF
HON. WILLIAM S. BROOMFIELD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. BROOMFIELD. Mr. Speaker, the Secretary of Defense, the Honorable Robert S. McNamara, has taken a thoughtful and courageous stand. In his address before the Associated Press annual luncheon he announced that the changing requirements and demands of an unchallengeable National Military Establishment will necessarily cause frequent and large-scale shifts in Defense programing.

We all realize that these shifts will cause setbacks to certain enterprises, localities, and States. It is only natural that each of us will be interested in those shifts which most affect the people and areas with which we are best acquainted. It is only natural that our sympathies will be most aroused for the people with whom long and fond associations have fostered mutual respect and friendship. It is only natural that each of us has a great concern for the areas we call home. But at the same time we all acknowledge the even greater loyalty that we in Congress share equally with every American, the overriding loyalty of our Nation. In times as perilous as these all good citizens must applaud the forthright, honest decision of Secretary McNamara.

Simply stated, the Secretary has said:

The welfare and defense of our great country must come first and foremost with every American.

The distinguished lady from Maine, Senator SMITH, has already set an example in this regard which we can admire and emulate.

I believe it would benefit everyone to read the editorial from the New York Herald Tribune of April 26, 1961, which briefly covers this important aspect of Secretary McNamara's vital defense program. It is entitled "Defense Before Politics," and I wish to include it in the RECORD following these remarks:

DEFENSE BEFORE POLITICS

Defense Secretary McNamara had some pointed things to say at the Associated Press luncheon.

Defense programs, he said, are going to keep on changing—in fact, shifts will increase both in size and in frequency. As this happens some companies, some communities, some States, are going to be hit by loss of defense business or closing of military facilities. But "we cannot afford to modify these decisions to accommodate local or private interests, no matter how legitimate."

Taking note of local and private pressures, he warned that "our decisions, once taken, will not be subject to reversal, except for changes in the facts on which they were based originally."

This is tough, plain talk, and a sound policy. Whether it can be maintained depends partly on what kind of support the Secretary gets, from local editors no less than from local politicians.

A few weeks ago Senator MARGARET CHASE SMITH, of Maine, set a noteworthy example of putting the national interest first. Notified that a Snark base at Presque Isle, Maine, would be closed, she rose the same day on the Senate floor. "The far easier course for me to pursue politically," she said, "would be to demand that the outmoded Snark program be continued, so that the Presque Isle Air Force Base be kept operating, to aid the economy of the area and to avoid the impact and dislocation that its closing is bound to have on the economy of this area.

"But in all good conscience," she added, "I cannot do this, for this would simply be playing politics with our national security, our national defense, and our taxpayer's dollar."

Let Senator SMITH's latest declaration of conscience govern the conduct of her fellow Senators.

B'nai B'rith—A Vibrant Organization

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. SANTANGELO. Mr. Speaker, on April 20 many Congressmen expressed their congratulations and best wishes to the State of Israel on its 13th anniversary. Throughout our land many functions took place in which people of Jewish faith reaffirmed their loyalty to these United States and expressed their good will toward the State of Israel. Many organizations have continually worked for a better understanding between ethnic, racial and religious groups, and among the foremost is the B'nai B'rith. This organization, which is sensitive to discrimination and uses its legal talent and moral force to bring about the principles of equality promised us in our Declaration of Independence, is very active in my congressional district. It has always been a force for good.

On April 20 the induction of the newly elected officers of the Yorkville B'nai B'rith took place at the Hotel Croydon, New York City. Two of my dear friends were installed as officers. Max Feigin, my administrative assistant, was installed as president, and Philip Wagner, counsel of the Securities and Exchange Commission, was elected as first vice president. The remarks of Mr. Feigin are truly American in spirit and demonstrate a yearning of understanding of brotherhood which we in these parlous times seek. I believe that Mr. Feigin's acceptance speech upon his installation is timely and well worth reading. His speech follows:

ADDRESS OF MR. MAX FEIGIN

I am delighted at the opportunity of serving as president. I hope I shall not fail your expectations or my own. I do not intend to.

Yet the success of an organization does not depend alone upon the president. You as members cannot sit back and expect to be entertained or sit impatiently for a meeting to end in order to socialize. As members of B'nai B'rith you do not fulfill your obligations or your potentialities to help merely by paying dues—no matter how welcome that may be.

A president may perhaps inspire, or guide or lead, but membership too must reciprocate or sometimes even initiate such inspiration or guidance.

All of you have a wonderful opportunity, living and working in Yorkville, to bring members of our ethnic group into B'nai B'rith. The last few years have witnessed a large influx of Jewish people—both young and old—into our area. All of you ought to avail yourselves of this opportunity of reminding these newcomers of the need for B'nai B'rith, of the need for a common gathering of our people.

There is nothing basically wrong in making an appeal to persons of the Jewish faith to join together. This is not a repudiation

of the doctrine which I continually espouse that we are each our brothers keeper. We have a right to respect our traditions while respecting the traditions of others.

We have probably drawn closer together in the last two decades than at any other time in the history of the Jewish people, motivated by common fears, deeply touched by the suffering and heroism of Jewish people in other lands, and proud of the birth of a new republic.

There is nothing wrong in our sympathetic kinship with Israel—remembering however that as Americans our loyalties are first, last, and always with the United States of America.

For here in our country the Jewish people have advanced more rapidly on the social and economic scale than any other minority group in any place in the world.

This has been true not only because of our own capabilities, not only because of the American atmosphere of fair play and equality—despite the rabble rousers—but because we have clung tenaciously to group survival despite the great assimilative forces of American life, and as a group have fought for our rights as individuals.

In safeguarding our traditions and rights through organizations like B'nai B'rith we ought never to forget that other ethnic groups have not fared as well as we and that the Jewish traditions of sympathy and fairplay must extend to Negroes and Puerto Ricans and Catholics and all others.

What is remarkable in our country is that in the midst of so many tensions there should be so striking a measure of success in living together.

But the gains we have achieved—the gains that are yet to come—must be safeguarded through organizations like B'nai B'rith, for in safeguarding our rights as individuals we surely help the great American dream of equality of opportunity for everyone and the world dream of eternal peace.

I ask all of you therefore to join me in revitalizing our lodge—I ask you to join with me in participating in the many activities we plan.

I ask you to be a conscious and active member.

I shall do my part to the best of my ability.

Tribute to Retiring Publisher Arthur Hays Sulzberger and Editorial Page Editor Charles Merz, of the New York Times

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. LINDSAY. Mr. Speaker, I rise today to pay tribute to a great newspaper, the New York Times, on the occasion of a major change in its top executive command.

Arthur Hays Sulzberger has been a distinguished publisher of this distinguished newspaper and it is fitting that we take due notice of his major contribution to American journalism on the occasion of his retirement. I am pleased to note that Mr. Sulzberger will continue to serve as chairman of the board of the New York Times.

Mr. Sulzberger's successor as publisher is Mr. Orvil E. Dryfoos, who is president of the New York Times Co., and who has been with the Times since 1942. Mr. Dryfoos' outstanding career as a journalist guarantees that the high standards which have made the Times one of the world's great newspapers will be maintained.

I am also pleased to note that Mr. John B. Oakes, a member of the Times staff since 1946, has been appointed as editorial page editor. Mr. Oakes succeeds Charles Merz, editor since 1938, who now becomes editor emeritus.

I should like at this time, Mr. Speaker, to pay warm tribute to Arthur Hays Sulzberger and Charles Merz on the occasion of their retirement from distinguished careers in American journalism.

My heartiest congratulations go to their successors, Orvil E. Dryfoos and John B. Oakes, who can be counted upon to sustain the illustrious tradition of the New York Times.

The people of the 17th District of New York, and I as their Representative in Congress, take great pride in the New York Times as one of the great and authoritative newspapers of the world.

Politics a Key Factor in Defense Transfers

EXTENSION OF REMARKS
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kansas City Star of April 29. It hits a well-known nail on the head. I think my colleagues will be interested in it:

POLITICS A KEY FACTOR IN DEFENSE TRANSFERS

Now there is a striking illustration in Washington of the varying reactions to proposed shift in defense installations from one State to another.

Not a peep came from the chairman of the House Armed Services Committee when the Kennedy administration recently decided to move an important naval air unit from Olathe, Kans., to Glynco, Ga. Presumably, the committee chairman Representative CARL VINSON, was pleased by the plan. He hails from Georgia, the beneficiary of the proposed move. Moreover, VINSON is very much the leader of his State's delegation in the House, where he is the senior Member after Speaker SAM RAYBURN.

Because of his great power, VINSON was recently asked to intervene in a fight being made by another Democratic Congressman, Representative SIDNEY R. YATES, to keep the Army's food processing plant in Chicago. VINSON expressed his concern and asked the Secretary of the Army for a complete review of a decision to move the food plant to Natick, Mass.

There may be sound military reasons for moving the plant to Massachusetts, just as there might be for the transfer that would benefit Georgia. But a hint of politics can be detected in both cases. Massachusetts happens to be the home State of the House majority leader, Representative JOHN W. MCCORMACK, as well as of the President of the United States.

We have noticed that States in which a President is particularly interested seem to have unusual luck in getting defense contracts and military activities. Certainly western Missouri fared better when Harry S. Truman was in the White House. And Denver became a major production center for missiles after Mr. Eisenhower started spending his presidential vacations in the Colorado City.

These could be mere coincidences. But it is human nature for Government officials to try to please a President. We don't expect VINSON to challenge the decision that would take payrolls and contracts to Georgia at the expense of Olathe and Greater Kansas City. His intervention for Chicago is a political horse of another color.

Naval Blockade of Cuba

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. STRATTON. Mr. Speaker, in my latest newsletter to my constituents I urged the imposition of a naval blockade of Cuba as the only effective method of preventing continued Soviet armaments from coming into the Western Hemisphere in violation of the Monroe Doctrine. Yesterday, I had the privilege of reading a thoughtful article in the U.S. News & World Report of May 8 which discussed this type of action in more detail, including both its advantages and its disadvantages.

Under leave to extend my remarks, I include the relevant portion of my newsletter, together with the text of the article from the U.S. News & World Report:

YOUR CONGRESSMAN, SAMUEL S. STRATTON, REPORTS FROM WASHINGTON, MAY 1, 1961

Cuban S.S.R.: Whatever may have been the setbacks resulting from the unsuccessful attempt of the Cuban rebels to establish a beachhead on the Castro-held mainland last week, there was at least one positive benefit, and that was the clear-cut revelation to the whole world of the complete conversion of Cuba into a Russian-dominated military base.

In fact, one of the major reasons for the failure of the ill-starred expedition appears to have been a lack of full information on the extent to which Cuba has been getting this Russian military equipment. Somehow, the pictures and stories of Soviet T-34 tanks on Cuban beaches and Russian Mig jet fighters strafing rebel troops has brought home to all of us the stark, blunt truth of what it means to have a Russian military base 90 miles away from home. Russian tanks and planes in Cuba jeopardize the security of the United States, violate the Monroe Doctrine, and threaten the security of every other Latin American republic.

Once the full extent of this Russian military penetration of Cuba was clear, President Kennedy announced we would take whatever action was appropriate to prevent this, even if we had to go it alone. But the Latin American republics who have been rather inclined to drag their feet on taking action against Castro also reacted swiftly last week by finally throwing Cuba off the Inter-American Defense Board. For years the United States had been trying to get these countries to exclude Castro's representative from secret military talks. But it took the

pictures of the Migs and the T-34 tanks to do the job. There is a new atmosphere of urgency in Washington this week. You can see it, for example, in the extensive efforts President Kennedy has made to enlist solid bipartisan support for his actions toward both Cuba and Laos, efforts, as I see it, which are being directed, by the way, toward support for future actions, not for those already past.

What the next move will be only time, of course, will tell. Personally, I think we ought to set up an immediate naval blockade of Cuba. We simply can't tolerate further Russian weapons, including the possibility of long-range nuclear missiles, being located in Cuba. Obviously, we can't stop them from coming in, however, just by talk. A naval blockade would be thoroughly in line with the Monroe Doctrine, would be a relatively simple operation to carry out, and would bring an abrupt end to Soviet penetration of our hemisphere.

[From U.S. News & World Report, May 8, 1961]

NEXT FOR CUBA: AN ARMS BLOCKADE?

Look at Castro now—cockier than ever, with arms and agents to threaten the Americas.

How can the United States act?

Blockade is one answer offered by experts. In it they see a way to isolate Cuba, stop infiltration, maybe finish Castro, too.

This is the question now facing President Kennedy: How to put a stop to the Soviet buildup in Cuba and to Communist infiltration of this hemisphere?

On April 25, the White House reported that a total embargo of remaining U.S. trade with Cuba was being considered. Its aim: To undermine further Cuba's economy, weaken Castro.

Another strategy—bolder and tougher—was also attracting notice in Washington: A naval and air blockade to cut Cuba off from the world, destroy Castro.

Blockade, in the view of military and civilian experts, could restore teeth to the Monroe Doctrine. It could halt a flood of Communist arms and strategic supplies now reaching Castro. It could stop Cuban reexport of guns and propaganda materials to South America. It would be the most severe reprisal, short of declared war, that the United States could invoke against Castro.

It is the strategy of blockade, therefore, that is suddenly at the center of attention of administration officials, Members of Congress, officers in the Pentagon. As a possible course of action, it also is the center of debate and is raising many questions. Among these questions:

WHAT WOULD A CUBA BLOCKADE TAKE?

Military experts say a tight naval blockade off Cuban ports and at the approaches to Cuban waters would require two naval task forces, each built around an aircraft carrier with a complement of about 100 planes and several destroyers.

The Navy, on April 25, announced it is is bringing back the carrier *Shangri-La* from the Mediterranean, increasing to four the number of attack carriers in the vicinity of Cuba. More than 36 other big Navy ships are no less than a day's sailing time away.

To round out the blockading force, submarines would be needed—to locate, identify and track approaching vessels. Land-based radar would help with this task. So would radar picket ships. A squadron of Navy jets and another of long-range patrol planes would add support to the carrier task forces.

Three requirements go with a blockade: It must be proclaimed; the blockading force must be powerful enough to enforce it; and it must be enforced without discrimination.

Once these conditions of international law are met, countries that try to run to blockade do so at their own risk. Blockade runners can be stopped—by gunfire, if necessary—searched and held, at least temporarily. They could be sent to U.S. ports for rulings whether cargo should be confiscated.

WHAT COULD A BLOCKADE ACCOMPLISH?

Plenty, say the experts. In a broad sense, it would reaffirm the Monroe Doctrine by opposing Communist interference in the Western Hemisphere. It could, by avoiding direct intervention, provide a short-of-war strategy to meet short-of-war infiltration.

Primary target would be shipments of tanks, guns, aviation gasoline and ammunition coming from Russia and Czechoslovakia. Shipments of arms from Western countries could similarly be seized as contraband. In a total blockade, action could also be taken against ships bringing in chemicals, oils, textiles, and even foodstuffs. At times, three ships a day from the Soviet bloc are unloading in Cuban ports. Castro's military machine and his economy could be squeezed as hard as the United States felt necessary to bring about his downfall.

To be totally effective, surface blockade must be acompanied by air blockade. Here, argument is heard. Some experts insist that all air traffic for Cuba would have to be diverted, forced to turn back or to land at designated friendly airfields. Those that pass U.S. ground checks could continue.

Other experts see this as risky business, creating danger of aerial duels and—if the Soviets wanted to press hard enough—the danger of war. These experts claim the risk is not worth it. They are convinced the Soviet bloc could not give substantial airlift support to Cuba, because of the long distances involved. They point out that, during the Berlin blockade, it cost the United States more than $200 million to airlift 1.2 million tons of supplies for short distances. A glance at a world map shows the limitations of a Soviet effort in the Caribbean.

WOULD THE UNITED STATES BE GOING IT ALONE?

Almost certainly, say the experts. They see no chance of either the United Nations or the Organization of American States lending approval to a peacetime blockade of a member state. Those who favor a blockade of Cuba are not deterred by this.

President Kennedy, as Commander in Chief of the Armed Forces, has the power to order the Navy into any action short of declared war, even though shots may be fired. Use of a carrier task force by President Eisenhower last November off Guatemala and Nicaragua was, in essence, a pacific blockade with orders to prevent the landing of armed forces and supplies from Cuba. Panama received similar U.S. naval help in 1959. In 1954, the Navy was alerted to search for a ship carrying arms to Guatemala.

BUT A PEACETIME BLOCKADE—IS THAT LEGAL?

A debate is now developing over just how far the United States can go in a blockade of Cuba, and stay within bounds of international law.

Basically, there are two kinds of blockade. One is the belligerent blockade that accompanies declared and open warfare. The United States has taken part in three major belligerent blockades—in the Civil War and in World Wars I and II. Belligerent blockades have been common in history and are governed by well-established "regulations."

Second type is the Pacific blockade, usually defined as a reprisal in time of peace, to block off trade. Pacific blockades are not recognized in a strict sense, but are accepted as acts against international delinquency. The British and French, for example, joined in establishing a Pacific blockade against the Dutch in 1831.

A Pacific blockade can be invoked without declaration of war, but some U.S. experts believe that any naval blockade without sanction of an international organization is an act of war. They say that it would depend entirely on how Cuba and Castro regard and interpret the action.

Main point that troubles the legalists is this: There is considerable doubt whether a Pacific blockade would give a clear right to stop any but Cuban and U.S. ships. The United States, for example, has argued in the past that a Pacific blockade cannot legally be applied against a third power. Under this interpretation. Soviet vessels must be allowed free access to Cuba if the United States is to pay strict regard to international law. This is important to those who want to make a blockade conform as closely as possible to precedent.

Others say this is a time to be practical and not legal. They see the situation boiling down to this: If the United States is determined to act first and argue later about the legal aspects, a blockade can be made effective.

The Ignored Remedy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 2, 1961

Mr. MULTER. Mr. Speaker, on May 1, 1961, I inserted in the RECORD an article entitled "Forgotten Remedy for the Voteless Negro," from the January 21, 1961, issue of the Nation. In the February 18 issue of the same publication the following comment appeared in the letters to the editor column. Assuming an interest on the part of our colleagues in the possible consequences of the enforcement of the discussed statute of 1872, I commend the item to the attention of our colleagues. It follows:

THE IGNORED STATUTE

DEAR SIRS: In the splendid article "Forgotten Remedy for the Voteless Negro" in your January 21 issue, the authors, Thomas I. Emerson and Arthur E. Bonfield, overlooked a very important matter. I made a study of the subject some 15 years ago; as a result, I suggested to Earl Warren, then Governor of California, that the State of California sue the State of South Carolina in the U.S. Supreme Court to have the number of Representatives of South Carolina reduced from six to one in conformity with the provisions of section 2 of the 14th amendment and the enforcing statute of 1872. At that time, it took 13 times as many electors to elect one Congressman in the State of Connecticut as it did in South Carolina, the two States having almost equal populations.

Messrs. Emerson and Bonfield, after quoting certain provisions of section 2 of the 14th amendment, say: "In addition to section 2 an almost unknown statute, originally framed in 1872 and still on the books, contains the same requirement." Later on they say: "Certainly advocates of civil rights should mount a full-scale effort to force Congress to honor the Constitutional mandate.

A close reading of section 2 of the 14th amendment and the statute of 1872 reveals that the former reduces the "basis of representation" and that the latter reduces the "representation" of any offending State, according to the same formula.

Congress has now power to change the basis of representation. It does have the power, and, indeed, the duty, to change the representation of an offending State in conformity with the mandate of section 2 of the 14th amendment. This Congress did by the

statute of 1872. Such was the sole purpose of that statute. In other words, Congress has honored the constitutional mandate.

It remains only for the courts, or a court, to apply and enforce the provisions of the statute. This no court can do unless and until proper action is brought before it for decision.

Congress has not failed to comply with this mandate. Nor has any court as yet failed to comply with it. The failure has been in a proper litigant instituting and forming a proper action in a court having jurisdiction.

There can be no doubt that the statute of 1872 is constitutional. Section 2 of the 14th amendment establishes its constitutionality, and Congress, by this statute, having expressly complied with the constitutional mandate, cannot, by implication, be said to have repealed that statute. That is, Congress cannot, by implication, withdraw its expressed compliance with that mandate. Indeed, it would seem that Congress cannot, even by expressed repeal, void the statute; that is, it cannot nullify its compliance with the mandate. To do so would be unconstitutional. Of course, Congress can enact further legislation in conformity with the mandate or, even without further legislation, the House of Representatives could enforce the statute of 1872.

Any action should be brought to apply and enforce the statute of 1872, not section 2 of the 14th amendment.

One other matter. The application and enforcement of this statute would benefit not only voteless Negro citizens, but voteless poor whites as well. There are more of the latter in the southern and border States than there are of the former, and this might very well turn the political complexion of the South from ultraconservative to mildly liberal and progressive. Not all at once, but in time, and in 3 years time can and does move very quickly.

WILLIAM F. CLEARY.

CHAPALA, JALISCO, MEXICO.

Military Personnel at California's Travis Air Force Base and Mather Air Force Base Commended

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. SHELLEY. Mr. Speaker, I would like to bring to your attention and to the attention of our colleagues a recent letter I received from a friend of mine, Mr. A. B. Anderson, of Volcano, Calif., which details the quick and humanitarian actions rendered by our military personnel located at Travis Air Force Base and Mather Air Force Base.

I am convinced that the quiet, efficient, and, in a real sense, heroic deed described below is the rule rather than the exception. It demonstrates that the dedication we expect of our uniformed men in wartime is as well expended and offered by them in any time of emergency. It is to Maj. Gen. Russell L. Waldron, base commander, Headquarters Western Transport Air Force, Travis Air Force Base; Maj. John D. Travis, 13th Air Medical Transport Squadron, Travis Air Force Base; Brig. Gen. Norman L. Callish, base commander, Mather Air Force Base, and to the other personnel involved that we owe our highest praise.

Under leave to extend my remarks, I submit the following letter:

JACKSON, CALIF., *April 12, 1961.*

Hon. JOHN F. SHELLEY,
Congressman, Fifth District, Calif., House of Representatives, Congress of the United States, Washington, D.C.

DEAR JACK: Because Travis Air Force Base and Mather Air Force Base are located in California, I want to inform you of an incident that is deserving of the highest commendation of the personnel involved.

A young 17-year-old married girl was critically burned with second- and third-degree burns over 70 percent of her body caused by a gasoline explosion and when brought to the Amador County Hospital there was little hope for her survival, as the hospital is not equipped to render the special care required in such cases.

I was contacted at 9:05 a.m. on April 5, 1961, by the chairman of the board of supervisors relative to the possibility of securing U.S. Air Force ambulance service to transport the patient to the John Sealy Hospital, Galveston, Tex., as this hospital has the facilities for treating such cases and the young girl is a resident of that State. After several contacts I finally was put in touch with Maj. John D. Travis, of the 13th Airo Medical Transport Squadron, Travis Air Force Base, and through him I was able to have this patient flown from Mather Field, Sacramento, Calif., to the hospital in Galveston, Tex., at 5 p.m. the same day.

The point I should like to bring out, JACK, is that every individual connected with this Air Force operation not only acted from a sense of duty, but from their hearts. Major Travis, after the situation was explained to him, took a personal burden upon himself to assure that this patient was moved as quickly as possible and kept in constant touch with me and the officials at Mather Field to expedite each step of the operation. The commanding officer of Mather Field sent an ambulance with an attendant to the hospital here to assist in this case. The next day Major Travis called me to inform me that the patient had arrived at her destination. In addition to the patient, transportation was furnished to her mother and her husband.

I have nothing but the highest praise for the U.S. Air Force, and especially Maj. John D. Travis, as I feel it was through him and his personal interest in this case that a life was saved.

While our U.S. Air Force is the finest in the world from a military standpoint, it also has its humanitarian side.

Sincerely,

A. B. ANDERSON.

Equality Now

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article from the February 4, 1961, issue of the Nation. The Reverend Martin Luther King here presents a lucid discussion and persuasive argument for the implementation of existing authority in helping the American Negro gain equality:

EQUALITY NOW

(By Martin Luther King, Jr.)

The new administration has the opportunity to be the first in one hundred years of American history to adopt a radically new approach to the question of civil rights. It must begin, however, with the firm conviction that the principle is no longer in doubt. The day is past for tolerating vicious and inhuman opposition on a subject which determines the lives of 20 million Americans. We are no longer discussing the wisdom of democracy over monarchism—and we would not permit hoodlum royalists to terrorize the streets of our major cities or the legislative halls of our States. We must decide that in a new era, there must be new thinking. If we fail to make this positive decision, an awakening world will conclude that we have become a fossil nation, morally and politically; and no floods of refrigerators, automobiles, or color TV sets will rejuvenate our image.

The second element in a new approach is the recognition by the Federal Government that it has sufficient power at its disposal to guide us through the changes ahead. The intolerably slow pace of civil rights is due at least as much to the limits which the Federal Government has imposed on its own actions as it is to the actions of the segregationist opposition.

If we examine the total of all judicial, executive and legislative acts of the past three decades and balance them against the sum needed to achieve fundamental change, two startling conclusions are inescapable. The first is the hopeless inadequacy of measures adopted—pitifully insufficient in scope and limited in conception. The second conclusion is even more disturbing. Federal action has been not only inadequate; viewed as a whole, it has also been self-nullifying. In 1954, the Supreme Court declared school segregation to be unconstitutional. Yet, since then Federal executive agencies and vast Federal legislative programs have given millions of dollars yearly to educational institutions which continue to violate the Supreme Court decision.

Further, the Federal Government collects taxes from all citizens, Negro and white, which it is constitutionally obligated to use for the benefit of all; yet, billions of these tax dollars have gone to support housing programs and hospital and airport construction in which discrimination is an open and notorious practice. Private firms which either totally exclude Negroes from the work force, or place them in discriminatory status, receive billions of dollars annually in Government contracts. The Federal Government permits elections and seats representatives in its legislative chambers in disregard of the fact that millions of Negro citizens have no vote. It directly employs millions in its various agencies and departments; yet its employment practices, especially in Southern States, are rife with discrimination.

These illustrations can be multiplied many times. The shocking fact is that while the Government moves sluggishly, and in patchwork fashion, to achieve equal rights for all citizens, in the daily conduct of its own massive economic and social activities it participates directly and indirectly in the denial of these rights. We must face the tragic fact that the Federal Government is the Nation's highest investor in segregation.

Therefore, a primary goal of a well-meaning administration should be a thorough examination of its own operations and the development of a rigorous program to wipe out immediately every vestige of Federal support and sponsorship of discrimination. Such a program would serve not only to attack the problem centrally, where results

can be produced, but collaterally to educate and influence the whole American populace, especially in the Deep South of massive resistance.. It would also be the first step in the evolution of Federal leadership to guide the entire Nation to its new democratic goals.

There is impressive precedent in recent history for massive governmental mobilization to create new conditions. As a consequence of economic crisis in the early thirties, the Federal Government, under the leadership of President Kennedy's party, undertook to change fundamental economic relationships. Every person in the Nation was affected. In a bewilderingly brief period, wages were regulated at new levels, unemployment insurance created, relief agencies set up, public works planned and executed. Regulatory legislation covering banking, the stock market, and money market was immediately enacted. Laws protecting trade-union organization were brought into being and administrative agencies to interpret and enforce the labor laws were created. Along with this broad assault on the depression went an educational campaign to facilitate the changes in public psychology requisite to the acceptance of such formidable alternatives to old thought patterns. The Nation which 5 years earlier viewed Federal intervention on any level as collectivism or socialism, in amazingly swift transition, supported the new role of Government as appropriate and justified.

These breathtaking, fundamental changes took place because a leadership emerged that was both determined and bold, that rejected inhibitions imposed by old traditions and habits. It utilized all agencies and organs of government in a massive drive to change a situation which imperiled the very existence of our society.

Viewed in this light, an administration with good will, sincerely besirious of eliminating discrimination from American life, could accomplish its goal by mobilizing the immense resources of the organs of government and throwing them into every area where the problem appears. There are at least three vital areas in which the President can work to bring about effective solutions.

First, there is the legislative area. The President could take the offensive, despite Southern opposition, by fighting for a really far-reaching legislative program. With resolute Presidential leadership, a majority in both Houses could be persuaded to pass meaningful laws. A determined majority-party leadership possesses the means to carry the reluctant along—and to hasten the end of the political careers, or the privileges, of those who prove unyielding. The influence the President can exert upon Congress when, with crusading zeal, he summons support from the Nation has been demonstrated more than once in the past.

An example of an area in which a vigorous President could significantly influence Congress is that of voter registration. The Civil Rights Commission has revealed that many Negro American citizens find it difficult, and often impossible, to vote. It went on to assert that these voting denials are accomplished through the creation of legal impediments, administrative obstacles and the fear of economic reprisal and physical harm. A truly decisive President would work passionately and unrelentingly to change these shameful conditions. He would take such a creative general proposal as that madé by the Civil Rights Commission of 1959 on Federal registrars to insure the right to vote, and would campaign on the Hill and across the Nation until Congress acted. He would also have the courage to insist that, in compliance with the 14th amendment, a State's representation in Congress be reduced in proportion to the number of citizens denied the right to vote because of race [see "Forgotten Remedy for the Voteless Negro," by Thomas I. Emerson and Arthur E. Bonfield, the Nation, January 21].

This approach would help us eliminate the defeatist psychology engendered by the alliance of Dixiecrats and Northern reactionaries in Congress. The same alliance, existing in even greater strength, failed in the past to stop legislation that altered patterns just as deeply imbedded in American mores as racial discrimination. It is leadership and determination that counts—and these have been lacking of recent years.

A second area in which the President can make a significant contribution toward the elimination of racial discrimination is that of moral persuasion. The President is the embodiment of the democratic personality of the Nation, both domestically and internationally. His own personal conduct influences and educates. If he were to make it known that he would not participate in any activities in which segregation exists, he would set a clear example for Americans everywhere, of every age, on a simple, easily understood level.

The calling of White House conferences of Negro and white leaders could be extremely useful. The President could serve the great purpose of opening the channels of communication between the races. Many white southerners who, for various reasons, fear to meet with Negro leaders in their own communities would participate unhesitatingly in a biracial conference called by the President.

It is appropriate to note here that, even in the hard core South, a small but growing number of whites are breaking with the old order. These people believe in the morality as well as the constitutionality of integration. Their still, small voices often go unheard amid the louder shouts of defiance, but they are active in the field. They often face problems of ostracism and isolation as a result of their stand. Their isolation and difficulties would be lessened if they were among the invitees to the White House to participate in a conference on desegregation.

No effort to list the President's opportunities to use the prestige of his office to further civil rights could be adequate; from fireside chats to appearances at major events, the list is endless. All that is needed at the outset is a firm resolve to make the Presidency a weapon for this democratic objective; the opportunities would then arise by themselves.

But beyond the legislative area and the employment of Presidential prestige, a weapon of overwhelming significance lies in the executive itself. It is no exaggeration to say that the President could give segregation its death blow through a stroke of the pen. The power inherent in Executive orders has never been exploited; its use in recent years has been microscopic in scope and timid in conception.

Historically, the executive has promulgated orders of extraordinary range and significance. The Emancipation Proclamation was an Executive order. The integration of the Armed Forces grew out of President Truman's Executive Order 8891. Executive orders could require the immediate end to all discrimination in any housing accommodations financed with Federal aid. Executive orders could prohibit any contractor dealing with any Federal agency from practicing discrimination in employment by requiring (a) cancellation of existing contracts, (b) and/or barring violators from bidding, (c) and/or calling in of Government loans of Federal funds extended to violators, (d) and/or requiring renegotiation of payment to exact financial penalties where violations appear after performance of a contract. With such effective penalties, enforcement of fair employment practices would become self-imposed by those enjoying billions of dollars in contracts with Federal agencies.

An Executive order could also bring an immediate end to the discriminatory employment policies of Federal agencies and departments. It is no secret that, despite statutes to the contrary, Negroes are almost totally excluded from skilled, clerical, and supervisory jobs in the Federal Government. A recent report of the President's Committee on Government Employment states "that there is discrimination in Federal employment is unquestionably true." A basic reason for this is that there have never been any sanctions imposed for violations of the law. In a real sense, a President can eliminate discrimination in Federal employment, just as it was eliminated in the military services, by setting up adequately staffed committees with authority to punish those who violate official Government policy from the inside.

We can easily see how an end to discriminatory practices in Federal agencies would have tremendous value in changing attitudes and behavior patterns. If, for instance, the law-enforcement personnel in the FBI were integrated, many persons who now defy Federal law might come under restraints from which they are presently free. If other law-enforcement agencies under the Treasury Department, such as the Internal Revenue Service, the Bureau of Narcotics, the Alcohol Tax Unit, the Secret Service, and Customs had an adequate number of field agents, investigators, and administrators who were Negro, there would be a greater respect for Negroes as well as the assurance that prejudicial behavior in these agencies toward citizens would cease.

Another area in which an Executive order can bring an end to a considerable amount of discrimination is that of health and hospitalization. Under the Hill-Burton Act, the Federal Government grants funds to the States for the construction of hospitals. Since this program began in 1948, more than $100 million a year has gone to the States in direct aid. The Government also makes grants to the States for mental health, maternal and child-care services, and for programs designed to control tuberculosis, cancer, and heart disease. In spite of this sizable Federal support, it is a known fact that most of the federally financed and approved health and hospitalization programs in the South are operated on a segregated basis. In many instances, the Southern Negroes are denied access to them altogether.

The President could wipe out these shameful conditions almost overnight by simply ordering his Secretary of Health, Education, and Welfare not to approve grants to States whose plans authorize segregation or denial of service on the basis of race. This type of sanction would bring even the most recalcitrant southerners into line.

There is hardly any area in which Executive leadership is needed more than in housing. Here the Negro confronts the most tragic expression of discrimination; he is consigned to ghettos and overcrowded conditions. And here the North is as guilty as the South.

Unfortunately, the Federal Government has participated directly and indirectly in the perpetuation of housing discrimination. Through the Federal Housing Administration (FHA), the Public Housing Administration (PHA), Urban Renewal Administration (URA), and the Veterans' Administration loan program, the Federal Government makes possible most of the building programs in the United States. Since its creation in 1934, the FHA alone has insured more than $33 billion in mortgages involving millions of homes. As a result of PHA programs, more than 2 million people presently live in more than 2,000 low-rent housing projects in 44 States and the District of Columbia. The URA, which was established in 1954 to help cities eliminate slum and blighted areas, has approved projects in more

than 877 localities. The GI bill of rights authorizes the Veterans' Administration to make loans outright to veterans for the construction of homes. This program has become so extensive that there have been years in which 30 percent of all new urban dwelling units were built with the help of VA loan guarantees.

While most of these housing programs have antidiscrimination clauses, they have done little to end segregated housing. It is a known fact that FHA continues to finance private developers who openly proclaim that none of their homes will be sold to Negroes. The urban renewal program has, in many instances, served to accentuate, even to initiate, segregated neighborhoods. (Since a large percentage of the people to be relocated are Negroes, they are more than likely to be relocated in segregated areas.)

A President seriously concerned about this problem could direct the Housing Administrator to require all participants in Federal housing programs to agree to a policy of open occupancy. Such a policy could be enforced by (a) making it mandatory for all violators to be excluded from future participation in federally financed housing programs and (b) by including a provision in each contract giving the Government the right to declare the entire mortgage debt due and payable upon breach of the agreement.

These are merely illustrations of acts possible of multiplication in many other fields.

Executive policy could reshape the practices and programs of other agencies and departments whose activities affect the welfare of millions. The Department of Health, Education, and Welfare could be directed to coordinate its resources to give special aid in those areas of the country where assistance might change local attitudes. The Department could give valuable assistance to local school boards without any additional legislative enactments.

The Department of Agriculture—which doubtless considers civil-rights issues as remote from its purview—could fruitfully reappraise its present operations with a view to taking certain steps that require no new legislative powers. The Department could be of tremendous assistance to Negro farmers who are now denied credit simply because of their desire to exercise their citizenship rights. To wipe out this kind of discrimination would be to transform the lives of hundreds of thousands of Negroes on the land. A department zealous to implement democratic ideals might become a source of security and help to struggling farmers rather than a symbol of hostility and discrimination on the Federal level.

A Justice Department that is imbued with a will to create justice has vast potential. The employment of powerful court orders, enforced by sizable numbers of Federal marshals, would restrain lawless elements now operating with inexcusable license. It should be remembered that in early American history it was the Federal marshal who restored law in frontier communities when local authority broke down.

In the opinion of many authorities Executive power, operating through the Attorney General, opens many hiterto untried avenues for Executive action in the field of school desegregation. There are existing laws under which the Attorney General could go into court and become a force in the current school struggles. Atrophy is not alone a medical phenomenon; it has its counterpart in social and political life. Long years of ignoring this area of law and Executive power have led, indeed, to atrophy; nothing is done, nothing is studied, though new situations arise constantly where existing laws could reasonably be utilized.

Space will not permit a spelling out of all the measures by which every Federal body could contribute to the enforcement of civil rights. This is the task of a master plan. Nor is it necessary to detail a legislative program, nor to list still unused powers inherent in the Judiciary. Justices J. Skelley Wright and W. A. Bootle, in Louisiana and Georgia, respectively, have given examples of the ability of a single Federal district judge to handle the unconstitutional maneuverings of State legislatures.

The purpose of this review is to emphasize that a recognition of the potentials of Federal power is a primary necessity if the fight for full racial equality is to be won. With it, however, must go another indispensable factor—the recognition by the Government of its moral obligation to solve the problem.

A recent visit to India revealed to me the vast opportunities open to a government determined to end discrimination. When it confronted the problem of centuries-old discrimination against the untouchables, India began its thinking at a point that we have not yet reached. Probing its moral responsibilities, it concluded that the country must atone for the immense injustices imposed upon the untouchables. It therefore made provision not alone for equality, but for special treatment to enable the victims of discrimination to leap the gap from backwardness to competence. Thus, millions of rupees are set aside each year to provide scholarships, financial grants, and special employment opportunities for the untouchables. To the argument that this is a new form of discrimination inflicted upon the majority population, the Indian people respond by saying that this is their way of atoning for the injustices and indignities heaped in the past upon their 70 million untouchable brothers.

Although discrimination has not yet been eliminated in India, the atmosphere there differs sharply from that in our country. In India, it is a crime punishable by imprisonment to practice discrimination against an untouchable. But even without this coercion, so successfully has the Government made the issue a matter of moral and ethical responsibility that no Government figure or political leader on any level would dare defend discriminatory practices. One could wish that we here in the United States had reached this level of morality.

To cordinate the widespread activities on the civil rights front, the President should appoint a Secretary of Integration. The appointee should be of the highest qualifications, free from partisan political obligations, imbued with the conviction that the Government of the most powerful nation on earth cannot lack the capacity to accomplish the rapid and complete solution to the problem of racial equality.

These proposals for Federal action do not obviate the necessity for the people themselves to act, of course. An administration of good faith can be strengthened immeasurably by determined popular action. This is the great value of the nonviolent direct-action movement that has engulfed the South. On the one hand, it gives large numbers of people a method of securing moral ends through moral means. On the other hand, it gives support and stimualtion of all those agencies which have the power to bring about meaningful change. Thousands of courageous students, sitting peacefully at lunch counters, can do more to arouse the administration to positive action than all of the verbal and written commentaries on governmental laxity put together.

When our Government determines to ally itself with those of its citizens who are crusading for their freedom within our borders, and lends the might of its resources creatively and unhesitatingly to the struggle, the blight of discrimination will begin rapidly to fade.

History has thrust upon the present administration an indescribably important destiny—to complete a process of democratization which our Nation has taken far too long to develop, but which is our most powerful weapon for earning world respect and emulation. How we deal with this crucial problem of racial discrimination will determine our moral health as individuals, our political health as a nation, our prestige as a leader of the free world. I can think of few better words for the guidance of the new administration than those which concluded the 1946 report of the President's Commission on Civil Rights: "The United States is not so strong, the final triumph of the democratic ideal not so inevitable that we can ignore what the world thinks of us or our record." These words are even more apt today than on the day they were written.

George E. Martin's Editorial Relative to Current Dual Rate Legislation

EXTENSION OF REMARKS
OF
HON. JOHN F. SHELLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 2, 1961

Mr. SHELLEY. Mr. Speaker, at this time I wish to bring to your attention and to the attention of my colleagues a thought-provoking editorial recently appearing in the Pacific Shipper relative to current dual rate legislation. I bring the thinking of George E. Martin, the distinguished editor and publisher of the Pacific Shipper, to the Members of Congress at the request of a number of individuals in San Francisco.

Under the able direction of George E. Martin, the Pacific Shipper enjoys a worldwide reputation as an authoritative and influential maritime publication. Because of this, Mr. Speaker, I am confident our colleagues will find this editorial stimulating reading:

EXTEND U.S. JURISPRUDENCE TO INTERNATIONAL COMMERCE?

The mistaken viewpoint of the Government (i.e., the Department of Justice and, possibly, Congress) toward the dual rate system in particular and oversea conferences in general is much the same, in some respects, as the attitude of many officeholders and politicians toward foreign trade. That is to say, they want to lay down the law, and that's that. They seem to think that international commerce can be treated as domestic commerce is treated.

Now the Government has the power to regulate domestic transport and does make a stab at it (whether successfully or not is not within the purview of this dissertation). Nothing comparable with respect to international trade or transport is possible. The United States cannot dictate to foreign-flag carriers except perhaps by denying them access to American ports, and if any such strategy were not circumvented by high-level diplomacy, its enforcement undoubtedly would bring retaliation that would hurt this country about as much as any other, and possibly more. Certainly it would calamitously disrupt world shipping. In any event, the likelihood is so remote that it may be taken as granted that the United States simply cannot dictate to the shipping of other nationals even to the etxent of their services to and from America.

In this partial vacuum of law, the steamship lines of all flags have to regulate them-

selves pretty much as they are able, and governmental interference, from whatever direction, is more apt to be hurtful than helpful. The United States goes about as far as custom will allow when it subsidizes U.S.-flag ships on certain of its most essential trade routes.

The steamship conference is the principal method of effecting self-regulation in oversea transport, and U.S. law recognizes the worth of conferences by exempting their members from the antitrust laws. No one pretends that the conference system is or has been perfect; (who thinks that Government regulation of internal transportation has been, either?). But it is a well-recognized fact that dual (contract/noncontract) rates have given oversea conferences their greatest stability and continuity. No doubt there have been instances of injustice, but nobody has yet come up with anything at once fairer and more effective.

Strangely enough, if the dual rate system were abolished (on the antitrust theory to which the United States adheres, whereas many other nations permit and even encourage cartels), the U.S.-flag carriers as a class would probably be the ones who would suffer the most. They have, by and large, and even in most cases after operating differential subsidies, the heaviest expenses. Indubitably they require consistently higher rates far more than does the shipping of some of the largest maritime powers—notably, and especially in the Pacific, the Japanese.

Yet the U.S. Government is the one that is pursuing the chimera of equal and uniform rates on international traffic, quite as though it had jurisdiction there. Perhaps it should leave these reforms to nations with greater maritime experience who might know better than to attempt them.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Gen. Douglas MacArthur—Soldier-Statesman

EXTENSION OF REMARKS
OF
HON. JOHN MARSHALL BUTLER
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Wednesday, May 3, 1961

Mr. BUTLER. Mr. President, the recent conference between President Kenney and Gen. Douglas MacArthur regarding the Cuban situation was in the best tradition of bipartisanship. Indeed, I could think of no better man than General MacArthur for the President to consult in this time of crisis. I recently made some remarks relative to the 10th anniversary of the general's historic speech before a joint session of Congress. I ask unanimous consent to have these remarks entitled "Gen. Douglas MacArthur, Soldier-Statesman," printed in the Appendix of the RECORD.

There being no objection the remarks were ordered to be printed in the Appendix of the RECORD, as follows:

GEN. DOUGLAS MACARTHUR, SOLDIER-STATESMAN

(Remarks by Hon. JOHN MARSHALL BUTLER, of Maryland)

Mr. President, it is with a great sense of pride for me to commemorate one of the greatest moments in the history of the United States, for it was 10 years ago today that a joint session of Congress had the honor of being addressed by Gen. Douglas MacArthur after his return from Korea.

As I reread this historic speech, it came to my mind that many truths which he expressed in his speech of April 19, 1951, could still apply to the world today. He said:

"The issues are global and so interlocked that to consider the problems of one sector, oblivious to those of another, is but to court disaster for the whole.

"While Asia is commonly referred to as the gateway to Europe, it is no less true that Europe is the gateway to Asia, and the broad influence of the one cannot fail to have its impact upon the other.

"There are those who claim our strength is inadequate to protect on both fronts—that we cannot divide our effort. I can think of no greater expression of defeatism. If a potential enemy can divide his strength on two fronts, it is for us to counter his effort.

"The Communist threat is a global one. Its successful advance in one sector threatens the destruction of every other sector. You cannot appease or otherwise surrender to communism in Asia without simultaneously undermining our efforts to halt its advance in Europe." [1]

We all know too well of the threat of war in Laos as well as the fact that two of the basic tenets of communism as stated by Stalin are "to take all necessary measures to strengthen the national liberation movement in the East," and "to spare no pains or means to assist the proletarian revolutions of the West." [2]

Gen. Douglas MacArthur's rendezvous with history was predetermined, as even his father served the United States in the Far East from the middle of the 19th century until his death; whereas General MacArthur began his service to his country in 1899 when he entered West Point and graduated as one of its most brilliant students—ranking with such great Americans as Robert E. Lee, John J. Pershing, and Jonathan Wainwright.[3]

His life has been one of self-discipline and duty to country. However, I believe, he can best be characterized by his own words when he says: "The man who will not defend his freedom does not deserve to be free." [4] General MacArthur has long been known to be a staunch advocate for a democratic form of government. He proved this is his dealings with the Japanese, for he was without a doubt one of the greatest ambassadors of the American way that we have ever had. No defeated nation had ever been in such a depressed state as Japan after the ordeal of having two atom bombs dropped on two of its major cities, yet Mr. Toshikazu Kase, a Japanese diplomat who accompanied Foreign Minister Shigemitsu as a member of the surrender party on the battleship *Missouri* said the following of the supreme commander:

"He is a man of peace. Never has the truth of the line 'peace has her victories no less renowned than war' been more eloquently demonstrated. He is a man of light. Radiantly, the gathered rays of his magnanimous soul embrace the earth, his footsteps paving the world with light. Is it not a piece of "rare good fortune, I asked myself, that a man of such caliber and character should have been designated as the supreme commander who will shape the destiny of Japan? In the dark hour of our despair and distress, a bright light is ushered in, in the very person of General MacArthur.

"I raised a question whether it would have been possible for us, had we been victorious, to embrace the vanquished with a similar magnanimity. Clearly, it would have been different. Returning from the audience, Shigemitsu told me that the Emperor nodded with a sigh in agreement. Indeed, a distance 'inexpressible by numbers that have name' separates us—America from Japan. After all, we were not beaten on the battlefield by dint of superior arms. We were defeated in the spiritual contest by virtue of a nobler ideal. The real issue was moral—beyond all the powers of algebra to compute.

"The day will come when recorded time, age on age, will seem but a point in retrospect. However, happen what may in the future, this big day on the *Missouri* will stand out as one of the brightest dates in history, with General MacArthur as a shining obelisk in the desert of human endeavor that marks a timeless march onward toward an enduring peace." [5]

We all know of the extreme effort General MacArthur placed on the rebuilding of Japan, and today well appreciate the success of his labors. However, he again led our forces as well as those of the United Nations in the war in Korea, and when victory was in sight was recalled from duty. On his return home, the Nation welcomed a man whom they loved dearly—a man whom all knew understood the Chinese better than anyone else, and he has proven this as only time can verify when he said:

"To understand the changes which now appear upon the Chinese mainland, one must understand the changes in Chinese character and culture over the past 50 years. China up to 50 years ago was completely nonhomogeneous, being compartmented into groups divided against each other. The war-making tendency was almost nonexistent, as they still followed the tenets of the Confucian ideal of pacifist culture. At the turn of the century, under the regime of Chan So Lin, efforts toward greater homogeneity produced the start of a nationalist urge. This was further and more successfully developed under the leadership of Chiang Kai-shek, but has been brought to its greatest fruition under the present regime, to the point that it has now taken on the character of a united nationalism of increasingly dominant aggressive tendencies. Through these past 50 years, the Chinese people have thus become militarized in their concepts and in their ideals. They now constitute excellent soldiers with competent staffs and commanders. This has produced a new and dominant power in Asia which for its own purposes is allied with Soviet Russia, but which in its own concepts and methods has become aggressively imperialistic with a lust for expansion and increased power normal to this type of imperialism. There is little of the ideological concept either one way or another in the Chinese makeup. The standard of living is so low and the capital accumulation has been so thoroughly dissipated by war that the masses are desperate and avid to follow any leadership which seems to promise the alleviation of local stringencies. I have from the beginning believed that the Chinese Communists' support of the North Koreans was the dominant one. Their interests are at present parallel to those of the Soviet, but I believe that the aggressiveness recently displayed not only in Korea, but also in Indochina and Tibet and pointing potentially toward the south, reflects predominantly the same lust for the expansion of power which has animated every would-be conqueror since the beginning of time." [6]

There is no question, I am sure, in the minds of any of my colleagues but that Red China is now as much a threat to the free world as Russia itself.

Therefore, with the Laotian crisis presently challenging us, I would like to draw again on this famous speech of April 19, 1951, when General MacArthur said:

"War's very object is victory—not prolonged indecision. In war, indeed, there can be no substitute for victory.

"There are some who for varying reasons would appease Red China. They are blind to history's clear lesson. For history teaches with unmistakable emphasis that appeasement but begets new and bloodier war. It points to no single instance where the end has justified that means—where appeasement has led to more than a sham peace. Like blackmail, it lays the basis for new and successively greater demands, until, as in blackmail, violence becomes the only other alternative. Why, my soldiers asked of me, surrender military advantages to an enemy in the field? I could not answer. Some may say to avoid spread of the conflict into an all-out war with China; others, to avoid Soviet intervention. Neither explanation seems valid. For China is already engaging with the maximum power it can commit and the Soviet will not necessarily mesh its actions with our moves. Like a cobra, any new enemy will more likely strike whenever

Footnotes at end of table.

it feels that the relativity in military or other potential is in its favor on a worldwide basis." [7]

Let us remember that in the spring of 1951, the United States had the power to make peace, as we alone among the nations of the world had advanced to such a great degree in the development of nuclear energy.

General MacArthur's experience has, as we all know, led him into varied fields of endeavor. His philosophy regarding our own domestic policy was quite clearly stated in a speech before the National Association of Manufacturers in 1954 in which he said:

"It is an unassailable truth, that the science of industry has become a major element in the science of war. The successful conduct of a military campaign now depends upon industrial supremacy. As a consequence, the armed forces of a Nation and its industrial power have become one and inseparable. The integration of the leadership of one into the leadership of the other is not only logical but inescapable. It has become indisputably clear that it is no longer the standing armies now in being, nor the naval and air forces which range freedom's vast frontiers, which stay the bloody specter of willful aggression, but rather a realistic appreciation of our massive potential of industrial power which is so capable of rapidly mounting the means to retaliate and to destroy. Industry has thus become the leavening influence in a world where war and the threat and fear of war would otherwise distort the minds of men and violently react upon the peaceful progress of the human race.

"In the mighty and almost limitless potential of American industry, the brilliance and rugged determination of its leaders; the skill, energy and patriotism of its workers—there has been welded an almost impregnable defense against the evil designs of any who would threaten the security of the American continent. It is indeed the most forceful and convincing argument yet evolved to restrain the irresponsibility of those who would recklessly bring down upon the good and peace-loving peoples of all the nations of the Earth the disaster of total war.

"Belabored by the Communists, their fellow travelers and the socialists, the capitalistic system has even been tacitly repudiated by some capitalists themselves. Succumbing to propaganda, they have wavered in their loyalty to a theory and a practice which has both served them well and built this Nation far beyond the wildest dreams of its architects. It has never failed to maximize the fruits of human energy and creative enterprise. It has never failed to provide the sinews for victory in war and has become now the one great hope in the struggle for peace. Was there ever greater hypocrisy than that which flows from those who castigate private capitalism as an evil to be renounced by human society, while avidly seeking to ensnare its benefits—those who regard American dollars as the panacea for all economic ills, while denouncing and condemning the source of such wealth—those who seek American goods, while scoffing at and deriding the very institutions by which these goods are produced?

"The past 20 years have witnessed an incessant encroachment upon the capitalistic system through the direction of our own public policy. This has left our free economy badly bruised and severely tried. The assault has taken various forms. For political expediency and even baser purposes, efforts have constantly been made by those in power or those seeking to be in power to provoke distrust and strife between industrial owners and industrial workers, between management and labor—to breach the community of purpose and effort which so logically must exist between these two great segments of our industrial economy. The effect of this has been to produce a sense of unrest and antagonism where a firm and confident alliance, built upon a mutuality of faith and understanding and a community of purpose, will not only serve the interests of both, but further the well-being of that third great economic segment, the consuming public.

"Another and yet more serious form of assault upon the capitalistic system has been the increasingly oppressive Government levies upon both capital and profit. The principle underlying such levies has not been to equalize the burden of meeting the legitimate costs of Government by a just and uniform assessment, but has followed instead a conspiratorial design, originally evolved by Karl Marx, to first weaken and then destroy the capitalistic system. Thus, many of our tax laws amount in practical effect to a series of graduated penalties upon the efficiency and the thrift which produces profit and accumulates capital—penalties which strike at the very roots of the incentive to labor, to create and to cheerfully accept the risks and hazards of enterprise in the traditional American pioneering spirit. If the capitalistic system—free enterprise—is to be preserved to the future generations of our people, the course of Government must now be sharply reoriented and America's industrial leadership must assume an invincible and uncompromising defense of that system. Only thereby may there be fostered and "preserved adequate inventive to encourage the thrift, the industry, and the adventure which brought our Nation to its present preeminence among all of the other nations of the earth and which alone can carry it forward in peace and security and progress." [8]

At this point it is well to note that General MacArthur has received the esteemed praise from many great Americans. John Gunther, the well-known author, in his book entitled "The Riddle of MacArthur" said: "He is that rare thing in the modern world, a genuinely high person. This is not put on. It is part of his marrow and essence * * *." [9]

My distinguished colleague, the senior Senator from Georgia, Mr. RUSSELL, at the conclusion of 3 days of hearings thanked General MacArthur as follows:

"General MacArthur, I wish to state to you that the 3 days that you have been here with us are without parallel in my legislative experience.

"I have never seen a man subjected to such a barrage of questions in so many fields and so on many varied subjects.

"I marvel at your physical endurance. More than that, I have been profoundly impressed by the vastness of your patience and the thoroughness and the frankness with which you have answered all of the questions that have been propounded.

"We have certainly drawn freely on your vast reservoir of knowledge and experience, not only as a great military captain, but as a civilian administrator of 80 million people.

"We will continue to delve into this matter with the objective of discovering the facts and the truth in order that we may contribute to the workings of democracy, and to enable America to emerge from the very critical situation in which we find ourselves today, safe and secure, and supplying the world the leadership that is necessary to enable us to have the best place on earth to live." [10]

The love and honor the people of Japan felt for Gen. Douglas MacArthur was clearly shown during the summer of 1960 when they bestowed upon him Japan's highest decoration for a foreigner—the Grand Cordon of the Order of the Rising Sun with Paulownia Flowers. In the citation accompanying this award the Japanese expressed their gratitude by saying that General MacArthur gave "great contributions to the postwar reconstruction of Japan and to the development of the immense reservoir of good will that exists between our two nations today." [11] Upon receipt of this award from the Emperor, General MacArthur commented that he could recall "no parallel in history where a great nation has so distinguished its former enemy commander." [12] I am quite sure no such parallel exists and that the significance of the presentation of this award exemplifies the friendship the Japanese people have for the United States.

And even more recently, General MacArthur was rated as "in a class above other Allied commanders in any theater," [13] by Great Britain's top military analyst, Capt. B. H. Liddell Hart.

However, with all these accomplishments behind him and with the great praise bestowed upon him by his fellow man, it might be well for us here in the Congress of the United States to review the remarks of this great soldier statesman at the Founders Day ceremony at the University of Dallas when he said:

"I cite for example such phrases as 'the rate of our national growth,' 'the direction of our national purpose', or 'the promise of our new horizons'. Such slogans are but political jargon little understood by even the most informed of our people, and with issues so obscure as to have little in common with reality. They are 'catchcalls' designed to impress the votes of a bewildered and trusting populace. Their authors know or should know that the 'rate of our national growth' is dependent more than all else on the degree of freedom left for the uninhibited play of our individual initiative and creative energies; they know or should know that 'our national purpose' is simple and supportable by every American—the steady increase in our standard of life and adequate defense of that standard against all pressures at home or abroad; they know or they should know that the only 'new horizons' to which we should as a nation now aspire are not to our left or right but up—not horizontal but vertical—those which measure the well-being and happiness of all the people.

"And how, it might rightly be asked, would a statesman approach the problem, a solution of which directly concerns our 'rate of national growth', the direction of our 'national purpose' and the 'new horizons' of our life?

"He would seek the answer in the basic and immutable principles of the science of government, not in the temporary expediences of popularity and adulation under the guise of the art of government. He would see a violation of the fundamental laws of freedom in our insatiably expanding Federal bureaucracy with its growing controls over our daily lives. He would see that if we reduced the monetary cost of the Federal Government, thus curtailing its bureaucratic power, we would, first, advance our economic growth and consequent standard of living, by lowering the extreme burden of taxation which threatens to reduce us all to a form of involuntary servitude, thereby releasing for constructive purposes our presently suppressed initiative and creative energies; second, insure a sharp curtailment of the growing paternalism inherent in massive Central Government, thereby permitting us once again the freedom to determine the direction of our own lives and to remarshal our resources fully to exploit our opportunities; and third: provide us the chance to pass down to our progeny a solvent rather than a bankrupt nation."

Mr. President, it is imperative for us as the chosen representatives of this great Nation to dwell over the words of wisdom given so freely to us by this truly great American.

Notwithstanding All These Things—Speech Delivered by Hon. A. Boyd Campbell

EXTENSION OF REMARKS
OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. COLMER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I submit an outstanding and thought provoking address delivered by the Hon. A. Boyd Campbell, a resident and native Mississippian, and I might add with justifiable pride, a former schoolmate and longtime personal friend, at the annual banquet of the Virginia State Chamber of Commerce on Friday, April 21.

I sincerely believe that many readers of the RECORD will profit by the speech as did the good people of the great State of Virginia who were privileged to hear him.

The address follows:

NOTWITHSTANDING ALL THESE THINGS

I want to take advantage of the fact that I was allowed to choose my own subject by associating myself with you in a few of the preoccupations in which, I have reason to believe, we are currently and mutually engaged.

I shall mention only six of these preoccupations, apprehensions, anxieties, fears and/or frustrations. Call them what you will, they are our daily companions. They are: Politics and business, the Congo, Cuba, civil rights, and the bomb.

While they are not necessarily related, you may recognize a common thread that runs through the fabric of each—the thread of man's groping, inconclusive, and too frequently insincere efforts to govern himself.

Merely to catalog our preoccupations would be a futility. To put them in perspective might be a utility. If I succeed, even partially, our time will have been well spent. If I fail, you will be breaking even, because this speech is costing you nothing.

My qualifications for discussing such complex subjects are nonexistent. Therefore, I shall proceed to do so, starting with a fairly recent event.

POLITICS AND BUSINESS

A few months ago millions of Americans witnessed the spectacle of a nomination for the presidency of the United States being conducted in the atmosphere of a Roman circus. The tumult and the shouting, the moblike demonstrations, the blaming, the bragging and the braying, the lionizing of some of the most unsavory characters in the entertainment world, and the open-eyed gesticulating appeals to Deity to bless the proceedings—all combined to produce a feeling of disgust. Meanwhile, viewers silently questioned if there was not a better way to select a leader whose words and deeds would so greatly affect their lives.

Notwithstanding the repulsion of the performance, we know that if enough of us are convinced that the business of nominating a President is too serious to be a carnival, we can stop it. If we want to make the method dignified, and in conformity with the overwhelming responsibility of the office, we have the power to do so.

Following the conventions, came the campaign. Through modern transportation and communication, America became a community audience. We learned more about the problems of a free society and the diverse methods by which it was proposed to solve them than we had ever known before—and it was all to the good.

Party labels meant less; personalities and principles meant more. In the absorbing interest of political discussion, we did not lose sight of the overriding questions. Foremost among them were:

Who can best lead America through the increasingly complex maze of international crosscurrents?

Who can best redefine our national purpose?

Who can best interpret it to the emerging and uncommitted nations of the world?

Who can best meet the challenge of the mighty forces which would destroy us?

Finally, who can best lead us along that long, upward road to peace with honor?

The answers were not to be found in the fustian claptrap of either party platform. Rather, they were in the minds and hearts of Americans like ourselves, who formed their free and independent judgments.

Notwithstanding all these things, on Friday, January 20, we had a change of Government without revolution or bloodshed. Furthermore, in the great tradition of good sportsmanship, Americans of all creeds, races and parties wished our young President Godspeed as he assumed the awesome responsibility of our country's leadership in this atom-triggered world.

And so, we have a new team in Washington. Now we are being led into the sixties, and every step is fraught with danger, just as it was when our forebears moved into the sixties 100 years ago.

It seems appropriate to recall some words about the times, then and now:

"Now we are engaged in a great civil war, testing whether that Nation or any nation so conceived and so dedicated can long endure."—Lincoln at Gettysburg.

These words are appropriate today, nearly 100 years later. We are still testing whether the Nation can endure.

The test, however, is not that fratricidal armed conflict. It is an external and internal struggle—against the most powerful tyranny that ever infested this planet—the Communist conspiracy. The contest will be a mortal one, and it will be decided in the sixties.

The test will determine if we Americans really believe in freedom. It will determine our commitment to the principles of our political system. It will determine what price we are willing to pay every day of every year to remain free.

I did not come here to be dramatic. I sincerely believe that I am speaking the truth when I say that our country is in the greatest danger in its history. The outcome will be determined, not necessarily in the horrors of nuclear explosions, but in the quiet, unwavering dedication of American men and women who will deeply resolve to meet the obligations that freedom imposes.

I propose to mention only one such obligation. It comes under the general definition of political participation. By that I mean, among other considerations:

Willingness to run for office.

Influencing other qualified people to do likewise, actively working for their election, helping to finance their campaigns, and standing by them after they are elected.

Keeping currently informed on public issues and abandoning forever the old canard that politics is for politicians and not for people—everyday people like ourselves.

We have too long taken our political processes for granted. It is a reproach to us that we do not vote. For too long we have been willing to let George do it—and, actually, George doesn't do it. The responsibilities of American citizenship are personal. They cannot be delegated.

For too long business people have shunned politics on the foolish theory that business should not be mixed with politics. I say to you that business and politics must mix, or we won't have any business.

Organized labor has set a pattern that does great credit to the labor movement. They keep their people informed; they keep them qualified to vote; and they get them to the polls.

I can only hope that American business will learn a lesson from American labor—and whether or not we agree on issues, we can agree on duties.

We in the Deep South, in my opinion, are peculiarly fortunate in the quality of our public servants. We are fortunate in that we are not boss-ridden, and that the incidence of graft and corruption is low.

We must keep it that way. We must return our best public officials to office. We must induce the best qualified people to offer for office and help them get elected. We must be better informed about our problems, foreign and domestic. Whether we like it or not, we are world citizens. The sooner we look this fact squarely in the face, the better it will be.

Notwithstanding the ominous challenge of the sixties, we will meet it if we try—and try hard.

THE CONGO

The frightening events in the Congo horrify us, but they do not mystify us. The mystery is that savages, whose lives have been ordered by the most primitive tribal customs, were expected to understand and assume the responsibilities of a democracy. We are told that many of them thought of freedom as a thing—a magic object which would be given to them. Once possessed, it would guarantee that all men would be rich and none would have to work.

While we have 3,000 years of culture back of us, are we that far ahead of these African primitives in our concepts of freedom? Let us not forget that we are only 3 generations removed from the dark period when 11 States of this Union were ruled and looted by newly enfranchised slaves, to whom freedom meant 40 acres and a mule and the license to preponderate their disfranchised former masters.

Let's take another look to see if we are 3,000 years ahead of the Congolese. They believe that freedom is a sort of heaven where everything will be done for them. We have only to examine the platforms of our two major political parties to find the same concept dressed up in polite palaver.

All of this political sham, economic heresy, and highly placed hypocrisy leaves the American people no opportunity to

register their choice between the liberal and conservative concepts of governmental policy.

Personally, I'd like to have such a choice and, in my opinion, there are thousands of unorganized Americans who feel exactly as I do.

Now let's get back to the Congo.

Notwithstanding the tragic debacle, it serves to remind us again that the veneer of civilization is very thin. From some of today's happenings in our own Southland we learn the same lesson. From the Congo we should learn again, and never forget that freedom is not a franchise nor is liberty a license to act without restraint where the rights of others are involved. Freedom is a spiritual quality which comes from God, and liberty without law is anarchy.

CUBA

Next, Cuba. What would you do? You know what we would have done a generation ago. The Marines would have landed; American lives and property would have been protected, and the situation would have been in hand.

We have been forced by circumstances not of our own making to discontinue diplomatic relations with a neighbor whose freedom was a gift from Uncle Sam.

We are subjected to daily insults from a bewiskered little Communist puppet who speaks with the voice of Castro but the words of Moscow.

While Cubans are lashed into a frenzy of hate, and the international thievery is rampant, we search for an answer and find none. We know that we will not take direct and effective police action, and we know why. It is because of a bear who walks like a man—or a man who walks like a bear. Either way he is a beast—an antichrist who holds in his powerful hands an instrument that could destroy civilization.

Notwithstanding the explosive Cuban situation, it may be that it took this to awaken us to the danger that lurks in all of Latin America. We must mightily resolve that the fire which is raging in Cuba shall be confined to that island.

CIVIL RIGHTS

We are deeply troubled in the South—so deeply that I wonder if you ever experience a feeling of treading a path that seems vaguely familiar, yet you know that you have never passed that way before? I do.

I sometimes have a sensation of walking in sorrow in the footsteps of my Confederate grandfathers. Step by step, they were drawn into the vortex of an overwhelming catastrophe which was not of their making, but from which there was no escape.

There is a striking and tragic parallel in the events of their day and ours. Today, as then, complex sociological and socioeconomic problems have become the hunting ground for political opportunists and professional do-gooders.

Civil rights has become a shibboleth around which a great political battle is being waged. As history repeats itself, a wall of resentment is being built. Human dignity is being offended by those who attempt to penalize one minority to befriend another.

We hear a lot about second-class citizenship from counterfeit sociological messiahs. I am not sure that I know what they are talking about—nor do they—but if second-class citizenship means what I think it does, it will never be abrogated by statute. First-class citizenship is a status that has to be earned. It cannot be attained by an act of Congress, a decision of the Supreme Court, or any other shortcut.

The doctrine of equal civil rights for all men, civilized and savage, saint and sinner, bond and free, is utterly false. It is the stuff on which tyrants feed and free economic and political systems are liquidated.

If we honestly examine this fallacy against the background of Congo and Cuba, we will come up with a more meaningful, more realistic maxim of "unequal civil rights." The unequality would apply to all men in proportion to their unequal capacities to function as citizens of a self-governing society.

Equal civil rights should be earned by learning well and practicing truly the principles of self-discipline, by a proper concept of freedom, and by correctly relating rights and duties.

The opportunity to attain the high privilege of equal civil rights should be open to all, and its achievement should be the reward of individual endeavor, understanding and maturing.

Notwithstanding the questionable motives of the heart-bleeding advocates of equal civil rights and their legislative and judicial victories, we must appraise them in the perspective of history. We must know that the problem is essentially sociological and not political. We must be steadfast, yet patient. We must, above all, maintain an attitude of good will toward those who sincerely disagree with us, and at all costs we must avoid the well-springs of bitterness, which can becloud our reason and shrivel our souls.

As we grapple with this problem, we should take courage from the knowledge that during the tragic era of Reconstruction, our grandparents wrestled with a similar one—a problem of gigantic proportions. They fought, as it were with bare hands, and they won. It is in our hands to prove whether we are worthy sons of so superb a generation.

THE BOMB

Probably the bomb is our most universal and most fearful preoccupation. We have lived with this fear so long that we have learned to bear it. We have learned so much of its awesome power that we no longer attempt to measure it. We simply accept it. In our deep consciousness we know that man has attained the capacity to destroy himself, and we gravely doubt if he has acquired the discipline to restrain himself. Thus, we have with us as a constant companion, the question, "Will the bomb be the end of man?"

I call upon Mississippi's Nobel prize winner, William Faulkner, to assist me with my last "Notwithstanding." He does so in these words:

"I decline to accept the end of man. It is easy enough to say that man is immortal simply because he will endure; that when the last ding-dong of doom has clanged and faded from the last worthless rock hanging tideless in the last red and dying evening, that even then there will still be one more sound: that of his puny, inexhaustible voice, still talking. I refuse to accept this. I believe that man will not merely endure. He will prevail. He is immortal not because he alone among creatures has an inexhaustible voice, but because he has a soul, a spirit capable of compassion, and sacrifice and endurance."

So there we have it—quite a formidable package of preoccupation: Politics and business, the Congo, Cuba, civil rights, and the atom bomb. Notwithstanding all these things, from them we can reappraise our priceless heritage of freedom and rededicate ourselves to its preservation.

In conclusion, I comment to you some magnificant lines from Henry Van Dyke, in which he referred to America as "the blessed land of room enongh where the air is full of sunlight and the flag is full of stars." Here in America the air is full of sunlight and the flag is full of stars—more stars than ever before.

Commerce and Transportation in the Metropolitan Area of Washington, D.C.

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, May 3, 1961

Mr. BEALL. Mr. President, Mr. C. Darwin Stolzenbach, who has been nominated by the President to be Administrator of the newly created National Capital Transportation Agency, delivered an address to a combined meeting of the Montgomery County Chamber of Commerce and the Bethesda-Chevy Chase Chamber of Commerce.

In his address, Mr. Stolzenbach showed wisdom which augers well for the future of mass transportation and automobile transportation in the metropolitan area. Recognizing the need for citizen support throughout the area, Mr. Stolzenbach calls for the formation of a Citizen Advisory Committee to keep the Agency informed of the needs and wishes of the metropolitan area.

The address is worth the attention of all who are interested in the important work of providing adequate, convenient, and speedy access to the Nation's Capital.

I ask unanimous consent that Mr. Stolzenbach's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

COMMERCE AND TRANSPORTATION IN THE METROPOLIS

I am pleased and honored to be here tonight. I want to tell you about one of the most long-sought, wanted, and needed undertakings in the Washington area, the National Capital Transportation Agency. I want to tell you about its past and its present. And I want to put its future up to you.

This agency is concerned with an improved transportation system for the National Capital region. Our focus of attention is on mass transit—that is, the movement of people in public conveyances.

In all this we do not look upon mass transit and the automobile as gladiators engaged in mortal combat. Rather, each complements the other. We must make suitable provision for both. Most of us are now auto riders. But many of us are also potential transit riders if the transit system will take us where we want to go quickly, conveniently, comfortably, and economically. And, the more people ride transit, the happier the motorist.

We are talking about a social organism made up of the counties of Arlington, Fairfax, Loudoun, and Prince William plus the cities of Alexandria and Falls Church in the sovereign State of Virginia, the counties of Montgomery and Prince Georges in the free State of Maryland, and the District of Columbia between, and of course the Government of the United States which has such a vital stake in this region.

In this social organism, as in a human being, the ills of one part affect the other parts—a fact that grows more apparent every time a new highway is opened, a new bus line is started, or a new company hires workers.

Everybody has a stake in this job, but nobody more than the businessman whose

business profits depends on the health of this regional being.

But how can these several counties and cities, two States, and the Federal district agree on a transportation plan and carry it out? Only one level of government can right now exercise the overall leadership required to start us on the road to a coordinated regional transportation system. This is the Federal Government. And that's why the National Capital Transportation Agency was born.

There is so much to be done. But a lot has already been done. The endorsement of a downtown subway by Congress, the Bureau of the Budget, the Washington newspapers, and many civic organizations, is a big step forward. Only a few years ago, anyone who suggested a subway for Washington would have been considered a dreamer. Now there is a widespread realization that a modern underground transportation system is possible and necessary, both to make that city an efficient nerve center for the Federal Government, and to bring the advantages of big-city living within the reach of everyone, city dweller and suburbanite alike.

A second major accomplishment is the tremendous amount of information that was gathered and analyzed in the 4-year mass transportation survey and, since then, by many governmental agencies. This information gives us a big jump on the job of coming up with a well-worked-out program for regional transportation that will stand up under critical inspection by congressional committees, bond underwriters, and John Q. Commuter.

A third accomplishment is steady progress on the construction of a regional freeway system, which simplifies the mass transportation job by reducing the task to realistic size. It also opens up the possibility that freeways and transit can share the same right-of-way along some routes. This can save us a lot of money.

A fourth important development is the growth, during the last 10 years, of governmental institutions of regional scope, capable of doing various parts of the total job. In addition to the National Capital Planning Commission and the National Capital Regional Planning Council, we now have the Washington Metropolitan Regional Conference, with members of each county and city governing body, and representatives from Congress and each State legislature. This organization has worked hard to promote regional solutions to regional problems, with special emphasis on the creation of regional arrangements for transportation. More recently the Washington Metropolitan Area Transit Commission, established by an interstate compact, offers for the first time means of regulating transit service across the District line. Now our National Capital Transportation Agency has joined this roster of complementary, cooperating agencies.

The birth of the National Capital Transportation Agency was attended by cries of urgency from all sides. I'm sure you are all too aware of our growing traffic congestion. You know that it will take time to find the solution. You, here, know better than most people that the area will keep on growing, keep on changing. You know that the movement of people in great numbers is the very lifeblood of all of this growth and change in a healthy metropolitan region.

The mass transportation survey report of 1959 showed how big the problem is. It showed that we cannot rely on the federally financed highway system alone to do the job. It showed that the transportation pathways of a region are like the arteries of our regional man—they have a lot to do with his development.

The transportation survey showed that the several local jurisdictions have no way of getting together to pay the bill for the whole system. This adds up to the fact that if the system is to be truly regional we must have some form of organization responsive to these jurisdictions, and charged with developing a balanced system that will serve all parts of our regional man for the immediate benefit of each part of our regional man.

The National Capital Transportation Agency is a launching mechanism. It will create programs for the construction and operation of improved regional transit service. Programs that can actually be implemented when the county, State, and Federal Governments accept them. Programs giving a concrete picture of the costs and benefits of a balanced mass transportation system. Practical programs resulting from research and development, insuring that your transit system for this region uses all the knowledge that modern science and technology can produce.

What kind of program will the Agency come up with? Congress has directed us to do two kinds of jobs. First, the Agency is to develop a program for the expanded use of existing facilities and services, including the existing railroad lines as well as bus service. This might be called the short-run job. By making some major improvements in transit service in the near future, we can both help to make the region a better place for all of us to live in, and at the same time build up transit ridership to the levels needed to support some major new construction.

Second, the agency is to plan and to build a modern high-speed transit system, including subways in downtown Washington and high-speed service in the outer areas, along freeway rights-of-way where this is feasible. The mass transportation survey plan of 1959 proposed that this system take the form of several spokes extending from downtown Washington to the suburbs. Suburban transit stations would be served by local feeder bus lines and some of them would have good sized parking lots for people driving in from outlying areas and continuing their trip by transit.

Please don't think that this is only a dream. With approval of the authorities concerned, the National Capital Transportation Agency can and will actually begin construction and operation. This is not just another planning Agency. This is a doing Agency.

Congress has given us the seed money—by next year we expect over a million dollars. Congress intends clearly that this Agency will take the lead in developing mass transit for this region. Using the best experts we can find in every necessary field, we will bring up to date and extend the immensely valuable work begun in the mass transportation survey, we will develop specific working programs for transit, using existing routes and new routes. We will work with other agencies to improve traffic and the flow of people, and we will sponsor whatever research is needed to bring you the last word in an economic and efficient transportation system.

The law creating the National Capital Transportation Agency prescribes two steps by which we are to find the best way to manage these operations. First, we will prepare for the President of the United States by November 1962 recommendations on the organization and financing of this project. These will be handed to Congress. Second, the Congress has invited representatives of Maryland, Virginia, the District, and the Federal Government to begin meetings leading to an interstate compact to deal generally with regional problems, among them, transportation.

Now, how do the program of the Agency fit into regional plans? What control do the various jurisdictions have? What about financing—both capital and operating? Will there be operating deficits?

As to the first question, the law says our programs must be coordinated with the plans of the National Capital Planning Commission and the National Capital Regional Planning Council. In the near future these two agencies will present to the public a set of proposals for the growth of the region to the year 2000. We are now working closely with the Commission and the Council, and we will continue to do so.

On the second question, you probably know that this agency's programs must be submitted to the governing bodies of the local jurisdictions for comment and advice. We can count on this as one way of informing the public of our thinking. It certainly will stimulate public discussion of the Agency's plans. Also it will give us important guidance in adapting our programs to the desires of each community.

In addition, our plans must be submitted to private transit companies, the local transit labor unions, and any public regional organizations that may exist, again for advice and comment. Finally, before we can execute any part of the program, the Governors of Maryland and Virginia must approve those portions that affect their respective States. We hope that local governing bodies will use this opportunity to examine the way our programs will affect their own jurisdictions. We also hope this will develop further understanding of their part in the metropolis.

Over and above all this system of referrals and approvals, the agency will have the continuing advice of the Presidentially appointed Advisory Board. This Board will consist of five persons, including one from Maryland, one from Virginia, and one from the District. Also, we have the authority to create additional special advisory groups.

As to the question—where does the money come from—there are many possible answers.

An effectively designed and efficiently operated mass transportation system can be financed from a combination of two sources: user charges, and revenues from new economic and business values created by the system. The Congress has implied that Uncle Sam will assist in putting up some of the initial capital, but it has directed us to look at various possible financing methods and to recommend a solution no later than November 1962.

We hope you read us loud and clear when we say that we are not just another government bureau downtown making arbitrary decisions affecting you. While we will have, subject to approval of the authorities concerned, the power to proceed with the development of a mass transit system, we will actually treat the entire population of the region as our constituency. We strongly recognize the responsibility of the citizens of the rgeion—through their elected representatives—for reaching enough agreement on the main elements of a metropolitan transportation program so that we can go ahead with it as quickly as is physically possible.

You are all naturally concerned with how our activities will affect your business, now and in the future. Obviously when the time comes that we can present specific proposals for transit routes and stations you can then make your own individual evaluations. We will certainly give you this information as soon as it is humanly possible.

In the meanwhile I can point out some of the effects that you all might anticipate. One of the main results of an efficient mass transportation system will be to broaden the market areas and the availability of labor. Both of these effects can make for

better economic efficiency in the conduct of your business.

Furthermore, an effective transportation system can have another important influence on the regional economy—it can increase the attractiveness of the region to new industry, which in turn brings new sources of local purchasing power.

As our programs unfold one of the important things every businessmen will want to examine critically is the idea of locating near new transit stations. The old phrase, "transit creates value," popular among the promoters of trolley car lines in the early 20th century, still has considerable validity. More accurately it is not the transit that creates the values, but the concentration of large numbers of people in a small space. Transit does this, bringing many people into and out of a transit station each day.

In recent years decisions on new business locations have been increasingly determined by the automobile rather than by transit. Retailers have looked for locations near strategic highway intersections. They have taken pains to be sure their customers and employees have ample parking space.

Now, as the suburbs continue to grow, we are likely to see the pendulum swing part of the way back. In the inner suburban areas, which are already built up at fairly high densities, both the business groups and the local government may find real advantages in bringing good transit service into the main commercial areas. The retail center that can tap a growing body of transit riders, as well as people who can travel by foot from nearby apartments and office buildings, will show a larger volume of sales per square foot of land occupied than will a center depending exclusively upon automobile traffic, which requires large amounts of land for parking.

This not only helps the owner of commercial property to earn more on his investment, but it also opens up new profit possibilities for the retailer, as the size of his clientele grows. Also it enables the local government to realize a larger tax revenue.

While the large auto-oriented shopping center is surely here to stay, every retailer would do well to keep an eye on plans for new high-capacity transit routes. These may offer new potentials in some of the inner commercial areas where customer drawing power is now limited by lack of parking space. Even at the outlying shopping centers the possibilities for increasing patronage by improving transit service should not be overlooked.

Probably most important is the stimulus that rapid transit by shrinking travel distances will give to the growth of the suburbs. What we all want, I am sure, is the kind of transportation system that will make possible the sound growth of our region. By helping our region become more efficiently organized and more pleasant to live in, the improved transportation system will contribute to this objective.

Finally, the local governments and their planning commissions can help transit to create new values. There will be a big job of replanning and rebuilding to be done in the vicinity of the new transit stations. Such planning will be essential to the success of the transit system. It will be equally important to the local businessmen who will be waiting to tap the new concentrations of buying power at these locations.

We, in the National Capital Transportation Agency, will look to you for guidance in the development of our programs, and later for support in getting them approved. To help make all this come true, we intend to appoint as one of our advisory groups a committee comprising one representative from each chamber of commerce and board of trade in the region. Through this committee we will keep you informed of our progress, obtain your views on alternative proposals, and encourage you to make some of the necessary studies.

This is what I meant at the start of this talk when I said the future is up to you. Literally, you can help get the wheels rolling for all of us.

Rule of Law Requires Judicial Discipline

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. LIBONATI. Mr. Speaker, it is fortunate that the right of freedom of speech, on any question, is protected by a constitutional provision that remains inviolate.

Our distinguished colleague, the Honorable FRANCIS E. WALTER, chairman of the House Committee on Un-American Activities, has raised a very provocative question in his observations concerning the importance of requiring strict judicial discipline in the applications of the rule of law and its maintenance, essential to the protection of individual liberties and our republican form of government. He describes, pointedly, that reasonable adherence to the principles of law and judgments established in prior decisions of the courts is an absolute requirement of the rule of law.

He is to be admired for his frankness in his recognition of the rule of law, with its certainty of pronouncement, as opposed to the rule of men, which is subject to the influence of caprices, prejudices, and lack of mental discipline. He points out the steady erosion of the rule of law through the legalistic matrix of minority judicial opinions. Our colleague is positive in his criticism of these opinions. Certainly, he sets forth an indictment of the courts which, if true or not, merits study. His position in these matters is both interesting and challenging. Whether one agrees with his position or not, certainly, we must agree that the courts are not infallible. No one can disagree with his position as to the statement that judicial appointments are of such public interest that, under our democratic process, the appointment of qualified men to occupy high positions in the judiciary must be influenced by public opinion, if we are to make effective the rule of law and its guarantees to the protection of our individual rights; the administration of our institutions and the guarantees of our republican form of government. No legislation should be so rigid as to effect the reasonable discretion of the court.

The following article, from the Friday, April 28, 1961, issue of the Chicago Daily Law Bulletin, presents his views:

[From the Chicago Daily Law Bulletin, Apr. 28, 1961]

STARE DECISIS—RULE OF LAW REQUIRES JUDICIAL DISCIPLINE

(By Hon. FRANCIS E. WALTER, chairman, House Committee on Un-American Activities)

Essential to the maintenance of individual liberties and our republican form of government is the rule of law. Indeed this is a basic feature of our society which distinguishes it from the totalitarian—the latter being the rule of men. The rule of law is an egalitarian principle of historic origin and necessity. A principle which declares the equality of men demands a rule of law, that is to say, standards of conduct of general and equal application. The rule of law is likewise a libertarian principle. Tyranny exists in a government of men who are bound by no standards except those of personal whim and prejudice. Accordingly, Alexander Hamilton noted: "It has been frequently remarked, with great propriety, that a voluminous code of laws is one of the inconveniences connected with the advantages of a free government." (Federalist, No. 78.)

I wish particularly to make an observation with reference to the application of the rule of law to the activities of the judiciary—notably the Supreme Court of the United States. Alexander Hamilton followed the above-quoted statement with this: "To avoid an arbitrary discretion in the courts, it is indispensable that they should be bound down by strict rules and precedents, which serve to define and point out their duty in every particular case that comes before them."

There is growing concern among a large number of lawyers, as we observe what appears to be a steady erosion of the rule of law within that body of justices, evident particularly in the opinions of the minority justices, namely, Warren, Black, Douglas, and Brennan. Hamilton was undoubtedly making references to the discipline of the common law, which in its wisdom teaches reasonable adherence to consistency and stare decisis. It is the apparent rejection of this discipline by that minority on the Court which is very properly a matter of comment.

Contempt of Congress cases involving the committee of which I am the chairman, the House Committee on Un-American Activities, have been particularly revealing, in the court's treatment of the first amendment privilege. For example, the dissenting opinions of Justices Black and Douglas in the *Viereck* case (318 U.S. 236) dealing with Nazi talk, endorsed a qualified privilege, whereas in the cases of Wilkinson and Braden, decided February 27, 1961, which dealt with Communist talk, the same justices joined by Warren and Brennan now pronounce an absolute privilege.

Reasonable adherence to principles of law and judgments established in prior decisions is a requirement of the rule of law, and plainly a demand of liberty and fairness. There must be some predictability in the law for those who must live by it and equal treatment to those who must come before the same tribunal—and indeed the same judges—for judgment. The doctrine of stare decisis is a recognition of the rule of law, with its certainty, as opposed to the rule of men, with their caprices and prejudices.

This points up another and related issue of equal importance in maintaining the rule of law. What kind of men are we selecting to administer the rule of law? If the rule of law is to be a reality, it is evident that our justices be men who accept its discipline—and men of mental balance and intellectual stability. It is therefore incumbent upon the bar to engage in determined political activity in the area of judicial appointments, to utilize the democratic process in the creation of public opinion, to assure the appointment of qualified men to occupy high stations—if we are to make effective the rule of law.

Policy for Growth—Address by the Secretary of Commerce

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, May 3, 1961

Mr. MAGNUSON. Mr. President, on Monday, April 24, 1961, I was among those who had the privilege of listening to a heartening and forceful address delivered by Hon. Luther H. Hodges before the National Press Club.

There has been no doubt in my mind at any time since the nomination of Governor Hodges to be Secretary of Commerce was confirmed that under his able leadership the Department is entering a new era and has a new concept of its responsibilities.

As Secretary Hodges expressed it in his address to the Washington press corps:

There is no place for a passive service department.

The new Secretary is a man of action, and he intends to get things done. Already he has taken effective steps to beef up our export trade, to recognize and strengthen the role of science and technology in our economy, to promote traffic safety, and to close the annual $1.1 billion travel gap.

As chairman of the Committee on Commerce, which has legislative jurisdiction over most of the activities of the Department of Commerce, I think I can assure Secretary Hodges of the committee's cooperation in his efforts to revitalize the Department and its role of strengthening our trade, both foreign and domestic, our transportation, and our technology in the national interest.

Mr. President, I ask unanimous consent that the address entitled "Policy for Growth," delivered by Secretary of Commerce Hodges before the National Press Club on April 24, 1961, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

POLICY FOR GROWTH

(Address by Secretary of Commerce Luther H. Hodges to the National Press Club, Washington, D.C., Monday, April 24, 1961)

I appreciate, President Cosgrove, your invitation to speak here today. I am just back from a 4-day trip to the Pacific Northwest where I met with trade groups and saw firsthand how a community and a region can help in promoting exports. Next week, I am off to Europe for 10 days to help sell American exports and do what I can to push forward our urgent program of export expansion and two-way international travel.

With all this moving around, it's a pleasure, as the visitor says, to be in Washington. And it's a particular honor and treat to be able to talk to you today.

Jefferson used to say that when a man assumes public office, he should consider himself as public property. I don't know how many of you are avid to claim me as a public possession, but I do know I feel a very real obligation to make myself as available as I can to the public, and mainly through you, the press.

Since February, as you're probably aware, I have been holding news conferences regularly every other Tuesday, and we have had other sessions as important stories came along. I intend to continue this practice and to see to it that in every way you have the broadest access possible to Commerce information. You and the public are entitled to know exactly what we are doing in the Department and, equally important, what we are not doing that we should do.

Incidentally, in case you haven't guessed it, I enjoy meeting the press. And I don't mind your questions, even the barbed ones. And I like your overall fairness and thank you for it.

Here today I would like to take these few minutes to talk about some things we seldom seem to get around to in press conferences. Specifically, I want to tell you a little of my thinking about the Commerce Department—what I see as its role in the economy, and what we are doing now, and hope to do, to make it a more vigorous and effective instrument for national growth.

To be frank, until last December I really had not thought much at all about Commerce, let alone the job of being its Secretary. Naturally, I took a part in the Kennedy campaign. My role, mainly, was to combat as best I could the religious issue and to say to my many conservative friends that the President, while progressive and imaginative, was very much a fiscal conservative and a sound-money man.

These things I did out of belief and loyalty. A Cabinet job, or any other post in Washington, was never discussed during the campaign. In fact, until the President called me in early December, the only future I was sure of was that I was going to be the ex-Governor of North Carolina.

Today, almost exactly 3 months after the inauguration, I am happily a part of the New Frontier, and I have seen enough of the Commerce Department to develop some fairly fixed views about the Department and its possible service. Today, I am going to talk mainly about two of these views.

First, although Commerce is the Government Department primarily concerned with business and industry, it is not a tool of industry, not its automatic spokesman. Its role is to serve business only as this serves the country. The interests of the Nation come first. You will never hear from me that this country should do this or that simply because business wants it. What is good for General Motors may, or may not, be good for the country.

In his own way, the President, I think, expressed this same attitude when he spoke to the National Industrial Conference Board early in February. As you may remember, he said that the hope and aim of this administration was an alliance with business in which both the public and private sectors of the economy would, by playing their proper roles, promote national growth.

Now, in my mind, an alliance prescribes a quite definite relationship—a joining together of independent parties to pursue common goals. From the standpoint of this administration, alliance means we will seek to understand the problems of business, and to assist in their solution. We will not harass or regulate it needlessly, but will work to promote its growth and prosperity.

By the same token, we as allies of business are not obliged to act in any way which runs counter to our own interests, which are those of the Nation. In short, this administration and we at Commerce are at once joined with business yet separate from it. We are its friend, but not its unquestioning servant; its sympathetic counselor, but not its conspirator. All of this, I am sure, business as a whole understands and commends.

A few weeks ago, you probably know, I made some suggestions to the Business Advisory Council, which led to certain changes in its organization and the opening up to the press of any meetings where Government officials speak. Now the reason I did this traces from what I have just described—my conviction that Commerce must act primarily for the country as a whole, not just one segment of it.

I have no reason to think that members of the advisory council ever gained advantage from, or misused, the information they got from Government officials at private meetings. But that's not the point. Whatever was told them officially by Government people should have been available to everyone—the rest of business and all the public.

The second conviction I have about the Commerce Department is this: whatever its role has been in the past, Commerce today must be an active stimulator of business, a goad to economic growth.

Within this Kennedy administration, pledged to a new vigor in American affairs, there is no place for a passive service department, one which acts only when asked. This is doubly true in the area of economic affairs where today there is not only need for immediate action, but for long-range stimulation of the economy so that it can fulfill its growth potential.

As Walter Heller, the President's economic counsel, has said, "economic recovery in 1961 is far more than a cyclical problem. It is also a problem of chronic slack in the economy—the growing gap between what we can produce and what we do produce."

Had we fulfilled even our available growth potential last year, we would have added about $500 per American household to our gross national product. This would have been almost twice the amount spent on public education by all the governments in the United States and about one and one-half times the total that went into new homes last year. With the extra output, upwards of 1.5 million of our unemployed workers would have jobs. Personal income would have been $20 billion higher than it was, and corporate profits $5 billion above their actual level.

All this could have been realized with available manpower, materials, and machines. The only missing element was the momentum to carry us forward.

This problem of momentum, of catching up with the potential of our domestic economy, exists over and beyond the temporary necessity for ridding ourselves of the recession. We are going to get out of this recession, of course. There are ample grounds now for confidence. But there is little likelihood we can restore momentum to the economy by the relatively simple measures needed to correct cyclical slides. To revive lagging growth requires something far more ambitious—a truly national effort by industry and government to improve technology, lower production and marketing costs, and devise new and superior products, all under conditions of price stability.

In my mind, the Department of Commerce must undertake a leading role in this effort. I feel it has both the ability and the obligation to make important contributions to the drive to achieve our economic potential. Indeed, except that it already has an official name, we might well call Commerce today the Department of Economic Progress. For its function, as I see it, is to help move this economy forward as rapidly as possible.

Now I am well aware of the reputation that Commerce has had over the years. The gentler phrases have referred to it as a departmental counterpart of the Smithsonian—a sort of Nation's attic of agencies—a sub-

sidized publishing house, or, as one of my predecessors implied, a woods littered with poison oak. I have even heard it suggested that since our main building is built over the Tiber Creek, this has inevitably produced a sogginess of atmosphere and a definite wetness to our statistics.

Even in North Carolina, some of my friends, after I was appointed, dredged up old cliches. One of them, who knew of my habit of jingling coins in my pocket when I get impatient, suggested that, at most, my pocket linings would last about 3 months.

Well, I haven't worn out the pockets yet. And the reason I haven't is that in these last few months I have seen a real mood of vitality take hold in Commerce, an eagerness to do more and to pick up responsibilities for economic growth. In fact, right now I sort of feel like "Cousin Ed" Murrow when he remarked about the young people in his agency. Ed said: "These young folks want to work until 2 a.m., and I find I must quit at 1 a.m."

All right, you say, what are you making out of this added drive. What exactly are you doing in substance to get this economy moving forward?

I think you already know a good bit about our program to increase American exports and create new markets for our goods. Today out of 300,000 or so manufacturing enterprises, only about 12,000 are actively exporting. We are trying to raise this small representation, to get more companies to take advantage of the potential for oversea sales. We have developed a complete export program, showing firms and especially smaller ones, just how they can enter the market abroad. And we are getting news of export opportunities to businessmen more quickly than was ever true in the past.

At the same time, we have stepped up efforts to broaden the oversea market for American goods and encourage new demand for our products. We have increased the number of our trade missions overseas; this year we plan to send 17 abroad, compared with 11 in 1960. We have also raised our participation in trade fairs, and have strengthened our commercial offices throughout the world. Further, we have plans for more permanent trade centers abroad. The first, as you know, opens in London in June.

Just in the past few weeks, Commerce and the State Departments started a series of meetings to determine what further assistance the Government should give to the companies that want to start factories overseas or invest in existing operations. We have in mind, particularly, the developing countries where some type of monetary guarantee against expropriation and startup costs may be required. While foreign investment does not return dollars immediately, as exports do, in the long run, such investments pay off.

In the field of travel, where there was a $1.1 billion gap last year, we are also moving ahead to stimulate business. We expect soon to have congressional sanction of the first program in history designed to promote travel to the United States.

Once the bill becomes law, we will establish travel information centers overseas and mount an energetic advertising and promotion campaign. In the meantime, we have started shipping abroad in a modest way travel information, materials, and posters for distribution to travel agencies, airlines, and others.

As you know, the assignment to administer the distressed areas program will shortly be lodged in Commerce. This will be a most important lever for growth in the American economy. The program is one of the keys to rebuilding and revitalizing this industrial soil of ours. It will have, I am sure, a marked impact on one of our most urgent problems, structural unemployment.

The President has asked for this new program. We intend to use it with incisiveness. We will try not to allow its administration to shift the burdens of economic difficulty from one community to another. We will help labor surplus areas, but we will act to the good of the total economy, rather than just its regional components.

I could go on about other efforts, but what I really want to single out today is our plans for science and technology. Research is perhaps the most important tool of all in spurring the economy toward full employment and prosperity. It alone holds the answer to new and superior products which will enable industry to command new markets here and abroad.

Whether you realize it or not, the Department of Commerce today represents the Nation's largest nonmilitary scientific capability. Within its walls are the research resources of the National Bureau of Standards, the Weather Bureau, the Bureau of the Census, the Coast and Geodetic Survey, the Maritime Administration, and the Bureau of Public Roads. The scientific work of these agencies touch much of the economy and they vitally and directly affect the national security.

We have asked Congress to strengthen the research role of Commerce by authorizing an Assistant Secretary of Science and Technology. Specifically, this new Secretary would be in charge of all the research functions carried out by the Department. But he would also work closely with industry, and particularly those which are lagging in their own research and development. Together with business, he would seek ways to increase and quicken their scientific efforts.

Let me cite just a few things we have in mind.

The Federal Government is now spending some $3 billion a year on public roads. Yet there has been relatively little spent for research in two crucial areas: safety and lower cost roads.

We pay a terrible price in traffic deaths, and we know roads can be made safer. How do we do it? How can we design and construct highways so that surface, route, access, and lighting all add up to a maximum safety factor? The answer, if it is to be found, lies in research.

Can a better, lower cost road be developed? A 5-percent reduction in construction cost would save some $150 million a year. And think of the savings in maintenance expense from a road that was really winterproof.

Another case, the Federal Government subsidizes our maritime fleet at a cost of some $350 million. It has been suggested that we may be subsidizing mediocrity. We ought to find out. The maritime industry and the Government together should undertake research to see if there aren't ways to reduce shipbuilding costs and operating costs which are now so badly out of line with those of foreign countries.

In the National Bureau of Standards all the standards and measurements used in the Nation are established. Today we have what is called a "measurement pinch." Our technology has progressed to such refined point that we have to find new methods of measuring things—temperature, pressure, space (both big space and infinitely small space). Without these methods we are deadended.

If we are to produce energy of millions of pounds of thrust, we must find efficient ways of measuring millions of pounds of thrust. If we are to produce interchangeable parts of tolerances of hundreds of thousandths of an inch, we must find easy ways of measuring hundreds of thousandths of inches. The National Bureau of Standards is the Nation's yardstick, and you can't produce goods without a yardstick.

The Patent Office, soon to celebrate its 125th anniversary, is the direct reflection of the state of the country's capacity to invent. And invention is our life blood. Right now we have a 3-year backlog in the Patent Office. A patent for a new complex data processing invention can take as long as 17 months to research. If our inventive genius is to flourish, it should not be subject to this kind of delay and frustration.

But entirely new techniques of automated search are needed to break this backlog. Literally a new language must be invented that can be used in electronic data processing machines. When we do invent it, I'll tell you one thing: We won't patent it, and add another 17 months to time lag.

In our Weather Bureau we are working with the new satellites for global weather observations. We are researching problems in weather alteration. A new project on tornado prediction and forecasting has just begun. Industrial traffic flow and inventory control will before long depend on extended forecasts from Commerce's Weather Bureau. It is so easy to visualize the losses in human life, crop damage, and retail close-outs that could be eliminated.

These functions need national support and national status, if we are to achieve the scientific progress that the pace of technology demands of us. Industry must have these scientific icebreakers to open the way to further growth and progress. And it must also have new programs designed specifically to advance productivity by grasping the gains offered by automation and atomic energy.

Now just one final word about Commerce and its role as a stimulator.

I have been much concerned lately by the black marks that business has been getting in the news. I mean, of course, the price-fixing scandals. The conspiracy in the electrical industry has shocked the Nation. And I am very much afraid that it is in for more shocks in the months ahead.

This collusion, this price-fixing is an unjustifiable thing. It should be exposed, punished, stamped out. We are right to treat for what it is, a bad blot on the record. But, and this is my point, we should not treat it for more than it is.

The real spirit of American business is not represented by these price fixers. The real spirit belongs to the thousands of businessmen who recognize their public responsibilities and who run their affairs honestly and ethically.

What I am most afraid of is that a handful of businessmen, who deserve public censure, may impair the good standing of all of business. If this should happen, the damage would be great—loss of public support, and worse yet, public faith.

I do not accept a passive role in this problem. I think the Commerce Department can and must help call attention to the principles of business conduct, which most businessmen observe and which all should.

After consultation with the President, I have asked a group of distinguished individuals to prepare for me what I hope may come to be a code of ethical practices for American business. My distinguished colleague, Secretary Goldberg, some years ago made a significant contribution to the American labor movement and all of the country when he developed labor's ethical codes. I hope, with the help of the people I have asked to suggest a set of standards, that I can make some similar contribution for business conduct.

I am confident that this administration, working with enlightened management and enlightened labor, can achieve in 1960's an era of record growth and prosperity. We can move far toward the elimination of poverty and unemployment and toward a fuller life for all our people.

The President is determined that the record of the sixties shall be one consistent with our potential. His economic program is both

farsighted and sound. We at Commerce will use our full resources to implement this program and to assist, entice, and prod business to achieve under it the kind of economic growth we must have to meet our national and international obligations.

Thank you for letting me come and talk with you.

Land-Grant Colleges: A Continuing Step Toward Education for All

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1961

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following because I strongly believe in the benefits that can be derived from higher education for all of our qualified citizens. I appeared before the Select Subcommittee on Education on April 13, 1961, to speak in favor of H.R. 4386, which provides for continuing education programs stemming from colleges and universities. I hope my colleagues will find the remarks that follow of interest:

STATEMENT BY THE HONORABLE JAMES ROOSEVELT, OF CALIFORNIA, ON H.R. 4386, BEFORE THE SELECT SUBCOMMITTEE ON EDUCATION, APRIL 13, 1961

Mr. Chairman, it is my great pleasure to appear before your committee and support the bill H.R. 4386, providing for continuing education programs stemming from colleges and universities.

As has been made clear, the purpose of this bill is to establish a publicly supported program of general education, to be operated by State universities and land-grant colleges.

I know of few greater challenges in the educational field than those sought to be met and fulfilled by the bill. Technical and social change is occurring in our time at an astonishing pace. Economic and social problems are becoming increasingly complex with the issue of automation adding its own fuel to this problem.

On the international scene we are witnessing as never before the greatest possible challenges to our democratic form of government. The effectiveness of our leadership in the years to come will be measured in part by the degree to which we solve our national problems; and the democratic manner in which these problems are met.

The growing importance of education and the changing relationship of government to education was clearly restated in the now famous school desegregation cases, decided May 17, 1954, in the following language by a unanimous Supreme Court:

"In approaching this problem we cannot turn the clock back to 1868 when the amendment was adopted, or even to 1896 when *Plessy* v. *Ferguson* was written. We must consider public education in the light of its full development and its present place in American life throughout the Nation. Only in this way can it be determined if segregation in public schools deprives these plaintiffs of the equal protection of the laws.

"Today, education is perhaps the most important function of State and local governments. Compulsory school-attendance laws and the great expenditures for education both demonstrate our recognition of the importance of education to our democratic society. It is required in the performance of our most basic public responsibilities, even service in the Armed Forces. It is the very foundation of good citizenship. Today it is a principal intrument in awakening the child to cultural values, in preparing him for later professional training, and in helping him to adjust normally to his environment. In these days, it is doubtful that any child may reasonably be expected to succeed in life if he is denied the opportunity of an education. Such an opportunity, where the State has undertaken to provide it, is a right which must be made available to all on equal terms."

From the earliest days of the Republic the Federal Government has made grants of land or funds to States to assist them in carrying out certain services that are "clothed with a national interest."

One hundred years ago, Congress began its support of State land-grant colleges and universities. In the colonial days higher education in this country was available only in a few institutions, such as Harvard, Yale, and William and Mary. These institutions at different times were subject to varying degrees of public control, but were essentially private. After the Revolutionary War the States began to organize universities as publicly controlled institutions. They were not essentially different from the privately controlled ones which by that time had grown relatively strong and were setting the pace for the development of collegiate education throughout the country.

During the first half of the 19th century the two types of colleges and universities, publicly and privately controlled, developed side by side. Both were greatly influenced naturally by the European universities of which their leading professors were commonly products. But these European universities were organized to serve a society not predominantly democratic. University education was for the leisure classes, the government leaders, and members of the professions.

The American institutions, functioning in somewhat the same fashion, maintained chiefly the classical and professional curricula. They made only slight adaptations to the needs of a pioneer people. A study of such fields as agriculture and the mechanic arts was beneath their academic dignity.

The mild protest against this too exclusively classical type of college and university, grew into a widespread agitation by the middle of the 19th century. Agricultural societies in many States were insisting that there must be available colleges where agriculture could be studied. The already established colleges and universities remained largely uninfluenced, however, by this agitation. Hence, during the 1850's the Congress debated the issue and finally passed the Morrill Act of 1859. President Buchanan vetoed it essentially on the ground that it was in violation of the traditional policy of the Federal Government which had up to that time left the control of education to the States. In 1862 the Morrill Act was again passed and was signed by President Lincoln.

The fundamental purpose of the Morrill Act was to insure the development in each State of at least one college adapted to the educational needs of the agricultural and industrial classes. Without too much regard to the academic traditions which largely controlled the colleges and universities of the time, these new institutions to be known as land-grant colleges, were to afford a type of education which would foster the development of agriculture and the mechanic arts. Each State was left to decide whether this new college should be made a part of an already existing institution (commonly the State University) or whether it should be a completely separate institution. By the time 48 States were admitted into the Union, more than a score of them had developed both a State university and a land-grant college or university on separate campuses, usually under separate boards of control. A number of States which established separate land-grant institutions have in recent decades joined their State universities and their land-grant colleges or universities under single boards in their efforts to coordinate the programs of the two institutions in a given State. A few States, notably New York, New Jersey, Delaware, and Pennsylvania, utilize as land-grant institutions, universities with varying degrees of private control.

Thus has grown up a system of colleges and universities managed by each State but conforming to certain broad policy stipulations of Federal law. The Federal support contemplated in the initial Morrill Act was to be the income from public land (30,000 acres for each Representative and Senator in Congress or equivalent in scrip) made available in each State. The State was expected to contribute to the maintenance of its land-grant institution as well as to provide its buildings.

From this modest beginning the Federal Government has expanded its contributions to the land-grant colleges and universities. Recognizing the need for research as a basis for developing agriculture, the Congress passed the Hatch Act in 1887 setting up in the land-grant institutions the system of agricultural experiment stations. In 1890 the second Morrill Act was passed supplementing by direct appropriation the income from the land grants for instruction. In 1914 the Smith-Lever Act was passed establishing the system of cooperative extension services to bring the adults the benefits of current developments in the field of agriculture. Thus, over a period of little more than half a century these institutions, designed to foster a program of education suited to the needs of the agricultural and industrial classes, had been established on a foundation of research, and encompassed a program for both the youth of the campus and the adult population throughout the rural areas of the State.

Throughout the recent decades numerous acts have been passed expanding the scope and increasing the support of all three aspects of their programs—research, campus instruction, and extension education. Now in addition to the income from the original land grants the appropriations of Federal funds to aid the States in the maintenance of the land-grant institutions amount to more than $300 million annually.

These funds are distributed to the States on a variety of bases. Some funds go in equal amounts to all States, some to the States on the basis of their farm populations, etc. The funds for campus instruction are distributed and administered by the U.S. Department of Health, Education, and Welfare, Office of Education. The funds for experiment stations and extension education are distributed and administered by the U.S. Department of Agriculture.

These land-grant institutions have broadened the base of higher education bringing it within the interest and attainment of vastly larger numbers of people than would otherwise have been reached. The whole realm of higher education in this country, and to a lesser degree even in some other countries, has been profoundly influenced by the developments of the land-grant colleges and universities in popularizing higher education. They have demonstrated the partnership of the Federal and State governments in the maintenance of a system of higher education which is designed to fulfill Federal, State, and local needs. They have spread widely the concept that higher education is something in which all the people have a stake. They have, therefore, a place of deep affection in the hearts of the people. They are growing in strength and influence with each passing decade.

As the committee knows, the present bill carries an annual basic appropriation of

$20,000 to each State. Additionally there is authorized the sum of $5 million to be divided among the several States on a population basis; with the securing of its share of funds of the latter amount being based upon the State providing equal matching sums.

This, Mr. Chairman, raises in my mind a very serious and pressing problem, to which I would respectfully like to direct the attention and study of this committee.

As I emphasized earlier, any discussion of Federal responsibility in the field of education necessitates a consideration of Federal responsibility in civil rights. I would like to conclude therefore with a discussion of the National Government's responsibility in insuring equality under the law in affording educational opportunity.

As I stated before Subcommittee No. 5 of the House Committee on the Judiciary on March 11, 1959, in support of the Civil Rights Act of 1959, I think we are all very much aware that the challenge in this fast-moving 20th century is to bring social progress up to scientific, technological, and material progress. This has always been, down through the centuries, the real and overriding challenge to mankind. And the grave internal and external pressures that face this Nation today further emphasize the need for perfecting our democratic institutions through a recognition that social progress—and certainly implementation of civil rights is part and parcel of such progress—is an indigenous ingredient in democratic concepts and institutions.

In the Morrill Act of 1890 the Congress included a clause requiring that land-grant colleges make no distinction of race or color in admission requirements. It was further provided that "no money shall be paid out under this act to any State or Territory for the support and maintenance of any college where a distinction of race or color is made in the admission of students, but the establishment and maintenance of such colleges separately for white and colored students shall be held to be a compliance with the provisions of this act if the funds received in such State or territory be equitably divided as hereinafter set forth." In consequence of this authorization, 17 of the States have maintained separate land-grant colleges for Negroes.

It is a sad commentary that a program adapted to meet the educational needs of the agricultural and industrial classes should have resulted in a greater disparity between and advantaged majority and a disadvantaged minority of our citizenry.

I feel therefore, Mr. Chairman, that it is a pertinent inquiry by this committee to examine this important matter for it appears to me that all land-grant institutions should open their resident instructions to all qualified students immediately. I should note, however, that some corrective action is now underway; and that through administration of these programs certain of these discrepancies can be rectified.

I am very grateful, Mr. Chairman, for the opportunity of appearing before this distinguished committee and supporting a bill and a farsighted program which should provide educational benefits for all our citizens.

A National Lottery

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. FINO. Mr. Speaker, as the sponsor of legislation to legalize a national lottery in the United States as a means of painlessly and voluntarily raising additional Government revenue; regulating and controlling the human urge to gamble; cutting off the underworld from this lucrative industry; reducing our mounting national debt; providing sorely needed tax relief for our American wage earners, I was happy to read that Walter Winchell, columnist for the New York Daily Mirror, supports my position on this disturbing and pressing human problem.

I would like the Members of Congress to read what Mr. Winchell wrote about gambling:

Eradicate gambling. Of course, gambling has always been easy to condemn and impossible to stop. The foregoing is not our opinion, but the judgment of human nature. The biography of humanity attests to the instinctive qualities of the take-a-risk urge. To a greater or lesser degree it has been prevalent in every era and nation. Gambling cannot be obliterated. It can only be legally controlled. Incidentally, those who deplore gambling as an evil which must be erased are reminded of the classic: "You would be surprised to learn how much some people have learned about prayer from playing poker."

Elks Flag Day

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 3, 1961

Mr. WILEY. Mr. President, one of our great freedoms is our right to organize into civic, patriotic, and fraternal groups and to associate with our friends who share common interests. These lodges and clubs have made outstanding contributions to their communities and to the Nation.

One such organization is the Benevolent and Protective Order of Elks. Some of us in the Senate are Elks; and those who are not, recognize, I believe, the leadership the Elks have given to many splendid activities, such as fine youth and old-age programs which extend well beyond their lodge doors.

Mr. H. Jankowski, who is Flag Day chairman for Milwaukee Lodge of Elks, No. 46, has written me regarding the Elks sponsorship of Flag Day programs which will be held this year by all lodges throughout the United States. I heartily commend this program, and ask unanimous consent to have the statement on the purposes of Elk's Flag Day printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ELKS FLAG DAY

The purpose of this service is to honor our country's flag, to celebrate the anniversary of its birth, and to revere the achievements wrought beneath its folds. It is quite appropriate that such a service should be held by the Order of Elks, an organization that is distinctively American, intensely patriotic and without counterpart.

Our flag is at once a history, a declaration and a prophecy. It represents the American Nation as it was at its birth; it speaks for what it is today; and it holds the opportunity for the future to add other stars to the glorious constellation.

The Benevolent and Protective Order of Elks is the first and the only fraternal body to require formal observance of Flag Day. In July of 1908, the grand lodge of this order, at Dallas, Tex., then assembled, provided for the annual nationwide observance of Flag Day, by making it mandatory upon each subordinate lodge of the order.

This unique distinction as the originator of Flag Day is most becoming to the Order of Elks, and only loyal American citizens are eligible to join it, and it has no foreign affiliations. It has linked its destiny with that of its country and made this flag its symbol of dedication to God, to country, and to its fellow men.

Tribute to Carmine Bellino

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, May 3, 1961

Mr. WILLIAMS of New Jersey. Mr. President, Carmine S. Bellino of Elizabeth, N.J., has served his Nation in many ways: as a member of the Federal Bureau of Investigation, as an assistant to J. Edgar Hoover, as chief investigator of the Senate Rackets Committee. He now has the distinction of serving as a special consultant to President John F. Kennedy.

On April 23, 1,200 persons paid tribute to Mr. Bellino in his hometown. Attorney General Robert F. Kennedy, who knows from firsthand experience about the abilities of Carmine Bellino, appeared at the testimonial dinner, in Newark, to salute this distinguished citizen of New Jersey.

The Journal, Elizabeth, N.J., described this tribute in an article on April 24 and an editorial on April 25. I ask unanimous consent to have them printed in the Appendix of the RECORD.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Elizabeth (N.J.) Journal, Apr. 24, 1961]

TWELVE HUNDRED SALUTE BELLINO, AID TO PRESIDENT

(Attorney General Robert Kennedy leads tribute to Elizabethan—cites his work with probers—Chief Executive sends good wishes)

Carmine S. Bellino, an Elizabeth native serving as special consultant to President John F. Kennedy, was honored last night by more than 1,200 persons, including Attorney General Robert F. Kennedy.

Several Members of Congress joined area resident, most of them from Elizabeth, to pay tribute to Mr. Bellino at a testimonial dinner in the Essex House, Newark.

Hundreds of congratulatory telegrams poured in from national figures, including President Kennedy, who wired, "I regret that I can't be with you. My warmest good wishes."

Attorney General Kennedy told the throng that "no name is going to rank higher than that of Carmine Bellino" when the history of committee investiagtions is written.

The Cabinet officer said the Elizabeth native, as chief investigator for the Senate

Rackets Committee, participated in 80 percent of all major investigations.

BROTHER "FEELS FORTUNATE"

"My brother, the President," the Attorney General added, "feels very fortunate to have Carmine Bellino by his side."

Attorney General Kennedy led the audience in a toast to Mr. Bellino's father, Frank Bellino, of 313 South Seventh Street; the memory of his mother, who died last year, and the honored guest and his wife, the former Miss Santina I. Novello, of Elizabeth.

Mr. Bellino's father was unable to attend because of illness, but sent a letter expressing his thanks to the committee which arranged the dinner. The honored guest's seven children were in the audience.

Mayor Steven J. Bercik lauded Mr. Bellino, who, he said, "has brought great credit to the city." He praised the President's special consultant for his "intelligence, integrity, courage and tenacity."

EARLY LIFE RECALLED

Salvatore J. Migliore of Union, dinner cochairman, traced Mr. Bellino's life, starting with their days as classmates at Continental School No. 3.

Mr. Migliore recalled the honored guest's activity as a member of the FBI and his rise to administrative assistant to J. Edgar Hoover, his work on various governmental committees and his appointment as special consultant to the President in January.

Rt. Rev. Msgr. James A. Caulfield, pastor of St. Jane de Chantal Church, Bethesda, Md., told the throng that Mr. Bellino is "a model father," "an appreciative husband," "a most dutiful son," and "a faithful friend."

"My tribute to Carmine Bellino," the clergyman asserted, "is in recognition of the sterling qualities he exemplifies as a member of my parish."

APPRECIATION EXPRESSED

Mr. Bellino, who also acts as an adviser to the director of the national budget, thanked the audience "from the bottom of my heart" for attending the affair.

At the start of his address, he used a greeting in Italian which drew a warm response.

Mr. Bellino recalled the names of various persons, including many Elizabeth residents, to whom he said he is indebted.

"I am grateful," the honored guest declared, "that President Kennedy gave me the opportunity to serve in his administration."

He praised his parents and his wife and said he has been "lucky" because of the people he met in his days in Elizabeth and throughout his career.

Mr. Bellino read a composition written for school by his oldest daughter, Mary Catherine, in which she praised Mrs. Bellino as a mother.

WELCOME BY O'HARA

Daniel J. O'Hara, an Elizabeth attorney who was general chairman of the dinner, welcomed the audience.

Frank J. Holmes, president of International Police Services Inc., Washington, and a former FBI colleague of Mr. Bellino, was toastmaster.

Union County Sheriff Ralph Oriscello, ticket chairman, presented a plaque to the honored guest "in recognition of dedicated experience in the service of his country."

Sheriff Oriscello told the President's special consultant that proceeds of the affair would be used to pay for a new desk and chair he has ordered for his Washington office.

Mr. Bellino also received a tape recorder on which the remarks of the evening's speakers were recorded.

HONORARY BAR MEMBER

Mr. Holmes announced that Mr. Bellino also has been given an honorary membership in the International Bar Association of Okinawa.

Elizabeth City Clerk Thomas P. Luchio presented Mr. Bellino with a guest register. Mrs. Rose Conforti presented flowers to Mrs. Bellino.

Rev. O. Dominic Battistello, S.D.B., pastor of St. Anthony's Church, where Mr. Bellino was active in various organizations, gave the invocation and closing prayer. Mrs. Edith Borello sang the national anthem.

Among those introduced to the throng were Mrs. Kennedy, Miss Angela Novello, an Elizabeth native who is secretary to the Attorney General; U.S. Senator HARRISON A. WILLIAMS, JR., of Westfield; U.S. Senator PAT MCNAMARA of Michigan.

CONGRESSMEN INTRODUCED

Representative Dominick V. Daniels, of Jersey City; Representative Peter Rodino, Jr., of Newark; Representative Alfred E. Santangelo, of New York; Dr. Vito V. Bellino, brother of the honored guest; and Rev. Daniel Power, S.J., of Georgetown University.

U.S. Senator CLIFFORD P. CASE of Rahway offered his congratulations to Mr. Bellino, but did not stay for dinner because of another engagement.

Telegrams of congratulations were received from U.S. Senators John L. McClellan, of Arkansas; Henry M. Jackson, of Washington; John O. Pastore, of Rhode Island, and Thomas J. Dodd, of Connecticut; and FBI Director Hoover.

Executive committee members for the dinner also included Recording Secretary Albert T. Caruso, Corresponding Secretary Joseph M. DeMarco; financial secretary, City Treasurer Joseph Manfredi, and Treasurer Michael Lapolla.

Ralph V. Mancini was chairman of arrangements. The general committee totaled about 50 persons.

TRIBUTE TO CARMINE BELLINO

As he reflects on the broad range of tributes paid to him in Newark on Sunday, Carmine S. Bellino must indeed be a happy man.

There was praise from the U.S. Attorney General, from U.S. Senators, from Congressmen, from priests, from officials of Elizabeth, his native city, and from the President himself.

At the other end of the scale were the felicitations of more than 1,200 of his friends and former neighbors, the hard-working, warm-hearted residents of the Peterstown section of Elizabeth.

The universal nature of Mr. Bellino's friendships is an index to universal nature of his character. He is active in his religion and the affairs of his community, devoted to his family and conscientious in his work.

Mr. Bellino, who has brought honor to his old neighborhood and to his native city, merits the honors accorded him by a wide assortment of fellow men.

Church and State

EXTENSION OF REMARKS

OF

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. FINO. Mr. Speaker, in view of the current controversy over the proper relationship between the Federal Government and religious educational institutions, I find it encouraging when some educator comes forward with an enlightening explanation of this sensitive problem.

The following letter, printed in the New York Herald Tribune on Sunday, February 26, 1961, has come to my attention. The writer, Father Herbert J. Clancy, a professor of history at Fordham University, offers a crystal clear explanation of this so-called tangled issue. I hope the Members of Congress will take time out to read this letter which, I believe, throws a new light on this subject:

To the NEW YORK HERALD TRIBUNE:

The tireless assertions of so many well intentioned Americans that governmental aid to church colleges would be an abandonment of the principle of separation of church and state recalls a perceptive observation of Machiavelli. Alluding to the discourses of Savonarola he wrote: "Those ignorant of the subject find them perfect."

The oft-repeated statement about there being "a wall of separation between church and state" is derived from a letter that Thomas Jefferson wrote to the Baptists of Danbury, Conn., on January 1, 1802. It seems more than passing strange that those who quote this celebrated phrase keep wrenching it out of its historical context. What Jefferson wrote was: "Believing with you that religion is a matter which lies solely between man and his God, that he owes account to none other for his faith or his worship, that the legislative powers of Government reach actions only, and not opinions, I contemplate with sovereign reverence that act of the whole American people which declared that their legislature should make no law respecting an establishment of religion, or prohibiting the free exercise thereof, thus building a wall of separation between church and state."

The "act of the whole American people" that Jefferson refers to is of course the first amendment. He knew quite well what our Founding Fathers meant by the first article of the Bill of Rights. For in the debates preparatory to the adoption of the first amendment, Madison proposed a wording which read: "No religion shall be established by law, nor shall the equal rights of conscience be infringed." The Senate, wishing to improve on this version, suggested the following: "Congress shall make no law establishing articles of faith or a mode of worship." Finally, as the "Annals of Congress" for 1789 tell us, the Senate approved the final version: "Congress shall make no law respecting an establishment of religion." At no time did Congress indicate a desire to prohibit itself from aiding religion on a nonpreferential basis. As Madison declared, the intention of the first amendment is that "Congress should not establish a religion and enforce the legal observance of it by law, nor compel men to worship God in any manner contrary to the conscience."

Knowing full well what the architects of our Constitution meant, our early Presidents acted on that knowledge. President Washington in 1789 sent a recommendation to Congress for the allocation of funds for religious education among the Indians. President Jefferson sent to Congress in 1803 a treaty which authorized the United States to give $700 to a Catholic priest working among the Indians, and $300 for the erection of a Catholic church. President Madison continued Jefferson's policy of payments to religious societies for services on Indian reservations.

In fine, a study of the "Annals of Congress" for the year 1789 shows conclusively that the founders of the American Republic did not seek to erect any absolute wall between church and state. On the contrary, they wished to foster all religions.

HERBERT J. CLANCY, S.J.,
Associate Professor of American History, Fordham University, New York.

Senator Ralph Yarborough, Addressing Joint Session of Texas Legislature, Urges Closer Cooperation Between State and National Legislative Bodies

EXTENSION OF REMARKS
OF
HON. JACK BROOKS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. BROOKS of Texas. Mr. Speaker, the Legislature of the State of Texas recently passed a concurrent resolution honoring our distinguished senior U.S. Senator from Texas, the Honorable RALPH W. YARBOROUGH, and inviting him to address a joint session of the Texas house and senate.

Senator YARBOROUGH responded with a noteworthy speech eloquently urging closer coordination and cooperation between State and National legislative bodies in the interest of more efficient and responsible government by consent of the governed.

I ask unanimous consent to have printed in the RECORD, the text of the aforementioned Texas Senate Concurrent Resolution 38, inviting Senator YARBOROUGH to speak, as well as the text of his stirring address upon that occasion:

There being no objection, the text of the concurrent resolution and the address was ordered to be printed in the RECORD, as follows:

Whereas the senior U.S. Senator from Texas will visit in Texas during the Easter holidays; and

Whereas this outstanding Texan has made many contributions to our great State as a citizen, judge, war veteran, and statesman; and

Whereas it is the desire of the Senate of Texas, the House of Representatives concurring, that the senior U.S. Senator from Texas be invited to address a joint session of the 57th legislature at 11 a.m. on April 6, 1961: Now, therefore, be it

Resolved, by the Senate of Texas (the House of Representatives concurring), That Hon. RALPH YARBOROUGH, senior U.S. Senator from Texas, be and he is hereby invited to address a joint session of the 57th legislature in the house of representatives at 11 a.m. on April 6, 1961; and

That an official copy of this resolution of invitation be forwarded to Senator YARBOROUGH by the secretary of the senate.

BEN RAMSEY,
President of the Senate.
JAMES A. TURMAN,
Speaker of the House.
CHARLES SCHNABEL,
Secretary of the Senate.

FEDERAL-STATE PARTNERSHIP

(Speech by U.S. Senator RALPH W. YARBOROUGH, Democrat of Texas, before a joint session of the Texas Legislature at Austin, Thursday, April, 6, 1961, at 11 a.m.)

Mr. Speaker, Lieutenant Governor Ramsey, fellow legislators, friends, Texans, I am grateful to each and every one of you for this privilege of coming again as an invited guest before a joint session of the greatest legislature of the greatest State. I owe a real debt to the Texas Legislature because it was your action 4 years ago this month that turned thumbs down on a change of rules in the middle of the game, while I was engaged in a tough race against highly competent, experienced opposition.

While my service in the U.S. Senate is my first service as a member of a legislative body, I have served with the Texas Legislature in the past as an assistant attorney general under the late beloved James V. Allred, when I had a job during some sessions of drafting bills for some members of the legislature. Those were the depression years of the thirties and Chief Justice Bob Calvert, Judge Sarah Hughes, the late Judge Harry Graves, and Governor Coke Stevenson were among the many influential members here then.

And later your committees were uniformly courteous to me as I appeared before them on unpaid committees of the University of Texas exes, of the State bar, and on behalf of mental hygiene societies, and of the State permanent school fund. I appreciate all of those courtesies, and hope that I may practice some reciprocity when you come before committees of our Senate.

Three times in my life, gubernatorial appointments for State office were confirmed on my behalf by your Senate, even before my good friend Doyle Willis was there to plead my cause, as he has done so many times these past 8 years.

This is a body of influence; your House has produced two distinguished Speakers of the U.S. House of Representatives, Vice President John Nance Garner, and the present record-breaking Speaker, "Mr. SAM," "Mr. Democrat" himself, Speaker SAM RAYBURN. And this House was for years the training ground of its member Sam Johnson, father of the distinguished Vice President of the United States, LYNDON B. JOHNSON.

You trained the present Governor of Texas, his immediate predecessor in office, a number of U.S. Congressmen and the next Governor of Guam.

It is an honor to serve in a body so rich in accomplishments and traditions, but richer yet in its potential for the future, now on the verge of new hope for more meaningful service, engendered by the modest salary increases the people of Texas voted last fall.

While we speak nationally of new frontiers, here at home we have our own Texas frontiers, but so entwined are our destinies as a people with our dual Federal-State relationships, that some of the best government that we have evolved in America is partnership government, involving partnership action by the State and Federal legislative bodies.

Outstanding examples of cooperation are in highway building programs, old age pensions, medical care for the aged, vocational and rehabilitation programs, National Guard programs, care for the blind, public health, public education, game, wildlife, soil and water conservation, and many other programs jointly financed for many years now.

Even in a field of such seemingly unilateral action, joint and cooperative efforts are needed if any worthwhile advancement is to be made. This is illustrated by the Big Bend National Park, the only national park in Texas, which was first authorized by the Texas Legislature, and presented to the Federal Government by Texas, before the Congress would act. In that case the Texas Legislature boldly took the initiative, and Texas has a national park.

There is now pending a proposal for a greater national park in Texas, the Padre Island National Seashore Recreation Area. Those best versed nationally on these matters look at it as the No. 1 seashore in America.

PADRE ISLAND SEASHORE

Padre Island is 117 miles long and varies from about one-fourth mile to 3 miles in width. Our first project in Congress called for a full-length national seashore recreation area, less about 5 miles at each end for private development. Later we agreed to shorten the park area to 100 miles of the total length of 117 miles. Then, in order to win the unanimous support of the National Parks Advisory Board, without whose approval no national park project can be created under Federal law, we compromised again, and shortened the area to an 88-mile-long park, but only 85 miles long on the gulf side, leaving 32 miles of gulf beaches on Padre Island for private development, if we have the 88-mile-long park.

I have been working hard for a Texas-size national seashore recreation area on Padre Island for two main reasons. First, I'm convinced that the project will bring a many-million-dollar tourist bonanza to our State, and even more important, it will preserve as a recreation area for this and future generations of Americans, a part of our country's rapidly vanishing natural grandeur.

A Texas-size national seashore park, which would attract many hundreds of thousands of additional tourists to Texas within a few short years, is especially needed right now. Over the last 4 years, the number of tourists and the number of tourist dollars, coming to Texas, have declined steadily. Last year, only 8,600,000 tourists visited Texas, a decline of 1,700,000 out-of-State visitors since 1957. Based on the average amount of $45 each out-of-State visitor spends in Texas, the decline in tourist trade (just last year alone) amounted to a $144 million loss of business. This loss of tourist trade is something we can correct, and it seems clear that the best answer is a national seashore recreation area on Padre Island.

Up to the present, Cape Hatteras National Seashore Recreation Area in North Carolina is the only facility of its kind in our entire Nation. It was opened in 1955 and attracted 264,000 visitors that year. In the past 6 years, while we have had a costly decline in visitors to Texas, attendance at Cape Hatteras has doubled. Visitors to Cape Hatteras Seashore totaled 467,000 last year. If this trend continues annual attendance will reach 1 million visitors by 1965. This tremendous increase in tourist trade has boosted the economy of Dare County, N.C., where Cape Hatteras is located, to the point that residents last year enjoyed a 20-percent tax cut, a rare thing in any State or county.

Building a Padre Island National Seashore Area is a sound step toward attracting new tourist trade to Texas. The National Park Service wants to build a Texas-size, 88-mile seashore area on Padre Island. Department of Interior officials have proposed to spend upwards of $8 million to buy land and build roads, visitors centers and other improvements over the next 5 years. President Kennedy has urged Congress to pass enabling legislation. But there is strong competition for the limited dollars budgeted for conservation projects. Hearings already have been held on proposed seashore recreation projects for Point Reyes, Calif., and at Cape Cod in President Kennedy's home State in Massachusetts.

Discord among us Texans and with the National Park Service over size of the seashore area or where roads should be built might well result in our Padre Island project being delayed while other seashore projects are built on the east and west coasts. Such a project in California would help give that State an advantage in the competition for beachbound tourist business.

I believe it is time for all of us Texans to begin working together to build a Texas-size national seashore recreation area on Padre Island. The Texas Legislature led the way in the 1959 session with a bill authorizing a 50-mile park on the island and, paving the way now for an 88-mile-long authorization.

Some argue against this national seashore area, saying a Miami Beach type of development is needed instead. But, they are not alternatives. There is ample room for both.

In this regard, a reasonable review of the facts reflects that the 88-mile seashore plan leaves adequate land for private development. Based on the 7.1-square-mile resort area of Miami Beach, private developers on Padre Island would have the space to build three resort centers the approximate size of the Florida vacationland outside that part of the 117-mile-long island after an 88-mile seashore recreation area is established. The area for private development on Padre Island in Cameron County alone is about the same size as Miami Beach, where there are 397 hotels, 2,350 resort apartments and other improvements valued at a total of $404 million.

EDUCATION

Fellow legislators, while this park project is urgent, we face even greater urgencies in this dangerous world in which we live, half slave and half free. For generations we have enjoyed advantages over other nations because of our educational lead. By our system of public free schools, we have pulled ahead of other nations.

Now that lead is threatened. All the peoples and nations of this world now realize that education is the golden key that unlocks the door for social and economic as well as intellectual advancement. They have crash programs to catch up, to educate their people.

We have led the world in the past; our ability to lead it in the future depends upon our willingness to pay the price of education and leadership.

Today, we spend about 4 percent of our gross national product on education, while the Russian Communists spend about 12 percent of their annual gross national product for education.

Soviet Russia now has more than twice as many engineering and science students in college as we; they have almost twice as many science and engineering students in college as the entire free world.

In 1959, we licensed 8,000 medical doctors; Soviet Russia graduated 16,000. Of these Russian Communist medical graduates, 14,000 were for service in Russia, while 2,000 were trained in the languages, religions, customs, and mores of the underdeveloped peoples in the world, and were pledged to go and live with the people directly, in their native huts and habitations, in the underdeveloped nations. We are running on borrowed time.

In those countries we are living on the good will earned by American missionaries and other representatives in the past, but we must educate to meet the new threat, rising like a cloud on our horizon.

Admiral Rickover, developer of the atomic submarine, has said that, despite the fact that the Russians are ahead of us in missiles, he regards the greatest Soviet Russian threat to us as coming, not from missiles, but from the driving Russian educational system.

Here in Texas we have a woeful failure to give our young people a fair chance at a college education. Of all the young people in Texas between the ages of 18 and 21, only 31½ percent attend college, while in California 60 percent of all young people between 18 and 21 attend college; in Utah 64 percent, and in Massachusetts 53.3 percent.

Here in Texas we have the greatest quantum of natural resources and mineral wealth found in any 265,000 square miles of the earth's surface. Despite that wealth, the average annual per capita income of Texans (at a little over $1,900 per year) places Texas 32d among the States of the Nation (32d down from the top) in the average income of our people.

Furthermore, recent surveys have revealed that of all management jobs in Texas business and industry, 65 percent are held by persons educated in other States, and only 35 percent are educated in Texas. Veritably we are becoming the hewers of wood and the drawers of water for those educated elsewhere who come in to manage our patrimony and enjoy our birthright.

But the problem isn't limited to Texas. A very fine article in the Austin American yesterday (Apr. 5, 1961), by Lynn Poole of Johns Hopkins University, under the title "Rising Costs Will Bar College Doors to Youth," warns of the tragedy of America's greatest underdeveloped resource and asset, the brainpower of her youth. The article gives these results of a survey:

"Assume that you live on a street which contains 10 houses. Further assume that you and your nine neighbors all earn between $5,000 and $7,500 per year, and that you will have children in elementary school.

"Today, in 8 of the 10 houses on that street, parents are making plans for their children to attend college when the time comes in the years ahead. If you are making similar plans, your house is one of these eight.

"The sorry truth is, however, that children from only three of the houses on your street will ever see the inside of a building on a college campus. Parents in the other five houses who had been hoping to see their youngsters march off to college are doomed to disappointment.

"There is one overriding reason for these discouraging facts: money.

"A recent survey has uncovered some revealing facts with regard to the financing of higher education.

"Of parents earning $3,000 or less per year, 39 percent expect their children can go to college. Only 12 percent get there.

"Of parents who earn $10,000 or more 95 percent expect their offspring to attend college. In this group 65 percent do attend.

"In both cases, fewer children go than are expected to. However, the greatest disappointment comes in the middle income range—on your street of 10 houses.

"In the $5,000 to $7,500 group, 80 percent expect their children to go to college—28 percent actually go.

"The figures are slightly better for the group whose income ranges from $7,500 to $10,000. Ninety percent anticipate college for their children and more than 50 percent make it.

"Thus, it becomes quite clear, according to the report, that there is a correlation between parent's income and college for the children."

With the financial burden of a college education barring the door for half of all those whom we should be educating, we must find means to unlock this resource of talent and brainpower. One such means is the G.I. bill for the education of cold war veterans, which I am sponsoring in the Senate of the United States. It would furnish educational opportunities either college, high school, or on the job training, for 4¼ million veterans of the cold war, over 200,000 of them right here in Texas.

We have other educational programs pending in the U.S. Congress—cooperative programs, calling for partnership action by State and national legislative bodies, to give American youth, and ourselves, the thrust for the future that only education can give.

Dr. Arthur H. Moehlman, a leading authority on education, now serving on the faculty of the University of Texas, in discussing the need for meeting and expanding our educational system, in keeping with the educational awakening now going on, warned us:

"The cost will be very high because of the tremendous increase in population, because of the complex nature of our culture, because of the mandatory need for cooperation between school and community, and because of the speeded-up metabolism of human history, which can outrun man. We are creating a new world, but we find it difficult to visualize what is a better world. There is a vast warfare between our ethics and our knowledge, between human wisdom and cosmos-shaking mechanisms. However, if we can pay the price of searching for the good and noble life through democracy and universal education, history will not outrun us and we will play a wise and courageous role in our new world. If we can carry out our second educational awakening, universal education will continue to be the United States' greatest contribution to world culture."

Fellow legislators, the tasks, responsibilities and duties of meeting this challenge are yours, and mine. Some other branches of Government receive more favorable treatment from the press and other news media than we legislators. But we are the ones who meet the hard unpleasant duty of leaving the taxes to pay for this educational advance. The legislator lives in no sheltered world, such as the judiciary enjoy. How well we legislators face and discharge that duty, will be the measure of the freedom and security of us all.

The free world looks to us for leadership and guidance. Fellow legislators, I trust we will not fail our country and freedom. It is a part of the legislator's creed that he takes the gaff, does his duty, and advances freedom, learning, justice, and civilization. Thanks for this visit, and God bless you in this discharge of your duties.

Century 21 Exposition

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Wednesday, May 3, 1961

Mr. MAGNUSON. Mr. President, the Seattle Post Intelligencer, editorially, gave a progress report on plans for our Century 21 Exposition last Friday, April 21.

Making this summation more important regarding steps taken to make this world fair a true report of the latest scientific and technological achievements to be shown to the entire world was the fact that just 1 year from last Friday, the exposition will open its gates.

So that Senators may know how the city of Seattle, the State of Washington, and the entire Pacific Northwest are moving ahead with the task of preparing this "jewel case exhibit of science," I ask unanimous consent that the Post Intelligencer editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

C–21 IS COMING STRONG

One year from today the world fair called Century 21 opens to the public.

Even oldtimers, accustomed to watching the west coast achieve big things against the odds, are astonished with the progress of the Century 21 exposition to date.

First of all, the $80 million project (exclusive of foreign exhibits) is on a solid

footing financially. Several of the buildings, including some of the largest structures are well along. Construction of the Nation's first monorail, from midtown to the exposition grounds, is underway. This has had the effect of alerting local citizens to the reality of Century 21.

That is a reality long since understood by people elsewhere. This 1962 world fair has the support of the United States, and Uncle Sam himself will be the largest exhibitor. Moreover, Century 21 is approved by the Bureau of International Expositions. It is the only world fair now projected in the United States to receive such endorsement by this board of 30 nations.

Thus foreign exposition experts, the Nation, and the State of Washington, are solidly behind Century 21. But, almost as important, all our neighbors this side of the Rocky Mountains have begun to recognize that Century 21 will reflect the energetic enterprise of the entire 11 Western States.

They see that this is not a Seattle fair or a Pacific Northwest fair, but a world fair whose roots and influence extend throughout the Far West and around the Pacific rim.

Such are some of the factors which led the region's hydroelectric utilities, both public and private, to combine on a complex exhibit in its own building. These are the reasons why wood cellulose companies, with worldwide markets, have pooled their imaginative resources toward a major exhibit. And why Pacific Telephone Northwest and General Electric were among the first major U.S. companies to sign up for sizable space. Nor will the presence of the Boeing Aircraft exhibit be a mere matter of propinquity.

Such companies want to identify themselves, properly enough, with the five worlds of the exposition: the world of Century 21, the world of commerce and industry, the world of science, the world of entertainment with its gay way, and the world of the arts.

While the response of business and industry is not discouraging at this stage of development, the absence thus far of certain major companies from the growing list of exhibitors is difficult to understand.

Among major companies at this moment conspicuous by their absence from the roster are, surprisingly, some which have found the Far West a lucrative market and whose future plans include expansion to serve this fastest growing population in the Nation.

It is the belief of the Post-Intelligencer that these companies simply have not yet grasped the scope and role of Century 21. Or perhaps have not considered that the exposition will draw the bulk of its attendance from the Far West and Midwestern States, just as 2 years later the world fair at New York will draw most of its spectators from the Atlantic seaboard.

We do know that at least a score of topmost companies are taking a second look at Century 21 and we are confident that their judgment will lead them westward and toward the warm welcome in which the Far West takes traditional pride.

Meanwhile it is up to us in Washington State to continue our support of Century 21 and of its officials who are doing such a splendid job.

Mr. LAUSCHE. Mr. President, will the Senator from Washington yield?

Mr. MAGNUSON. I yield.

Mr. LAUSCHE. The Senator from Washington made reference to the Century 21 Exposition, but did not state what he was submitting for the RECORD.

Mr. MAGNUSON. An editorial published in the Seattle Post Intelligencer, relating to the exposition.

Mr. LAUSCHE. Is the exposition now in progress?

Mr. MAGNUSON. Oh, no; it will start 1 year from now.

Mr. LAUSCHE. But it is in process of being developed?

Mr. MAGNUSON. Oh, yes. The Senator from Ohio, who took a great interest in the subject, may like to know that good progress is being made. The State contribution, made by the last legislature, was exactly what the State government had said it would be. The Senator is aware, of course, of the Federal contribution.

The exhibitors are rapidly falling into line. Approximately 30 nations will take part.

The science exhibit is progressing well. Ground has been broken for the Federal building. The other parts of the fair are rapidly underway. The State building is approximately 60 percent completed.

Dr. Athelstan Spelhaus will be the Federal Commissioner. The President submitted the nomination of Dr. Spilhaus to the Senate today. The exposition is making good progress and will be completed on schedule, 1 year from this week.

Mr. LAUSCHE. Is the transportation line being constructed, or has that been abandoned?

Mr. MAGNUSON. No; the construction of the monorail was begun 60 days ago. I happened to be at home and attended the ceremony which marked the construction of the monorail.

Now under construction is a tower which will be about 500 feet high, and in which there will be a restaurant. It will be a sort of Eiffel Tower.

The exposition is privately financed. The total investment to date is between $55 and $59 million.

Mr. LAUSCHE. How much has been contributed by the Federal Government?

Mr. MAGNUSON. Nine million dollars.

Mr. LAUSCHE. I thank the Senator from Washington.

Communist Tactics

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, May 3, 1961

Mr. WILLIAMS of New Jersey. Mr. President, Bishop Fulton J. Sheen has often written of the evil that is implicit in ruthless Communist tactics. His column of April 20, which appeared in the Advocate, Newark, N.J., and other newspapers, explores this question still further and gives a specific example of Bishop Sheen's argument that organized savagery is the most devastating kind of savagery.

The first article in this series appeared in the CONGRESSIONAL RECORD on April 20. Mr. President, I ask unanimous consent to have the second article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Advocate, April 20, 1961]

GOD LOVE YOU—COMMUNIST TACTICS

(By Bishop Fulton J. Sheen)

This is our second report on the Communist persecutions in the Congo.

At Kasongo, nine sisters were violently seized during the night, the arm of an aged sister broken when struck by a gun butt. Their veils, rosaries, and their crosses were taken. Stripped and ravished, they were forced to dance in bare feet on prison gravel and to shout slogans in favor of the Communist leaders.

One sister lost her mind; another, beaten because she refused to dance, can neither bend nor walk. Sisters who were not arrested were accused by Communist teachers of stealing 2 million francs from them.

Father Gerry of the White Fathers was beaten in the same prison from 5 in the evening until 2 in the morning. Some 18 other White Fathers and nine brothers were severely tortured.

One missionary writes: "We were forced to go about the prison on our knees saying, 'I killed Lumumba, the Christ of the Congo.'" And another: "We were all beaten with clubs; our hands were tied behind our backs and ropes passed between our legs. A soldier struck me on the head ordering, 'Say your mass.'"

The Communist technique is ever the same: accuse falsely, then arrest, then torture.

Do not say: "Oh! these Africans are only one stage removed from barbarism." That has nothing to do with the persecution. Were the Communist soldiers of Spain one generation removed from barbarism? Or the Chinese? Or the Polish or Hungarian governments?

It is not a primitive civilization but communism which accounts for modern savagery. If the Communists gained control in the United States it would be the Ph.D.'s in our universities who would torture the ambassadors of Christ, as they did in Hungary and Poland. The primitive people are only passive barbarians; the Communists are active barbarians.

Dismiss not the persecution by saying their bodies are black. The problem is: whence come black souls. The devil makes them, and he makes them out of white bodies as well as black bodies.

It would seem that we have almost forgotten there is a devil, that he is the invisible head of the mystical body of the anti-Christ with his visible head in Moscow, that he has not cloven hoofs but puts on the air of godliness and love of mankind, that his cohorts eat not with fingers but with knife and fork in the best hotels of America.

Questionnaire Returns

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. BERRY. Mr. Speaker, I have recently completed the tabulation of the returns on my questionnaire, which was distributed throughout my district in mid-March. I was very gratified by the response I received. Almost 13 percent of the questionnaires were returned, and

many people took the time to add personal comments on items of special interest.

Because these views are representative of the thinking of the people of western South Dakota, I would like to insert in the RECORD the results of the tabulation together with some of the comments included in the questionnaire:

Questionnaire returns

	Percentage		
	Yes	No	Not certain
Do you favor—			
1. Increasing the minimum wage from $1 to $1.25 per hour and extending coverage to 4,300,000 additional workers?	31	59	10
2. Liberalization of our social security program including optional retirement for men at age 62, $10 increase in minimum monthly pensions, increase in widow's allowance, liberalized disability provisions, and less coverage to establish eligibility? An increase in payroll taxes of both employer and employee would be required to cover the over $1,000,000,000 annual cost	34	54	12
3. Medical care for the aged under the social security program not based on need, pushing the payroll tax to 10 percent by 1969, applicable only to those covered by social security? This program has been proposed rather than the State-administered program covering any needy person enacted by Congress last year	19	70	11
4. Establishing protective tariffs and quotas to enable our domestic production to successfully compete with low-cost foreign imports in order to protect industry, agriculture, and mineral interests and our gold reserves which are being seriously depleted as imports exceed exports?	75	13	12
5. The proposal to assist areas where chronic labor surpluses exist, resulting from industries forced out of business primarily because of foreign competition? The proposal would enable these areas to lure industries away from prosperous communities	33	57	10
6. A massive program for Government-owned public housing	7	69	24
7. Continuation of foreign economic aid at its present level of approximately $4,000,000,000 annually	20	56	24
Do you favor—Continued			
8. Expanding the aid to dependent children program to include children of unemployed parents	36	44	20
9. An increase in postal rates	37	51	12
10. Retaining gasoline tax at its present 4-cent level, shifting greater responsibility upon trucks for the Federal highway construction program	77	13	10
11. Abolition of the House Un-American Activities Committee	9	73	19
12. The general principle in agricultural legislation of—			
(a) Permitting the CCC to dispose of commodities on the open market at less than support price (cost to the Government)	27	43	30
(b) Payment by Government, either in cash or in kind, for further retirement of production acres on either a temporary or permanent basis	17	56	27

	Percentage
13. In the field of Federal aid to education, which do you prefer:	
(a) A $5,700,000,000 Federal aid to education program including school construction, teachers' salaries, college scholarships, etc., paid directly from the Federal Treasury, even though it will bring certain Federal control of the schools?	13
(b) As an alternative to direct Federal aid to education, legislation enabling the taxpayer to substract from his Federal income tax the amount he pays in local property taxes for school purposes up to $100, and to deduct from taxable income up to $2,000 per year for each child in college? This would enable school districts to finance their own operating costs by making additional tax levies without additional cost to the taxpayer	77

QUOTABLE QUOTAS FROM THE QUESTIONNAIRES

Social security. "How do they expect to get the additional unemployment benefits out of employers who no longer employ the unemployed?" "When this law went into effect, people had the idea that they would live a grand life in their old age and made no other provision for themselves. Now, with their pensions, they simply eek out the bare necessities."

Tax suggestions. "A double exemption allowance should be provided on the income tax return for a handicapped child or adult. It should include any person unable to hold a job due to a mental or physical handicap."

Tariffs. "We have been using nails manufactured in Holland since the steel strike. Labor got their pay raise but lost their market."

Gasoline tax. "The President's request on increased taxes for the highway system must have been prepared by the railroad lobby as its net effect is to torpedo the $5 billion trucking industry. It recommends that the trucking industry pay an amount equal to the net profit of the industry for 1960. Maybe Dr. Galbraith and Dr. Schlesinger were taught in Harvard that profits were not the incentive that made the free enterprise system successful in America" * * *. "An average truck running 100,000 miles would presently pay $800 in Federal fuel tax. An automobile running the same number of miles would pay about $266 in gasoline tax."

Agriculture. "If the CCC is permitted to sell at less than support price, it will put all small independent buyers and grain dealers out of business."

Un-American Activities Committee. "Do everything you can to strengthen the committee." "Increase the funds for the Un-American Activities Committee instead of reducing them." "We need greater protection against the Communist threat."

Spending. "This 'Giverment'." "In 83 years the Homestake Mine has produced three-fourth billion dollars in gold and the Government gives away that much every week." "You don't see many businesses still going that spend more than their income year after year." "Put a stop to back-door spending—there is already too much going out the front door unnecessarily."

Education. "Why do you try to make people believe that if we have Federal aid to education we must have Federal control of education?" "How can Congress take money from one group and give it to another without retaining control of how it shall be spent?" "I know firsthand that Federal aid means Federal control. Here the Government is telling them how to run the sewing course next year. We have always had an exceptional course here and now they are offering a little sewing and a little homemaking to comply with Government regulations." "Smith-Hughes now dictates the qualifications of teachers."

General. "Any government that can make you rich can also make you poor." "We people do not want handouts—we just want a fair chance. Let's make government good government and keep it businesslike. Let's not mortgage our freedom." "When you hurt a small man a little, you hurt him a lot." "The Communist and Socialist countries have centralized governments. America was built upon the foundation of the freedom of the individual. Mount Rushmore has space for the man who can keep it that way. Only four have qualified so far." "What is it when the government of a country taxes the products of the people's labor and dispenses those products back according to their needs? This is socialism and every government program seems headed in that direction." "After objecting to so many things being done, I feel that I should shed a little light on the other side. I am very grateful to be living in a country where the individual can state his convictions toward his government. I also believe that any good American citizen does not mind paying his fair share, and would pay taxes that were necessary for the operation of his country, but I also believe that a good citizen doesn't look to the government for a living and a handout for every little pinch in his business. I am a young man of 24 and certainly hope that I do not have to live the rest of my life in a welfare state."

Letter on Cuban Situation Written by Sheldon Z. Kaplan

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 1, 1961

Mr. SIKES. Mr. Speaker, at this critical stage in inter-American relations, it is essential to have the views not only of qualified Government officials and of Members of Congress, but also of private citizens with knowledge and experience. Sheldon Z. Kaplan, who served with distinction for 8 years as staff consultant to the House Foreign Affairs Committee and also the Subcommittee on Latin America, is well known to the membership of this House as a topflight expert, in the true sense of the term, on foreign policy and Latin America. I commend to my colleagues the following letter which Mr.

Kaplan directed to the editor of the Washington Post and which skillfully puts the Cuban situation in proper perspective:

APRIL 21, 1961.

THE EDITOR,
Washington Post Newspaper,
Washington, D.C.

DEAR SIR: On several occasions in the past I have been tempted to communicate with you on certain points raised in your editorials with respect to U.S. policy toward Latin America. I did not succumb to that temptation on those occasions, but find that your editorial, "A Call to Duty," in your April 21, 1961 issue, impels me to try to set the issue of Cuba in proper and realistic perspective.

You state in that editorial, commenting on President Kennedy's message on Cuba to the American Society of Newspaper Editors, that "the President's lecture to the countries of Latin America was the weakest part of his message. The United States is not yet sufficiently identified with active movements for reform and social justice to make its concern about communism in Cuba altogether convincing. Here is the largest and most immediate challenge." You then go on to say in your editorial that the need also is for "simultaneous, cooperative effort in ideas and ideals to give our version of freedom more meaning to the landless peasant and disgruntled student."

Keeping in mind the objective of U.S. foreign policy toward Latin America so clearly enunciated by the President in his doctrine of alianza para progreso,[1] the portion of the President's talk on Cuba before the American Society of Editors which you find to be the weakest part of his message is indeed the strongest.

The question of intervention or nonintervention is not involved in the slightest. Intervention is an established fact—intervention in the hemisphere by international communism. Any action by the United States or Latin American countries to counter the impact of that intervention constitutes defense on behalf of the security of the Western Hemisphere. Further, it would constitute a removal of the greatest barrier to the achievement of the social and economic goals of alianza para progreso and to the identification of the United States "with active movements for reform and social justice," the absence of which identification you deplore. In the face of a triumphant international communism in Cuba, it is the very depth of naivete to imagine that this taste of success will be confined to the island of Cuba. As the strength and daring of international communism increases in the hemisphere, so does the opportunity for achievement of the economic and social goals referred to in your editorial diminish. Alianza would be limited to a few countries and progreso would be deliberately subverted by those who are more intensely devoted to spreading international communism than they are to a better life for our neighbors to the South.

While prior U.S. policy toward Latin America has been criticized for its disease of indifference to Latin America, and with justification, no real emphasis had been articulated on the role which our friends in Latin America must themselevs play as equal partners with us toward the common goal, until the declaration and enunciation of the Kennedy doctrine of alianza para progreso. In his message to the editors, the President has rightly pointed out that the threat of international communism is a threat to the security of the hemisphere. It is precisely because President Kennedy must realize the futility of attempting to implement his doctrine of alianza para progreso while international communism is permitted to spread, that he has sounded the call to duty to Latin America itself as well as to our own Nation. Only if that call to duty is heeded will progress and the freedom of the Americas be achieved. Our Nation is prepared to heed that call to protect its security. The peoples of Latin America can do no less if they are to protect their own.

The President is to be commended for exhibiting his own profile in courage and for his refusal to tolerate the views of those more zealous in preserving a doctrine of nonintervention against the spreading and consuming conflagration of international communism than they are in preserving and developing free institutions in the Western Hemisphere.

To expect a successful alianza para progreso in the social and economic sectors in the face of this spreading conflagration would be akin to a husband hoping to teach his wife to drive with a time bomb under the hood. This, to me, is the essence of President Kennedy's lecture, as you call it, to the countries of Latin America. It is, in fact, the backbone of his call to duty.

Respectfully yours,

SHELDON Z. KAPLAN,
Formerly Staff Consultant, House Foreign Affairs Committee and Its Subcommittee on Latin America.

[1] Alliance for progress.

Safe for Ideas

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the editorial, "Safe for Ideas," from the Washington Post of April 24, 1961.

Mr. Speaker, I was so impressed by the statesmanlike comment of Gov. Pat Brown of my State of California and the wise remark of Dr. Clark Kerr, president of the University of California, regarding the appearance of a particular speaker on the campus at Berkeley that I feel this editorial should be called to the attention of my colleagues.

The editorial follows:

[From the Washington Post, Apr. 24, 1961]

SAFE FOR IDEAS

The president of the University of California and the Governor of the Golden State have given what seem to us model statements of the importance of exposing students to controversy. A furor had arisen because a man convicted of contempt of Congress for refusal to answer questions about communism was invited to speak on the campus at Berkeley. Asked to intervene, Gov. Pat Brown of California refused, commenting: "Let the people say anything they want to. If they do anything criminal while they're speaking or after they're speaking, then they can be prosecuted." To this the university president, Dr. Clark Kerr, added: "The university is not engaged in making ideas safe for students; it is engaged in making students safe for ideas." This is an attitude which ought to hearten more timorous administrators, for it goes to the heart of a main purpose of education. If university training can't teach a student to be discreet and discriminating in his selection of ideas, artificial shielding won't help him.

Water in the Economy of the Red River Valley

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 3, 1961

Mr. KERR. Mr. President, one of the problems, often overlooked, we must face up to is water quality. Too often we think only in terms of quantity. My good friend, and a devoted servant of our Government, Gordon E. McCallum, Chief, Division of Water Supply and Pollution Control, Public Health Service, made a very fine talk to the 36th Annual Convention of the Red River Valley Association, Shreveport, La., on April 3.

I would like to share it with Senators, and therefore ask that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WATER IN THE ECONOMY OF THE RED RIVER VALLEY

(By Gordon E. McCallum, Chief, Division of Water Supply and Pollution Control, Public Health Service, U.S. Department of Health, Education, and Welfare, Washington D.C.)

Mr. Chairman, Members of the Congress, members and distinguished guests of the Red River Valley Association, it gives me much pleasure to be here today and participate in your 36th annual convention.

As an association which has functioned for this many years, I would guess that there are some second-generation members among you here today. In 36 years you have certainly witnessed significant changes in the face of your Red River Valley. Great man-made lakes such as Texoma have come into existence. Crops and land use have changed. Cities have spread out. Oil fields have developed—to name just a few. Dedicated as this group is to the fivefold purpose of navigation, soil conservation, reforestation, irrigation, and recreation—I have no doubt that this association has led in bringing about these great changes. It goes without saying that your efforts have lifted the living standards of those who dwell in this great river basin.

Your presence here today is testimony of your dedication to the comprehensive development of river basins. It was because of your interest that the Public Health Service, some 4 years ago, came in as a partner in one aspect of that development. Most of you have heard reports on our Arkansas-Red River basin water quality conservation project. At the risk of telling you things you already know, I should like to say a word about this project.

In simple terms, the project seeks to run down the major sources of pollution—brines that are degrading millions of acre-feet of water each year. Then we hope to propose ways to cut off those sources—so the waters will be suitable for domestic, industrial, and agricultural uses. Some 40 million acre-feet of salt polluted water is now passing through the Arkansas-Red River Basin each year—wasted for many purposes. Made usable, these waters can spell the difference between an economic impairment and unprecedented progress.

Each of us is becoming more concerned over our resources. President Kennedy emphasized this in his natural resources message to the Congress. In relation to water

he said, "Pollution of our country's rivers and streams has—as a result of our rapid population and industrial growth and change—reached alarming proportions. To meet all needs—domestic, agricultural, industrial, recreational—we shall have to use and reuse the same water, maintaining quality as well as quantity. In many areas of the country we need new sources of supply—but in all areas we must protect the supplies we have."

Each of us is also aware of what conservation and development have already meant to this part of the country. Population counts are of interest. The national growth in population the past decade was 18.5 percent. Texas was well above this national average with a 24.2-percent gain. Louisiana showed a 21.4 percent increase, Oklahoma about a 5-percent gain, while Arkansas experienced no gain. What do you suppose the figures would have been without the water resource developments this area has witnessed during the 1950's?

Now, let us take a look at how these States fared in another area. The U.S. per capita income gain was 45.3 percent in the same 10-year period. Arkansas per capita income increased 65 percent; Louisiana, 45 percent; Oklahoma, 58 percent; and Texas, 42 percent. Can anyone deny that resource development was largely responsible? How much more will water development pay off for these four States in the future?

The well-remembered drought years pointed up the importance of good water supplies to the people of the Arkansas-Red River Basins. Many a city had to go exploring for new sources when old, dependable water supplies ran out. Too often, if they located water, they found it of unsuitable quality. For, once the minerals—sodium chloride and calcium sulfate or gypsum—enter a stream, neither conventional treatment processes nor the natural purification phenomena of the stream itself—have any effect. The minerals become permanent additions to the water—impairing its use henceforth. Such is the plight of the city of Shreveport here on the banks of the Red. Altogether, the people of the Arkansas-Red River Basins became extremely water conscious during the drought of the early fifties.

So, we found a favorable reception when we initiated our water quality conservation project on July 1, 1957. We started it as a small pollution investigation of these two interstate rivers. But soon it became apparent that here was no ordinary problem. Tremendous benefits would accrue if we could isolate the sources of the brine and gypsum pollutants and keep these minerals out of the waters they were despoiling. It was then—and is today—a project unique in the whole country. It might be said—seldom if ever—has so little bad water spoiled so much good water.

Cities like Wichita Falls, Oklahoma City, and Tulsa, which have already had to go long distances for municipal water supplies, to meet current needs, can certainly benefit if we achieve our project objectives. Wichita Falls is planning now to go 20 miles downstream on the Little Wichita for a new source of water supply, while the Wichita River flows in salty abundance right through the heart of the city.

Similarly, Oklahoma City recently impounded a new reservoir more than 100 miles distant. The nearby Cimarron and Canadian Rivers were not considered as sources of water supply because of their high chlorides. The Arkansas River flows through the city of Tulsa, untapped as a source of municipal water supply, for the same reason.

Step No. 1 in our project was to get the facts. Where were the objectionable brines originating? How extensive was the whole problem? Could anything be done about it? If so, would it be economically feasible? As we marshaled the facts, they confirmed what we hoped might be the case—there was a comparatively small amount of contamination damaging a very large amount of water, which made it appear feasible to try to do something about it.

The principal sources of the chlorides are natural brine outcrops and oilfield production. Stream flows were insufficient to adequately and continuously dilute the natural brine flows by controlled releases of relatively good water. Manmade sources of brine (the oilfields) account for some 20 percent of the chloride in the entire Arkansas-Red River Basins. In some tributary basins, however, this source accounts for as much as 50 percent.

A 64-station stream quality network has been established—37 in the Arkansas River, 27 in the Red. Continuous recording conductivity equipment has been installed at these stations to provide a continuous index of mineral quality. Stations located above and below all major salt sources and key monitoring points on major tributaries. The conductivity records will be used to compute salt loads.

We know that an average of some 10,000 tons of salt each day are released from natural sources alone in the two basins—2,500 in the Red and 7,500 in the Arkansas. Studies by the U.S. Geological Survey disclose that large salt deposits underlie the salt source areas at depths of 200 feet or less. The ground water dissolves some of the salt and returns to the surface as springs or salt plains.

One of our most interesting study points is the Great Salt Plains (10,000 acres) in northwest Oklahoma. This has long been a tourist attraction and a popular fishing and wildfowl area. A Federal game refuge and one of the large Corps of Engineer impoundments are located there. While the lake is a major recreation center, the water is unsuited for most other uses. Other salt plains within the Arkansas-Red River Basins vary from several acres to this largest of 10,000 acres. The brine springs vary from less than 1-gallon-per-minute to 5-cubic-feet-per-second flow.

A spring at Estilline, Tex., which is tributary to the Prairie Dog Town Fork of Red River, is one of the largest contributors of salt water in this basin. It is in an active oil field where salt water injection is practiced by the operating companies. The flow of this spring varies between 5 and 6 cubic feet per second. The spring is issuing from a large chimneylike hole in a rather sizable flood plain. A skindiver employed by the U.S. Bureau of Mines recently explored the chimney to a depth of 150 feet. At that point, the water apparently was coming in from a horizontal direction.

During the time we have worked on this project, suggestions for control of the natural salt sources have been numerous and have come from all over the country. In general, they can be classified into these broad categories: (1) Subsurface disposal, (2) permanent storage or retention, (3) interception and elimination or suppression of brine recharge water, (4) transport to a nondamaging site such as the Gulf of Mexico, and (5) industrial utilization. I am sure that General Flemming will mention some of the Corps of Engineer plans tomorrow.

Geological explorations are going forward at all of the salt locations, and some 35 wells have been drilled at the 12 natural salt springs or seepage areas from which we have taken core samples. One method which may show considerable promise for obtaining information on the hydrostatic head is that of pumping the springs and computing the rates of recovery and attempting to project them to a point of no flow.

We are now ready to construct, for experimental purposes, an injection well at one or two locations in the Upper Red River. Such a test well will yield valuable information on injection possibilities at depths of 4,500 feet to 8,000 feet, for which there is practically no information now in existence.

We have begun a study to ascertain the financial benefits which will result from the water quality improvement we are seeking. Both major basins lie in a relatively sparsely populated area—but with many untapped resources. There is, however, already a need—especially during periods of low stream flow—for additional municipal water supplies. There have been many inquiries as to the availability of industrial water supplies as well as irrigation possibilities. In nearly all cases, both of these streams and their tributaries have been rejected or have been used sparingly and then only in dire emergencies. Along with the great resources for industrial development, it seems that improvement in water quality at a reasonable cost is a must to place this area in a favored competitive position with other portions of the Southwest and of the Nation. Think what an additional 25 or 30 million acre-feet of fresh water would mean to your industrial development by the year 2000.

Senator KERR of Oklahoma voiced extreme optimism in this direction recently when, as chairman of the Senate Select Committee on National Water Resources, he made the committee's final report. Speaking of the Arkansas-White-Red River Basins plan adopted in 1949, Senator KERR said:

"The committee report clearly shows that without this Federal-State cooperative program millions of acres in the Upper Arkansas-Red Basins would have been in real trouble by the year 2000. The pinch already would have been felt in many parts, but for the soil-and-water program now underway.

"Our area already has done much of that which the committee recommended, and others will thus study it as a model and a pattern of performance. We are proud of our efforts both for water supply and water quality.

"Thanks to the cooperation between Federal agencies promoted by the interagency setup, this area has a bright outlook for controlling the natural pollution of water which has been a major problem. The Public Health Service and the Corps of Army Engineers are well on the way to developing a solution for the elimination of the natural salt pollution from the Arkansas-Red Rivers."

Up to this point we are pleased with our findings from the Arkansas-Red River water quality conservation project. Certainly the cooperation of citizen groups like yours, together with the interest and support of the great statesmen you people have sent to the Congress, has been our greatest reward—which we truly appreciate. The newspaper coverage in this area, as the work has progressed, has been invaluable in keeping the public informed—and I might add has been most kind to us.

You may be interested in the inquiries we get about this project. They come from all over the country and even from foreign visitors. Our work is checked on by such publications as the Wall Street Journal.

When the Public Health Service has been able to recommend corrective measures—our major role would essentially be ended on this project according to our original plans. It would then seem that other Federal agencies, such as the Corps of Engineers, the States, and local groups who are especially qualified in the field of construction, are best suited to carry out corrective measures. We will, of course, always be ready to help in any way we can.

It occurs to me that you may be interested in some of the legislation being introduced in the Congress on water pollution. More than 30 bills have been introduced in the Congress this year dealing with water pol-

lution. In general, they would extend the several authorities already written into the Federal Water Pollution Control Act of 1956. Some of them contain provisions for the use of federally constructed reservoirs to augment low flow in streams. Senator KERR—a stanch supporter of this philosophy—included such a provision in his bill—S. 120.

Senator LONG of Louisiana has introduced a bill—S. 1475—which would provide for this type of streamflow regulation by releasing water from Federal reservoirs and other impoundments. The amount of waters to be released would be approved by the Congress upon recommendation of the Surgeon General of the Public Health Service. The Surgeon General would first consult Federal, State, interstate and local agencies and other interests involved, and would base his recommendations on expert hydrologic, economic and water quality data. Senator LONG's bill specifically states, "Such water releases shall not be a substitute for adequate treatment or other methods of controlling waste at the source."

I am told that the people of the Red River Valley have sometimes been called "the salt of the earth." And this expression has nothing whatever to do with the type of salt we have been discussing. It is a complimentary term intended to signify a dependable, courageous, and enterprising people.

These qualities have been well demonstrated by you. I have no doubt that the economic future of the Red River Valley is in good hands—and I wish you well in all that you undertake.

Thank you.

Area Redevelopment Act

SPEECH

OF

HON. CLARK MacGREGOR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1961

Mr. MACGREGOR. Mr. Speaker, although I favor the concept of proper legislation providing Government assistance to areas of chronic underemployment, I object to provisions of this conference report which allow financing of the program directly from the Treasury.

I voted for S. 1 on March 29. In that version the bill called for regular financing of the program through congressional appropriation. This was the administration proposal. It is the method which is the accepted practice and it is the method which meets all the requirements of logic and governmental responsibility. It is the method which I believe the people of this country want used, especially in programs such as this which are entirely new. The process of financing Government programs through congressional appropriations was set up for a specific purpose and has served well. We should not deliberately depart from it in a substantial program such as this without having a clear mandate to do so. I do not think we have such a mandate.

The House of Representatives is charged with the responsibility of balancing the Government's income with expenditures. If we abdicate that responsibility we are turning over unreasonable and unnecessary authority to the executive branch.

Under the method of financing provided for in this conference report, an executive agency can borrow funds from the Treasury, which then must sell Government bonds on the open market. These funds are not authorized by the Appropriations Committee and are not reflected in the budget, but they do become a part of the national debt. The result is that we engage in even greater deficit spending than the people of this country can know of.

The greater public debt then has the effect of weakening the very economy we are striving here to strengthen. We are defeating ourselves by providing stimulation for the economies of certain depressed areas while at the same time creating conditions for weakening of the dollar and an unstable general economy.

In this critical time of worldwide struggle of which the economic phase is an important part, it is vital that we maintain the financial solvency and fiscal responsibility which this country has enjoyed during the past 8 years. This conference report on the Area Redevelopment Act is one step along the way to financial chaos. I support a responsible area redevelopment program but I cannot put my stamp of approval on irregular and irresponsible financing provisions.

Steelmark Month in the Upper Ohio Valley

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 3, 1961

Mr. RANDOLPH. Mr. President, on May 1, the cities of Wierton and Steubenville held official ceremonies inaugurating the month of May as Steelmark Month in the upper Ohio Valley. Due to the pressure of Senate business, I was unable to participate in this significant event. However, it is a project which, in my judgment, deserves wide notice as a community experiment in implementing the spirit of the New Frontiers.

In a letter from the Weirton Steel Co. which sets forth the program and purposes of Steelmark Month, Mr. Martin F. Fahey, legal administrator of the industrial relations department of Weirton Steel Co., stated:

Forty cities will participate in Steelmark Month and 19 mayors recently attended a meeting here and issued proclamations declaring the month of May to be Steelmark Month. Every chamber of commerce in the six counties comprising the upper Ohio Valley is actively and vigorously participating, and every Retail Merchants Bureau in every city in the six counties is also enthusiastically supporting this program.

In addition * * * at least 25 mayors representing the key cities in the upper Ohio Valley will participate in the activities on May 1, all feeling that Steelmark Month is vitally necessary to the well-being of the people of their respective cities.

Mr. President, in the interest of bringing to wider attention Steelmark Month as an outstanding example of community enterprise and initiative, I ask unanimous consent to have printed in the Appendix of the RECORD my letter on the event dated April 24 and my followup telegram of May 1.

There being no objection, the letter and telegram were ordered to be printed in the RECORD, as follows:

APRIL 24, 1961.

Mr. JOHN A. JONES,
Director of Public Relations, Weirton Steel Co., Weirton, W. Va.

DEAR JOHN: With reference to my conversations with you and Mr. Martin Fahey last Thursday, I would very much like to participate in your official inaugural ceremonies for Steelmark Month on May 1. However, in view of the mounting pressure of Senate business, I would consider it most unlikely that I will be able to absent myself from the Senate that day.

In the event that I will not be able to join you in the ceremonies, I hope that you will not think it presumptuous of me to take this occasion to extend a message in keeping with the general purpose of the event.

It is gratifying to learn of this effort by Weirton Steel and the communities of the upper Ohio Valley to implement at a grassroots level the spirit of President Kennedy's inaugural message.

The management personnel of Weirton Steel are particularly to be commended for their role in assuming the leadership of Steelmark Month. This is the kind of effective industrial and community relations work which is responsible for the vital place that Weirton Steel occupies in the life of the upper Ohio Valley.

Steelmark Month represents also the kind of initiative and enterprise which have brought the Ohio Valley itself into a position of prominence in the industrial and economic life of America. It is worth noting, in this respect, that no matter how dynamic and forward looking our leadership at the national level, no program of national goals will be achieved if these goals are not embraced and carried forth by the actions of individual men and women at the community level.

No industry has more clearly exemplified the dynamism and vigor of America than has the steel industry. In developing new uses for steel and new techniques for its production, the men and women who make the steel for America have also made their industry the bedrock and foundation of American industrial, economic and military strength.

The efforts of the men and women in the American steel industry have brought America to the highest per capita annual production of steel in the world—1,300 pounds of steel per year for every person in the United States, as compared to 9 pounds per year in India. And in the wake of this outstanding achievement, we have virtually eliminated from our society the conditions of poverty and dire need.

Yet the remarkable increase in productivity in the steel industry, as well as many other industries, has not been unaccompanied by new problems. We are faced with a continued growth in our labor force at the same time that automation and mechanization displace manpower. These processes are already well advanced in the coal and steel industries, with the end not yet in sight.

Therefore, in addition to the very worthy immediate goals of Steelmark Month, I would hope that the joint efforts and the relationships between industrial business, labor, and civic leaders established in this

enterprise will be carried forth into further planning for the future. For in order to meet the displacement that is destined to occur in many industries, we must begin now to plan for an orderly process of readjustment, in discovering new regional resources and sources of employment, in planning for vocational retraining, and in extending the range and variety of industry-community relationships over the entire field where their interests and purposes are joined.

In this respect, Steelmark Month may come to have a wider and a continuing beneficient effect upon the economic life of the upper Ohio Valley region.

With my firmest hopes for the success of your project and with warm personal regards, I am,

Sincerely,

JENNINGS RANDOLPH.

MAY 1, 1961.

Mr. JOHN A. JONES,
Director of Public Relations,
Weirton Steel Co.,
Weirton, W. Va.:

Senate business here prevents my participation in your important ceremonies today. President Kennedy has asked me to be present for signing of area redevelopment bill at White House at 11 a.m. A conference committee of Senate and House of which I am a member will meet at 2 p.m. in an effort to finalize amendments to Fair Labor Standards Act. Please know of my sincere congratulations and I trust my letter of April 24 commending your effective industrial and community effort will be a further indication of my appreciation of the value of your Steelmark Month. If convenient please extend my best wishes to all those who are in attendance.

JENNINGS RANDOLPH,
U.S. Senator.

Witness Contradicts Red Probers' Riot Story

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1961

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the Associated Press—San Francisco—article from the Washington Post of April 21, 1961, giving an account of a key witness in the city hall riot trial who contradicted House Un-American Activities Committee accounts of violence at the committee's hearings last May.

The article follows:

[From the Washington Post, Apr. 21, 1961]

WITNESS CONTRADICTS RED PROBERS' RIOT STORY

SAN FRANCISCO, April 20.—A key witness in the city hall riot trial yesterday contradicted House Un-American Activities Committee accounts of violence at the committee's hearings here last May.

Under defense cross-examination, Patrolman Ralph E. Schaumleffel acknowledged fire hoses had been turned on student demonstrators before he encountered Robert E. Meisenbach.

Meisenbach, 23, University of California senior, is being tried on a charge of assault with a deadly weapon. He is accused of beating Schaumleffel on the head with the officer's nightstick.

The House committee's accounts were contained in a printed report by FBI Director J. Edgar Hoover and in the narration of the committee-sponsored film report called "Operation Abolition." They declared the nightstick attack on the officer "touched off the flame of violence."

Jack Berman, defense attorney, drew Schaumleffel's agreement on the time of his struggle with Meisenbach by producing a series of news photographs.

All showed the tall, bespectacled student far in the rear of the crowd of demonstrators in the rotunda outside the city hall hearing room. They showed Meisenbach backed against a pillar before the police turned on the hoses, while the water streamed on the crowd, and after the water was turned off.

Regardless of timing, Schaumleffel insisted he grappled with Meisenbach on the floor after the student had struck him on the back of the head with the nightstick.

Schaumleffel gave his direct testimony in a crisp 30 minutes of questioning by Walter E. Giubbini, assistant district attorney.

Schaumleffel declared he was hit and kicked by Meisenbach and by several others in the crowd before he was able to subdue Meisenbach, with the aid of other officers, and handcuff him.

The picture showed Schaumleffel standing over Meisenbach with five other officers ringed closely around.

Berman declared Meisenbach had been frightened by seeing police beat other students and was trying to leave the scene when he was tackled and seized by Schaumleffel.

American Medical Association Survey of Federal Expenditures in the Health Field, Fiscal Year 1961—Summary I

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. CURTIS of Missouri. Mr. Speaker, the American Medical Association has prepared a report on the funds which have been appropriated by the Congress for activities of the Federal Government in the field of health. It is not exhaustive, as the introductory remarks appearing below will indicate. It does, however, show what steps the Government is taking in this area and the very constructive role which it is playing in connection with our private health system to produce for America the best in medical service for all our people.

The report follows:

FEDERAL MEDICAL-HEALTH APPROPRIATIONS FOR FISCAL 1961—(JULY 1, 1960, TO JUNE 30, 1961)

The following report details the medical-health activities of Federal agencies, Government employees' health programs and the Federal contribution in this field to the District of Columbia. The total appropriation to carry out these activities is $3,756,363,311. This sum is $549,141,295 more than was appropriated for fiscal 1960. Approximately 60 percent of the increase went to the Department of Health, Education, and Welfare. Of the $324,946,011 increase in appropriations for that agency, $160 million went to the National Institutes of Health. Another 20 percent of the increase, or $114 million, results from the implementation of the new Federal employees health insurance program. The remainder is composed of increases in appropriations to other agencies and of newly reported programs. For the first time, appropriations for the Veterans' Administration's health activities passed the $1 billion figure.

The report attempts to identfy all programs, describing their purpose and comparing their appropriations for the present fiscal year with those of the preceding year. No attempt is made to evaluate the programs—to rate them good, bad, indifferent, as wasteful or invaluable. It is a factual study based on close scrutiny of appropriations acts passed by the Congress and on information supplied by program and fiscal officers in the various departments and agencies. The association appreciates the wholehearted cooperation given by these individuals.

Because most appropriations acts do not earmark funds for medical activities and because the bookkeeping practices used by some agencies make it impossible to ascertain complete information on the costs of medical activities, the use of estimates in some cases is necessary. Where these situations prevail, an attempt has been made to point them out. Not included in the report are the administrative expenses of such loan programs as the Small Business Administration which makes loans for the construction of medical facilities; the college housing program under which loans for the construction of intern and nurse housing are made; or the National Defense Education Act under which loans are made to medical students and other paramedical personnel. Because of inability to separate the medical from the enforcement activities, the appropriation for the Bureau of Narcotics is not included. Further, the report does not show the effect of the recent pay raise granted to Federal employees. The necessary funds to meet these expenses will be provided by supplemental appropriations by the 87th Congress.

On the final page is listed in table form payments made to persons because of disability through programs financed entirely or in part by the Federal Government. Such beneficiaries total 7,006,130, an increase of 836,130 over last year. Money expected to be paid them totals $5,731,596,000, an increase of $664,474,000 over last year.

Medical-health budgets of Federal departments, agencies, and commissions for this fiscal year

	Fiscal 1961	Fiscal 1960	Page
Department of Health, Education and Welfare	$1,598,356,536	$1,273,410,525	3-11
Veterans' Administration	1,015,389,000	948,529,500	11-12
Department of Defense	803,462,100	788,597,000	13
Federal Employees Health Insurance	114,000,000		14
Department of State	86,874,700	81,066,510	14-16
Atomic Energy Commission	57,500,000	52,150,000	16
National Science Foundation	29,250,000	24,400,000	17
Federal Employees Health Programs	12,200,000	11,500,000	17
Department of Labor	10,596,000	9,624,660	17
National Aeronautics and Space Administration	7,451,000	2,751,300	17
Office of Civil and Defense Mobilization	5,255,900	1,432,000	18
Canal Zone Government	4,460,800	4,306,200	18
District of Columbia	2,800,000	2,200,000	18
Federal Aviation Agency	2,764,000	1,765,600	19
Department of Justice	2,520,000	2,218,000	19
Federal Trade Commission	1,900,000	1,600,000	19

Medical-health budgets of Federal departments, agencies, and commissions for this fiscal year—Continued

	Fiscal 1961	Fiscal 1960	Page
Department of Commerce	$846,100	$992,300	19
Civil Service Commission	425,400	405,806	20
Department of Interior	265,500	230,000	20
Office of the Attending Physician to Congress	27,275	23,615	20
National Advisory Committee to Selective Service	19,000	19,000	20
Total	3,756,363,311	3,207,222,016	

Payments to individuals because of disability through programs in which the U.S. Government participates (fiscal year ending June 30, 1961)

(Small groups of Federal retirees' plans not listed; administrative cost of programs omitted)

Program	Estimated beneficiaries	Approximate payments
Veterans' benefits:		
(a) Service-connected disability	[1] 2,419,000	$2,052,000,000
(b) Non-service-connected disabilities	[2] 1,827,000	1,627,000,000
Military retirement, permanent and temporary disability	87,030	235,021,000
Federal employees compensation (these programs fully financed by United States)	27,000	27,375,000
Public assistance (public assistance financed 59 percent United States and 41 percent States and localities; civil service, 50 percent United States and 50 percent employees):		
(a) Aid to needy permanently and totally disabled	361,700	[3] 290,000,000
(b) Dependent children aid (incapacitated father segment)	[4] 768,400	[4] 272,300,000
(c) Aid to the blind	108,000	[5] 94,900,000
Disability annuity payments to civil service retirees	110,000	165,000,000
Social security—OASI disability (these programs financed by social security tax):		
(a) Disabled workers [6]	[7] 567,000	566,000,000
(b) Childhood disability benefits [8]	[7] 127,000	70,000,000
(c) Dependents of disabled workers	[7] 358,000	125,000,000
Railroad retirement disability (a and b financed 50 percent by employers, 50 percent employees; c financed entirely by employers):		
(a) Permanent disability for regular job	36,000	49,000,000
(b) Permanent disability for all employment	70,000	96,000,000
(c) Temporary disability	140,000	62,000,000
Total	[9] 7,006,130	5,731,596,000

[1] 390,000 dependents in this total; program will be decreasing as beneficiaries die.
[2] 734,000 dependents in this total; program is increasing.
[3] $160,600,000 of this total is provided from U.S. funds. In addition, administrative cost of program is about $36,700,000; U.S. share is $18,300,000.
[4] Provided to 202,000 families, $161,000,000 of benefits is Federal. In addition, administrative cost of program is about $30,000,000; U.S. share is $15,000,000.
[5] U.S. contribution to program is $45,300,000. In addition, administrative costs of program are about $8,300,000; U.S. share is $3,800,000.
[6] Most of 200,000 increase in disabled over last year will result from elimination of age 50 requirement.
[7] Beneficiaries as of June 30, 1961.
[8] Eligibility based on disability incurred before age 18.
[9] No adjustment made for payments to 1 individual through more than 1 program.

Human Progress and Economic Brotherhood—Address by Ray R. Eppert

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, May 3, 1961

Mr. WILEY. Mr. President, yesterday, it was my high privilege to listen to a very fine address by Ray R. Eppert, national chairman of the Invest-in-America Week, and president of the Burroughs Corp. In the address he expressed thoughts which every American should consider, particularly at a time when we are so much concerned with many foreign problems. It is generally conceded that we should also give more thought to our domestic problems and the necessity to keep our economy sound.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HUMAN PROGRESS AND ECONOMIC BROTHERHOOD

(An address by Ray R. Eppert, national chairman, Invest-in-America Week, president, Burroughs Corp.)

It is a very real privilege for me to participate in Invest-in-America Week. Its purpose, as you know, is to spotlight the essential role of investment capital in our country and the great opportunity each citizen enjoys because of our individual freedom to invest in America's future growth.

Let me be specific, using a business enterprise as an analogy. The record of this business is the greatest success story ever written.

This company's bylaws were established in 1787. It has an unbroken dividend record, and has paid to its stockholders very much larger dividends than any similar enterprise in the world. While it has been in business many years it has always remained a young, forward-looking, dynamic enterprise.

It has constantly improved its products through research and development. In the last 15 years this R. & D. has risen from $2 billion to $13½ billion.

In the last 60 years, this company has increased its volume from $79 billion per year to $503 billion. Its customers have grown to 180 million, and its number of employees to 66 million.

That is a good record for the 173 years this business has been in existence. But what about the future? Where will it be in 1970, less than 10 short years from now?

New products will flow in an ever-increasing stream as research and development rises to a forecasted annual rate of $25 billion. Instead of 66 million employees, the business will have 80 million. The number of customers will increase from 180 million to 214 million. This particular business is getting eight new customers every minute of every hour of every day.

The volume of business in this decade will rise from $503 billion to $770 billion. Dividends to the stockholders will not only be maintained but greatly increased during this period.

Does that sound like a good business in which to invest?

The name of this company, of course, is the United States of America and its economic activity is made possible by voluntary capital invested by the customers who in turn receive the dividends from this most successful enterprise in the history of mankind.

Never has this subject been as important as it is at the present moment. It becomes increasingly clear that upon the economic strength of the United States depends the future for not only of Americans but of freemen everywhere.

Investing in America is tantamount to, and essential to, the continuation of our economic growth which has made the strength of America the strength of the free world. It means, quite simply, putting our dollars to work to maintain the flow of capital which is the lifeblood of our free enterprise system.

It means a continuing higher standard of living for our citizens * * * those same citizens who do the investing. It means the jobs which we must create for a million young men and women who enter our work force each year * * * at an average investment of approximately $17,000 per job or an annual total new job investment of $17 billion. It means the new and better tools and machines for an urgently needed increase in productivity.

And in our role of leader of the free world against the opposing ideology of Communist nations, investing in America—our economic growth—has taken on direct worldwide importance.

We have readily recognized the military implications of the Communist ambition for world domination. To forestall that threat, we have devoted a large part of our vast economic resources to building up a deterrent military force.

We have emphasized that our military security program is a defense program, and we are greatly concerned about a quick reaction time if attacked, and the means which will insure our adequate retaliation. Not being the aggressor we have little latitude of action other than to counter our opponents' moves.

We have allowed ourselves to be less concerned over the economic implications of the conflict, but the brutal fact is that we are today actively engaged in an undeclared war on the economic front which is potentially as dangerous as nuclear warheads; the difference is only that between quick destruction and slow strangulation, or perhaps the difference is whether the end of our way of life would come in our own time or our children's time.

The Communists have openly boasted that they will outproduce us and outtrade us to show the world, and especially those uncommitted peoples of the underdeveloped nations, that the methods of communism are more effective than the processes of free enterprise in providing the material necessities of life. To date they have had enough sense not to say when they expect to reach this capability and I think we can be certain Khrushchev hopes we won't call his economic bluff.

We should welcome this challenge because this is a war in which we have no logical reason, no reasonable logic, for taking a defensive posture. This is a cold war which we can unapologetically and deliberately fan into a hot war. There is a need for an economic NATO dedicated to offense, not defense. the free world can and should and must take the initiative, and the United States should be leading the attack.

Investing in America, then, not only provides the better life for our own people but generates the firepower necessary for leadership in this all-out economic offensive which we must wage if we are to preserve individual freedoms. Who can criticize our motives in a hot war waged to raise the living standards of the world?

In this economic offensive, the key battlegrounds are those underdeveloped nations of Asia, Africa and Latin America where per-

haps two-thirds of all humanity are still living in poverty, illness, and ignorance. It is a tragic fact that in this latter half of the 20th century, probably half of mankind is permanently hungry.

With our imaginations fired by the nearing conquest of space, we talk a great deal about our giant strides of progress—including the Soviets' accomplishment 3 weeks ago in bringing a man back from orbit—but we must always remember that what is ultimately achieved by man in space can be measured only by the benefits derived therefrom by men on earth—3 billion of them.

It must be obvious that there is little we can do toward lasting peace and prosperity—the ultimate goal of human progress—as long as so much of humanity is waging a daily struggle for minimum existence. That very situation gives communism its greatest weapon and poses to the free world its greatest danger.

Next to averting nuclear war, there is no problem facing us today more important than raising the living standards, improving the economies, of this restive, unhappy majority of the human race. Human progress can never be complete until the brotherhood of man has been extended to include economic brotherhood.

This is a conclusion based upon realism, not idealism.

In Asia, in Africa, in Latin America, there is an insistent demand for benefits of civilization which will not be denied. It is a demand which we Americans must heed not only because of the Communist alternative, not only because of our humanitarian instincts to help the suffering, but also for the very compelling reason of our national self-interest.

Our self-interest lies in expanding world trade, for the basic reason that our productive capacity has become greater than our own requirements. To keep our economy growing at the desired levels I mentioned earlier, we must have new markets, and the underdeveloped nations are our greatest potential. Unless we raise their standards so they can become better customers, our own standards are in very great danger of declining.

In recent years, these countries, despite their pitifully small starting bases, have averaged an economic growth of only 3 percent a year which has been largely offset by an average population growth of 2 percent a year. Since the annual per capita income is on the order of $100, the actual increase has been only about $1 a year per person.

Certainly the most modest goal we can envision for economic brotherhood is to step up this per capita gain another 1 percent, another $1, a year. Yet one reputable study has calculated that such a modest achievement would mean that by 1970 these peoples could be buying $14 billion forth of our exports a year.

In business, overproduction creates excess inventories which in turn necessitate layoffs, and then we have an economic bump in the road. In some underdeveloped countries the population inventory makes the development job extremely difficult. It is encouraging to note that some of these countries are officially recognizing that economic betterment must be predicated upon balanced inventories.

The problem in an economic offensive is to provide investment capital, the same kind of capital we are talking about for our own needs in Invest-in-America. The amount of capital required can of course be estimated only in the roughest terms, but one of the more conservative estimates sets it at approximately $450 billion to secure an additional 1 to 2 percent annual gain per capita during the next decade. It has been assumed that they could raise 85 percent of this need themselves from the sale of their goods on the world market. This leaves a deficit of around $7 billion which, during the initial period at least, would have to come from outside sources which presently are providing about half that amount. Thus there is a need for $3 to $4 billion more capital a year and that, remember, is for purely minimal results.

From what free world sources can they get this money?

Should it be direct foreign aid from the United States and our allies? Present commitments, especially in view of defense and domestic needs, are already heavy and further increases in direct government-to-government economic assistance will, it must be assumed, be modest in relation to the total need.

What about the international and national lending organizations? These sources have been and are being very helpful to underdeveloped nations but even with recent additions and expansions they are not capitalized on a scale to take up more than part of the slack.

Can private enterprise help? With the high level of business activity throughout the free world and the resulting competitive situation, this would appear to be the best hope for attracting capital into the rich potential of underdeveloped countries. Unfortunately, there are obstacles, some of them exasperating. In some have-not nations, nationalism has reached such a pitch that, desperate as they are for capital, they regard outside investment as imperialism.

To each of these outside capital sources, then, there are drawbacks. Probably none of them can provide the needed amount alone: combined, there is a serious question whether enough can be raised.

To me, this all adds up to one conclusion: if we are going to help these poorer countries and thereby keep them out of the Communist orbit, alleviate their suffering and help our own economy, we can reach our objective only through greater emphasis upon world trade. This must be a primary weapon in our economic offensive.

I remind you that the amount of investment capital needed by these nations from outside sources depends to a very large extent upon how much of their own investment capital they can accumulate. In the estimate I have been using, it was assumed that they would provide 85 percent of their own capital out of the sale of their own exports. If their export sales should fall below expectations, they would need even more outside capital. Conversely, if their export sales can be increased, they will need less outside capital.

Most of the underdeveloped nations are underdeveloped not because they lack resources but because they are dependent upon single product or single crop economies. They have been aptly described as "rich lands inhabited by poor people."

In the final analysis, the pace of their economic development must depend upon how successfully they are incorporated into the world market. The commercial nations, most importantly including the United States, are their markets and must assume responsibility for an expanding world trade which will permit the less commercial countries to earn their own way so they can become buyers as well as sellers and thus make their own contributions to a growing world market.

It is an economic truism that no nation can achieve its maximum economic growth except in an expanding market. The more the world economy can be expanded, the more prosperous all nations can become. Our own need is not for a bigger piece of the pie but for a bigger pie.

I have said that economic brotherhood would be a necessity even if it were not for the Communist challenge. Communism has not created the problem but it has increased greatly the urgency of the solution. History may record that communism's greatest contribution, perhaps its only contribution, to mankind was that it spurred the free world into greater efforts in spreading the benefits of civilization.

Or history may record that communism won out because the free world did not respond soon enough and vigorously enough to the vital economic aspect of the cold war.

To us, it is difficult to understand why people of underdeveloped nations, most of them newly won to political independence, should hesitate in their choice between communism and democracy. Why choose a still-experimental system which depends upon the individual's subservience to the state when we can offer a proved system rooted in the concept of the state's subservience to the individual? How can there be room for doubt between economic betterment with freedom and economic betterment at the cost of freedom?

The Ambassador from India gave a succinct answer last year in a speech before the Economic Club of Detroit. He pointed out that men have two needs, the need for bread and the need for liberty. In the richer societies such as ours, the need for bread has been satisfied and our overpowering need is for human liberty. In India and the rest of the underdeveloped world, the need for bread has not been met.

"In these circumstances"—and here I am quoting the Ambassador—"it would not be at all surprising if the people of these countries were to rate the material needs for life higher than the nonmaterial values of human liberty. If there is a system which they think can rapidly get them out of misery, it would not be surprising if they were to agree to a deprivation of their human liberties in order to rapidly improve their material status."

This is how the underprivileged peoples see their problems, according to one of their own spokesmen. Bread first, then liberty. Economic betterment must precede, or at least accompany, the promotion of democratic ideals and principles. Before we can win the war for men's minds, we must win the battle of their stomachs.

I believe that we can win that battle and the war despite the widespread belief that communism can, at a cost, produce faster economic results than democracy in an underdeveloped society. I believe that premise is based upon qualifications which are decisive in our favor.

Admittedly, certain advantages lie with the Communist method—not necessarily because it is Communist but because it is totalitarian, with all the regimentation of energies and resources which totalitarianism can enforce at whatever price to its own people.

Thus, as first in Russian and now in Red China, the people can be used as a slave labor force whose production is almost entirely confiscated to provide the reinvestment capital essential to economic growth. National production rises with relative rapidity but the workers realize little of the benefits of their labor until national objectives have been met. Sooner or later what may appear to be an initial advantage is lost because the state must begin to share its productivity with the people, thus slowing its reinvestment rate.

Under free enterprise methods, less of the production can be immediately reinvested because more of it is siphoned off for the current benefit of the workers. The people gain the advantages of economic growth as it occurs—not after it has reached a dictated, state-controlled level.

There are, then, two important qualifications to the speed of Communist methods.

First, the Communist lead holds only over a sprint distance; over the longer range, democracy accelerates while communism decelerates.

Second, the temporary Communist lead is in national productive power. Quick results are for the state, not the individual, and it is the individual in the underdeveloped world who needs and wants bread.

In the kind of economic results we are after, it is the democratic method, not communism, which has the advantage. It is an advantage which we can press to victory if we will work to make our foreign aid as effective as possible; if we pursue a policy of enlightened international cooperation; and if we encourage greater world trade and foreign investment.

I have mentioned the cost involved in achieving victory for the peoples of the world. Let us never forget the cost involved if we fail.

The world is being offered a fateful choice; progressive chaos or economic brotherhood.

The choice will depend in large part upon how well we continue to invest in America. And what a prime investment it is because if America's future growth is not assured, what is there to be certain about in this uncertain world?

If the free world has a well-conceived battle plan, and if our collective economic firepower is coordinated and directed on the right targets in an all-out offensive, the great issue in the world can be settled. Final victory must be achieved on the economic front. There is no acceptable alternative.

Public Stake in Railroad Merger

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MILLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. MILLER of New York. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to call to the attention of the House of Representatives an editorial which appeared in the April 30, 1961, edition of the Buffalo Courier Express. The article follows:

[From the Buffalo Courier Express, Apr. 30, 1961]

PUBLIC STAKE IN RAILROAD MERGER

If railroads, with the blessing of the Interstate Commerce Commission, go about solving their economic ills by mergers, the people of every region served by one or more railroad systems ought to pay close attention to merger proposals.

This is because one merger may put the system or systems serving them down the economic drain. And down the drain also may go the region's chances of competing on even ground with other marketing areas to and from which goods are shipped by rail.

We make the point in support of the New York Central's insistence that if there is to be a merger of the Chesapeake & Ohio with the Baltimore & Ohio, the New York Central ought to be included in the merger.

Whether or not the New York Central is right in claiming the three-road merger would be "a step toward the creation of a healthy eastern railroad economy," we very clearly see that the interests of New York State shippers and travelers would be damaged badly if the Interstate Commerce Commission allowed the C. & O. and B. & O. to merge without inclusion of the NYC.

Because of the geographic layout of properties now owned and operated separately by the three railroads in several Eastern States, the New York Central obviously would be the sufferer if the other two were allowed to merge and together become a competitor of the isolated NYC.

New York State interests are peculiarly tied in with the future of the New York Central because from east to west across the State, it alone serves a statewide clientele. Its deterioration, which might be brought about by a merger excluding it, would be a loss in several ways both to the State at large and to the individual communities in which it pays taxes as a property owner. For years the NYC has been the city of Buffalo's biggest taxpayer.

The Interstate Commerce Commission will conduct a hearing in Washington June 19 on the proposed C. & O.-B. & O. merger. The New York Central has petitioned to intervene. The public stake in arranging the affairs of privately owned and operated facilities seldom is as evident as it is in this case. Since a public agency, the ICC, is to make the determination, it behooves all interests in this region to support the New York Central's position before the ICC in every conceivable way.

American Medical Association Survey of Federal Health Expenses—HEW Division of Hospital Facilities and NIH—II

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. CURTIS of Missouri. Mr. Speaker, the following is the second part of a series on the report prepared by the American Medical Association on funds which have been appropriated by Congress for activities of the Federal Government in the field of health:

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

This year	$1,598,356,536
Last year	1,273,410,525

Division of hospital facilities	$187,875,000
Last year	187,850,000

This division administers the Federal aspects of both the original and expanded Hill-Burton programs. In 1958 Congress enacted legislation which authorizes loans in lieu of grants for any of the eligible projects under the entire program. Since 1946 the Federal contribution through June 30, 1960, amounts to $1,384,831,857; when the sponsors' share is included, the total is $4,467,542,872 (these figures are for both the original and the expanded program). Total appropriations are divided into the following four categories:

Hill-Burton original program	$150,000,000
Last year	150,000,000

This appropriation, allotted to the States on the basis of population and per capita income, assists in the financing of new hospitals and related health facilities construction under the original Hill-Burton program. To June 30, 1960, Federal funds have partially financed approximately 4,319 projects, including 199,922 hospital beds, 925 public health centers, 24 State health laboratories and approximately 155 nurses' homes and training facilities.

Medical facilities—Categorical program	$35,000,000
Last year	35,000,000

These funds are allotted to the States on a population-per capita-income formula for new construction in the following four categories: $7,500,000 for hospitals for the chronically ill and impaired; $7,500,000 for diagnostic centers, or diagnostic and treatment centers; $10 million for nursing homes; and $10 million for rehabilitation facilities. As under the original program, the Federal share may range from one-third to two-thirds of the total project cost. As of June 30, 1960, a total of 880 projects had been approved, divided among the 4 categories as follows: facilities for chronically ill, 128; diagnostic-treatment centers, 349; nursing homes, 248; and rehabilitation facilities, 155.

Hill-Burton administrative expenses	$1,675,000
Last year	1,650,000

This appropriation is used for administration, including salaries and expenses for the hospital survey and construction program for the Federal headquarters and for eight regional Federal offices.

Research	$1,200,000
Last year	1,200,000

These funds are used for research, experiments, and demonstrations on utilization of hospital services, facilities, and resources. The bulk of the money is assigned as grants to States, universities, hospitals, hospital associations, professional associations, and community organizations and a small amount for direct research by the U.S. Public Health Service.

National Institutes of Health	$560,000,000
Last year	400,000,000
National Cancer Institute	111,000,000
Last year	91,257,000

About 57 percent of this appropriation is earmarked for grants to non-Federal individual investigators and private institutions for research and training. Almost 20 percent will be used to support contracts with the pharmaceutical and chemical industries in research on chemotherapeutic agents for the treatment of cancer. The States receive $3,500,000 for cancer control work, and $1,500,000 will be used for demonstration of the application of new control knowledge through grants to private nonprofit agencies and institutions and community hospitals and health departments; $6 million will provide professional and technical assistance to public and private institutions engaged in prevention, diagnosis, and treatment among individuals and large population groups (cytology activities) and environmental cancer activities and $700,000 will be used for planning of a cancer research building. The balance is for direct research operations, including salaries, supplies, and this Institute's share in the cost of operating the Bethesda (Md.) Clinical Center and related auxiliary services.

National Heart Institute	$86,900,000
Last year	62,237,000

Grants to non-Federal individual investigators and public and private institutions for research and training take about 80 percent of the appropriation; $3,500,000 is allocated to States for heart disease control. Approximately $2,370,000 is for technical assistance to States. The balance is for direct research operations, including salaries, supplies, and this Institute's share in the cost of operating the Bethesda (Md.) Clinical Center and related auxiliary services.

Mental Health Institute	$100,900,000
Last year	68,090,000

Approximately 75 percent of this appropriation is apportioned for research and training through grants to individual investigators and public and private institu-

tions. Under the research program, funds will be utilized for basic drug research, establishing of clinical centers for evaluation of new drugs, developing of a psychopharmacology training program and new methods of treating mental illness. Among the traineeship programs are research fellowships and psychiatric training for GP's. The sum of $6 million is allocated to the States for community mental health services. About $2,780,000 will be used for technical assistance to States; $5,139,000 of this appropriation will be used for construction of a combined mental health-neurology research facility. The remainder is for direct research operations, including salaries, supplies, and this Institute's share in the cost of operating the Bethesda Clinical Center and related auxiliary services.

Arthritis and Metabolic Diseases Institute	$61,200,000
Last year	46,862,000

Grants to public and private investigators for research and training total 80 percent of this appropriation. Studies include diseases such as arthritis, cystic fibrosis, diabetes, gout, rheumatism and gastrointestinal disorders. The balance is for direct research operations, including salaries, supplies and this Institute's share in the cost of operating the Bethesda Clinical Center and related auxiliary services.

Neurological Diseases and Blindness Institute	$56,600,000
Last year	41,487,000

Grants to public and private investigators and institutions for research and training total 70 percent of this appropriation. Studies include cerebral palsy, muscular dystrophy, multiple sclerosis, Parkinson's disease, epilepsy and conditions causing blindness and deafness; $7 million of this appropriation will be used for construction of a combined mental health-neurology research facility. This remainder is for direct research operations, including salaries, supplies, and this Institute's share in the cost of operating the clinical center and related auxiliary services.

Allergy and Infectious Diseases Institute	$44,000,000
Last year	34,054,000

Research grants to public and private investigators for research and training amount to 80 percent of this appropriation. Research activities in staphylococcal disease, upper respiratory infections, cystic fibrosis, basic immunology, tropical diseases and vaccine development is supported by this Institute. $750,000 would be used for payment to the Gorgas Memorial Institute for operating and maintaining the Gorgas Memorial Laboratory and for construction and equipping facilities. The balance is for direct research operations, including salaries, supplies and this Institute's share in the cost of operating the clinical center and related auxiliary services.

Dental Health Institute	$15,500,000
Last year	10,019,000

Grants to public and private investigators for research and training total about 65 percent of this appropriation. For technical assistance to States and for coordination and development of dental resources $2,100,000 will be used. The remainder is for direct research at Bethesda, review and approval of grants, administrative expenses, and for support of the clinical center.

General research and services— National Institutes of Health	$83,900,000
Last year	45,994,000

These funds are administered by the Division of General Medical Sciences of the National Institutes of Health, with practically all funds being expended for research and training grants and fellowships, with the exception of $2,970,000 for control of biologics, which activity is under the Division of Biologics Standards. Research supported by this Institute includes experimental embryology, cell biology, genetics, fetal and endrocrine physiology. The balance goes toward administrative expenses relating to grants.

(NOTE.—Included in the 1961 appropriations for the National Institutes of Health are the following amounts for special programs: $20 million for regional clinical research centers, both general and categorical; $7 million for primate centers; and $2 million for career research professorships. Public Law 86–798 (86th Cong.) authorizes the setting-aside of a uniform percentage (up to a maximum of 15 percent of amounts provided for research grants to be used as grants-in-aid to public or nonprofit universities, hospitals, laboratories, and other institutions for the general support of their research and research training programs. At the time National Institutes of Health appropriations were considered, Public Law 86–798 had not been enacted. Since the Appropriation Committees have not had an opportunity to discuss the application of the law, no funds have been allocated for this purpose in this appropriation.)

Progress in North Little Rock, Ark.

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, May 3, 1961

Mr. FULBRIGHT. Mr. President, an interesting article concerning the progress being made in North Little Rock, Ark., under the leadership of Mayor William F. Laman, appeared in the April issue of Arkansas Municipalities.

This article points out the things which can be done to improve a city's public facilities under dynamic and aggressive leadership. North Little Rock is really on the move. In only a few years the face of the city has been transformed. I hope that leaders in cities throughout the country will take note of what can be accomplished when civic leaders are willing to think and act big. I ask unanimous consent to have this article printed in the Appendix of the RECORD for the enlightment of my colleagues and other readers of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NORTH LITTLE ROCK—"PLEDGED TO PROGRESS"—PLANNING FOR THE FUTURE

"If you want to see a horrible example of an unplanned city, come to North Little Rock," said Mayor William F. "Casey" Laman, speaking at the annual meeting of the Arkansas Municipal League, but he was quick to add that in order to see it you would have to come soon for the development programs, planned and underway, would within a very short space of time completely change the face and character of the second largest city in Arkansas.

The story behind this statement is probably one of the greatest success stories in recent Arkansas history. It is a story of a man with vision and purpose and the ability to see his city as it might be; a man who could communicate his ideas to the people and provide the dynamic leadership necessary to completely change the attitude of a community.

For many years North Little Rock had prided itself in being a city without bonded indebtedness, but in point of fact, as was pointed out it was also a city without many of the basic facilities and services required by citizens in this day and age. In the first year of his administration Mayor Laman very candidly pointed out the deficiencies, portrayed potential, and explained how the city could acquire the needed facilities.

REORGANIZATION OF CITY DEPARTMENTS

The first major change was a partial reorganization of city departments, particularly those concerned with finance and purchasing. Strict accounting of all revenues and purchases was introduced, and a program of municipal services was prepared and correlated with anticipated revenues. The city can now tell the exact balance within its budget and can account for ever purchase at the end of each working day.

Typical of the change in departmental organization and service policies is the street program which in a period of less than 3 years has accomplished the building of 1,000 blocks of permanent street paving. Mayor Laman found that in the past the funds available for street paving had been devoted to maintaining substandard streets and that no progress was being made in the building of streets in the older part of the city. He called in experts to examine the street problem and to recommend a program where money could be put into permanent streets and maintenance costs could be reduced to a minimum. The solution appeared to be the use of soil cement base with black-top surface. Using this procedure the city has within a period of less than 3 years laid permanent streets on 68 percent of previously unpaved streets.

Tests which have been made on these streets show that they are increasing in strength each year, have a life expectancy of 30 years or more, and will be maintenance free for at least 15 years. Some idea of the boldness of this street-paving program can be gained from the fact that in the 50 years prior to 1958 the city, with its general revenue and street turnback funds, had been able to build only 35 blocks of permanent streets.

Through these reorganizations and because of his personal drive, the mayor had been able to bring about dramatic changes in the services rendered; but working within the strict financial limitations imposed on cities in Arkansas, and overwhelmed by the accumulation of problems brought about by half a century of neglect, he was forced to seek other means for constructing the much-needed public buildings and overhauling of the basic city services.

CITY'S NEEDS ANALYZED—AN INVENTORY

The analysis of city needs showed that many of the city buildings were antiquated and totally unsuited for their purpose. Indeed the Pulaski County grand jury had twice condemned the city's jail. The police department of some 80 men was housed in an area designed for a police force of 20 men. There was a need for new fire stations to provide adequate protection in all parts of the city. The public health center was located in a converted house which was sadly lacking in space, arrangement, and facilities despite the valiant efforts of a dedicated staff to provide the very best in health service. The library was housed in a 2-story frame house with no parking. The electrical distribution system was grossly overloaded, and the privately owned water system antiquated.

The city owned a 1,500-acre park which it had been unable to develop, and along the river banks of the Arkansas River, in

what is the front window of the city, squatters had created a slum on lands a large portion of which the city owned. These were but a few on the long list of improvements needed. Despite all of the reorganization, strict policing of purchases, and other changes, it was totally impossible for the city to finance these improvements with current revenues. Other means had to be sought.

CITIZENS APPROVE CAPITAL IMPROVEMENTS

Just prior to his election in 1957, the people of North Little Rock had voted a 2-mill ad valorem tax for a $750,000 bond issue for the construction of a city hospital. Once again Mayor Laman took the cause to the people and proposed two revenue bond issues, one for $2,100,000 to overhaul the electric system (of which $393,000 was to be spent on lighting major thoroughfares) and a second issue of $4,857,500 to purchase and overhaul the water-supply system. These bond issues were passed by an overwhelming majority.

The mayor waited only long enough to carry out the administrative duties connected with the successful bond issues before he again went to the people to ask for a $1,100,000 bond issue for capital improvements requiring a 2-mill ad valorem tax. Under this bond issue $390,000 was set aside for the purchase of sites and construction of buildings for a new central fire station and two out stations; $275,000 for a police and courts building; $200,000 for a library $85,000 for a health center, and $150,000 for park improvements. So successful had been the mayor's explanation of the city's needs that the community as a whole campaigned for the new issue. We saw insurance men campaigning for new fire stations although the new stations would reduce the fire insurance rates. The chamber of commerce, which had often been thought as a very conservative group, campaigned so vigorously and effectively for the improvements that their work was eventually recognized by the national chamber of commerce and won for them a coveted award for civic responsibility.

The citizens by again voting an overwhelming majority in favor of the bond issue made it crystal clear that not only did they approve of the city government's policy but demanded the facilities for their city. Here was a case of where an erroneous assumption had been made that the people would go without rather than bear the tax burden, but in actual fact the people had not been given a choice and when eventually allowed to express their opinions made it known in no uncertain terms that they wanted North Little Rock to become a well-balanced community providing all of the facilities for a well-rounded life.

FACE LIFTING BEGINS

With the moneys provided under the bond issue, the work of face lifting has progressed at a very rapid pace. On the electrical system the job of converting from 4,160 volts transmission lines to 13,000 volts is now 50 percent complete. This work has been carried out under the direction of F. D. Jarvis, who is manager of the North Little Rock Electric Department. His program has produced a complete inventory of equipment, lines, and poles throughout the entire system. Working with his senior engineer draftsman, Irl Moreland, a complete study has been made of the existing distribution system so that loads can be balanced, transformers and substations used more efficiently, and lines and equipment installed to care for present needs and future expansion. Estimating and designing for future loads is not an easy matter, particularly in a city growing as rapidly as North Little Rock; for not only do you have to estimate population growth but you also have to consider many new uses to which electricity is put in the home and in the factory. Between 1949 and 1960 the demand in North Little Rock zoomed from 6,700 kilowatts to 30,600 kilowatts, an increase of five times, which is way above national average. On the street lighting program some 50 percent of the 24 miles of major highways are now illuminated by mercury vapor lights.

Under the waterworks bond issue the water distribution system had been acquired by the city and set up under an independent commission, with J. H. Montgomery as manager. The commission's program of overhauling and expansion of the waterlines has now been underway for over a year with spectacular results. The capital improvements bond issue in itself created another venture for the city. Whereas, initially the new buildings had been considered simply as replacements for inadequate facilities, it soon became apparent that the police and courts building, library, and health center formed a nucleus of a civic center and that in due course other new civic buildings would be needed. Mayor Laman called in Planning Consultant Gerald J. McLindon, to assist him in the selection of a site for the proposed civic center, and plans are now prepared for present and proposed developments covering some five city blocks to house all of the public buildings to be erected in the next 25 years. The plan calls for modern structures set in landscaped malls, with small courtyards, reflecting pools, and quiet areas. Parking spaces have been allowed to take care of all anticipated needs. The civic center is located at the junction of interstate freeways which radiate out into all sections of the city. In what was a year ago a slum area, there is now a rising police and courts building. The library will be under construction within a matter of weeks and the health center will be started before fall. Two of the fire stations have already been completed, and the new central fire station will be under construction early next month.

The money voted for park improvements has been used in developing portions of the 1,500 acre Burns Park, providing pavilions, play equipment, ball diamonds, and new roadways. But a very substantial part of the money was used in developing community and neighborhood parks close to the major residential concentrations. Mayor Laman has said that he wants to see a park within a half mile of every home in North Little Rock and equipped to provide recreation for children of all ages. His philosophy on recreation and youth programs is well known and often quoted. "I would much rather spend money providing facilities for the useful outlet of youthful energy than have to spend the money for police and court work rounding up juvenile delinquents."

Along the river front 120 slum shacks have been bulldozed off and the riverside park created. A new roadway, pavilions, a comfort station, picnic areas, and flower beds will soon fill the city's front window, and on the seawall, which had supported cardboard shacks, a mural will be painted depicting the progress in Arkansas.

These bond issues have already borne great fruits for the community, not only do we have these needed facilities, but they have also drawn people to North Little Rock. Only last month a new 16-lot subdivision was completely sold out in one day without any advertising campaign. The Kohler Co. of Wisconsin has announced the opening of a big plant. The director of a large motel chain, in announcing the building of a million-dollar structure said that never in all of his business contacts had he experienced the cooperation or enthusiasm from a city or a mayor equal to that shown in North Little Rock. Each day brings forward new plans and new investments. A regional shopping center, two department stores, talk of a farmers' market, new subdivisions, all of these things because one man had vision and courage and pointed the way for the citizens.

FUTURE PLANS

But what has been accomplished is only a beginning. Mayor Laman waits only long enough for one of his programs to get underway before plunging into the next. At this time he is working on the purchase of a 5,300-acre industrial tract, and a $3,500,000 sewerage project and is searching for ways and means of solving the storm drainage problem which has plagued the city from the day of its creation. The mayor, the city council, and the people are indeed the epitomy of the city's slogan "Pledged to Progress" but even this slogan is used as a measure of accomplishment. Becoming concerned with the amount of substandard and slum housing within the city, Mayor Laman has said, "We cannot say we are a city pledged to progress and at the same time sweep our problems under the rug." Declaring war on slums, he continued, "There is something wrong with our society when some of our children don't have bathtubs and one of the biggest problems with others is where they are going to park their cars at the high school." Under such great leadership and encouraged by the fantastic rate of change, the people of North Little Rock are firmly convinced that they and their children will realize the full potential of the city and will in course of time become the first city in the State.

Migratory Farmworker Problems in New Jersey

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, May 3, 1961

Mr. WILLIAMS of New Jersey. Mr. President, many growers are interested in and truly concerned about the lot of our migratory workers. Many are sincerely trying to improve the conditions of the workers, who help them each year to plant, pick, and harvest their crops. Throughout my work on the Subcommittee on Migratory Labor, of which I have the honor to be chairman, I have called the attention of the Senate and the public to this kind of concern, wherever I have found it to exist. Only recently, this kind of constructive endeavor was noted in an article which appeared in the New York Times on April 28 entitled, "Migrant Workers Arrive in New Jersey." The article gives an excellent account of the efforts which have been made to improve the living and working conditions of our Puerto Rican migratory workers in Glassboro, N.J. It was with no little interest and pride that I noted the splendid progress which has been made in my home State.

The article points out that contracts between worker and grower guarantee a minimum of 80 cents an hour, and at least 160 hours of work for every 4 weeks. The article also notes that last year the average pay for the Glassboro workers was $44.60 a week. Some workers manage to accumulate as much as $1,000 during the season, a considerable sum by Puerto Rican farm labor standards.

Positive evidence that living conditions of migratory workers can be adequate is clearly exemplified on one farm where 14 men live in a large, white-painted cinderblock building. The building is equipped with a television set, kitchen facilities including electric refrigerator, double decker beds, two toilets and a shower with hot water. Of his workers, the owner says, I don't know what we'd do without them.

Because the article explains the origins of the Glassboro program, and because it shows that constructive thinking and planning can accomplish real progress, I ask unanimous consent that the article be included in the RECORD at this point.

Mr. President, I would also like to ask unanimous consent to have included in the Appendix of the RECORD a series of three articles on other progress being made in this area. The author, Eleanor G. Collie, has written often on migratory workers on New Jersey farms. Her understanding of the problems and progress in this area is demonstrated again in this series, which appeared in the Camden (N.J.) Courier-Post on April 24, 25, and 26.

There being no objection the articles were ordered to be printed in the RECORD, as follows:

[From the New York Times, Apr. 28, 1961]

MIGRANT WORKERS ARRIVE IN JERSEY—VANGUARD OF 7,000 FLIES IN FROM PUERTO RICO TO HARVEST THE CROP

(By Clarence Dean)

MILLVILLE, N.J., April 27.—A white and silver Trans Caribbean airplane cut through gathering thunderclouds and touched down at the municipal airport here. A dozen Millville residents had gathered in the dusk to watch the transport arrive.

It was bringing in from Puerto Rico some of the first of the seasonal labor on which New Jersey's agricultural industry becomes increasingly dependent.

The 105 who alighted from the chartered flight were the vanguard of 7,000 who will harvest this year's crops—asparagus, blueberries, cucumbers, tomatoes, onions, string beans, peaches and, finally, apples and sweet potatoes.

The asparagus season began this week. It will continue through June. There are 29,000 acres to be harvested in Gloucester, Salem, and Cumberland Counties, an asparagus-growing area second only to California. Sixty percent of the crop will be canned or frozen, the balance sold on the fresh-produce market in the East.

A SEASONAL TRIP

Most of the Puerto Ricans who come here for the harvest are agricultural workers at home. The season on the coffee, sugar, and banana plantations ends about this time, and, without jobs in the United States, they would be unemployed until early next year.

With their Latin temperament, they are, nevertheless, diffident, shy people on the whole, born to the primitive, rustic life of the island's mountainous interior.

They came down the gangway from the big plane tonight, eyes alive with wonder and despite their ages—from 19 through 45—looking like excited youngsters on their first trip to the city.

Buses were waiting to take them the 22 miles to a reception center in Glassboro and a dinner of pork chops, rice, beans and strong Caribbean coffee. Here they would sleep for the night and leave in the morning for the farms to which they had been assigned.

Prior to World War II, the south Jersey farmers obtained their seasonal help mostly from below the Mason and Dixon line which actually cuts through lower New Jersey.

QUEST FOR WORKERS

But after the war, job opportunities for Negroes became more numerous and summer workers grew increasingly hard to find.

In 1946, the Glassboro Service Association, a farmers' cooperative, experimented with recruiting temporary labor in Puerto Rico.

The move was so successful that 3 years later, the Garden State Service Cooperative Association was formed to expand the work. It serves 10 farmer groups, the largest of which is the Glassboro association, with 1,400 members. Garden State recruits for farms in Delaware, New York and Pennsylvania as well as New Jersey.

The operation is carried on in cooperation with the Puerto Rican Department of Labor. Garden State interviewers begin recruiting workers on the island in early spring, and the men come here on a contract basis.

The contracts, individually signed, guarantee a minimum of 80 cents an hour and at least 160 hours of work every 4 weeks. Housing accommodations and cooking facilities also are provided.

The men buy their own food and pay the chartered-plane fare of $50.15 to New Jersey. The fare may be paid in installments. They must also pay their way home at the end of the season.

Many earn more than the minimum, especially those who are on piecework. The average pay for the Glassboro workers last year was $44.60 a week. Some workers manage to accumulate as much as $1,000 during the season, a considerable sum by Puerto Rican farm labor standards.

The men are under no obligation to return to Puerto Rico in the fall, but Garden State officials estimate that 70 percent do. Most of them are married or have strong family ties on the island.

The living accommodations on the farms are subject to approval by the New Jersey Bureau of Migrant Labor. They vary in quality, but, on the whole, are superior to the migrants' housing on their island.

At the farm of J. Ellison Haines on Salem Pike in Mickleton, for example, 14 men are living in a white-painted cinder block building some 20 feet wide by 40 feet long.

It has a television set, kitchen facilities including an electric refrigerator, double-decker beds, two toilets and a shower with hot water.

Mr. Haines' farm—where there are ninety acres of asparagus to be harvested between now and the end of the season in late June—provides an example of the relationship that has grown up between the workers and the South Jersey farmers.

For 8 years, Mr. Haines has been employing Puerto Ricans. Some of the same men return to his farm each season by mutual agreement, a common practice.

A Quaker, erect in stature, with clear gray eyes and quiet voice, Mr. Haines says simply: "I don't know what we'd do without them."

Marianas Sotomayor, a smiling, stocky man 36 years old, for three summers has left his wife and boy in Adjuntas to work for Mr. Haines. "He is a good man," Mr. Sotomayor says. "He is a good farmer. We like him."

The language barrier is an increasing diminishing problem on the South Jersey farms. The employers have picked up a smattering of Spanish, and the workers a similar amount of English, and they seem to make themselves understood on both sides.

For emergency problems—such as a serious misunderstanding of orders or a personal dispute—the Glassboro service keeps seven radio cars geographically deployed, and a call for assistance quickly brings a field representative with an interpreter.

[From the Camden (N.J.) Courier-Post, Apr. 24, 1961]

SHOW HOW IT'S DONE IN UNITED STATES—GOAL OF MIGRANT OFFICE

(By Eleanor G. Collie)

Names of Government agencies are sometimes no longer than the objectives of the agencies to which they are attached.

A case in point is the Bureau of Employment, Security Migration Division, Department of Labor, Commonwealth of Puerto Rico.

The regional office of this agency, at 433 Arch Street, has as its ultimate objective going out of business, according to Anthony Vega, regional director.

"We want to do our job so well and thoroughly that our services will no longer be required," Vega said.

SERVES FOUR STATES

But the migrant office won't be hanging up an out of business sign for some time to come because of a continuing stream of Puerto Ricans coming into four States, New Jersey, Pennsylvania, Maryland, and Delaware, served by the regional office.

William Muniz, who doubles as Vega's deputy and is responsible for services to Puerto Ricans in south Jersey, reported that approximately 20,000 of his countrymen are in the area and require services available at the regional office.

"We're here to tell our people how to do what, like everybody else does it," Vega said, "when they earn this then we'll go out of business."

Vega's regional responsibilities include supervision of the Camden office and suboffices in Keysport and Hamburg, Pa.

EXPANDED SERVICES

Established to provide services for agricultural contract workers brought in annually to work on south Jersey farms, the Camden office became a regional headquarters in 1960 and expanded its services to include advisory assistance to Puerto Ricans who elect to live here permanently.

In general, Vega said, three service programs are available to Puerto Ricans and groups and agencies working with Puerto Ricans.

"We have an agricultural program, a community relations program, and an educational program, developed and supervised by trained personnel."

Requirements for field workers include "college training and experience in social work, community organization, education, and labor relations; and of course, our men must speak both English and Spanish," Vega said.

EMPHASIZES SELF-HELP

Muniz supervises the agricultural program; Lionel Jiminez and Gabriel Koll, working out of the Camden office, supervise respectively the community service and educational programs.

"In each of our programs," Vega said, "the accent is on our people helping themselves" in adjusting to the community and industrial pattern in south Jersey.

Calling his organization "a multidiscipline government agency," Vega said, "we work with churches, health groups, civic and municipal agencies, educators, labor, and agricultural associations to find collective cooperative solutions to social problems involving newly arrived Puerto Ricans."

In following articles, details of the three service programs cited by Vega will be reviewed.

[From the Camden (N.J.) Courier-Post, Apr. 25, 1961]

PUERTO RICAN AGENCY AIDS MIGRANTS WHO WANT TO HELP THEMSELVES

(By Eleanor G. Collie)

When representatives of the Puerto Rican Department of Labor in Camden talk of their educational service program, they are not referring to compulsory classroom attendance.

They're discussing self and group education for Puerto Ricans in expediting the adjustment to the south Jersey socioeconomic pattern.

The program, outlined by Anthony Vega, regional director, is fairly standard in the 11 regional offices in the United States.

Joseph Monserrat, chief of the migration division of the Puerto Rican employment service in the middle Atlantic States, is responsible for all programs.

AID AVAILABLE

Vega said, "in all migrant division offices, personnel are available to assist Puerto Ricans in group organization, conducting leadership courses, and in holding meetings."

Emphasizing that his staff neither initiates nor insist that their countrymen organize groups, Vega said, "But if they want to themselves, we're here to help if they call on us.

"For example, there is in Camden a committee of Puerto Rican affairs. This committee is in no way responsible to us nor connected with us, but we work with them occationally when we are specifically invited to do so.

HELPING THEMSELVES

"The committee of Puerto Rican affairs is a group of people helping themselves and that's the way we like it.

"You could say this office strives to be a resource for all types of guidance for Puerto Ricans wanting to become a normal part of a community."

Vega cited the New Jersey Council of Puerto Rican Organizations as an outstanding example of "people helping themselves."

Composed of 42 civic, social and self-help member groups, the council and Rutgers University will hold a conference on Puerto Rican affairs May 7 in Newark.

The theme of the conference, which will be addressed by educators and representatives from social schools and labor, is "Accomplishments and Goals of the Puerto Rican Community of New Jersey."

CONSULTANTS TO PROJECTS

Time has been allotted for discussions on housing, employment, health and discrimination.

Migrant division personnel are merely consultants cooperating in the project proposed by Rutgers University and enthusiastically accepted by the Puerto Rican council.

This type of project is an example of the program Vega means when he discusses "education."

Through its regional offices, the Puerto Rican department of labor contributes to the assimilation of its island people into a cosmopolitan society.

Migrant division offices in the States exist to serve both the Puerto Rican who comes into the area and the communities within the area.

"When the assimilation is accomplished," Vega said, "our offices can be closed."

[From the Camden (N.J.) Courier-Post, Apr. 26, 1961]

PUERTO RICAN LABOR DEPARTMENT SERVES MIGRANT AND COMMUNITY

(By Eleanor G. Collie)

Puerto Rico's department of labor serves its citizens who come to south Jersey to live and work.

Through the regional office in Camden, the Puerto Rican labor department provides both trained personnel and action programs to assist the Spanish-speaking migrants in adjusting to their new environment.

Anthony Vega, regional director, provided details for three general programs in agricultural, community service and education assistance.

Vega said "we work with farm laborers and growers. We have four men in the field who visit farms to assist the employer as well as the employee in working out problems that might adversely influence the effectiveness of the worker."

CHECK CONTRACT WORK

"Along with representatives of the State employment service and farm associations, our fieldworkers check to make sure that contracts are being honored."

"We work with the farmers in telling the non-English speaking workers how the farmers want their jobs done."

Summing up the agricultural program Vega said, "In a multitude of ways we try to assist both the growers and the agricultural workers."

Problems are referred to Ralph Sanchez, regional program director, by individual workers and growers and by the Glassboro Service Association.

COMMUNITY SERVICE

Turning to the community service program, Vega reported that his staff works closely with various groups including churches, schools and labor unions.

He said, "Church representatives frequently come to us for guidance on setting up programs that will attract and involve Puerto Ricans living in the neighborhood of the church.

"We have obtained and have available approved testing material appropriate to the newcomer which schools have used to determine class placement of children, their intelligence level and cultural potential."

The educational service program is broad in its application. Vega said, "Education is bilateral, it works both ways."

WORKS BOTH WAYS

Implying that communities accepting Puerto Ricans as well as newly arrived Puerto Ricans themselves need to be oriented, Vega said, "When we're invited we address civic groups and discuss the social, cultural and economic backgrounds of our countrymen, and we suggest ways and methods by which the groups and the Puerto Ricans can work cooperatively.

"We serve as interpreters between labor groups and Puerto Ricans and explain the one to the other.

"This service is mainly in cities such as Camden where the distinction between the seasonal migrant worker and the settled urban Puerto Rican is most obvious."

In the concluding article, the Puerto Rican educational program, which is in effect a reaffirmation of the idea of the Puerto Ricans helping themselves, will be reviewed.

American Medical Association Survey of Federal Health Expenses—HEW Miscellaneous—III

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. CURTIS of Missouri. Mr. Speaker, the following is the third part of a series on the report prepared by the American Medical Association on funds which have been appropriated by Congress for activities of the Federal Government in the field of health:

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

Grants for construction of research facilities $30,000,000
Last year 30,000,000

These funds are available for planning and construction of research facilities. To be eligible for grants, the applicant must be a public or nonprofit institution determined by the Surgeon General, after consultation with the National Advisory Council on Health Research Facilities, to be competent to engage in the type of research for which the facility is to be constructed. This is the fifth year of this program's operation.

Scientific activities overseas, new $3,707,000

This appropriation provides for the purchase of United States owned local currencies in foreign countries for the conduct of medical research activities in those countries under the provisions of the Agricultural Trade Development and Assistance Act of 1954 (Public Law 480), as amended.

Water pollution control $45,000,000
Last year 45,000,000

The Federal Government makes grants for the construction of waste treatment plants. Although $45 million was appropriated for fiscal 1960 and 1961, the funds allocated to the States each year will be based on the $50 million authorized in the basic legislation.

Hospital and medical care $55,213,000
Last year 51,600,000

These funds are used for operational costs and maintenance of Public Health Service hospitals and health services in caring for American seamen, Coast Guard, and Public Health Service personnel and their dependents, Federal employees injured at work, leprosy patients, and narcotic addicts, and includes studies in the development and coordination of nursing resources. It also includes $1,200,000 for payments to Hawaii for care of patients suffering from leprosy and $6,550,000 for nurse training grants. Also included in $421,000 for the Division of Nursing Resources which administers the professional nurse traineeship program and conducts research and provides consultation on nursing education and services. Not shown in the appropriation is approximately $5,536,000 additional income, principally from other Federal agencies for reimbursable services.

Indian health activities and facilities $57,990,000
Last year 50,287,000

The Public Health Service is responsible for the health of American Indians and Alaskan natives (Eskimos, etc.). The total is broken down as follows: hospital care in Indian hospitals, $29,195,000; contract patient care, $9,028,000; field health services, $8,622,000; program direction, $1,431,000; and modernization of hospitals and construction of facilities, $9,714,000. In addition, the Indian health activities of the Public Health Service will receive approximately $750,000 as reimbursements from other governmental agencies for services rendered in Public Health Service facilities.

Assistance to States—General $27,120,000
Last year 24,497,000

A total of $17 million will be available as grants to States in support of State and local general public health activities. These grants must be matched 1 State dollar for

every Federal dollar. The remainder will be available as follows: $5,690,000 to provide technical assistance, consulting services to States, expenses of the National Office of Vital Statistics, international health activities, demonstrations, training activities, and operational expenses; $2 million for grants to schools or direct traineeship awards to individuals for training of professonal public health personnel; $1 million for grants to schools of public health; and $1,430,000 (authorized by Public Law 86–720, 86th Cong.) for project grants for graduate public health training.

Environment health $27,640,000
Last year 15,640,000

This program is made up of six activities as follows: air pollution control, $5,921,000; water supply and water pollution control, $9,892,000; radiological health activities, $6,719,000; milk, food, and general sanitation activities, $1,855,000; occupational health activities, $1,877,000; and accident prevention activities, $1,376,000.

Tuberculosis control $6,430,000
Last year 6,452,000

Grants to States for diagnostic and treatment clinics, mass case-finding and follow-up services account for $4 million, all of which has to be matched equally by the States. The remainder is for direct operations of Public Health Service.

Communicable disease activities $14,116,000
Last year 13,415,000

This appropriation is used for direct activities of the PHS Communicable Disease Center at Atlanta, Ga. (and its affiliated operations), and for the Arctic Health Research Center in Anchorage, Alaska. The Communicable Disease Center carries on studies in epidemiology, furnishes laboratory diagnostic services, and sponsors special projects to assist States. The Arctic Health Research Center conducts studies on health problems in low temperature areas. Of the total of $5,700,000 for control of venereal disease, $2,400,000 goes for direct grants to States for venereal disease detection, treatment, and control on a special-need basis. Most of the remainder is spent for technical assistance to the States, including funds to pay 351 Federal employees, the majority of whom are assigned to State health departments.

Office of the Surgeon General $6,900,000
Last year 5,816,000

For administrative expenses of this Office, including all housekeeping services, evaluation of public health needs, and personnel training. Included also is approximately $2,156,725 for administration of the National Health Survey Act authorized by Public Law 652 (84th Cong.),

Foreign quarantine activities $4,931,000
Last year 4,685,800

This service operates 319 medical quarantine stations on borders of the United States. It also operates 23 medical examination stations on foreign soil for the examination of aliens seeking visas to enter the United States. Inspections are made of all seagoing vessels and aircraft entering the United States. It is estimated that the service will examine more than 3,150,000 aliens in this country and 165,000 abroad.

National Library of Medicine, operating expenses $1,662,000
Last year 1,566,000

Under Public Law 940 (84th Cong.), the Armed Forces Medical Library was renamed the National Library of Medicine and transferred to the Department of Health, Education, and Welfare. A new structure has been authorized to house the Library and $6,950,000 in construction funds was appropriated for 1959. The new Library is now under construction on the southeast corner of the NIH reservation at Bethesda.

Buildings and facilities, PHS ..... (new) .. $3,470,000

This appropriation would be divided as follows: $600,000 to survey and acquire a site for quartering animals and for construction of additional office, laboratory, and service space at the Communicable Disease Center at Atlanta; $785,000 for planning for an environmental health center; and $2,085,000 for construction of research and other facilities for National Institutes of Health, the bulk of which would be for equipping and renovating of animal quarters, a permanent animal research building for the addiction center at Lexington, Ky., and for initial development of facilities for large animals on the site purchased with funds provided in 1960.

Reimbursable health programs for other governmental agencies $691,000
Last year 623,000

This represents the cost of services expected to be advanced to Public Health Service by other governmental agencies for establishing and operating on-the-job clinics. Public Health Service deals largely with Washington, D.C., personnel; whereas, 90 percent of the total number of Government's employees are located outside the Washington area.

St. Elizabeths Hospital $26,380,000
Last year 18,817,725

St. Elizabeths provides treatment for several classes of mentally ill persons, including those residing in the District of Columbia, beneficiaries of the Veterans' Administration, beneficiaries of Public Health Service, insane persons charged with or convicted of crimes in U.S. courts (including the court of the District of Columbia), certain American citizens found insane in Canada, the Panama Canal Zone and the Virgin Islands, certain foreign service personnel, and members of the military services admitted to the hospital prior to July 16, 1946. Congress appropriated $4,491,000 to this institution for operational expenses, $345,000 for major repairs, and $4,994,000 for construction of new buildings or expansion of present buildings. Reimbursements from other agencies will approximate $16,550,000. This hospital has an average daily patient load of 7,000.

Freedmen's Hospital $3,294,600
Last year 3,190,000

This institution with an average patient load of 326, plus 36 new-borns is a medical teaching facility and general hospital. Its patients are chiefly drawn from the District of Columbia and the adjoining area. The hospital is utilized for training of interns and residents, many of whom are graduates of Howard University, and it has a nurses' training school. A total of $5,050,515 is authorized for operating costs. All in excess of $3,294,600 (appropriated for fiscal 1961) are expected reimbursements from charges made to patients and payments made by the District of Columbia and other Federal agencies and from the counties surrounding Washington who utilize these facilities for welfare patients. Some supervisory functions over this program are vested in the Public Health Service.

Howard University $1,481,000
Last year 1,296,000

This university is jointly supported by congressional appropriations and private funds and offers instruction in ten schools and colleges, including colleges of medicine, dentistry, and pharmacy. This year the university's total operational budget is in excess of $9,300,000. Of this amount, the Federal Government will contribute $5,490,000 toward operational expenses, $225,000 for plans for construction, and $1,433,000 for completion of a home economics building and power plant facilities. The combined budgets for the colleges of medicine, dentistry and pharmacy will require approximately 24.9 percent of the university's budget for educational and general expense. The entire student body of the university for 1960–61 will be approximately 6,778. There are 385 students enrolled in the college of medicine, 336 in the college of dentistry, and 169 in the college of pharmacy. The Federal contribution for direct current operations in the colleges of medicine, dentistry and pharmacy is estimated to be $1,481,000 for 1961.

Bureau of Public Assistance, medical payments $350,000,000
Last year 254,000,000

Out of a total budget of approximately $3½ billion (Federal, State and local funds) for categorical public assistance payments, officials of the Social Security Administration estimate that approximately $675 million or about 19 percent is now being devoted for medical and health needs of categorical assistance recipients this fiscal year. About $585 million will be paid to vendors of medical care, such as physicians, hospitals, pharmacists, nursing homes, etc., and about $90 million directly to recipients to enable them to meet their medical care needs. The Federal share of combined medical payments to vendors and to recipients will be about $350 million. Reflected in the increase are funds for the expanded old age assistance medical care program and the medical assistance for the aged program under Public Law 86–778, the Social Security Amendments of 1960.

Children's Bureau $39,110,000
Last year 34,420,000

Operating under the Social Security Administration, the Children's Bureau administers grants to States for maternal and child health, and crippled children's and child welfare services. This year grant money totals $51,833,000 divided as follows: $18,167,000 for maternal and child health work; $20 million for crippled children's services; and $13,666,000 for child welfare services. However, this last item has no medical significance and, therefore, it is not reflected in the total of $39,110,000. One-half of the Federal funds for maternal and child health and crippled children's services is required to be matched dollar for dollar by the States. In addition, the Children's Bureau has $2,360,000 to finance investigating and reporting activities and to administer all investigating and reporting activities and to administer all the grants. About 40 percent of this amount is chargeable to the health and related activities of the Children's Bureau which include administration of grants for maternal and child health and crippled children's services and consultative services to State agencies and other public and voluntary agencies and organizations engaged in the provision of maternal and child health services.

Office of Vocational Rehabilitation $73,501,000
Last year 66,338,000

Grants to the States (same as Hill-Burton formula) are provided for: (a) Support of basic rehabilitation services, including medical examinations, surgical, and therapeutic treatment, hospitalization, prostheses, occupational tools, and aids, vending stands, rehabilitation facilities, vocational training, and funds for maintenance, $54,700,000; and (b) extension and improvement of State

programs, $1,500,000. Appropriations for research and training are divided as follows: (a) Special grants to States or nonprofit organizations for projects designed to expand the rehabilitation program (2–1 Federal-States matching), $8,074,000; and (b) for training of rehabilitation personnel, including physicians, therapists, psychologists, counselors, medical, and psychiatric social workers, $7,206,000. In addition, $2,021,000 is available for Federal administration costs.

Rehabilitation activities overseas (new)---------- $930,000

This appropriation provides for the purchase, mainly from the Treasury, of U.S.-owned local currencies of foreign countries for the conduct of research and training in rehabilitation in those countries under the provisions of the Agricultural Trade Development and Assistance Act of 1954 (Public Law 480), as amended.

Food and Drug Administration_ $19,654,000
Last year---------- 15,512,000

Of the total, $18,052,000 will be used for the enforcement of the Food, Drug, and Cosmetic Act which includes: The inspection of manufacturers and examination of samples of all foods, drugs and cosmetics in interstate commerce to see that they are safe, pure, honestly labeled and packaged, and bear adequate warnings and directions for use; combating medical, nutritional and mechanical quackery through court actions; premarketing safety clearance of new drugs and food additives; requiring appropriate labeling of household products containing hazardous ingredients; pretesting of all color additives. $1,602,000 will be used to certify the strength, purity and other requisites of certain antibiotic drugs and their derivatives, insulin and its derivatives, the establishment of tolerances for pesticide chemicals on raw agricultural products, and certification of batches and establishment of tolerances for all colors used in or on food, drugs and cosmetics.

U.S. Office of Education_____ $4,000,000
Last year---------- 4,000,000

For a number of years the Office of Education has been making grants to States chiefly for vocational education. During the last fiscal year approximately $4 million was made available as grants to aid the States in the training of practical nurses. For this year, the Office of Education has available approximately $34 million for grants to States, of which $4 million is again earmarked for the practical nurse training program.

Federal surplus property donation program, approximate___ $47,260,936
Last year---------- 38,405,000

The Department of Health, Education, and Welfare has authority to make donations of personal property and transfer of real property declared surplus by Federal agencies for health needs. In the case of real property, conditional title is vested in the transferee and then after a number of years of utilization of the property in accordance with imposed conditions the property can become absolutely vested. Recipients of personal property may be medical institutions, health centers, hospitals and clinics. Eligible donees of real property may be any institutions organized for health purposes, including those engaging in medical research. It is difficult to determine the exact value of property donated and transferred since accounting is on the basis of acquisition cost. Last year approximately $40,066,069 of personal property (acquisition cost) was allocated for health purposes. During the same period, approximately $23,355,370 of real property (acquisition cost) was transferred with a fair market value of $7,194,867. It is expected that the level of donations and transfers for the current fiscal year will be in line or slightly in excess of last year's totals.

The Captive Nations and the Freedom of Europe

EXTENSION OF REMARKS
OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, May 3, 1961

Mr. DOUGLAS. Mr. President, the Assembly of Captive European Nations is made up of representatives of the democratic and anti-Communist forces in the nations of central and Eastern Europe which have been taken over by the Russian Communists and which are conducted as satellites of the Soviet Union. The Assembly comprises distinguished exiles from Albania, Bulgaria, Czechoslovakia, Estonia, Hungary, Latvia, Lithuania, Poland, and Rumania. Some of these men were once in coalition governments with the Communists and discovered how faithless and brutal the latter are in their relentless drive for power.

The Assembly has prepared an excellent memorandum on the "Captive Nations and the Freedom of Europe," and I ask unanimous consent that excerpts from it, together with this statement, be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

THE CAPTIVE NATIONS AND THE FREEDOM OF EUROPE

(A memorandum)

The Assembly of Captive European Nations considers itself in duty bound to reaffirm, at this time of searching reassessment of American foreign policy, its conviction that Europe is and will remain in the decisive arena in the global struggle between freedom and Communist totalitarianism; that the people of Eastern Europe are in a position to play, both as a factor of deterrence, and, if deterrence failed, as allies of the free nations, a very significant role in this struggle; that a lasting and secure peace will remain beyond reach as long as Soviet power is poised in the geographical center of Europe, and that to serve both the immediate and longer term requirements of a free Europe, it is incumbent upon the Western Powers to demonstrate by words and deeds their vital stake in the freedom of the eastern half of Europe and their unswerving resolve to help the captive peoples recover the exercise of their right of self-determination.

The subjugation of nine, once free and independent European nations by Soviet Russia constitutes a legal and moral issue solidly founded on the war-time and post-war agreements to which both the Western Powers and the Soviet Union were parties, as well as on the now universally recognized right of self-determination. Its major political consequences has been the failure to establish in Europe a dependable and durable peace, that is, a peace with freedom and justice. In the considered judgment of the Assembly, failure to recognize the vital importance of Eastern Europe and to pursue policies designed to link effectively the struggle for the preservation of freedom and for the recovery of freedom in Europe would have most serious consequences. It would make it extremely difficult, if not impossible, for the United States "to steer a course between the Scylla of universal annihilation and the Charybdis of universal enslavement" which, in the expressive words of an American statesman, is the basic requirement of U.S. foreign policy in the sixties. The assembly, therefore, feels enjoined (i) to examine the currently most widespread Western views on, and policies with respect to, the captive countries; (ii) to submit its own views on the present stake of the Western Powers in the captive nations, and (iii) to suggest measures apt to promote the common interests of the free nations and their silent allies in Eastern Europe.

I

Any attempt to bring into discussion the problem of the freedom and independence of the captive nations of central and eastern Europe has lately been hurting itself against the theory that the situation in Europe was now stabilized—economically, politically, and militarily, and it could only be changed, one way or the other, at the price of a major war, that is, at a price unacceptable to both sides. The arena of contest between the forces of freedom and communism, continues the theory, has moved to the so-called uncommitted nations of Asia and Africa. These nations hold the balance of power. With Latin America, they constitute the only active fronts and, therefore, claim the undivided attention of the Western Powers. However desirable it would be to have in central and eastern Europe truly independent nations, under freely elected governments, this can no longer be a practical goal of Western policy. To pretend otherwise would mean engaging in the irresponsible action of inciting people to futile uprisings. The best the West can do for the captive nations, concludes the theory, is to preserve the hope in their ultimate delivery by refusing to give formal sanction to the political status quo in Europe and to help them improve their lot under the present dispensations by practical measures—designed to foster evolution toward more internal freedom and less subordination to Soviet Russia. This theory does not resist a closer examination.

The argument of a fully stabilized European situation is not borne out by the facts. The countries of Western Europe have achieved indeed a very high degree of internal political stability and a remarkable economic growth and prosperity. They failed, however, to develop the third essential element of strength: adequate military power. During the many years of American nuclear supremacy their security was practically absolute. But their continued dependence on the strategic nuclear deterrent renders them increasingly vulnerable to Soviet intimidation and blackmail.

There can be little doubt that the Soviet rulers are not only intent upon changing the situation in Europe to their advantage, but also believe they can accomplish this without the mortal risks involved for them in a major war. The basic premise of Soviet political strategy toward Western Europe is that the Soviet advances in nuclear striking power have or are about to neutralize the strategic nuclear power of the United States. As a consequence of such neutralization, the balance of power in Europe is shifting to the overwhelming advantage of the Soviet Union, whose ground forces will acquire a new freedom of action. In the words of a report prepared last year for the Foreign Relations Committee of the U.S. Senate by a Columbia-Harvard research group: "With the strategic nuclear weapons neutralized, Soviet superi-

ority in other forms of military power becomes of greater significance, both militarily and politically. This superiority of military power in the various categories would mean not necessarily that the Soviet leadership would choose to attack, but that it could bring about political changes in one part of the world or another without having to attack. As Mr. Khrushchev sees it, what remains is for the Western nations to be realistic about adjusting their positions abroad to a weaker power relationship." This interpretation of Soviet policies fully tallies with the forward strategy set forth with ostentatious confidence in the statement issued last December in Moscow following the conference of 81 Communist parties and in the speech delivered on January 6, 1961, by Nikita Khrushchev. It is, furthermore, confirmed by the renewed emphasis placed in the communique issued on March 30, 1961, following the Moscow meeting of the rulers of the countries of the so-called Warsaw Pact on the urgent necessity of concluding a peace treaty with "both German states" and on converting West Berlin into a "demilitarized free city."

The arena of contest has indeed been broadened. In 1955 it was extended to Africa. In 1959 Latin America, too, became an active front. But geography, experience, skill, population and resources make Europe the major target of Soviet efforts and, therefore, the principal front. Communist victories in other continents may help Soviet strategy in Europe. But such victories would not be necessarily decisive, whereas failure of the forces of freedom to make a stand in Europe will seal the fate of at least Africa and the Middle East. The uncommitted nations are and will remain in the foreseeable future so weak that they will mirror rather than determine the balance of power. It is in Europe, therefore, that the balance of power can be disrupted with decisive consequences.

The argument that the freedom of the captive countries can no longer be a practical goal of Western policy overlooks an essential factor. As long as the strategic nuclear deterrent was unquestionably effective, the captive countries may have been of little strategic interest for the West. However, with the increasing neutralization of the strategic deterrence and the ensuing effort to build up an alternative deterrence, the captive countries become a potentially vital element of Western European security. Whether the Soviet rulers must or not reckon in their strategic calculations with a high coefficient of risk in the captive countries, which lie athwart their lines of communication, may make, in the coming years, all the difference between acceptable and unacceptable risks for the Soviet Union, that is, between effective deterrence or no deterrence at all.

Soviet diplomacy persistently seeks to wrest from the Western Powers the express or at least tacit admission that the political status quo in East-Central Europe is permanent. In turn, Soviet propaganda tirelessly strives to convince the respective peoples that the world balance of power has tipped decisively in favor of the Communist camp. Both efforts prove that the Soviet rulers are aware of their vulnerability in the captive area and are intent upon promoting there a spirit of hopelessness, leading to passivity and resignation. For this alone would permit them to discount the likelihood of active resistance in all circumstances.

It follows, that in order to mobilize all the forces which are needed to counter effectively the effort of Soviet Russia to change the situation in Europe in her favor, by means of pressures, intimidation and blackmail rather than war, the Western Powers must commit themselves, in turn, to the purpose of changing the status quo in their own favor. To this end, they must pursue unremittingly and consistently, policies aimed at extending the area of freedom in Europe. The fear that such a commitment and policy would stir up undue expectations in the captive countries and might eventually lead to futile uprisings appears at present entirely unwarranted. After the tragic experience of the Hungarian revolution, neither statements of purposes, even if confirmed by political and diplomatic actions, nor the most inflammatory kind of propaganda can bring any of the captive peoples to the boiling point. The best a Western policy of active concern can accomplish is to keep them at a simmering point, that is, with hope in eventual delivery and confidence in the West alive. Uprisings and revolutions on the Hungarian pattern appear today conceivable only if Soviet military power were neutralized, as a result of an internal crisis in the Soviet Union, or effectively engaged by Western forces (in the event of an open Soviet aggression). Still, the possibility of violent popular outbreaks, born of sheer despair, cannot be entirely discounted.

A policy that would avoid a commitment to the clear goal of freedom and independence for the nations of East-Central Europe and would aim, instead, at fostering ameliorations under the present dispensations could hardly bring into accord the interest of the free and the captive nations. By its standoffish cautiousness, such a policy could not fail to undermine the spirit of resistance in the captive lands and, with it, squander away a deterrent factor of vital significance for the survival of freedom in any part of Europe. This is not to say that the captive peoples would not welcome a less repressive internal regime, less subordination to Soviet Russia, some economic amelioration and more contacts and cultural exchanges with the West. It means, however, that nations deeply rooted in history, as are the captive nations, will never settle for such marginal gains at the price of their inalienable rights.

In practical terms, the main question is whether even at the price of sacrificing the goal of full freedom and independence, Western policy could generate or only stimulate an evolution towards more, though limited, freedom and independence. In other words, the question is whether the Yugoslav or Polish situations represent patterns that could be duplicaed elsewhere.

Titoism was the product of a unique combination of geographical and historical factors. These factors have all along been lacking in the other captive countries. Since the Hungarian revolution, which has shown to all satellite rulers the risk of finding themselves face to face with their own people, none of those rulers even dreams of letting himself be weaned away from Moscow—the only dependable source of his power and privileges.

As for the so-called Polish pattern of a less repressive, more tolerable internal regime, three main factors combined in 1956 to bring it about: (1) the Soviet fear of an international conflict at a time when the balance of power was distinctly favorable to the United States; (2) the internal tensions in the Soviet Union, due to the then still unresolved struggle for power in the Kremlin and the ensuing impairment of the decisionmaking process, and, most important of all (3) the pressure of the Polish people and the resulting fear of an explosion that would spread to the whole captive area. All these factors have lost their effectiveness since 1956. The balance of power is now more favorable to the Soviets. The struggle for supreme power in the Soviet Communist Party was won by Khrushchev, and the captive nations were discouraged both by the fate of the Hungarian revolution and by the general trend of Western policies. Events have since demonstrated that, for the Communists, the Polish October was a mere tactical retreat at a time when concessions remained the only way to avoid an explosion. In the years which have lapsed since 1956, most of the gains made by the Polish people have been gradually nibbled away. The process is still in progress against mute but stubborn popular resistance, and it goes hand in hand with an increasingly repressive trend all over Eastern Europe.

It would appear, therefore, that the outlook for duplicating the so-called Yugoslav pattern is practically nil. As regards the so-called Polish pattern, it could conceivably be repeated in circumstances comparable to those prevailing in Poland, in October 1956. But since pressure from below was one of the main factors at that time, it can hardly be imagined how this can be generated by a Western policy of friendliness toward the Communist regimes. This applies, of course, to the concept of economic aid, the only exception being Poland where such aid may contribute to slowing down the process of gradual retreat from the gains of October 1956.

II

The assembly of captive European nations holds that the captive nations of Europe are of vital significance to the United States and its allies on at least four counts:

1. They are an essential part of the alternative deterrent the West is endeavoring to create in Europe.

2. Their issue can help the West in establishing a balance of pressures in negotiations, in United Nations debates and in the propaganda war.

3. They enable the West effectively to undermine the claim that the emancipation of colonial peoples is a Western rout confirming the inevitability of the worldwide victory of communism.

4. They represent the key to a strong and self-reliant Europe and thus to a dependable peace.

III

A program of measures designed to stimulate hope and faith in the captive countries can only fulfill the previously listed immediate and long-range purposes if the present image of an irresistible Soviet momentum is replaced by the impression that the tide has turned, or is about to turn in favor of the West. This can be accomplished only by a measurable, territorial advance of freedom against communism anywhere in the world. There is a further condition of success for such a program. It should not appear motivated by either generosity or selfish interest. It should rather suggest that the free world has come to realize the strength of the bonds of mutual interest between the two parts of Europe; it is fully aware of its vital stake in the freedom and independence of the east-central European nations and is, therefore, prepared both as a matter of principle and self-interest, to do something about it.

Specifically, in the view of the Assembly of Captive European Nations the morale of the captive peoples of Central and Eastern Europe and their faith in the West will be sustained, the long and short-term interest of both free and captive nations served and a useful balance of pressures established if the Government of the United States of America were to—

1. Reaffirm the validity of the wartime and postwar legal commitments and pledges with respect to Albania, Bulgaria, Czechoslovakia, Estonia, Hungary, Latvia, Lithuania, Poland and Rumania, and its continued determination to seek the observance of these obligations by all concerned;

2. Insist firmly in any diplomatic parleys or conferences on European problems with the rulers of the Soviet on the withdrawal of Soviet armed forces and agents from the territories of the above nine captive countries, as well as on the holding in these

countries of free elections under international supervision.

3. Inscribe on the agenda of the United Nations General Assembly the question of the denial of self-determination to the above nine captive countries and press for a debate and investigation of this charge.

4. Work out with the European partners of the United States in the summit conferences and promote by all appropriate means a plan for an overall European settlement based on the principle of self-determination.

5. Insist on the inclusion of the Hungarian question on the agenda of each yearly session of the United Nations General Assembly, and propose, regardless of the prospects of such proposals being adopted, (a) the rejection of the credentials issued by the Kadar regime, and (b) measures of enforcement.

6. Promote a worldwide movement against Soviet colonialism.

There are other practical measures and attitudes which could be taken to good avail for the same ends. Among these the following may be worthy of consideration:

(a) To downgrade the present diplomatic missions to the satellite governments.

(b) To desist from actions and moves which give respectability to the satellite regimes and compound the effect of past acts of recognition.

(c) To challenge in the United Nations on all appropriate occasions the qualification of the satellite delegates to speak on human rights and expose systematically the record of denial of human rights in their respective countries.

(d) To call for a United Nations investigation of conditions in prisons and forced labor camps in the captive countries, as well as for the release of all prisoners detained because of their convictions or past political affiliations.

(e) Invigorate radio propaganda to Eastern Europe.

(f) Seek full reciprocity in all cultural exchange programs, and warn American participants against letting themselves be exploited for political propaganda purposes by the Communist rulers or their agents.

(g) To call for the abolition of the almost prohibitive restrictions imposed by the satellite regimes on the sending of individual food, medicine, and clothing packages from the free world to relatives and friends in the captive countries.

(h) To sustain the organizations established in the free world for the purpose of voicing the political aspirations of the captive nations, and preserving their cultural heritage.

IV

The Assembly of Captive European Nations believes that the struggle to prevent any further extension of Soviet power in Europe and in other parts of the world cannot be separated from the struggle for the recovery of freedom wherever it has been suppressed by communism. Denying to the Soviet Union external successes is in itself productive of internal stresses. It gives the lie to the Soviet claim about the inevitability of the worldwide victory of communism and is thereby a powerful antidote to resignation and apathy among those held captive. Carrying the struggle to the enemy-controlled territory is apt to deliver a serious blow to the most important weapon of communism against the free world and particularly against the politically unstable, economically and socially underdeveloped and militarily feeble countries; the impression that communism is irresistibly moving toward its goal.

Against an enemy irrevocably committed to one world, his own, there is no safeguard in a search for mere survival by means of accommodations and static defense. The way to survival is a firm commitment to a paramount purpose—a world of freedom under law, a dynamic, worldwide challenge of communism.

Latin American Aid

SPEECH
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 6518) making appropriations for the inter-American social and economic cooperation program and the Chilean reconstruction and rehabilitation program for the fiscal year ending June 30, 1961, and for other purposes.

Mr. PHILBIN. Mr. Chairman, let me compliment the distinguished gentleman from Louisiana [Mr. PASSMAN] for his usual masterful presentation on the Latin American assistance program. His able analysis of foreign aid bills is always most helpful and his remarks today, as usual, provide wise guidance for the House.

There is no question that an effective program of aid to Latin America, despite the many widely scattered contributions we have made in the past, is long overdue, one that is specifically designed to assist our friends in this part of the world.

Attention has been directed to lack of full information from the agencies concerned about the scope and extent of specific projects to justify the appropriations requested in this bill. In this respect, Mr. Chairman, I would like to direct the attention of my colleagues and those agency officials concerned to a most worthy project which deserves the type of assistance we seek to provide in the Latin American assistance program.

I speak of the recently instituted Ciudad de los Niños or Boys Town, at San José, in the friendly, neighboring Republic of Costa Rica.

To my mind, this project is particularly deserving of assistance because it appears to fit quite naturally within the framework of the program outlined recently by the President for Inter-American cooperation.

Ciudad de los Niños is only a few months old and already it has taken to its care 64 Costa Rican boys, ranging from 12 to 18 years of age, orphans or the victims of broken homes and, some, graduates of reformatories.

It is the purpose of this institution, much as with our well known and famed Boys Town in Nebraska, not only to harbor such unfortunate boys, but to impart to them the essential education and training they need to become useful citizens.

I am advised that Ciudad de los Niños has the official sanction of the Government of Costa Rica and that a special Costa Rican commemorative stamp has been issued to signalize its establishment. I am also informed that need for such an institution is so great that plans are already underway for the establishment within the near future of a physical plant capable of taking care of 2,000 boys. At this time, work is proceeding on the erection of housing facilities to accommodate 150 boys by the first of next year.

Notice of this activity has come to my attention through friends of the Assumption Fathers who have been entrusted with the development and direction of Ciudad de los Niños. This most versatile and enterprising order of Catholic priests, founded over 100 years ago in France, carriers on a wide variety of activities, largely in the field of education, throughout the world, including that unique educational institution in this country, Assumption College, located in Worcester, Mass.

Many young men from my district attend Assumption, which is especially dedicated to the liberal arts, to French and religious culture, and to international relations. Over the years, like many others, I have respected and admired the magnificent works of the Assumption Fathers and many of us in this House will long remember the truly heroic work of this dedicated order in rebuilding, as a preparatory school, their combined preparatory school and college facilities which were devastated by the Worcester tornado of June 1953. Now the Assumption Fathers have established a fine, new Assumption College campus, also in Worcester, devoted entirely to the college department.

Ciudad de los Niños is a practical, humane undertaking of the Assumption Fathers which could well have a strong and favorable impact on our international relations. It is an undertaking which offers this Nation a fine opportunity to lend a timely helping hand in the true spirit of inter-American good neighbor cooperation. It is my understanding that, in order to keep pace with the opportunities it has to accomplish good, Ciudad de los Niños is urgently in need of long-term financing which would permit it to go ahead with the building of an adequate physical plant. I hope that under the regulations worked out by the Inter-American Development Bank that deserving projects like this will receive just and sympathetic consideration of their needs.

It would appear that here at Ciudad de los Niños we have a pilot venture which should be encouraged by those agencies responsible for the development of the Latin American aid program. What could more aptly portray to our fellow American Republics the deep humanitarian motives of the United States of America than to extend to a particularly unfortunate segment of the youth of Costa Rica the friendly hand of friendship within the spirit of the President's cooperative program?

The long-term benefits of such a gesture can readily be seen. They are eloquently expressed by an Assumption father, a product of Assumption College, newly assigned to Ciudad de los Niños who writes to a good friend:

We are convinced that our Boys' Town, once developed, will be a very strong deterrent to Communist infiltration here in Costa Rica and in due time throughout Central America. The time is more than ripe for our kind of work. What we are doing now for 64 boys will, God willing, be done later for hundreds, and ultimately for thousands.

Mr. Chairman, it is my hope that appropriate agencies of our Government will have the imagination to take the initiative when a worthwhile opportunity of this kind comes along and make Ciudad de los Niños a monument to the sincerity of our words and of our motives. Let Ciudad de los Niños become a showplace of democracy in America and fruitful realization of what the Latin American aid program can accomplish.

American Medical Association Survey of Federal Health Expenditures—VA and DOD—IV

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. CURTIS of Missouri. Mr. Speaker, the following is the fourth part of a series on the report prepared by the American Medical Association on funds which have been appropriated by Congress for activities of the Federal Government in the field of health:

VETERANS' ADMINISTRATION

(This year, $1,015,389,000; last year, $948,529,500).

Inpatient care in veterans' administration hospitals	$766,445,000
Last year	751,440,000

Veterans' administration's largest single medical expenditure covers inpatient care in 171 veterans' administration hospitals and provides for an estimated 121,456 beds. At present veterans' administration reports an estimated daily patient load of 111,600, approximately 92 percent of bed capacity. The appropriation includes salaries of physicians and other personnel, medical rehabilitation of veterans, dietetic and nursing services, social services and special services, such as recreation and transportation of veterans.

Outpatient care	$86,481,000
Last year	83,866,000

The bulk of this appropriation is for outpatient care in about 100 veterans' administration clinics. The remainder is planned for fees to physicians ($8,965,000) and dentists ($937,000) under the hometown care program.

Modernization and replacement construction	$70,441,000
Last year	26,676,000

This amount is for work on existing units where costs exceed $300,000 per project and equipment for new units. The money is available until expended (see "Alterations and improvements" item for small projects).

Domiciliary care	$35,341,000
Last year	34,172,000

Domiciliary care is being provided in 18 VA facilities for about 16,850 veterans who, while incapacitated for employment, are not in need of full hospital care. VA also makes payments to 33 State veterans homes with a daily patient load of approximately 9,750. Payments this fiscal year are estimated at $6,513,000. Under Public Law 86–625 (86th Cong.) Federal contributions to these homes will be raised from a maximum of $700 to $912 a year per patient.

Medical research	$22,500,000
Last year	18,344,000

For research, mostly in VA hospitals. The breakdown: general medical and surgical research, $14,700,000; atomic medical research, $3,250,000; prosthetics testing, $1 million; neuropsychiatric, $2,450,000; tuberculosis, $900,000; other, $200,000.

Contract hospitalization	$15,235,000
Last year	15,277,000

This appropriation finances an average daily patient load of 3,050 veterans in Federal hospitals other than VA and in State and municipal hospitals. Patients in Federal non-VA hospitals are estimated at 1,407 and in non-Federal hospitals, 1,643. Mental cases make up the largest single category of contract cases.

Medical administration	$8,896,000
Last year	8,177,000

To operate the Veterans' Administration Department of Medicine and Surgery in the central office and the seven area medical offices; included are salaries, travel, and like expenses.

Alterations, improvements, and repairs	$4,559,000
Last year	4,983,000

For alteration, improvements and repairs to VA clinics and domiciliaries (costing less than $300,000 per project).

Supply depot operations	$2,500,000
Last year	2,263,500

For maintaining and operating supply depots handling the purchase, shipping and storage of medical supplies and equipment used by the Department of Medicine and Surgery.

Medical care—Philippine veterans	$1,500,000
Last year	2,000,000

Until 1963 the United States will contribute for the medical care of Philippine veterans.

Medical education and training	$1,491,000
Last year	1,331,000

For VA training programs for physicians and other VA personnel in medical specialties and auxiliary services.

DEPARTMENT OF DEFENSE

This year, $803,462,100, last year, $788,597,000.

Air Force medical services, approximately	$363,442,000
Last year	339,761,000

The estimate for fiscal 1961 includes $239,657,000 for the operation and maintenance of medical treatment facilities. This figure includes estimated expenses in connection with hospitalization, outpatient care, ancillary services, administrative support, and other medical services, including preventive medicine, veterinary, aeromedical evacuation, dental, physiological training, industrial health, medical training, payments to other Federal and nonfederal agencies for care provided Air Force active duty and retired personnel. Included are military salaries which constitute the largest portion of expenses. For the dependents' medical care program, the Air Force expects to spend in fiscal 1961 $30,185,000. Major repairs and construction of medical facilities is estimated at $26,833,000. This figure includes amounts appropriated for fiscal 1960 which have not yet been obligated. Other medical expenses are estimated at $66,767,000 and will be used to pay military students, and for medical printing and medical education, operation of staff functions at major air commands, subcommands, and the Office of the Surgeon General. This sum also include military salaries.

Army medical services, approximately	$261,000,000
Last year	262,000,000

The estimated cost includes expenses normally associated with the operation of military hospitals and dispensaries, military and civilian salaries, medical supplies and equipment, utilities, communications, transportation travel subsistence, maintenance and repair of buildings and grounds, expenses for construction, dependent medical care, medical education and training, medical research and preventive medicine.

Navy medical services, approximately	$178,884,000
Last year	186,824,000

The above estimate is broken down in the following manner; Military pay, $62 million, maintenance and operation of the Bureau of Medicine and Surgery activities, $38,600,000; medical care nonnaval facilities, $14 million; medicare, $22,500,000; care of the dead, $1,100,000; alteration or renovation, $1,500,000; other costs, $9,900,000; new construction $500,000; research $5,484,000; reimbursements, $23,300,000. Not included in the above figures is the cost of operation of medical facilities not under the control of the Bureau of Medicine and Surgery nor the salaries of military and civilian medical personnel at activities not under the management control of the BuMed or the military medical personnel attached to ships, fleet operating units and the Fleet Marine Force. These expenses are borne by the Bureau responsible for funding these activities.

Office Assistant Secretary of Defense—health and medical, approximately	$136,100
Last year	120,000

For salaries, travel, and administration of this office, and for travel expenses and consultant fees for the Defense Department Civilian Health and Medical Advisory Council.

Cuba as a Satellite

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, May 3, 1961

Mr. WILEY. Mr. President, there appeared in this morning's Washington Post an editorial entitled "Cuba as a Satellite." I think all of us can afford to read the editorial and profit from the same. I am sure we recognize the danger of Cuba, which is 90 miles away from our shores, becoming a satellite. We are not sure, but we have good reason to believe that several hundred Cubans are training to handle the airplanes that Castro hopes will be forthcoming from Russia.

I ask unanimous consent that the editorial be printed following my remarks in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CUBA AS A SATELLITE

Any lingering doubts elsewhere about the complete Communist orientation of Cuba ought to be resolved by Fidel Castro's May Day harangue. The Cuban dictator has made it plain that his regime is an enthusiastic satellite—perhaps even more slavish than Mr. Khrushchev, for tactical reasons, might want. Dr. Castro's total repudiation of the elections he promised when he came to power and his renewed attacks upon the Catholic Church are links in the chain. It would be monstrous to think that these fetters represent the wish of the Cuban people.

All the same, Secretary Rusk's assurance that the United States has no plans for armed intervention in Cuba is a welcome indication that the administration has regained its balance. After the inglorious end of the invasion 2 weeks ago, American military action against Castro now would vastly compound the damage. That is one of the consequences of the initial failure. In present circumstances an attempt to expunge the menace by armed force would be prohibitively costly to this country's standing.

Mr. Rusk's testimony that the abortive invasion was a Cuban decision, however, will strike some persons at less than candid. Obviously Cubans carried out the landings. But the anti-Castro Cubans seem to have had relatively little voice in the planning and execution of the enterprise. No purpose is served by appearing to blame the anti-Communist Cubans for a fiasco that was in essence a piece of sad mismanagement by the United States.

At the same time, we think that former President Eisenhower has taken the right approach in advising against a "witch hunt" over the Cuban affair. It is altogether too evident that there were major miscalculations. It is essential that the administration and the country learn from them. But somewhat the same considerations are involved now as applied after the U–2 debacle a year ago. At that time the Senate Foreign Relations Committee conducted a highly responsible investigation that avoided needless turmoil.

Individual or agency accountability in the Cuban affair may exist. At best, however, an ex parte judgment can comprehend only a partial view; no one on the outside can know all the factors that went into recommendations and decisions. Much more important than pinpointing the blame is to institute changes in procedure and machinery so as to guard against such aberrations in the future.

Meanwhile the emphasis ought to be on isolating Castro. Even though this country's prestige in the hemisphere may have been injured temporarily by the Cuban flop, perhaps the net effect will still be that of catharsis—particularly if the United States moves quickly to give substance to its promises of economic help for self-help in promoting orderly change in Latin America. Castro himself is helping to promote an awakening. Until recently there was a tendency in some areas to dismiss the alaruma about communism in Cuba as mere opposition to the reforms of a romantic revolutionary. But Castro's contempt for elections and his direct affirmation of ties to Moscow may have a different effect.

This, in turn, ought to bring more willingness on the part of other countries to enforce collective sanctions against the Castro regime—as has just been done in the exclusion of Cuba from the Inter-American Defense Board. A collective embargo, to be sure, would not have the same appeal to advocates of direct action as a military intervention or a blockade (which would be difficult to enforce); and it must be conceded that the Communist hold on Cuba is likely to increase. But in view of the humilitation of the last fortnight, the first objective now ought to be to encourage broader understanding of the Communist enclave in Cuba and the dangers it presents.

Then, if Castro attempts to export subversion, it will be much easier to crack down with collective approval.

American Policy in the Near East

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 3, 1961

Mr. HUMPHREY. Mr. President, the recent exchange of fire between the Syrians and Israeli once again points to the festering sore in the Middle East. I am sure that we would all agree that it is the desire of all Americans to promote and establish peaceful and friendly relations between Israel and her neighbors in this most strategic part of the world.

With this thought in mind, it is well to give careful consideration to the statement of policy adopted by the American Israel Public Affairs Committee Conference held March 19 and 20. This organization's burning desire is to advance an Arab-Israel peace through a realistic approach to the many problems involved.

Mr. President, I ask unanimous consent that the statement of the committee, entitled "American Policy in the Near East" be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

AMERICAN POLICY IN THE NEAR EAST

(A statement adopted by the American Israel Public Affairs Committee and submitted to the Department of State on March 20, 1961)

The American Israel Public Affairs Committee believes that the American people, gravely concerned over the hostilities which divide mankind and threaten its survival, have been heartened by the courageous and vigorous leadership of President John F. Kennedy.

We join with our fellow Americans in the determination to support the firm words uttered by President Kennedy in the hour of his inauguration: "Let every nation know, whether it wishes us well or ill, that we shall pay any price, bear any burden, meet any hardship, support any friend, oppose any foe, in order to assure the survival and the success of liberty."

The new administration is now reviewing American foreign policy in all parts of the world. The American Israel Public Affairs Committee hopes that this reappraisal will insure a firm policy in the Near East which will deter aggression, promote peace and economic development, and strengthen freedom.

We offer our support to the administration in the implementation of policies which will serve these objectives.

Since World War II, the United States has befriended Israel and the Arab States and has helped them to raise the standards of living of their peoples.

The United States should continue to seek the friendship of these governments and encourage them to resolve their conflicts and befriend each other. In this process, however, our Government cannot be neutral between those who are for aggression and those who are for peace.

Neither the United Nations nor the United States has been able to induce the Arab States to terminate the state of war which they have maintained against Israel for 13 years in defiance of the United Nation's 1947 Partition Resolution and in violation of the United Nations Charter. That state of war is deplorable, dangerous and a tragic waste of human and material resources.

Arab leaders use hatred for Israel as their badge of patriotism in the internal struggle for leadership in the Arab world. The massive military, economic and political support they receive from the Soviet bloc bolsters their ambition for military superiority and encourages their hope for victory. They wage a propaganda offensive to shift the blame and consequences for the Arab-Israel conflict to Israel in order to alienate other nations from Israel, disengage the West from vital moral and security commitments, reduce Western aid to Israel and ultimately isolate her.

FOR DIRECT NEGOTIATIONS

An Arab-Israel peace is a fundamental goal of U.S. policy in the Near East and our Government must continue a sustained effort to work for it, recognizing that peace can be attained only by direct negotiations between the Arab States and Israel.

Israel has repeatedly offered to negotiate directly with the Arab States. There is no reason why such direct negotiations should be indefinitely deferred. The United States should not be restrained by fear that working for peace will provoke Arab resentment. The Arab States can be induced to abandon their negative position only if our country and the U.N. are unswerving in the determination to outlaw the Arab war against Israel.

President Kennedy referred to the overriding world conflict in his inaugural address. His words are applicable to the Near East: "So let us begin anew—remembering on both sides that stability is not a sign of weakness, and sincerity is always subject to proof. Let us never negotiate out of fear. But let us never fear to negotiate."

We also recall, with satisfaction, President Kennedy's statement of August 25, 1960, that the United States must make it "crystal clear" that "we will act promptly and decisively against any nation in the Middle East which attacks its neighbor." The President deplored that neither Arabs nor Israelis "know exactly where we stand or exactly what we mean." We look forward to a new and positive statement that the United States will take decisive action to resist aggression in the Near East from whatever source.

THE BALANCE OF STRENGTH

Israel stands alone; she belongs to no defense system; no treaty automatically brings allies to her defense. While Israel's neighbors have been supplied with weapons from Communist sources, our Government has not provided grant military aid to Israel, and she has been compelled to expend large sums to purchase arms to defend herself. In the interests of world peace we favor disarmament in the Near East, under effective mutual inspection. As long as Israel is menaced by Soviet weapons in the hands of the Arab states, however, our Government and other Western allies must be viligant to guarantee that the arms balance is maintained. This is indispensable to preserve stability in the Near East and to prevent an outbreak of hostilities.

THE ECONOMICAL WAR

The Arab boycott and blockade must be ended. In May 1960, Congress by an amendment to the Mutual Security Act, reaffirmed the U.S. position in favor of freedom of navigation in international waterways and economic cooperation between nations and in opposition to boycotts, blockades, and restriction in the use of international waterways. This amendment armed the administration with an authoritative statement of American policy on these issues.

President-elect Kennedy declared on August 25, 1960: "If America's word to the world is to have any meaning, if the decisions and resolutions of the United Nations are to be binding on all parties, if the mutual security amendment which I cosponsored with Senator PAUL H. DOUGLAS is to have meaning, if the clear, thoughtful language of the Democratic platform is to have meaning—the influence of this Nation and other maritime powers must be brought to bear on a just solution that removes all discrimination from the Suez Canal."

The administration should make it clear that the United States will not concur in the blacklisting of American shippers or other businessmen who trade with Israel.

The United States should implement the position affirmed by the Congress in the amendment to the Mutual Security Appropriations Act of 1959, which expressed opposition to discrimination by recipients of American aid against Americans on grounds of race or religion.

CONTINUED ECONOMIC AID

The United States must assist the new nations who make effective use of our aid to combat poverty and to help their peoples to a better life.

The United States should continue economic aid to the peoples of Israel, the Arab States and other countries in the Near East.

Economic assistance to Israel has helped her resettle hundreds of thousands of Jewish refugees, develop her skills and resources and stimulate her impressive rate of agricultural and industrial growth. American aid to Israel has been used prudently and should be maintained.

Our Government respects the right of of every nation to be independent in the conduct of foreign policy. But a distinction must be made between genuine neutrals and those who don the mask of neutralism to exploit world conflicts to enhance their power. Our Government should avoid lavishing aid on those who abuse our assistance to undermine our policies and alienate friends and who engage in power politics.

THE ARAB REFUGEES

The only realistic solution to the problem of the Arab refugees is their resettlement in Arab countries where there is need, land and opportunity. Major refugee problems have been resolved in the past by resettlement—never by repatriation.

Arab leaders persistently refuse to cooperate in any resettlement program. Instead, they demand that Israel repatriate the refugees who were the victims of their own 1948 aggression.

The Arab States base their demand for repatriation on a U.N. resolution adopted in December 1948 which they themselves opposed because it called upon "the governments and authorities concerned to seek agreement by negotiations conducted with a view toward the final settlement of all questions outstanding between them."

The United Nations resolution clearly intended that any repatriation of Arab refugees to Israel should be dealt with within the context of Arab-Israel peace negotiations. But Arab leaders ignore the U.N. call for peace. They invoke only one paragraph of that resolution (par. 11), deliberately disregarding the resolution's explicit qualification that returning refugees be prepared to "live at peace with their neighbors." The Arab claim to repatriation has been invalidated because they have persisted in a proclaimed war which contravenes that resolution and has rendered it obsolete. In the U.N. refugee centers, the Arab refugees are being taught to hate Israel, and Arab propaganda calls for paramilitary formations in preparation for the invasion of Israel.

It is contended by some that if only Israel would permit the refugees a free choice between repatriation and compensation, very few would choose repatriation; once having achieved satisfaction of their political claim, they would no longer reject resettlement. This is a reckless contention and a disservice to the refugees themselves. It merely encourages Arab leaders in their opposition to resettlement.

It should be noted that Israel has repeatedly declared its readiness to pay compensation for abandoned Arab property. More than 200,000 Arabs, some of them former refugees admitted under the family reunification plan, are now citizens of Israel.

No nation can risk an influx of people who come with inbred hostility, rather than as loyal settlers. In a similar situation, in 1780, the U.S. Congress rejected British pressure to readmit refugees who had left as enemies of America's struggle for independence.

Since 1948, Israel has welcomed a million Jewish immigrants. Half of them came from Arab countries in Asia and North Africa—about as many as the actual number of Arabs who 13 years ago left what is now Israel. It would be both logical and fair for the Arab States to resettle the Arab refugees in their territories. They have vast underpopulated space, opportunity and a need for people.

Our Government owes full support to every measure which compassionately speeds the day when the refugees can become productive citizens leading useful lives among their own people.

The mandate of the United Nations Relief and Works Agency should be extended. Some progress has been made. Refugees who are trained and who acquire skills have found work. The majority of the refugees who still receive UNRWA rations no longer reside in UN refugee centers. UNRWA should increasingly emphasize rehabilitation rather than relief—by training people to work, encouraging them to become citizens in the countries in which they reside and stimulating resettlement.

Congress should continue to appropriate adequate funds for the maintenance of the refugees, stressing public works, self-help and settlement. Larger aid should be granted to those nations which cooperate in projects for refugee absorption.

A BIPARTISAN POLICY

It is a source of deep satisfaction that the United States actively helped Israel, in bipartisan accord, during the administrations of both President Harry Truman and President Dwight D. Eisenhower.

We believe that the views expressed herein are shared by the majority of the American people. They were reflected in the platform statements adopted at the 1960 national conventions.

The Democratic platform said: "In the Middle East we will work for guarantees to insure independence for all states. We will encourage direct Arab-Israel peace negotiations; th resettlement of Arab refugees in lands where there is room and opportunity for them; and end to boycotts and blockades; the unrestricted use of the Suez Conal by all nations.

"We urge continued economic assistant to Israel and the Arab peoples to help them raise their living stndards. We pledge our best efforts for peace in the Middle East by seeking to prevent an arms race while guarding against the dangers of a military imbalance resulting from Soviet arms shipments.

"Protection of the rights of American citizens to travel, to pursue lawful trade and to engage in other lawful activities abroad without distinction as to race or religion is a cardinal function of the national sovereignty. We will oppose any international agreement or treaty which by its terms or practices differentiates among American citizens on grounds of race or religion."

The Republican platform said: "In the Middle East, we shall continue to support the integrity and independence of all the states of that area including Israel and the Arab States.

"With specific reference to Israel and the Arab nations, we urge them to undertake negotiations for a mutually acceptable settlemen of the causes of tension between them. We pledge continued efforts: to eliminate the obstacles to a lasting peace in the area, including the human problem of the Arab refugees; to seek an end to transit and trade restrictions, blockades and boycotts; to secure freedom of navigation in international waterways, the cessation of discrimination against Americans on the basis of religious beliefs, and an end to the wasteful and dangerous arms race and to the threat of an arms imbalance in the area."

We are confident that the new administration and Congress will carry out their bipartisan commitments.

Needed Now: A Joint Committee on the Budget

EXTENSION OF REMARKS

OF

HON. WILLIAM M. COLMER

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. COLMER. Mr. Speaker, I submit herewith for the consideration of my colleagues as well as the tax-burdened citizens of this country a very timely article, which appeared in the April edition of Tax Review, by the Honorable JOHN L. MCCLELLAN, our highly esteemed colleague and senior Senator from the State of Arkansas.

Senator MCCLELLAN points out in a very logical and forceful manner the need for a Joint Committee on the Budget to be set up within the Congress and responsible to the Congress. He very appropriately calls attention to the fact that the existing Bureau of the Budget is the agent of and responsible to the President. Further, that the Congress, which has the responsibility under the Constitution to appropriate funds, is more or less at the mercy of the executive department. This for the reason that the hearings before the Appropriation Committees of the Congress are virtually ex parte. The witnesses from the various departments of Government are largely, if not exclusively, from the executive branch, who present and attempt to justify the Presidential budget.

What the Congress, I repeat, responsible for spending the tax money, needs is a staff responsible to the Congress. The billl sponsored by Senator MCCLELLAN in the Senate and a similar bill

sponsored by me in the House would provide the Appropriations Committees particularly and the Congress generally with an adequate staff of its own.

Senator MCCLELLAN has succeeded in having his bill passed by the Senate in two previous Congresses. The House Committee on Rules cleared my bill for floor consideration in 1953. But the House itself turned down its consideration by some 16 votes. Both Senator MCCLELLAN and I have reintroduced our bills, and I am very much in hopes that this much needed legislation can be passed at this session of the Congress. Certainly, with a national debt in excess of $290 billion and prospects of an additional deficit this year of $5 or more billion and possibly more next year, something should be done to get our fiscal house in order.

Senator MCCLELLAN'S article follows:

One of the most serious problems confronting the Nation today is the maintenance of national solvency in the face of ever-growing demands on the Federal Government for programs and services, coupled with the necessity of meeting the national defense requirements of the cold war and the atomic age. Our national expenditures budget has grown from $66 billion in fiscal year 1956 to $80.7 billion in 1961, and the probability of an $84.2 billion expenditures budget for fiscal year 1962.

Nor is the end in sight. The Congress is being bombarded constantly by demands for new or expanded programs in social welfare, education, agriculture, housing and other fields.

Breaking the fiscal year 1962 expenditures requests down by functions, we find that $48 billion is requested for major national security; $2.8 billion for international affairs and finance; commerce, housing and space technology, $3.8 billion; agriculture and agricultural resources $5.7 billion; natural resources, $2.1 billion; labor and welfare, $6 billion; veterans services and benefits, $5.3 billion; interest, $8.6 billion; and general government, $2 billion.

While the President is clearly authorized to propose, it is equally clear that the responsibility to dispose rests with the Congress. Of this there can be no doubt. In fact, one of the most important responsibilities which the Founding Fathers, in their wisdom, vested in the Congress of the United States was the control over appropriations.

Article I, section 9, clause 7 of the Constitution of the United States provides, in part, that "No money shall be drawn from the Treasury but in consequence of appropriations made by law * * *."

From the formation of our Government down to the present time, it has been clearly understood and accepted that this clause vested exclusively in the Congress the right to grant supplies of money to the various branches of the Federal Government, and to designate the purpose for which the money shall be used.

Perhaps an examination of the magnitude of this responsibility, in terms of the work it entails, will serve further to demonstrate its tremendous importance. Early in January of each year, the President submits the Federal budget to the Congress. It is usually a large document, running in excess of 1,000 pages, representing a full year of work on the part of the agencies and departments of the Government, as well as the Bureau of the Budget. The material contained in the Federal budget has been developed and assembled by a vast number of persons in the departments and agencies, reviewed and reorganized by each department and agency, and finally reviewed, revised and finalized by the Bureau of the Budget where some 450 persons are involved in the preparation and submission of the final document. In addition, in the Washington headquarters area alone, a total of some 2,000 persons in executive branch departments and agencies are involved in the preparation of the budget each year.

In addition to the Federal budget itself, a tremendous amount of detailed information is supplied in written form to the House and Senate Appropriations Committees, and presented orally at hearings which last for several months and cover thousands of typed and printed pages. Finally, when the requests are reduced to the form of legislative proposals, there are usually between 12 and 15 appropriations bills running many pages and containing thousands of separate items.

Over a period of 12 years, together with other Members of Congress, I have been seriously concerned over the manner in which the Congress handles its appropriations responsibilities. As I have studied congressional procedures for handling appropriations, I have become convinced that there are serious deficiencies in these procedures; and it is absolutely vital that we take steps immediately not only to remedy them but also to improve the surveillance exercised by the Congress over the expenditure of public funds.

Both the Senate and House Appropriations Committees perform their functions through subcommittees which deal with the appropriations requests of one or more departments and agencies. Hearings on budget requests are held by these subcommittees beginning sometime in January or early February and continue until their work is completed. Subcommittee recommendations are submitted to the full Appropriations Committee in each House and final action is then taken by the respective committees. All along the line the procedure is duplicated in both Houses, in that following hearings by House subcommittees, identical hearings are held by Senate subcommittees, although in the Senate emphasis is often placed by departmental representatives on restoring items which were deleted by the House.

TAXPAYER NOT REPRESENTED

The usual procedure followed by the Appropriations Committees is for witnesses representing executive branch departments and agencies to appear before a subcommittee, usually accompanied by a corps of technical experts from that agency, as well as from the Bureau of the Budget. The entire proceeding is virtually ex parte in nature, and these witnesses represent exclusively the point of view of the executive branch of the Government. Since it is their duty, as executive branch officials, to support all of the budget items contained in the President's budget, it becomes their function and responsibility to demonstrate, both by oral and written justifications, that the amounts requested are absolutely necessary. For the most part, these requests are supported by elaborate justifications and exhibits, based upon extensive agency research and by the testimony of technical experts who have devoted many years to the fields in which they have been working.

Unlike hearings on substantive legislation, where witnesses appear in support of or in opposition to pending bills, at appropriations hearings, testimony from the public, except on certain public works projects, is rarely, if ever, received. In a great majority of the proceedings before the subcommittees, no witnesses are present to represent the taxpayer, and the only manner in which the public interest can receive the consideration and protection it deserves with respect to either the purpose for which the funds are sought or their need or adequacy, is through careful scrutiny of the requests and justification by the few staff members who are assigned to handle each of the appropriation bills, and by members of the Appropriations Committees. Other Members of Congress who do not serve on the Appropriations Committees must, and generally do, rely largely on the recommendations of these committees when final action on appropriations measures is taken on the floor of each House.

Unfortunately, members of the Senate and House Appropriations Committees are so heavily burdened by other legislative duties and responsibilities that they are unable personally to give adequate attention to each budget item. Equally important, however, is the fact that they do not have adequate facilities to obtain the information necessary to enable them to pass judgment on the necessity for the funds requested. Because the Congress is not adequately equipped to carry out its vital fiscal responsibilities, many millions of dollars have been appropriated in excess of actual requirements of the Federal Government. These excesses have, in turn, added to the large recurring deficits which must be passed on to already overburdened taxpayers.

Examining the results of a survey made by the Committee on Government Operations on the activities of the Senate in the 84th Congress, we found that, exclusive of sessions called for the purpose of marking up appropriation bills, the Senate Committee on Appropriations held some 300 open hearings consuming approximately 825 hours. In addition, at least 30 executive sessions were held to consider other matters pertaining to the functions of the committee, involving some 67 hours. In summary, the Senate Committee on Appropriations, in the 84th Congress, held a total of 330 meetings and consumed an estimated 900 hours on appropriations measures alone.

As a further illustration of the tremendous workload, the Senate Appropriations Committee, during the 84th Congress, had a regular standing subcommittee for each of the 12 major appropriations bills. Each member of the committee had a minimum of four subcommittee assignments, with some members serving on as many as six subcommittees. On many occasions there were two or three hearings in progress simultaneously and members sometimes found it necessary to attend one hearing for a limited time and then to participate, insofar as time permitted, in other hearings of subcommittees on which they served.

Aside from an overburdened staff, members of the Appropriations Committees are forced to rely upon two major sources of information: (1) the testimony of representatives of the executive branch who formulate the programs and present them in a light most favorable to their requests; and who tell us only as little or as much as they desire to disclose; and (2) information media, such as newspapers, periodicals, books, and radio and television programs. Of course, some Members of Congress have additional sources of information, such as members of their own office staffs, interested groups, confidential informers, or reliable friends who work in executive branch agencies.

This picture raises dramatically, in my judgment, the question of whether this is the way for the Congress of the United States to obtain information necessary to enable it to formulate the considered judgment which is its constitutional responsibility and which is so vital if it is to carry out its obligation to the American people.

MUST DEVELOP MACHINERY

The answer to the question is clearly and emphatically "No." It is not the way. If the Congress is to discharge its responsibilities with respect to the expenditure of public funds, it must develop the necessary machinery as well as adequate procedures. Only then will the Congress have the facts and

background information necessary to enable it to act judiciously on requests for funds from executive branch agencies and departments. This machinery must be designed so as to enable the Congress to analyze more thoroughly and screen more effectively spending requests.

I propose to accomplish this vital objective by the establishment of a Joint Committee on the Budget, composed of an equal number of members from the Senate and House Appropriations Committee, staffed on a nonpolitical basis by outstanding experts and technicians. Such a joint committee would provide the Appropriations Committees with the same kind of expert staff facilities and technical information as the Bureau of the Budget provides for the executive branch.

Ample precedent for this proposal is found in the Joint Committee on Internal Revenue Taxation, established by the Congress more than 30 years ago, which is composed of members of the Ways and Means Committee of the House and the Finance Committee of the Senate. These committees work together through this joint committee, using a trained, technical staff to enable it to obtain the facts and information needed for tax legislation. It seems obvious that it is just as important that the Appropriations Committees, which must pass on the expenditures of public funds, work together cooperatively through a joint committee with a trained professional staff to safeguard the revenues raised by taxation.

The proposed Joint Committee on the Budget would be required to inform itself with respect to all aspects of the annual budget of the departments and agencies of the Government, to examine all expenditure reports, and to investigate the details of Federal operations. Assisted by a nonpolitical staff of technical experts, the Joint Committee's functions would include, on a year-round basis, analyses of and reports on the details of program operations, a review of the administration of authorized programs and functions, and the compilation of data on agency activities and their conformity to or deviation from legislative authority. Although this information would be primarily for the use of the Appropriations Committees, it would be available to all other committees and to all Members of Congress.

WOULD BE "WATCHDOG"

The joint committee would also be required to utilize fully information emanating from the Joint Committee on Internal Revenue Taxation, to consider the President's messages on the state of the Union and the Economic Report, and from all other sources as to estimated revenues and changing economic conditions, in order that a well-considered fiscal program may be devised to hold expenditures to a minimum in relation to anticipated Federal revenues. In addition, it would have investigative powers, and would be authorized to report on and recommend appropriate legislative changes to standing committees in order to eliminate wasteful practices, correct deviations from programs authorized by Congress, and effect cutbacks in such programs when consistent with essential requirements of Government and the national security.

In other words, this joint committee and its staff would work continuously, analyzing and screening the budget, checking on department and agency expenditures and determining where waste and extravagance exist, so that appropriations for succeeding years may be reduced or denied entirely where such action is warranted. It would serve as a congressional watchdog to do the work, obtain the facts and furnish the Congress with the information it needs to enable it to make cuts in appropriations where they can and should be made in the interest of governmental efficiency and economy.

The proposal to create a Joint Committee on the Budget has been studied carefully for more than 10 years by the Senate Committee on Government Operations, on which it is my privilege to serve as chairman. During the 82d, 83d, 84th, and 85th Congresses, the measure was approved by the Senate, the last three times without dissent. Unfortunately, the House of Representatives has not seen fit to take favorable action. I have reintroduced the bill in the 87th Congress (S. 529), together with 66 other Senators, and we are hopeful that a majority of Members of the House of Representatives will support it. Because of the continuing interest in the financial procedures of the Federal Government, in general, and in this proposal in particular, at my direction, the staff of the Committee on Government Operations has prepared a comprehensive study and analysis of existing and proposed legislation relative to fiscal management, published in the 87th Congress as Senate Document No. 11, "Financial Management in the Federal Government." Readers who are interested in further particulars concerning the joint committee proposal will find in that document a complete legislative history of the proposal, as well as an analysis of its background and major provisions.

Based upon my many years of study and consideration, it is my firm and sincere conviction that the establishment of a Joint Committee on the Budget, clothed with the authority and duties I have proposed, and staffed with nonpolitical experts and technicians, will equip the Congress with adequate machinery to enable it to carry out its constitutional responsibilities. It will enable the legislative branch to examine carefully every item of proposed expenditure so that appropriations may be limited to no more than is actually required to provide the funds which are essential to the successful operation of the Government.

I am firmly convinced that the adoption of this measure will do much to remedy existing deficiencies in procedures relative to the appropriation and expenditure of public funds, and that it constitutes a positive approach to the elimination of extravagance, waste, and needless or excessive appropriations. Finally, I believe that in the face of ever-mounting spending pressures and ever-increasing budgets, it is essential to the welfare of the Nation that this proposal be enacted into law without delay.

Time for Words Has Passed

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. WIDNALL. Mr. Speaker, the American public is awake to the perilous times in which we live and is ready to support courageous and effective leadership. However, we have yet to see such leadership demonstrated by the new administration. We have yet to see any of that spirit called for by the President in his inaugural address—"of not what you get from your country, but how best you can serve."

What good will be accomplished by huge new Government spending proposals, by new fringe benefits, by greater profits and shorten hours, if the Communist challenge to our free system is not firmly met and overcome?

In the Washington Post of May 3, 1961, Roscoe Drummond has crystallized public opinion, as I have found it at home and throughout the country. His article follows:

WAR CALLED PEACE: TIME FOR WORDS HAS PASSED

In the wake of Castro's repulse of the Cuban freedom fighters, Khrushchev's wrecking of the test-ban talks by demanding a veto over inspection, and, now, the Communists' near conquest of Laos, President Kennedy is certainly saying enough about averting the worst.

But he isn't doing enough.

It is my conviction that the time for words has passed, that the moment is at hand when it is not enough to say what needs to be done—but to do what needs to be done before it is too late.

It is my conviction that the time has come when the American Government and the American people must act on the reality that we are not at peace, but at war, though a different and more difficult kind of war than we have ever faced; that, as the Overstreets have put it, we are in a war called peace and that there is nothing peaceful about it.

At this stage we are losing, not winning—and we are not yet strong enough to win.

It is my conviction that we will continue to lose this war called peace as long as we try to conduct it on a basis of business as usual, politics as usual and defense as usual.

Referring to the Communist tactics of infiltration, subversion, intimidation, and guerilla warfare—in Cuba, Laos, South Vietnam, Iran, and in the Congo—President Kennedy declared that "no war every posed a greater threat to our security."

But if no war ever posed a greater threat, is the President proposing measures equal to this threat?

In New York last week President Kennedy declared that "every new piece of information, every fresh event, have deepened my conviction that the survival of our civilization is at stake—and the hour is late."

But is the President yet calling on the Nation to do all it would do when its very life is at stake and the hour late?

While President Kennedy is rightly telling the country the worst, is he adequately providing for it?

I do not find that he is.

For example, the new administration saw the great need to expand our limited-war capability, fully appreciated that over-reliance on massive retaliation might deter a nuclear war while losing every vulnerable nation in Asia. The President spoke out lucidly for this need. Secretary McNamara agreed. But when the new defense budget is carried into effect, it won't add much more than 5,000 men to our limited war capability.

Only power to defend the free world will counter Communist power to eat up the free world and this miniscule addition to our military strength, far from deterring the Communists, will only persuade them that we really mean to do nothing.

On the President's declared convictions that our very civilization is at stake, that the hour is late, that never has a greater threat confronted us than this war called peace—nothing that the administration is yet doing to provide for it is anywhere near equal to the peril.

Why?

He has been given a clue in his statement that the Nation's greatest adversary is not the Russians but our own unwillingness to do what must be done.

There is truth in this but it is a dangerous half-truth. I am convinced that the whole

truth is that the American people will respond galvanically, not to Presidential words, but only to Presidential action—by adding not a puny 5,000 but 500,000 men, if necessary, to our limited-war forces, by expanding radically our capacity to meet unconventional aggression with unconventional means. This would mean accepting a degree of national mobilization to provide a doctrinal change in our defense strategy and thus to enlarge our means to wage successfully this war called peace.

I believe that the country is anxiously waiting for the President to act in a way equal to the urgency of his own words.

Use State Government Know-How in Our Foreign Assistance Program

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. CURTIS of Missouri. Mr. Speaker, in the April issue of Current magazine, a short article appears in which Mr. William B. Dale and Mr. David C. Fulton propose the use of our State government know-how in dealing with the problems of technical assistance to foreign nations whose size, population, and economies more nearly parallel those of our States than our National Government. I commend this article to the attention of my colleagues and would like, at this point in the RECORD, to introduce this article:

USE STATE GOVERNMENT KNOW-HOW

(By William B. Dale and David C. Fulton)

(Two staff members of the Stanford Research Institute contend that State governments and institutions within the United States are a neglected resource for development aid to the new nations.)

Many State and local institutions are already actively involved in the development process both locally and abroad. But the State institutional framework as such has not been tapped.

Most new African nations have areas, populations, and economies which, from the standpoint of size, if nothing else, bear far closer relationship to States within the United States than they do the United States as a whole. Like some individual States, their economies are relatively simple, depending on only a few crops, resources or industries. Their road systems are only beginning to take form; their communications complexes are embryonic. They are struggling to make their school systems into an instrument of progress. These are all problems in which our States and communities have had direct experience on a scale which is meaningful to the new countries—and their experience covers a great many other fields as well.

In virtually all of these countries, the problems match those of State governments more closely than they do those of the Federal Government. Thus, we suggest that logical twin relationships might be formed between the government of an underdeveloped nation and a State government in the United States to provide contact and help on a sustained and continuing basis. Such relationships might be financed in part by Federal grants to the States, with perhaps some public and private contributions from within the States themselves.

State-to-foreign arrangements would provide an umbrella under which a network of further relationships could be established. For instance, cooperative arrangements could be worked out between colleges and universities involving the exchange of persons and the teaching of languages. U.S. newspapers and radio stations in the relevant States could cover activities in the cooperating areas abroad. As relationships developed, it might be possible to involve private manufacturers and financing institutions as well, in a manner that would go beyond their ordinary business arrangements, while not inhibiting those of firms from other States.

Our problems with the new African nations are well known. We are feared. They find us big, impersonal, and sometimes overpowering. Their attitudes—a matter of vital importance to the United States—are frequently uncertain, ambivalent, defiant. But suppose that a new African nation, let us say Senegal, for example, could form a special relationship with one State—perhaps Nebraska. And suppose, over a 2- or 3-year period that, as a result of aid activities, Senegal's progress became a matter of quite personal concern to the people of the State of Nebraska. The result might well be warm feelings for Nebraska and, by implication, for the entire United States. The other side of the coin, of course, is that a deeper involvement of Nebraska and other States in the oversea development process could contribute to an increased understanding and appreciation at home of U.S. aid programs—and indeed of foreign policy problems generally.

Nebraska could send a mission of experts to Senegal. Its university could undertake a program of cooperation with theirs. Eventually, perhaps, its companies might be interested in Senegal's industrial development, at least to the point of helping in practical training programs and in corresponding with particular businesses in Senegal to suggest how problems could be approached. The State Development Commission could set up an exchange of ideas and experience on how to attract, encourage, and support industry (perhaps learning something in the process). Communities in Nebraska could "adopt" communities in Senegal, and take a special interest in their problems, their people, their progress. This kind of cooperation could extend across the whole spectrum of development needs, involving all kinds of institutions.

This is intended to be no more than the germ of an idea, but we think it is worth further development' ("Do the States Have a Role To Play in Foreign Aid?" memorandum, January 1961).

Space Metal Breakthrough

EXTENSION OF REMARKS
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. KING of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Dayton (Ohio) Journal Herald of April 27, 1961:

SPACE METAL BREAKTHROUGH—CONVERTING PROCESS FOR INGOTS TO AID REENTRY PROBLEM

What is described as a significant step in the development of a process of converting ingots of certain metals at high temperatures for aerospace vehicles has been accomplished at Wright-Patterson Air Force Base.

The metallurgical advance is the result of 2 years of work by a team of Harvey Aluminum Co. research engineers and the Materials Center at the Aeronautical Systems Division.

Roy Tombaugh, resident project engineer for Harvey Aluminum, explained that the new process makes possible conversion of molybdenum-tungsten alloy ingots into components for aerospace vehicles.

The conversion has been accomplished at 4,125° F. through a reusable die coated with zerconium oxide (zerconia).

"The breakthrough helps reduce costs substantially and makes possible fabrication by a reduction to practice of advanced metal concepts," the Harvey Co. announced.

Production of structural materials to withstand high temperatures required in missile and rocket work has been one of the major engineering problems in these new fields.

"The technical accomplishment is expected to increase the utilization of refractory metals—particularly molybdenum, columbium, tantalum, tungsten, and their alloys—in missiles, rockets, hypersonic aircraft and satellites.

"Refractory metals are necessary because of re-entry heat problems and in structural applications where the metal must maintain its useful strength at temperatures above 2,000° F.," the company explained.

Giving Protocol Meaning—New Strength in the Office of Protocol

EXTENSION OF REMARKS
OF
HON. MAURINE B. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, May 3, 1961

Mrs. NEUBERGER. Mr. President, in the State Department, directly under the Under Secretary of State, there exists a little understood, yet important adjunct to our foreign policy. I refer to the Office of the Chief of Protocol, currently held by Angier Biddle Duke.

Too often, the Chief of Protocol is envisioned as the President's representative at white-tie parties and fancy diplomatic receptions. His responsibility is thought of as merely requiring that Ambassador A is recognized as being senior in rank to Ambassador B, and treated accordingly. Fortunately, Mr. Duke is bringing a broader concept of this job to the office he holds.

Mr. Duke has taken into his jurisdiction many of the personal problems that the representatives of other nations, particularly the new nations of Africa, face on being accredited to the United States. Problems such as decent housing, schooling, vacations, and trips around the country are only some that have crossed Mr. Duke's desk.

His quick response to the insult to the Chargé d'Affaires of Sierra Leone at a restaurant in Pennsylvania and the understanding with which he came to the assistance of several young African students when they had been picked up for demonstrating on the death of Patrice

Lumumba augur well for the sensible and sensitive handling of these minute yet important problems.

About 2 weeks ago, Mrs. Eleanor Israel of New York was sworn in as a special assistant to Mr. Duke to work on housing problems. Mrs. Israel has had an outstanding career as a leader in the resolution of social problems. In a quiet, yet effective manner, she has attained many significant goals. In the ceremony swearing in Mrs. Israel, Mr. Duke said, "She will not receive all the recognition she will deserve because the nature of her job requires that she be efficient while being unobtrusive."

On April 22, the Washington Post reprinted an editorial from the Milwaukee Journal discussing the job of the Chief of Protocol of the State Department. I ask unanimous consent that it appear with my remarks in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GIVING PROTOCOL MEANING

The traditional job of the Chief of Protocol of the State Department has been one of assuring that foreign diplomats and dignitaries are dealt with on the basis of rank and seniority. He sees that they are properly greeted upon arrival—whether at airports or receptions—and given proper sendoffs. He is in charge of the social and diplomatic amenities. Protocol, as the French expert said, "is the code of international politeness."

Angier Biddle Duke, new Chief of Protocol, wants to expand the duties of his office. He suggests that his staff help diplomats get their children placed in schools, help plan their vacations, and trips about the country and help them meet their neighbors.

But he wants to take over a much more important problem, too. It is that of seeing to it that African diplomats are properly treated. In the past many have run into racial discrimination in Washington and around the country. They have had difficulty finding housing, entering places of recreation, getting served in hotels, and restaurants, finding office space. This, of course, is harmful to American foreign policy—and shameful in view of our democratic professions.

If Duke succeeds in getting the asignment he wants, and solves its problems, he will not only raise the level of his office but will serve the best interests of our foreign policy.

Immigration Policies

EXTENSION OF REMARKS
OF
HON. CLAIBORNE PELL
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES

Wednesday, May 3, 1961

Mr. PELL. Mr. President, as a firm proponent of liberalized immigration policies and as a member of the Board of Directors of the American Immigration and Citizenship Conference, I congratulate my esteemed colleague and friend, Senator PHILLIP HART, on the speech he delivered before the annual conference of that organization on March 24.

Senator HART's remarks were succinct and frank. He rightly emphasized the desirability of making clear to the American public the relationship between our immigration legislation and our prestige abroad.

Mr. President, it is indeed important to our foreign policy that the ideals of the dignity and brotherhood of mankind be incorporated in our immigration laws. We must share those blessings which our heritage has bestowed upon us.

In his speech Senator HART has allied himself with that very type of imaginative, forward thinking leadership which must lead our country in these times of crisis. It has clearly never been so important for the United States to stand as a symbol of truly democratic thought and action throughout the world.

It is a genuine pleasure for me to ask unanimous consent that Senator HART'S address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF SENATOR PHILIP A. HART, OF MICHIGAN, AT A CONFERENCE HELD BY THE AMERICAN IMMIGRATION AND CITIZENSHIP CONFERENCE: HOTEL PLAZA, NEW YORK, N.Y., MARCH 24, 1961

The President, in his message to your conference, again has expressed his abiding belief that we must constantly strive toward the day when our immigration and refugee programs will reflect our highest principles of fair play, humanitarianism, and equality.

All of you who work so faithfully in organizations and through such groups as the Immigration and Citizenship Conference are aware of the President's earlier writings and legislative achievements. It is my hope that we are entering a period when significant steps can be taken, both in and out of Congress, to achieve some of the priority goals you have sought.

The signs are encouraging. The obnoxious questionnaire has been rescinded, and we no longer thus insult the visitor to our shore. The recognition of continuing departmental responsibility for the welfare of those who arrive homeless on our shores is equally significant. This I would add, does not detract from nor lessen the need for, the excellent work being done by the many voluntary agencies so skilled in post-arrival adjustments and assistance. The new study of alien fingerprinting requirements also reflects a changing tenor of the times and is, I believe, another good omen.

Your meetings today have recognized the importance of a renewed effort in developing immigration and refugee policies responsive to this new decade and now tiny world. This has been called by some the decade of decision. The President said a few days ago in his foreign aid message, a "decade for development." Perhaps it is not out of order to suggest that for all concerned with the challenges of our immigration policy, this could well be the decade of dedication.

It would be my hope that ingenuity, flexibility, and imagination could be the hallmarks with which you as an organization, along with the executive and legislative leaders, would approach the job ahead. Defeat is inevitable only if we become rigid and step beyond the realm of the possible. There are important executive policy and reorganization steps that can be taken. There are governmental and nongovernmental ways through which the public can be educated on policy objectives. And one by one it should be possible to make the legislative changes necessary to bring our goals closer.

It would be helpful if the primary energies of all could be directed not to debates on procedures and strategy, but to educating and informing the public and the public's representatives on the basic policy questions. The questions and debates over short legislative steps versus long steps, omnibus bills versus multibill approaches are not the keys to success.

In my book the real key is to make clear the full impact on U.S. foreign policy of our immigration policies—our national origins approach to screening individuals. President Kennedy made this point very clear in his message to this Congress. A major recognition of the importance of immigration and refugee policy to foreign policy was made in the 1960 Democratic Party platform under a section entitled: "The Instruments of Foreign Policy." This section included the pledge to "eliminate discrimination and to enable members of scattered families abroad to be united with relatives." Here, in very personal terms, is described the full impact of immigration policy on our foreign relations. Let us increase enormously the number of Americans who think immediately in just this way whenever the phrase "immigration policy" is heard or seen.

Everyone recognizes that the challenges of emerging nations are tremendous. Let us not be further hampered in our efforts to join with them in free world endeavors by the embarrassment of taking no action to move forcibly against the kind of national policy discrimination we know today under our immigration quota system.

What are the congressional prospects? Well, I am sure that in 1956 no one would have made a serious bet that Congress would have passed two significant civil rights laws before 1960. We must not look too closely at the roadblocks of the past in assessing the possibilities of the future.

Finally, and this is the reason I was invited to make these few remarks I am sure, the tentative plans of the Subcommittee on Refugees and Escapees are probably of interest to you.

The chairman of the subcommittee is new to the intricacies of this field. The subcommittee has a modest budget with which to initiate our work. Yet I hope that within the next year or two the subcommittee can evolve a program which will give members of the Senate Judiciary Committee and the Senate background studies and hearings on such subjects as:

What we have learned from our current experiences with the Cuban refugees, and our Nation having been the first stop of those seeking asylum from tyranny;

World refugee and escapee facts and policies within the jurisdictional scope of the subcommittee's resolution and charter.

U.S. experience gained from participation in the World Refugee Year.

And if staff time and funds permit, I would hope to collect some experiences of those most familiar with the success or lack of success we have had in assimilating, training and resettling the homeless of the world under the program of the last 15 years.

Your hospitality and warmth in inviting a neophyte to address you is deeply appreciated. If objectives sought in immigation reform are achieved in the months and years ahead, you will be largely responsible. If the Refugee and Escapee Subcommittee makes a small contribution to fairly and equitably assess the many ramifications of this subject, it will be as a result of the support and cooperation of all of you. The pledge I make you is simply a desire to be helpful, cooperative, and available to all as I attempt to perform my duties in the Senate.

American Medical Association Survey of Federal Health Expenditures—State—V

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 3, 1961

Mr. CURTIS of Missouri. Mr. Speaker, the following is the fifth part of a series on the report prepared by the American Medical Association on funds which have been appropriated by Congress for activities of the Federal Government in the field of health:

DEPARTMENT OF STATE

This year	$86,874,700
Last year	81,068,510
International Cooperation Administration	52,857,000
Last year	48,615,000

The unilateral activities of the United States in the field of health are, in the main, carried out by the International Cooperation Administration of the Department of State. This agency, through cooperatively financed programs, is helping 45 countries at their request to improve their health and living conditions. Other programs are carried out by the Department of State itself or through multilateral organizations, such as the U.N. or PAHO. The total appropriations for the International Cooperation Administration are carried out in the following programs.

Malaria eradication program, approximate	$29,500,000
Last year	27,011,000

The Mutual Security Act amendments of the 86th Congress, 2d session, continued the authorization for U.S. participation in a worldwide malaria eradication program; $29,500,000 will be allocated by International Cooperation Administration to 45 countries for this purpose.

Cooperative health programs—other than malaria—approximate	$21,512,000
Last year	21,554,000

The United States, through cooperatively financed programs, is helping countries, at ther request, to improve their health and living conditions. The broad range of health projects falls into the fields of (1) epidemic and infectious diseases (trachoma, smallpox, typhoid), (2) environmental sanitation (safe water systems and sewage disposal), (3) development of rural health services and facilities (health centers, hospitals, clinics, laboratories), (4) training of personnel both locally and in the United States, (5) the establishment and development of basic health training institutions (schools of nursing, schools of public health, schools of medicine).

American Research Hospital for Children in Poland (new)	$1,500,000

Under the provisions of section 400(c) of the Mutual Security Act, the President is authorized to use foreign currencies for assistance in the construction of hospitals abroad. The Mutual Security Appropriations Act (Public Law 86-704) provides $1,500,000, which is to be used to purchase foreign currencies for the construction of the American Research Hospital for Children at Krakow, Poland. The program will be supervised by the International Cooperation Administration through an agreement with an organization known as the Committee for Research Hospital for Children in Poland.

American University at Beirut (newly reported)	$295,000

The United States, through the International Cooperation Administration, under an agreement with the American University at Beirut, sponsors a number of students at the various schools in the university. The cost to the United States is based on both direct and indirect costs per student. Currently the United States is sponsoring 85 sudents at the university's school of public health for an estimated cost of $225,000, 15 students at the school of nursing at an approximate cost of $30,000, and 25 students at the school of pharmacy for approximately $40,000.

Atoms-for-peace program	$50,000
Last year	50,000

Congress appropriated for fiscal 1961, $1,500,000 to carry out the program authorized by section 419 of the Mutual Security Act. It is estimated that $50,000 of the total will be used in the health field. While the allocations have not been programed, funds could be expended for such things as training of foreign technicians in the United States in the use of radioisotopes, the equipping of laboratories, or the supplying of units, such as those used in cobalt therapy, to facilities in foreign countries.

United Nations Children's Fund	$12,000,000
Last year	12,000,000

There are 87 contributing governments and territories. The U.S. proposed contribution to the fund for calendar year 1961 is $12 million. The fund is aiding 371 health and medical projects in 104 territories and benefiting over 55 million children and mothers. In 1959 (latest available figures) more than 14 million children were vaccinated against tuberculosis; 35 million persons were protected with DDT against malaria; some 2,500,000 children and mothers were treated for yaws; 2 million children were treated for tracoma and related eye diseases; 800,000 were under treatment for leprosy; and 7 million mothers and children received daily milk rations.

U.N. relief activities for Palestine refugees, approximately	$2,721,000
Last year	2,721,000

The United States contributes 70 percent of the funds for the United Nations relief activities for the 550,000 Palestine refugees in camps in Jordan, Lebanon, Syria, and Gaza. For calendar 1961, the U.S. contribution will be $23 million of which $6.5 million will be in kind. The $2,721,000 will provide all types of health care needed by the refugees.

World Health Organization, approximately	11,215,510
Last year	11,215,510

The budget for WHO for calendar year 1961 is estimated at $18,920,520 of which the United States will contribute $5,999,700 (31.71 percent). WHO sponsors health projects in most areas of the world, with particular emphasis given to underdeveloped nations; 88 percent of its budget is allocated to operating programs, 9 percent to administration, and 3 percent to conferences and meetings. It is anticipated that the U.N. expanded program of technical assistance will allocate an estimated $5,500,000 for 1961 to WHO for technical assistance not financed by WHO's regular budget. The United States will contribute 40 percent of this total or $2,200,000. In addition, the United States will contribute the following sums for other WHO programs: $4 million for malaria eradication, $500,000 for medical research, and $175,000 for the development of safe water programs.

Pan American Health Organization, approximately	$4,727,000
Last year	4,840,000

The budget for PAHO for calendar year 1961 is estimated at $4,700,000 of which the United States will contribute $3,102,000 (66 percent). PAHO sponsors health programs in the Western Hemisphere and serves as the regional office of WHO in the Americas. In addition, the United States will contribute the following sums to other PAHO programs: $1,500,000 for malaria eradication, and $125,000 for community water supplies.

Health program for overseas employees	$1,695,000
Last year	1,675,000

The Department of State furnishes health care to 13,000 overseas employees (the majority of whom work for other agencies) and approximately 18,000 of their dependents. In the case of dependents, the Government pays for hospital and surgical care only after the first $35 of expense incurred for a single illness. Care is not provided for obstetrics or for disease or injury which results from the individual's willful misconduct. In most cases, U.S. military and Public Health Service medical facilities are utilized. The above total does not include salaries of physicians, nurses and technicians, and administrative staff in Washington nor the salaries, allowances and travel expenses to and from posts. The Department maintains a medical officer at 14 foreign posts. Eleven of these also have at least one nurse and three employ lab technicians. Health rooms are serviced by nurses in 15 other posts. All medical personnel are American citizens.

The Plight of the Baltic States

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Wednesday, May 3, 1961

Mr. CAPEHART. Mr. President, I ask unanimous consent to have the attached article "The Plight of the Baltic States," by Kenneth V. Lottich, inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE PLIGHT OF THE BALTIC STATES
(By Kenneth V. Lottich)

If one were callous enough to disregard the lives and fortunes of the 6 million inhabitants of Estonia, Lithuania, and Latvia, it might be said that at long last the U.S.S.R. has solved the Baltic question.

This phrase, an item of history, has been in existence for several millenniums and the problem suggested an issue among the empires of Europe for an even longer duration. Although, as we have said, people must never go unheeded, the geography of the Baltic States has been the most significant contributing factor in the development of this question and the Baltic States predicament.

A quick glimpse at the map shows the dismal plight of northern East Central Europe. Finland (although currently outside the Iron Curtain) has been shorn of geopolitical significance, her borders pulled back from Leningrad and the Barents Sea, her very existence as an independent nation placed in grave jeopardy by the reptilian maneuvers

of Moscow. Estonia, Latvia, and Lithuania were annexed by the Soviet Union in 1940; their coastline had become a necessity for the submarine pens of the Russian bear rapidly learning to swim under water; their perimeter islands a site for the Soviet missile bases that threaten Western Europe. "Most important is the fact that the (Russian) Baltic fleet has come out of its mousetrap in the innermost corner of the Gulf of Finland into the drillground of the open Baltic Sea." [1]

The seizure of Kaliningrad (Koenigsberg), in former German East Prussia (which was split between the Kremlin and its Polish satrapy), plus Poland and the littoral of the German Democratic Republic, completed this Soviet advance on the great northern sea of Europe. Weishar calls this sweep "the greatest geopolitical trump to be played by Russia in the last century." [2]

Although the absorption of the Baltic States proper (Estonia, Latvia, and Lithuania) has never been recognized by the United States, Britain, France, and the West in general, possession—in this case, at least—represents considerably more than the usual nine points in law. The area involved comprises 67,000 square miles—approximately the size of the American State of Washington—with a population three times as great.

Properly speaking, Finland and Sweden likewise are Baltic countries yet the Baltic question is most frequently discussed in terms of Livonia, i.e., the recently (but presently Communist-held) countries, Estonia and Latvia.

Nonetheless the Baltic question is not solely a national issue, despite the fact that Baltic nationalisms are involved. It is international and in many ways must be considered as significant as the problem of the landlocked areas in east-central Europe directly to the south.

Specifically, the Baltic question "refers rather to the role which the eastern Baltic region played in world affairs. It reflects the influence which this area exercised upon the development of the surrounding great powers." [3] Kirchner, a historian of the Baltic, alleges that "during 4,000 years of historical knowledge, the Baltic provinces have been equaled in importance by but few regions: Mesopotamia, Egypt, Sicily, the Rhine Valley, and perhaps two or three others—all of them at the junction of great communication lines between east and west or between north and south." [4]

To put this theme another way: The very land itself, the geographical, political, and cultural potentialities of this naturally-favored situation, appears to be the controlling factor. There are indications, it is true, that the Latgalians and Semgalians, Baltic people in the legitimate sense, and the Cours, Livs, and Estonians (Finno-Ugrian), who settled this maritime province as early as the fourth and fifth centuries,[5] were influential in its social, economic, and political development; nevertheless, rather uniquely, it is the situation, the land and its potential, that seemingly dominate the historical mission of the Baltic States.

Thus the favored position of their realm has become the tragedy of the peoples of this eastern Baltic coastland. Their geographic position a focus of envy, brief periods of independence have been largely overshadowed by long epochs of vassalage.

Livonia's most recent period began with the post-World War I independence championed by President Wilson at Versailles. Estonia and Latvia, along with Lithuania, continued as sovereign states for two decades up to the second Russian attack on their liberty in 1940. Nazi occupation from 1941 to 1944 and so-called liberation by Moscow have placed the peoples of these Baltic States under many perils and it is well known that the people's democracies set up by the Marxists rest only on Russian bayonets.

Indeed Baltic nationalism, in the modern sense of the word, may be said to have flowered in the 20th century; in its original form (in the passive assumption of some elements of cultural homogeneity) it may be over 1,000 years old. Nonetheless, Estonia, Latvia, and Lithuania (along with Finland and Poland) were the only nationalities subject to czarist rule that were able to break away from the Kremlin. Joseph Stalin himself, the Marxists' No. 2 troubleshooter, failed dismally in his attempt to gain the Baltic republics for bolshevism, an episode which he spent a third of a century trying to forget.

Twenty years of freedom, however, came to an end with the beginning of World War II on September 1, 1939. Actually independence had been earmarked for destruction a few days prior when Molotov and Von Ribbentrop signed the Soviet-Nazi pact of friendship and nonaggression of August 23. A secret protocol placed Finland, Estonia, Latvia, Lithuania, and Bessarabia in Soviet Russia's sphere of influence. Plans likewise were made on August 28 for the "fourth partition" of Poland, an event which was to signal the death knell of small nations in East Central Europe.

September and October saw "mutual assistance" pacts forced upon the three Baltic States. On trumped up charges the following June 14, Molotov presented the Lithuanian Government with an ultimatum demanding free admission of the Soviet Army and the establishment of a new government friendly to the U.S.S.R. and willing to execute the mutual assistance treaty honestly. Within a couple of days Estonia and Latvia had also had their turn to cooperate.

The creation of the new "friendly" governments ended the phase of military occupation, or rather continued it even more rigorously under another from. Under the tutelage of three Russian commissars puppet regimes quickly came into being. On July 14 and 15 elections of "people's parliaments" were held in each state. Franchise laws having been corrupted, only one slate, that of the so-called Union of Working People, was approved. The events of this dreadful day have been reported as follows:

"In Estonia and Latvia a group of patriotic citizens had attempted to present to the voters a list of independent candidates * * * such action was immediately suppressed by the government and the initiators were arrested * * * a great many citizens abstained from voting. (Yet the day after the elections it was announced that 92.8 of the voters had cast their ballots for the single pro-Communist slate in Estonia, 97.6 in Latvia, and 99.19 in Lithuania." [6])

Of course this result should not have been surprising. As an actual instance, but highly significant in revealing the mentality of the Marxist masters, the following conversation between Deputy Prime Minister Professor V. Kreve-Mickevicius of the Lithuanian People's Government and Molotov, held in Moscow on July 2, 1940, excels in frankness: Molotov—"You must take a good look at reality and understand that in the future small nations will have to disappear. Your Lithuania along with the other Baltic nations, including Finland, will have to join the glorious family of the Soviet Union. Lithuania cannot remain an exception. You would be doing the most intelligent thing if you would accept without any hesitation the leadership of the Communist Party which is determined to effect the unification of all Europe and the application of the new order." [7] Apparently the Reds combined the tactics of Adolf Hitler and Peter the Great.

Horrible events in the subjugation of Estonia, Latvia, and Lithuania are related by Endel Kareda as, for example, the terrors of the night of June 14, 1941. In Lithuania a total of 30,485 persons seized and deported, is substantiated by police and railroad documents, including "freight lists" of human cargo indicating car numbers, capacity, and destinations. In Latvia and Estonia "the MVD raided thousands of homes during the night, ordered men, women, and children out of bed, gave them 10 to 30 minutes to pack a few belongings, bundled them into lorries and took them to railway stations where cattle cars with barred windows waited. Hundreds of children and old people died even before the trains crossed the frontier on their way to Northern Russia, and the wastes of Siberia." [8] The following figures representing executions in 1 year of Soviet occupation, based upon evidence found in the hundreds of mass graves, shock the sensibilities: Estonia, 62,729; Latvia, 64,250; Lithuania, 65,000.[9]

As late as 1960, in order to cover their own atrocities, the Soviets continued to broadcast claims that "authorities in Communist Estonia have uncovered evidence showing Nazis slaughtered 3,000 Czech and German citizens near Tallinn in 1942–43." [10] Obviously, such communications are part and parcel of Stalin's attempt to place the responsibility for the Katyn Forest massacres on German forces, an imputation that was rejected almost universally by the West.

Through its Polish satellite the Kremlin currently raises the specter of German despoilment of East Europe and the "danger" of revanchism through "West Prussian" and other "revisionist" associations. Again to obscure her own role in the rape of the Baltic countries—and speaking through her Warsaw mouthpiece—Moscow cries: "Poland, like all other peace-loving countries, sees in German designs of revenge a danger not only to herself but to the peace of the world." [11]

William L. Shirer, an American war correspondent and commentator, in an interesting analysis of the background of World War II, suggests that Stalin outsmarted himself in the Molotov-Von Ribbentrop pact, another reason for Russian recourse to German damnation. Trapped by his own lack of logic, the great marshal allowed the German army to sweep the West and then initiate a one-front war in the East. Shirer thinks that the German generals would never have permitted a war which promised from the outset two main fronts; that Hitler's government would have toppled had he attempted to force this. Thus Stalin's promise of immobility was the real cause of Hitler's overconfidence.[12]

On the other hand, had Stalin from the first merely gambled on the ruin of Germany and the reconstitution of the German and Slavic East under the Communist banner, he stands as second only to Lenin as a master strategist—although one willing to take survival risks of the type currently attributed to Mao-tse-tung's Red China.

The Russian attempt to shift the blame for the devastation of East Europe on Germany is not their only control device for securing conformity by the satellites. Deportation by the Marxists is anything but a forgotten expedient. Weishar reports that "In its craving for expansion the Kremlin is not satisfied to hold the southern Baltic coast (in addition to the Baltic states proper) and place it in the hands of its satraps. Together with the military occupation and political subjugation went an ethnic change of vast proportions: the German Baltic coast from Memel to the mouth of the Oder was denationalized. The Baltic peoples constitute an uncommonly high percentage of the inmates of the Siberian slave labor camps. The Finns, too, were expelled from the Karelian Isthmus after the war's end and their land annexed to the Soviet Union, which also swallowed a considerable

Footnotes at end of speech.

strip of the north coast of the Gulf of Finland." [13]

Because of the strength of Roman Catholicism in the eastern Baltic States, the Communists from the first have endeavored to wean the population from their religious moorings. Heavy taxation was imposed on all churches in the newly acquired territory and excessive rents charged for the use of dwellings which formerly belonged to the church and were domiciled by clerics. Education suffered too. It is well known that, in Lithuania, the Catholic faculties of theology and Catholic high schools were closed; only one of Lithuania's four seminaries was allowed to function and the number of students eventually reduced; religious services in the Army, hospitals, asylums, and prisons were stopped; religious teaching in the schools was forbidden and this portion of instruction replaced by lessons on Marxist materialism.[14]

At the same time 11 of Latvia's 110 Catholic priests were arrested, tortured, and finally either executed or deported. In Lithuania 60 out of 800 suffered a similar fate. Apparently the Soviet overlords believed that the liquidation of 10 percent of the Baltic clerics would intimidate the population. It did not. Therefore, during the first year of the second occupation, 33 Catholic priests in Latvia and 350 in Lithuania were transported or killed, raising the proportion to close to one-third.[15]

Yet not all of the clergy in the Baltic were attacked. For example, Archbishop Antonius Springovics remained at Riga, on orders from Rome, during the entire first occupation. While he personally was not molested, he was powerless to prevent either the arrest, torture, or liquidation of his priests or the deportation of the Latvian population, a maneuver calculated by the Communists to cause him loss of prestige and indirectly weaken the power of the Church itself.

When the Russians returned (after the German invasion) in May 1945, the archbishop was, at first, in keeping with the much propagandized policy of religious freedom, shown suitable consideration. Then, toward the end of the year, he was invited by the Kremlin to remove to Moscow, where, as "metropolitan of the Roman Catholics in the Soviet Union," he could "wield a larger power." Upon his indignant refusal the Communists showed their other face. Although it is not yet established whether of his own free will or on Marxist orders, in 1947 Archbishop Springovics withdrew to a tiny domicile well beyond the Riga city limits.[16]

We can unquestionably assume that the exercise of religious rites in the Baltic, in addition to the spiritual comfort achieved, serves also as a reiteration of the feeling of common nationality, as opposed to the folk activity fostered in the political sphere by the Red regime. Nor is religion the sole mode of expression available. The habitants can show a common spirit in many ways that are passive rather than active. For instance, it is reported that on January 18 (1951) the Communist Rahva Hääl (Tallinn) revealed that the department of cinematography (which owns all of the nationalized cinemas) ended 1950 with a considerable deficit, because of the drop in cinema attendance." [17]) Good reason for the public not to attend is suggested by the fact that all films have Russian sound-tracks and, naturally, the Estonians do not care to speak Russian; furthermore, it is alleged that the cinema fare is so heavily loaded with Soviet propaganda that the pictures are boring in the first place.

A little later, on February 21, 1952, the Secretary-General of the Latvian Communist Party is revealed as whining that "the people's minds are much influenced by capitalist relics. Bourgeois nationalism makes itself felt in all walks of life; class alien elements spread corrupt reactionary theories and encourage the inclination to private property in the kolkhozes." [18]

Then there is the Estonian youth problem, a phenomenon that is plaguing Moscow itself. From London the comment comes that "On March 26–28 in Tallinn at a plenary session of the Central Committee of the Estonian Communist Party, its secretary, Comrade Lentsman, and the secretary of the Komsomol, Comrade Pomazkin, stated that the political education of the workers and young people left much to be desired. Local party organizations," he said, "paid no attention to the Communist education of the masses." [19]

The parallel between the expansionist policies of czarist Russia and those of the current Red regime, both at the Kremlin level and as working in the satellites, is too visible to require much comment. Dr. Rudolf von Lodgman has recently restated this truth in pertinent fashion: "It is not the first time in history that Eastern peoples have reached out to conquer Europe. Huns, Magyars, Mongols, and Islam, in turn, have been a threat; today Bolshevism, emanating from Moscow, would execute if possible the testament of Peter the Great." [20]

Throughout history the Baltic States have served as a pivot or axis. This is the real meaning of the Baltic question. Presently the Soviet masters in playing up the rimland characteristics of this land perhaps consider it only a buffer. At any rate the inhabitants of these unfortunate countries must suffer expulsion and frequently death merely for having been born in one of the most strategic and significant spots on earth.

Dr. Kurt Rabl, an expert on international law, cites the legal basis for such action through an illustration particularly appropriate to these Baltic regions.

Expulsion or resettlement has been, in recent years, applied (among other circumstances) to "Persons who, within a state of which they are citizens, are also resident there, but by the authority of that state are deported to other localities of the interior for reasons of 'public order and security' or for reasons of economic planning.

"That applies to the politically or socially 'undesirable' Estonians, Letts, Lithuanians, and Ukrainians; it has also been the case of certain Mohammedan Caucasian peoples, and also to the Japanese living on the Pacific coast of the United States who, under the impact of the outbreak of Japanese-American hostilities (Pearl Harbor) at the turn of 1942–43, were deported to barren regions of the Rocky Mountains and interned in guarded camps." [21]

In fairness it should be pointed out that while Dr. Rabl exposes the rationalization of these events, he views the acts themselves as violations of the spirit of international law.

What steps have the Western democracies taken to remedy the situation in east Europe, especially in the Baltic States? In 1951 the Voice of America enlarged its program to include broadcasts to these Soviet-enslaved peoples of Estonia, Latvia, and Lithuania in their native languages. In 1953 the Congress of the United States created a Select Congressional Committee on Communist Aggression. This committee compiled a huge quantity of evidence concerning the annexation and subsequent Marxist atrocities in the Baltic countries. This was published in 1953–54.

John Foster Dulles, late Secretary of State of the United States, revealed the attitude of many citizens of the West regarding the captivity of the Baltic States: "The United States, for its part, maintains (only the diplomatic recognition it extended in 1922 to the Baltic nations). The captive peoples should know that they are not forgotten; that we are not prepared to seek illusory safety ourselves by a bargain with their masters."

Wilderness Should Be Realistic

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. WESTLAND. Mr. Speaker, the Second District of Washington State

which I represent is concerned with the various aspects of wilderness as much if not more than comparable districts throughout the United States.

The people in my district believe in the principle of multiple use so that our national forests can serve all by producing areas for recreation, grazing and timber production. I believe an editorial produced in the Everett, Wash., Daily Herald, April 29, 1961, reflects the thinking of the majority of those I represent. This editorial points out that wilderness areas must be realistic and should be preserved for multiple use of benefit to all:

AS WE SEE IT—PRESERVE WILDERNESS AREAS FOR BENEFIT OF ALL PEOPLE

Wilderness areas are not foreign to this community nor to western Washington; so the recent address of Supreme Court Justice William Douglas held much interest to us.

Justice Douglas' veneration for Mother Nature demands universal respect. His sociological views have found their way into his contributions to many decisions of the High Court and other expressions have brought him considerable criticism, some of it justified.

Justice Douglas' address to the Wilderness Conference of the Sierra Club in San Francisco obviously was devoted to the subject for which the conference was organized. It was natural for him to find something in common between nature and the Constitution of the United States.

"The American Bill of Rights implies that every child should have the opportunity to grow up in a place where there are lakes, woods, and mysteries of the wilderness," he asserted.

We have been projecting the same thought for years.

Justice Douglas also found room in nature to make a comparison between a free society and communism.

"The distinctive quality of a free society," he said, "the thing that makes us different from the Russians, is recognition of the rights of man, and that must include his right to enjoy the wilderness."

Efforts of eastern naturalists, however, to allocate additional huge areas of the Northwest have met with disfavor here. Recreationists and industrialists were more than satisfied with the methods under which these areas were supervised by the Forest Service and could see no outstanding reason to change the sharing of their administration.

Wilderness areas are fine but they must be realistic.

The allotment of these areas must be compatible with the future of our major wood-using industries and the livelihood of the many thousands of Washington State residents to whom they give employment.

Justice Douglas believes that the New Frontier is the preservation of "the remaining islands of wilderness." He is so right, if he means their preservation for a multiple use of benefit to all.

Report From Washington

EXTENSION OF REMARKS
OF
HON. DURWARD G. HALL
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. HALL. Mr. Speaker, under leave to extend my remarks I ask unanimous consent to include in the record my "Report From Washington," because of its bearing on the current crisis.

Something took place in Washington this past week which shows the gravity of the international situation in which the United States now finds itself. As the Nation's Capital, Washington, was of course, involved in the civil defense air raid warning test, conducted throughout the Nation to test our communications, and the Conelrad warning network.

As one might expect, Washington probably has the most comprehensive air raid warning system in the Nation, and when the sirens started howling here the noise was loud enough to drown out an Ozark family reunion complete with hoedown back in our beloved Missouri hills. But what stands out in my mind, is that many persons who complacently missed all the newspaper, radio, and TV publicity on the test; actually thought a real attack was underway and that the missiles were on the way.

Their fears, real or fancied, are perhaps the clearest indication of the seriousness of the international crisis now facing our country.

Indeed, events are happening so swiftly that one crisis comes along while a previous one is still on the front pages. And so, in rapid succession, we have had the Russian manned space flight, or at least the claims thereof, the Cuban fiasco, the Algerian revolt, and the Communist military success and deceit in Laos.

The President has met over three times within the last week with the National Security Council; and reports indicate that consideration is being given, not to how to save Laos, but to how to lose it gracefully.

It is impossible to disguise the magnitude of the defeat which the United States and our allies have suffered in Laos, Cuba, and world prestige.

While we have issued "strong words," the Communists have been countering with "strong deeds." On one hand, the Communist rebels have been dangling a cease-fire agreement in front of our officials like a Yo-yo, and each time we have grasped, the string has been pulled, tantalizingly, just beyond our reach. With the other hand, the Communist rebels have been taking over territory so swiftly that we virtualy have nothing left to bargain for.

The Communists now control the northern half of Laos. A month ago they controlled only one-third. The price of a cease-fire is likely to be Communist domination of any so-called neutralist government which is set up. If this occurs, Laos seems certain to be converted into a major base for Communist operations against neighboring South Vietnam. If this comes to pass, the fall of southeast Asia to the Communists is at best, only a matter of time, as Laos, Vietnam, Malaya, and Thailand complete the pincers movement, and lays bare and unprotected Burma and India.

Just as in a game of chess, one move in the field of international power politics can have a drastic effect on the next move. And so it is, that what has happened in Cuba has affected not only Cuba, but every other place where we are at grips with Russia, in the so-called cold war. Having inflicted a setback of major proportions in our own backyard, the Communists are now using that opportunity to apply pressure in every other part of the world. As soon as, and if, the Lao crisis is over, we may expect new pressures to be applied on Berlin, in South Vietnam, and any other place where we are vulnerable, even Korea, again.

Having reached this incredible situation in the short space of only a few months, there are strong rumors in Washington that some drastic changes are about to take place in the executive branch of our Government.

There is much to indicate that Government by "professors and theorists" is about to be abandoned. U.S. News & World Report magazine points out that the new administration brought in a wide range of top-level "professors," noted for their theories about how the United States and the world should be run. The theories ranged from how to deal with Russian Dictator Khrushchev to how White House operations could be made to work more efficiently. Today, little more than 3 months later, doubts have begun to rise, even among the President's aids. Experience, in a brief time, has clashed sharply with theory. Nothing has happened, as the professors theorized, it should happen. And so, the magazine concludes, the "professors" will now lose some of their influence because their neatly reasoned ideas about Khrushchev and the world have not worked out, in practice. Words, which have been superabundant in this administration—over 150 white papers and messages, so far—are likely to be reduced somewhat in number. Actions, when taken, will be based less on snap judgment, and more on conference.

The question facing Washington, and the Nation, is whether there is still time to act, and how to draw the line.

American Medical Association Survey of Federal Health Expenditures—Miscellaneous—VI

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. CURTIS of Missouri. Mr. Speaker, the following is the last of six parts of a series on a report prepared by the American Medical Association on funds which have been appropriated by Congress for activities of the Federal Government in the field of health:

ATOMIC ENERGY COMMISSION

This year, $57,500,000; last year, $52,150,000.

The above sum will be spent by the Atomic Energy Commission's biology and medicine research program and its training, education, and information activities in the following manner: cancer research, $4,783,000; other

medical research, $14,975,000; biological research, $17,293,000; environmental sciences research, $8,641,000; radiological physics (including biophysics research), dosimetry and instrumentation, $4,935,000; support for distribution of radioisotopes, $250,000; miscellaneous, $3,323,000; and training and education activities in nuclear energy as related to the life sciences, $3,300,000.

FEDERAL EMPLOYEES HEALTH INSURANCE PROGRAM

This year, $114 million, new program.

Under the terms of Public Law 86–382, the Federal agencies, as employers, are authorized to provide health insurance benefits for their employees and their dependents. The employee has the right to select one of the following types of insurance plans: service benefits such as offered by Blue Cross-Blue Shield; an idemnnity program offered by commercial insurance companies; programs offered by employee organizations; or comprehensive health plans such as the health insurance program. Under the law, the Federal Government will contribute a specific amount, depending on the employee's marital status; 1,738,828 employees have elected to participate in the program. Over 3 million of their dependents will also be covered. For fiscal 1961, the program is expected to cost $300 million with the Federal Government contributing $114 million. While the law anticipated the Federal Government paying half the cost of the program, it authorized two options under the service and indemnity programs under which the employee, if he selected the high option, would pay the difference. Eighty-one percent of employees chose the high option. Early studies indicate that employees selected plans in the following percentages: service plans, 54 percent; idemnity, 27 percent; employee organization plans, 13 percent; and comprehensive plans, 6 percent.

(NOTE.—The program for already retired Federal employees provided in Public Law 86–724 is not included in the above. This program will become effective on July 1, 1961.)

NATIONAL SCIENCE FOUNDATION

This year, $29,250,000; last year, $27,400,000.

The foundation's overall budget for fiscal year 1961 is $175,800,000. The sum of $26,450,000 is earmarked for grants for research in the biological and medical sciences. $2,800,000 is available for support of specialized biological facilities. The foundation provides support for basic scientific research, for training and education in the sciences through fellowships and programs to improve science teaching, and programs to improve exchange of scientific information.

FEDERAL EMPLOYEES HEALTH PROGRAMS

This year, $12,200,000; last year, $11,500,000.

This program is available to all Federal civilian workers and provides limited services through health clinics. They are operated by Federal agencies which employ 300 or more persons in any one area. Services include treatment for on-the-job illness and physical examinations for employment and preventive health measures.

DEPARTMENT OF LABOR

This year, $10,596,000; last year, $9,624,660.

Bureau of Employees' Compensation	$9,500,000
Last year	8,702,130

An estimated 2,400,000 Federal workers are eligible under the Federal Employees' Compensation Act for medical and hospital care, rehabilitation services, disability and death payments, funeral and burial expenses. For treatment of employees by private doctors and hospitalization in private facilities, the Labor Department has set aside $7,700,000 this fiscal year ($786,000 more than was spent for this purpose in 1960), and for similar services in Federal hospitals and clinics, $1,800,000.

Bureau of Labor Standards	$1,096,000
Last year	922,530

For promotion of industrial safety, the Bureau plans to obligate $1,096,000. The Bureau develops standards for hazardous occupations, assists the States in accident prevention programs and gives safety training to State and union personnel. In addition, it carries out a program of promoting and enforcing safety in the maritime industry under the Longshoremen's Act.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

This year	$7,450,000
Last year	2,751,300

The National Aeronautics and Space Administration was established in 1958 to provide civilian control of aeronautic and space activities, other than the development of weapons systems. As with many agencies, funds are not earmarked specifically for medical activities. The figure for fiscal 1960 is actual expenditures and figures for fiscal 1961 are estimates. Medical activities are divided into two categories: inhouse activities and contractual activities. Estimates for inhouse activities include $174,000 for the agency's health program; and $1 million for research in human factors and life sciences (pilot performance). The agency contracts with other government agencies, universities and private industry for research in flight medicine and biology as follows: biotechnology, $1 million; biomedical experiments in extra terrestrial environments, $2 million; space medical and behavior sciences, $1 million; and space biology, $1 million; Project Mercury (man in space): personnel equipment for space flight, $787,000 and tolerance studies, $490,000.

OFFICE OF CIVIL AND DEFENSE MOBILIZATION

This year	$5,255,900
Last year	1,432,000

The total budget for the Office of Civil and Defense Mobilization is $60,125,000. Funds for health activities are estimated at $5,255,900 broken down as follows: salaries and expenses, $512,900; Federal medical stockpiling, $3,650,000; Federal matching contributions for medical supplies and equipment for State agencies, $100,000; and $993,000 for Office of Civil and Defense Mobilization activities to be carried out by the Public Health Service (includes $180,000 for the medical education for national defense program). Most of the increase over last year results from inclusion of medical stockpile management and maintenance costs in this year's estimate.

CANAL ZONE GOVERNMENT

This year	$4,460,800
Last year	4,306,200

Estimated expenditures for fiscal year 1961 for operation of Canal Zone Government hospitals and clinics and public health activities are $7,908,400. Expenditures for operation of hospitals and clinics are estimated to be $6,832,300 and revenue is estimated at $3,384,700. Four hospitals are operated by the Health Bureau of the Canal Zone Government and have 1,010 beds available daily, as follows: Gorgas Hospital, 440; Coco Solo Hospital, 150; Corozal Hospital, 300; and Palo Seco Leprosarium, 120. In addition there are two dental clinics, one district medical clinic, and six public health centers. Expenditures for public health activities, which include the Division of Sanitation, Health Director's Office, Division of Veterinary Medicine, Division of Preventive Medicine and Quarantine, and general governmental expenses applicable to the Health Bureau are estimated at $1,076,100, with revenue estimated at $62,900. All reimbursements are returned to the U.S. Treasury together with payments by the Panama Canal Company for the remaining net cost of the Canal Zone Government.

DISTRICT OF COLUMBIA

This year	$2,800,000
Last year	2,200,000

Congress appropriates approximately 12 percent of the annual budget of the District of Columbia. The Public Health Department budget for 1960 is $37,700,000. Of this sum $14.2 million will be used to provide care for residents of the District at St. Elizabeths Hospital; therefore, this amount is included in the report under that institution. Twelve percent of the balance, or $2,800,000 can therefore be considered as the estimated Federal contribution for health and medical activities in the District of Columbia.

FEDERAL AVIATION AGENCIES

This year, $2,764,000; last year, $1,765,600.

Funds included in the Federal Aviation Agency appropriations this fiscal year for the flight safety program are divided as follows: $1,395,800 for salaries, administrative expenses, and extramural research effort at headquarters; $348,100 for salaries and administrative expenses in regional offices; $851,000 for the Aeromedical Research Laboratory at Oklahoma City; $169,100 for Georgetown University Clinical Research Laboratory. Nine full-time medical officers in the field supervise the periodic physical examinations required of commercial and private pilots. Federal Aviation Agency now has 3,504 aviation medical examiners in the United States and overseas. A total of 272,800 examinations were made last year and it is expected that this number will increase to 275,000 this year. For this service, pilots pay examining physicians directly.

DEPARTMENT OF JUSTICE

This year, $2,520,000; last year, $2,218,000.

The figure represents the Bureau of Prisons estimate of the cost of medical and dental services for approximately 23,000 prisoners in 31 Federal penal institutions. The bulk (about $2,370,000) goes to commissioned officers of the Public Health Service assigned to the prisons and to related civil service personnel for services that include medical, surgical, psychiatric, pychological, nursing, and dental treatment. Approximately $150,000 is earmarked for fees to 250 consultants in various medical specialties.

FEDERAL TRADE COMMISSION

This year, $1,900,000; last year, $1,600,000.

Federal Trade Commission is charged by Congress with safeguarding the life and health of the public through the prevention of false advertising of products. The above sum represents 23 percent of the Commission's total budget of $8,010,500 and will be used for research, testing, and compliance operations in the field of food, drugs, cosmetics, and devices.

DEPARTMENT OF COMMERCE

This year, $846,100; last year, $992,300.

The National Bureau of Standards performs tests and engages in developmental research on its own initiative and at the request of others. The Bureau will expend $280,100 of its own money this year as follows: radiation research, $243,500; audiometric calibrations research, $18,600; dental materials research, $18,000. In addition, the Bureau will receive $566,000 from other agencies, divided as follows: radiation research, $252,300; air pollution research, $90,000; audiometric instrument testing, $48,500; dental materials research, $85,000; development and production of C–14 labeled carbohydrates, $45,000; development of methods for automatic manipulation of elec-

trocardiograms, $37,200; and cardiovascular equipment and development, $8,000.

CIVIL SERVICE COMMISSION

This year	$425,400
Last year	405,806

The Commission's total budget for fiscal 1961 is approximately $19,405,000, out of which about 2.2 percent goes to the medical function for salaries of 8 medical officers in Washington, D.C., and 11 medical officers in the regional offices, plus clerical assistance in both the central and regional offices.

DEPARTMENT OF INTERIOR

This year	$265,500
Last year	230,000

The Bureau of Mines, operating within the Department of the Interior, has a total appropriation of $6,457,000 for health and safety activities for this fiscal year. Identifiable health programs and expenditures are as follows: $71,500 for respirator approval testing and research, $53,000 for research on dust and approval testing drill dust collectors; $100,000 for environmental surveys in metal mines; and $41,000 for health and safety inspections in uranium mines.

OFFICE OF THE ATTENDING PHYSICIAN OF CONGRESS

This year	$27,275
Last year	23,615

The attending physician of Congress provides outpatient care for Members of the House and Senate and their staffs. Funds voted by Congress are for medical supplies, equipment, and contingent expenses ($16,545) and for a technical assistant to the attending physician ($10,730). The office is filled by a medical officer of the U.S. Navy. Sole occupant of the post has been Rear Adm. George W. Calver. Compensation of Dr. Calver, his assisting physicians and enlisted corpsmen are paid from Navy funds.

NATIONAL ADVISORY COMMITTEE TO SELECTIVE SERVICE

This year	$19,000
Last year	19,000

Congress provided the $19,000 appropriation for a skeleton staff and for expenses of national advisory committee operations, plus nominal expenses of State committees which are now on a stand-by basis. The National Advisory Committee has the responsibility of advising Selective Service on deferment policies for physicians in residences, teaching positions, essential laboratory and clinical research and persons deemed necessary to protect civilian health at a time when draft calls are being made. The State and territorial committees assist the national committee when their services are required.

The Life of the Land

EXTENSION OF REMARKS
OF
HON. HIRAM L. FONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES
Wednesday, May 3, 1961

Mr. FONG. Mr. President, Mark Twain once described Hawaii as "the loveliest fleet of islands anchored in any ocean."

Our beautiful beaches, majestic green-clad mountains, our fertile, peaceful valleys, our vast canyons and slumbering and active volcanoes, our colorful, fragrant flowers and balmy climate have earned for Hawaii the most appropriate name of "Paradise of the Pacific."

Our natural and historic wonders attract several hundred thousand visitors to our shores each year, as well as provide recreation and spiritual refreshment for those of us fortunate to live on these Pacific Islands.

But, like many of our sister States who also possess marvelous natural scienic and recreational resources, Hawaii is confronted with the imperative need to take steps to preserve in perpetuity for all our people these wonders of nature and to perpetuate the Polynesian culture which we have inherited.

I am pleased that our Federal Governernment is taking an increasing interest in protecting our Nation's recreational, park, seashore, and wilderness for the enjoyment of generations to come. My own State of Hawaii, too, is more and more concerned about preserving our natural and cultural heritage. Civic groups long have labored in this cause.

In the April 1961 publication of one of these groups, the Sierra Club, is an eloquent plea by Walter S. Horchler to perpetuate the life of the land. Because it expresses vividly and concisely the dilemma Hawaii faces of expanding civilization and shrinking unspoiled areas, a problem common to many States, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HAWAII NEEDS A STATE PARK SYSTEM TO HELP PRESERVE THE LIFE OF THE LAND

(By Walter S. Horchler)

"He aupuni palapala ko'u;
Aia i ka lani ke akua;
O ke kanaka pono ola ko'u kanaka,
Ua mau ke ea o ka aina i ka pono."

"My kingdom is a kingdom of knowledge;
Its god is in heaven;
The righteous man is my man.
The life of the land is perpetuated by righteousness."

When King Kamehameha III pronounced these words at his installation as ruler of the Sandwich Islands in 1843, he could have hardly foreseen the tremendous changes which were to bring economic revolution and commercial exploitation of unbelievable proportions to his island paradise in little over a hundred years. Today this motto still stands on the official seal of the 50th State, and the promotion of the million-dollar resort industry has done an outstanding job of perpetuating an elusive picture in the minds of millions of a vanishing way of life, which still sparkles from advertising posters and picture postcards.

The land of Aloha teems with prosperity, the like of which it has never seen before; concrete towers mushroom out of taro patches, blacktop highways creep steadily over the green hills like gigantic spiderwebs and tourist limousines, packed to the brim, speed across the islands.

Is this the "life of the land," which the righteous monarch had in mind? Is it the life of the land which more than a quarter-million visitors come to see? Is it our unavoidable prospect to see the last vestiges of the blue-green slopes disappear under subdivisions, or the swallowing-up of the emerald beaches by continuous lines of hotel lanais?

Attempts to save "Old Hawaii" have been made in many forms and at various times, ever since the turn of the century, when the islands became the territory of Uncle Sam.

In the forefront of these efforts have been the Outdoor Circle, founded in 1911, whose main goal is the preservation of the island's beauty, the Hawaiian Historical Society, and the many civic organizations with mainly Hawaiian membership, who are still predominantly concerned with the protection and perpetuation of Hawaiian lore and customs.

All these sincere endeavors have not been able to forestall a continually faster disintegration of the sociocultural values and scenic-esthetic qualities of the land, which more and more must be visually superimposed on the actual vista presented to the paying customer of today. Must we accept as inescapable progress that every scenic viewpoint, if turned into dollars, will raise Hawaii's economy? Is it too late, after 150 years of indoctrination in the value of this dollar, to do some more missionary work with ideals, which are just as much a part of the American way of life? Is it too late to foster understanding and appreciation for the preservation of the land?

Hawaii stands at the crossroads today. It can scuttle all the impractical ideas, which promote the setting aside of the fabulous and dramatic palis (cliffs) and beaches, its historic shrines, which overlook its mystic gorges, and it can give an unparalleled commercial exploitation the run of the country. These interests have not been idle, but privately or officially have already earmarked almost every accessible sandbeach for resort projects, and bulldozers are cutting into the red earth at every turn of the road. So-called tourist promotion is planning cable cars to the top of Diamond Head and chairlifts leading up gorges for close views of majestic waterfalls.

Yet there is still time to decide that preservation and wise conservation of Hawaii's superlative scenic and recreational resources is equal partner in maintaining the islands as the paradise of the Pacific. Wilderness areas of magnificent quality are at stake, which in their geological and topographical aspects are rarely equalled anywhere in America and where flora and fauna constitute an important outdoor laboratory. Other extremely significant areas of historic as well as scenic interest are hard pressed by encroachment and need immediate protection.

A blueprint is at hand in a comprehensive report by the new State planning office, setting forth the "musts" in scenic and historic values which should be protected and saved for the benefit of all. It indicates the procedures which alone can bring about an effective program, by giving a formula for a State park system patterned after national park system standards.

The broad aims of this plan have been welcomed warmly by civic groups and leading citizens, and the administration and legislature have professed support for the program. But a major hurdle remains—the acceptance of the required land acquisition program. It seems vain, of course, to make grand gestures without accepting this basic requirement. Neither has there been general awareness that such a program can only succeed with appropriate leadership backed by skilled professional help. No parks organization which can tackle this job efficiently has been established.

Great strides have been made in the nationwide recognition of the need to preserve "America the Beautiful"—not in the least by the concentrated efforts of the men and women in the Sierra Club and in other like-minded organizations. Achievement has come about by education of large segments of the people and their government leaders who now sense the natural val-

ues which are our God-given heritage and which are indispensable to the spiritual life of the Nation. These treasures can never be measured in monetary terms.

Are the scenic glories of the 50th State worth the concern of all of us? Many think so; for they are priceless natural assets of the Nation just like the Sierra, the Cascades and the Rockies. Hawaii needs our help today, to awaken the spirit of true conservation, to lift its sights to the irreplacable treasures of its matchless scenery.

A new missionary goal of outsanding caliber for us in the Sierra Club: we all have a stake in Hawaii to be sure that, "The life of the land is perpetuated by righteousness." That is the order of the day. Aloha Hawaii.

Opposition to Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 3, 1961

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the preambles and resolutions adopted by the Petersburg, Va., School Board and an editorial from the Petersburg Progress-Index in opposition to Federal aid to education.

There being no objection, the resolution and article were ordered to be printed in the RECORD, as follows:

PREAMBLES AND RESOLUTIONS PASSED BY THE PETERSBURG SCHOOL BOARD OF THE CITY OF PETERSBURG, VA., AT ITS REGULAR MEETING HELD ON APRIL 5, 1961

Whereas the Federal revenues have been inadequate to meet Federal expenditures in 26 out of the last 30 years; and

Whereas Federal aid to education does not represent a new source of revenue; and

Whereas, three-fourths of all personal income goes to wage earners, the cost of Federal aid to education will not be borne by the rich and large corporations as the public is led to believe; and

Whereas the Federal Government now takes 64 percent of all public revenue and will have to demand more if it attempts financial support of public education; and

Whereas the Supreme Court of the United States has in effect ruled on several occasions that the Federal Government can regulate that which it subsidizes; and

Whereas Federal involvement in public education is contrary to the 10th amendment to the Constitution of the United States which provides that "powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people"; and

Whereas financial dependence on the Federal Government for support of public education will at best reduce local control over our public educational system: Now, therefore, be it

Resolved, That the School Board of the City of Petersburg, Va., publicly announce that it is opposed to Federal aid to education and does feel that such assistance is not needed; and be it further

Resolved, That this board pronounce its opposition to any movement which will give the Federal Government one scintilla of control over any local school system and any attempt to standardize or to destroy the flexibility of public education throughout the local school divisions or districts in the United States; and be it further

Resolved, That a copy of these preambles and resolutions be furnished to the Senators and Members of the House who represent the Commonwealth of Virginia and its political subdivisions in the Congress of the United States of America.

[From the Progress-Index, Apr. 7, 1961]

IF OTHERS WILL DO LIKEWISE

The Petersburg School Board did a good day's work when it adopted a strong resolution in opposition to Federal aid for education. We hope it reaches all the proper persons and makes the impression which it deserves.

The resolution, offered by the board's chairman, is a cogent statement of the case against Federal aid to education.

No less significant than the reasons cited is the fact that a school board has taken such action. Other boards may have done so, but we are not aware of the instances.

Rather, there is a strong tendency on the part of persons and groups directly concerned with the field of education to endorse the idea, either with enthusiasm or with professed reluctance.

One explanation seems to be that such persons and organizations, mindful of school needs and discouraged over the prospect of seeing them financed by other means, finally succumb to the argument. As far as the effect is concerned, the supposedly reluctant endorsements are just as influential—perhaps more so—as those which come from sources which would welcome Federal aid and the inevitably accompanying Federal control. Yet such endorsements have been made so frequently as to cause some to wonder whether, in opposing Federal aid to education, they are not serving principle at too dear a price.

Against this background, it is good to have the resolution from the Petersburg School Board taking account of the Federal Government's ability to provide such aid, the prospect of higher Federal taxes to make it possible, the certainty of regulation in the event of aid, and the all important fact that Federal involvement in education would be in violation of the provision of the 10th amendment that powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively or the people.

Let us hope that other school boards in the land will take similar action. That could make a real difference in national thinking on the issue.

National Farmers Union Favors Omnibus Farm Bill

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, on May 1, Gilbert Rohde, president of the Wisconsin Farmers Union, testified before the House Agriculture Committee in behalf of the National Farmers Union, which favors enactment of the proposed Agricultural Act of 1961. Under leave to extend my remarks, I would like to include Mr. Rohde's testimony in the RECORD:

DILEMMA OF AGRICULTURE ILLUSTRATES NEED FOR COMPREHENSIVE FARM LEGISLATION

At the outset, may I say that we support the Cooley-Ellender bill, H.R. 6400. I was tremendously impressed with the statement made by the chairman of this committee when he introduced H.R. 6400 on April 18. The chairman's keen insight into the problems that affect the agricultural industry were well documented in his statement, and we heartily agree with his closing remark that the farm problem is everybody's problem.

During the course of these hearings, Secretary Freeman and experts from the Department of Agriculture have testified concerning the mechanics of the proposed Agricultural Act of 1961. I will not presume to enlarge upon the excellent analysis already submitted by the Secretary, except to applaud and endorse his eloquent declaration in behalf of family farming.

DECLARATION OF POLICY

The declaration of policy in the Agricultural Act of 1961 sums up the present-day dilemma of agriculture and shows just cause as to the need for the development of a comprehesive, procedural bill under which farmers can devise programs for a wide range of the commodities they produce.

The declaration of policy, for the first time in the history of our Nation, also attempts to summarize the overall aims, aspirations and goals of farm families as related to the development of an overall farm program to meet their needs in this era of abundance.

National Farmers Union is an organization of family farmers. We believe in the family farm pattern of agriculture. The keystone of a free progressive democratic national society, as well as of a strong rural America, is the efficient, economically adequate and prosperous owner-operated family farm.

Delegates to our national convention meeting in Washington in March of this year defined the "family farm" as "an agricultural production unit using land and other capital investment that can be efficiently operated by one or more typical farm operator families who provide the management, take the economic risk and do most of the work required to operate the unit."

The basic aims of our organization are closely related to the policies of Government at Federal, State, and local levels that contribute to the economic betterment of farm families on the land. Well known to this committee, Farmers Union vigorously supports those programs and policies which are consistent with our objectives and we just as vigorously oppose those programs and policies which detract from our goal.

One reason we are supporting H.R. 6400 is that we believe it is based on family farming and would help achieve our goals for family farmers.

I believe and hope that what this committee desires most of all from farm organization representatives like myself is a sounding of grassroots reaction to the provisions of this farm bill. It is to this area that this formal statement will be directed.

DISPELLING MYTHS

Two years ago, the National Planning Association issued an excellent pamphlet entitled "Myths About Farming" in which the association's agriculture committee attempted to set the record straight on many misconceptions held by both city people and farmers about farming. Secretary Freeman has likewise concentrated much of his early efforts on getting the real facts of American agriculture before the public.

The matter of mythmaking, unfortunately extends even into the legislative process—at times influencing the character, direction, and acceptance of farm legislation. More specifically, let us consider some of the

myths that have been manufactured concerning the provisions contained under the five subtitles included under title I.

In respect to the establishment of farm advisory committees, some newspapers, magazines, and even farm groups have attempted to question the competence that bona fide farmers can bring to the realm of farm policy formulation. Their effectiveness has been discounted, and the myth has been created that the Secretary of Agriculture will be the sole policymaker. We believe this to be an unwarranted and unsupported criticism of the proposed legislation.

First of all, illustrations of the effectiveness of farm committees at the policy level are easy to find. Producer committees have worked effectively in marketing order programs and in bargaining associations. Farmer-elected ASC committees have demonstrated the practicality of placing more responsibility on farmers themselves in the administration of their farm programs. Any decisions on farm policy must be closely identified with the thinking of the people most vitally concerned.

Incidentally, we do not fear these various committees as competitors—we welcome them as useful parts of the democratic process in America.

Secondly, in many respects the Secretary would have less power under this bill than he has under existing legislation. Without intending to advocate less power in that important office, let me point out that the Secretary can now set any support level up to 90 percent of parity—or no support level—for all but a few of the commodities grown in the United States. This power was possessed constantly by the preceding Secretary, and the new Secretary exercised it just recently when he increased the supports under soybeans.

But under the proposal being criticized he would establish an advisory committee, submit the recommended program to Congress for 60 days of review and then submit it to a referendum in which two-thirds of the producers would have to approve the proposal.

It seems to us that this procedure recommended by the Administration is accepting less authority in the executive branch, rather than seizing the awful powers attributed to it by some critics.

MARKETING ORDERS (TITLE I, SUBTITLE B)

The amendments to the Agricultural Marketing Act of 1937 (1) expand the coverage of this act to additional commodities; (2) remove present limitations on area coverage of a marketing order; (3) authorize individual producer allotments and national orders subject to consultation with national farmer advisory committees, approval by the President and Congress, and subsequent to congressional action, producer approval in a referendum; and (4) other provisions for wider latitude in the application of marketing orders.

Marketing orders are a means to the establishing of a do-it-yourself approach for producers in managing supply and in strengthening bargaining power as it relates to price and income. These orders have made it possible for thousands of independent operators in milk and in a number of fruit and vegetable commodities to organize and to regulate themselves to bring stability and orderly marketing conditions to their farm operations.

In respect to the establishment of marketing orders (subtitle B), the myth has been circulated that marketing order programs would regiment farmers under brutal Government controls. This was the case in Wisconsin a year ago when 11 farm organizations supported enabling legislation to permit farmers to establish State marketing order programs. The scarewords of the opposing minority narrowly defeated the measure despite the wide support farmers gave the proposed legislation.

That farmers have faith in such self-help programs has been proven time and again. This year, dairy farmers throughout Wisconsin are seeking the extension of Federal milk marketing orders to areas not now covered. Farmers who have witnessed State and Federal marketing order programs working successfully are going to continue to press for their extension and expansion. The national and regional orders provided for in this bill appear to be a logical outgrowth of this demand.

The expansion of coverage of marketing orders gives greater flexibility in the Agricultural Marketing Act and would provide farmers with another tool for the development of economically sound marketing programs.

Under the subtitle, farmers would develop their programs through advisory committees and vote democratically, by commodity groups, to decide upon use.

In the case of national orders, or orders involving quotas, Congress would review the program prior to submission to producer referendum.

The expanded use of marketing orders is consistent with the program adopted by delegates to our recent national convention here in Washington and we believe the expanded use of marketing orders will afford producers the opportunity for economic betterment and a better life.

MARKETING QUOTAS

Subtitle C of the bill, dealing with marketing quotas, is in our opinion one of the most vital sections of the bill. This portion of the measure spells out the principal mechanism to be available for managing farm production. Yet the myth persists that farmers want nothing to do with allotments and quotas.

Wheat, cotton, peanut, rice, and tobacco growers have repeatedly voted for quotas in producer referendums. Dairy farmers in the Pure Milk Association, which supplies 90 percent of the milk going into the huge Chicago milkshed, recently agreed overwhelmingly to accept marketing quotas.

Farmers realize that they cannot have both fair prices and unlimited production. Given reasonable alternatives, such as the feed grain program offers, farmers can be counted upon to tailor their supply to existing demand. False slogans such as "freedom to plant" have fallen with a dull thud on the Nation's farmlands.

It is, we believe, the intent of the drafters of this comprehensive measure that a system of national marketing orders will produce the desirable price and income effects to raise farm income substantially closer to that enjoyed by the nonfarm segment of the economy. Subtitle D, "Price Stabilization," makes it clear, however, that the present program of price supports will be retained and enlarged to insure farmers greater income protection.

This brings us to the myth that says farmers are fed up with Government "dole" and want only to be returned to the price adjustments of the free market. This myth is a favorite among processor and middleman groups, but farmers have more grey matter than to buy this one. The road to the so-called free market is the road to bankruptcy for most family farmers.

A USDA study released last year substantiates this view. The study shows that if price supports and production limitations were removed, farm prices, with the 1959 level as a base, by 1965 would drop 50 percent for wheat, 34 percent for oats and cotton, 28 percent for corn, 24 percent for cattle, 23 percent for hogs, 16 percent for eggs and 12 percent for milk. Such drastic price drops would return the farm economy to the depths of the thirties. No thinking farmer wants this.

Another myth in the making is that Congress, under this bill, will delegate its powers over farm legislation to the executive branch of the Government. The presence in the measure of subtitle E, "Congressional Review," we believe disproves this contention. The fact that farm programs will not originate in the agriculture committees of either House will not detract from an objective study of any farm proposal or discourage debate. The veto power retained by Congress will be an effective check on the executive branch.

The farm programs that are finally approved under this new approach will, if anything, have had closer congressional scrutiny than is sometimes the case now. The bill relieves Congress of much of the tedious research and paper work without in any way weakening the representative process.

In conclusion, we wish to emphasize that title I is an enabling provision. It merely authorizes the use of economic tools which farmers as individual operators lack. The fundamental question is this: It is reasonable for farmers to seek the tools which will give them more bargaining power in the market place? If we want to maintain our traditional type of agriculture consisting of millions of family units, we must be willing to give farmers greater management over supply and price.

The whole structure of this farm legislation is based upon the belief that preserving the family farm is in the public interest. If we now refuse the farmer these bargaining devices, we will in effect encourage the advent of corporate agriculture. If this comes to pass, it will be the consumer who will be seeking relief and assistance in our legislative halls and not the farmer.

One Hundredth Anniversary of John Wanamaker, Philadelphia

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mrs. GRANAHAN. Mr. Speaker, on Friday, April 7, 1961, it was my privilege to attend the Poor Richard Club dinner marking the 100th anniversary of the John Wanamaker Philadelphia store. The occasion was a great milestone in the history of the City of Brotherly Love and was truly symbolic of our national progress since the bitter divisions that led to the Civil War soon after John Wanamaker Philadelphia was founded a century ago.

A distinguished leader in American commerce and civic affairs, Mr. Richard C. Bond, president of John Wanamaker, Philadelphia, was the principal speaker at the 100th anniversary dinner. His remarks hold great significance for all of us as they recall the early struggles of our forefathers who contributed so much to building the vigorous and ever-progressive economy that is the lifeblood of America. It is truly a most heartening and encouraging message at this time, when we face powerful adverse forces and seemingly insoluble problems on both international and domestic fronts.

I earnestly commend to the attention of Congress Mr. Bond's excellent and timely address, which follows:

REMARKS BY RICHARD C. BOND, POOR RICHARD CLUB DINNER FOR THE 100TH ANNIVERSARY OF JOHN WANAMAKER, PHILADELPHIA

Mr. Morgan, distinguished guests, ladies and gentlemen, needless to say, John and I feel greatly honored and privileged to receive this citation and we know that everyone here realizes that we accept it symbolically for the more than 100,000 employees who have loyally served the great John Wanamaker store over the last 100 years.

It seems very fitting to us, too, that this award should come from Philadelphia's leading advertising group and one of America's better known organizations, the Poor Richard Club. For while Mr. Wanamaker was known as the Merchant Prince, in my judgment he was an even greater advertising and public relations man.

Believe me, he has set a most difficult, if not impossible merchandising and advertising pace for his successors to follow. The assignment could be compared with asking our present day statesmen to measure up to Thomas Jefferson, Abe Lincoln, and our own Ben Franklin all rolled into one. To begin with, the fact that out of his first day's receipt of $24.63, $24 of it went right back into the next day's advertising, speaks for itself. I am sure that the Inquirer, the Bulletin, and the Daily News would appreciate this percentage today but I don't think our controller, Mr. Dooley, would.

Mr. Wanamaker's store soon became famed worldwide as an institution of beauty and quality, built on service and wide selection. His pioneering firsts in merchandising and advertising became legend. Just to mention a few.

The first store to recognize the importance of a one-price store.

The first store to run a full page ad.

The first store to advertise complete satisfaction or your money back.

The first store to copyright advertisements.

The first store to hold storewide sales events.

The first store to use electricity—but let me quote from the papers of that day—"Light blazed in the display windows. 'That building's gonna blow up', people screamed, cowering half a block away. The scene was Wanamaker's big department store in Philadelphia—the time, Christmas 1878. For the first time anywhere, a store was lit by electricity and it caused so much excitement that Sunday papers actually demanded police protection for the public so they wouldn't be burned up inside the new-fangled store."

The first store in which Bell telephones were installed.

The first store to open foreign offices, to open a basement store as well as antique galleries.

The first store to forecast the weather in its ads.

The first store to dramatically departmentalize itself with each department having the objective of being the best specialty shop in the area.

The first store to see the importance of publicity in promotion through the installation of the world famous eagle and the world's largest organ and having the President of the United States, President Taft, dedicate the store on opening day.

In fact, to sum up, General Grant was to say on a visit to the store in 1877—"It takes far more generalship to organize and advertise a business like this than it does to run an army."

In addition, Mr. Wanamaker was a tremendous power in the civic and community life of Philadelphia, being the moving force behind most of the worthwhile projects of his day. In fact, he was to become known as the Mr. Philadelphia of his era.

Now over the years, we at the store have tried to keep pace with this great dynamo and while in many cases we have not measured up to his standards, I do believe that through capitalizing on the great vision and heritage he left us, such as continuing to use the Eagle as a meeting place, the overall beauty of the store, using the organ for entertainment, the Muncasky paintings for beauty and art, we have carried on in his tradition. Speaking of the paintings, to show how ingenious Mr. Wanamaker was, he apparently was somewhat hard up for cash when he purchased the paintings and decided that before he showed them in the store, he would send them around the country exhibiting them in various cities with an admission price of 25 cents. After a year's tour, he had paid for the paintings and we have had the benefit of them all these years.

In addition, I do believe our recent court displays, such as the Cathedral, the Fountains and coming up, a 60-foot birthday cake made of steel, with candles 9 feet in height—our rebuilding and renovation program going on continuously and expansion program in the suburbs—the fact that 300,000 people used our auditorium for civic purposes last year and that presently we have a 100-year history of photographs in the auditorium loaned to us by Life, Time, and Fortune that are treasures indeed—as well as a display tieup with the Ford Motor Co. featuring the cars of the past, the present and the future, is in the same image tradition—that the Philadelphia orchestra, the Mormon Tabernacle Choir, almost every well-known sports and entertainment figure has made a personal appearance here—the fact that we are going to announce in June a John Wanamaker Sports Award for the athlete who has contributed the most to Philadelphia in the past year—that our institutional advertising, one such ad being a full page from our Pet Shop advertising a live elephant reduced from $7,995 to $3,995 with a 25 cents extra gift wrap charge, which incidentally made the front pages of 93 papers throughout the country—are just some of the things we believe would be the apples of his eyes. In fact, these are the very things we believe are largely responsible for our corporation going over the $100 million mark within the last several years.

Further, by imitating a winner, some of us, like his great-grandson, John, for instance, have moved out into the civic world of Philadelphia, helping wherever we can to build a better city on the grounds that what is good for Philadelphia is good for John Wanamaker. We believe the day is gone forever when the retailer, the manufacturer, or the banker can limit his interest to just the technique of his immediate job. In his own self interest, he has a duty to participate in his community's civic affairs. This is not to say that the modern businessman must become a starry-eyed do-gooder. We like the old saying about duty which reads, "nothing is properly one's duty but what is also one's interest." Our responsibilities were set forth, we believe, over 2,000 years ago by the great Greek philosopher, Aristotle, when he said: "One citizen differs from another, but the salvation of the community is the common business of them all."

In fact, there has been so much of this civic work going on by some of our executives, that many have asked: Who is tending the store? Certainly it couldn't be Bond or Wanamaker. Well, now I will let you in on a little secret. I would like to introduce our officers who really do run the store.

Financial: Mr. Prendergast, Mr. Dooley, Mr. Bartlett, Mr. Berry, Mr. Deakin.

Merchandising: Mr. Foreman, Mr. Chance, Mr. Rudolph, Mr. Siegel, Mr. Sipe, Mr. Van Camp, Mr. Howe, Mr. Harrison, Mr. Boone.

Advertising: Mr. Yost, Mr. Wyatt, Mr. Wetherill.

Branch stores: Mr. Taylor, Mr. Price, Miss Webb, Mr. Hagerstrom, Mr. Wilson.

Operations: Mr. Funk.

Personnel: Mr. McMullin.

Now everyone in this room has, at sometime or another, been the beneficiary in this life of much good. For example, we are the beneficiaries tonight of a very thoughtful citation. In fact, if you analyze it, all we have has come to us from others. What we do, then, when we participate in civic efforts or help to build a great store, should not be looked upon as a duty. It is merely repaying to society a small portion of what society has already given us. It would seem fitting to close with a quotation on this subject from Ben Franklin.

He once expressed to a friend his conception of a thoughtful deed, such as the Poor Richard Club is making to John Wanamaker tonight. He said: "For my part, when I am employed in serving or helping others, I do not look upon myself as offering favors, but rather as paying debts. I have received, he said many kindnesses from men to whom I shall never have the opportunity to make the least direct return. Those kindnesses of men I can only return to their fellowmen and so, let good offices go round and round for mankind is all of a family."

On this note, let us again thank you for this very kind and thoughtful citation.

Omaha's Evening World-Herald Praises Nebraska's Courageous Men Beermann and Martin for Social Security Vote

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 3, 1961

Mr. CURTIS of Missouri. Mr. Speaker, in its lead editorial of April 25, the Omaha Evening World-Herald analyzed this country's social security program and this House's recent 399 to 14 vote for certain extensions of that program. It noted with pride the dissenting votes of its State's two freshman Congressmen— Mr. MARTIN and Mr. BEERMANN—and with alarm the unfortunate ignoring of certain very basic considerations which must be faced in dealing with the social security program. I, too, have dealt with the points the World-Herald discusses; my discussion of them appears in a speech, "Politics Can Destroy Social Security," which appeared in the CONGRESSIONAL RECORD at pages A1512–1514 this year.

I should like, at this point, to place the Omaha Evening World-Herald's editorial in the RECORD:

COURAGEOUS MEN

It took courage for two Nebraska Congressmen, RALPH BEERMANN and DAVE MARTIN, to vote against the Kennedy social security program. Social security has become a sacred cow among politicians, as the House vote of 399 to 14 demonstrated.

The benefits are called insurance, but even the Department of Health, Education, and Welfare has said that old-age and survivors insurance, although it uses the word, is in no sense a federally administered insurance program.

The "contributions" are not premiums. They are a "tax." And here again we are quoting the Department of Health, Education, and Welfare.
